FIG. 38

should be tested as to being watertight by one or other method to be afterwards described.

In replacing the soil the first portion next to the pipes and joints should be selected and well packed under and on either side of the pipes to prevent future settlement, which is always liable (if it

cracking, consequently a leaky joint. Patent joints are only used under exceptional circumstances and are more costly than the ordinary cemented joint and the patented joints are seldom used in small or private installations, so will not be described in detail in this book, but in very bad ground, unless the pipes are laid on a solid foundation of concrete, it would be advisable to install same to ensure first-class drains. In no case should clay joints be used in preference to cement as they are always liable to deteriorate and lead to leaky drains.

Junctions from the branch drain to the main drain should always be in the form of a Y and no branch should connect with another by means of the T or at right angles. The sewage should always enter the main drain in the direction of its flow, otherwise splashing will occur, which through the small diameter of the pipe will leave a deposit on the pipe from the drying sewage splashed against the sides of the pipes

and should never be allowed as it interferes with the easy flow of sewage and weakens the construction of the pipes at every joint.

BRITISH MANUFACTURERS' REPRESENTATIVES VISITING CANADA

A pilgrimage of British manufacturers' representatives towards Canada has set in. Numbers of them have been arriving on almost every boat, both by Canadian and New York routes. Generally speaking, they have come to investigate the possibilities of doing business with Canadians. Intelligence reaches Toronto that many more are coming, and this year promises to be a banner one in this respect. Lines represented include pressure-gauges, disinfectants, door furniture, sporting goods, toys, traveling leather goods, bicycle accessories, lamps, etc.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Montreal.—A. Laflamme & Co., plumbers, have dissolved.

Montreal.—Maltbie & Taillefer, plumbers, have dissolved.

NEW FIRMS

Ward & Wilson have commenced business at 906 Dundas Street West, Toronto.

Albert McBride has commenced business at Long Branch, Ont.

MOVING TO LARGER PREMISES

Hamilton, Ont.—Owing to increased business J. & G. Inrig, plumbing and tinsmith merchants, of Lock Street, Hamilton, are moving to larger premises on June 15. The new address will be 206 Lock Street.

OBITUARY

New Hamburg, Ont.—Wm. Heimbeck, plumber and tinsmith, is dead.

SARNIA TO VOTE ON WATER-

Sarnia.—The city council at a special meeting set June 6 as the date on which Sarnia ratepayers will vote on a by-law to raise \$95,000 for waterworks purposes.

WELLAND PLUMBERS BACK

Welland, Ont.—The plumbers' strike is ended and the men have returned to work at 80 cents an hour. The men went out when it was announced that a cut of ten cents would be put into effect. The new agreement will be effective till August.

INCORPORATIONS

Chamberlain Desolvó Co., Ltd., has been incorporated with capital of \$40,000; head office, Toronto, Ont.

CONVENTION IN QUEBEC, NOT MONTREAL

In the last issue of Sanitary Engineer an item appeared listing the names of Montreal master plumbers who were delegated to attend the convention of the Canadian Society Domestic Sanitary and Heating Engineers. It was erroneously stated that this convention was in Montreal. This convention is to be held in the city of Quebec on June 6, 7, 8.

HAMILTON NOT SUCH A SMALL CITY

Hamilton, Ont.—A manufacturer and a supply man from Toronto got lost in Hamilton on Tuesday night of last week

in the small hours of the morning, having come to this city with some friends to spend a social evening interspersed with some business. They have now concluded that Hamilton is not such a small city.

WESTERN ONTARIO NEWS

F. D. Bates, Ridgetown, Ont., wants prices on heating, plumbing and electrical work for new residence costing \$6,000.

Plans are being prepared at Fergus, Ont., for a new two story lavatory building for the high school. Prices wanted on equipment. Dr. H. W. Armstrong, chairman.

William Clouse, of Brussels, Ont., is preparing plans for new residence to cost \$5,000 and wants prices on heating, plumbing and electrical work.

Hartley Berry, of Tillsonburg, Ont., has commenced erection of a new residence to cost \$4,500 and wants prices on hot air heating, plumbing and electrical work.

The Fireproof Warehousing Co., 717 Richmond St., London, Ont., is preparing plans for new building to cost \$50,000, and is interested in prices of heating and electrical equipment.

R. Ryan, of the hardware firm of Ryan & Co., is dissolving the partnership in the business at Amherstburg and will go into business as a sanitary and heating engineer.

Prices are wanted on well drilling outfits and equipment by E. V. Buchanan, general manager of the Utilities Commission at London, Ont.

S. Fisher, Ridgetown, Ont., is preparing plans for new \$4,500 residence and wants prices on heating, plumbing and electrical work.

John Grant, 24 Central Ave., London, is calling for tenders for new residence to cost \$15,000 and wants prices on hot water heating, plumbing and electrical work.

The township council is calling for tenders for the Oxbow drainage system in London township. Work will cost \$10,000 and tenders will be received by M. Grant, 110 Dundas St., London, until June 2.

John Collins, Putnam, Ont., wants prices on hot air heating and plumbing for new \$7,000 residence he is just starting.

Eggett & Co., of London, Ont., secured two contracts in the past few days in the shape of the plumbing and heating

for the new \$300,000 Collegiate Institute and a new public school to cost \$160,000. Steam heating plants will be installed in both buildings.

TENDERS FOR SCARBORO WATERWORKS

Birch Cliff, Ont.—Scarboro Township Public Utilities Commission is receiving tenders for construction of a pump house, reservoir, pumps and filter equipment.

Preliminary work on the southern waterworks system proceeds rapidly. Attention is at present centred on the intake wells on the lake shore, and the foundation for the pump house is assuming shape. Advantage will be taken of weather conditions for the laying of the intake pipe around the first week in June.

CITY TAKES GOVERNMENT TO TASK

Toronto.—The city indirectly is taking the Government to court for a breach of the drainage by-law. Drainage work is being undertaken at Knox College and an inspector of the civic Health Department is summoning the owner of that property to court for not complying with the by-law, but, it is stated, the Government is stepping in with the statement that it is doing this work and does not have to comply with the by-laws.

GETTING ALONG FAMOUSLY WITH HIS NEW CAR

W. J. Mellett, who is representing Empire Brass Mfg. Co., London, Ont., in the territory north and east of that city, recently adopted an automobile to help in the covering of his ground. A letter received from Mr. Mellett by H. McAlpine, plumbing supply department of the company, concerning the innovation is as follows:

"I have great pleasure in reporting that 'Lizzie' and I are getting on famously together. We are travelling rather slow as yet, as we do not quite understand one another's temperaments, but in the course of a few days I think we shall do better and more smoothly. I realize her capabilities for climbing ditches, but so far I have not asked her to extend herself in climbing trees or telegraph poles, but I have such confidence in her power that when asked nicely to do any of these acrobatic feats, she will easily accomplish them."

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

Wm. Brundage, of Kingsville, Ont., wants prices on heating and plumbing for new \$5,000 dwelling for which he is preparing plans.

Plans are to be prepared immediately for new chlorinating plant and new filtration plant at Goderich, Ont., following orders received from the provincial Board of Health.

Work will be commenced early in June on new warehouse at London, Ont., for Crane, Ltd. The firm also plans to erect a large branch on Wellington Street at Hamilton.

TENDERS WANTED

Kingston, Ont.—Stevens & Lee, Toronto, have called for tenders for the service building at the Kingston General Hospital. Tenders to be in the nature of a general contract will be received up till June 3. The new building is the first to be erected under the rebuilding plans for the hospital.

AGENCY FOR STEAM AND HYDRAULIC FITTINGS

W. J. Brown, 117 Youville Square, Montreal, has secured the Eastern Canada agency for Payne & Griffith, Birmingham, England, manufacturers of steam and hydraulic fittings and motor car gauges. Payne & Griffith have bought the sole rights for the manufacture of Probert & Bridges high and low detectors for steam boilers.

RESERVOIR FOR MELVILLE, SASK.

Melville, Sask.—Aiming to secure a railway water supply for Melville, a contract for the excavation of a reservoir has been awarded to Tomlinson and Fleming, general contractors, of Toronto.

The contracts for the pipe line from the reservoir to the water tank at Melville have been awarded to C. L. De Vall, general contractor, Edmonton. The amounts of the contracts are said to aggregate in the vicinity of \$400,000.

The enterprise is being energetically pushed ahead, and the western contractors are already on the ground. The ultimate water requirements are being based on one hundred million gallons per year.

Catalogues and Booklets

NEW PLANT OF THE WEIRTON STEEL COMPANY

A. C. Leslie & Co., Ltd., Montreal, are in possession of a booklet containing the re-

print of an article appearing in recent issues of the Iron Age on the new steel plant of Weirton Steel Co., Weirton, W., Va.

The article is illustrated by photographs and drawings showing the extensive plant with its blast furnace, open hearth furnaces, and mills for producing sheet bars, billets and slabs, also its labor-saving equipment which is prominent throughout. A. C. Leslie & Co., Ltd., are Canadian sales agents for products of this extensive plant, which include: basic pig iron; O. H. steel blooms; slabs, billets and sheet bars; coke tin plates, best cokes, silver finish, egg shell finish, canners, special, gold lacquered, extra cleaned for lithographing, charcoals, ternes, (copper bearing steel base) carrying coated of 8-lb to 40-lb. inclusive, tea-tray stock, Weirton blue (uniform color), full finish black plate, enamelling stock, metal shingle stock, show card stock, ceiling stock, milk can stock, galvanizing stock, nickel plating stock, H. R. & A. stock, O.P.C.R. & A. stock, special deep drawing stock.

RELATION OF PHYSIOLOGY TO VENTILATION

Continued from page 20

an impure quality of air, or any pathogenic bacteria, or any dust, or any particulate matter is absorbed into the blood, but that if its physical condition is not satisfactory, it does not produce the correct or desirable effects on the outside or skin surface of the body.

In general terms the theory is that the presence of persons' bodies for a long period in the same surroundings produces physical conditions in the air which are not satisfactory for dissipating the surplus heat from the body, and that it makes little difference whether these conditions have been produced by persons' bodies or their breath, or by any other means. It is the conditions themselves and not the character of their origin which is important.

This theory has perhaps been carried to extreme lengths. I am quite satisfied from experience that the adequate and suitable cooling of the human body and the suppression of smell or dust are not the only important functions of ventilation, but it must be clearly pointed out that this is essentially a physiological or hygienic matter on which the opinions of any engineer must of necessity be more or less amateur or common-sense in character. The close connection between heating and ventilation is clearly indicated in this theory. In order to understand the theory fully it is desirable to consider what the human body is, and what are the conditions necessary for its continued well-being.

A human being may be regarded as a mass of matter, not of constant shape, and never wholly at rest, provided with an internal heating apparatus. It is a fundamental condition for the well-being of this mass of matter that it shall be

kept very closely at a constant temperature throughout its mass (though not necessarily on its surface), even although the temperature and other conditions of the surroundings may vary very widely—from many degrees below the freezing point up to the body temperature, or even much higher.

Heat is supplied to the interior of the body by a transformation of the energy of the carbon and hydrogen taken in in the food. The value of the food as food can be exactly estimated on a calorimetric basis. Of course we all realize that energy in all its forms is fundamentally the same thing, that work and heat are interchangeable in the proportion of 778 foot-pounds of work to 1 British thermal unit of heat.

The food taken in is absorbed in a way which need not concern us, and distributed by the circulation of the blood all over the body. After absorption the liberation of the energy of the food, chiefly in the form of heat, takes place by oxidation in the interior of the body tissues. By some marvellous process the exact nature of which is unknown, the rate of oxidation is automatically regulated by the temperature of the environment and by the amount of muscular work done.

(To be continued)

SEWAGE DISPOSAL IN THE WEST

(Continued from page 19)

be taken in backfilling the excavation in order that the pipes and their surrounding bed be not disturbed.

Trees or bushes should not be grown over absorption beds as the roots may penetrate the openings between the tiles and obstruct the flow of sewage.

Depth of Tank and Absorption Field Below Ground

The clause in the provincial plumbing regulations which has hitherto required all basements to be drained has been amended with the issue of this bulletin and drainage of basements will in future be optional. And additional expense incurred by draining the basement is justified, however, by the sanitary advantages obtained and it is recommended that basement drainage be provided in all cases.

Where there is a good surface fall available the field tiles may, subject to the conditions noted below, be laid at the depth at which full advantage may be taken of the action of the soil bacteria, namely, 18 to 20 inches below the surface.

Rolling ground is, however, the exception rather than the rule in this province and in the average installation it will be found that the field tiles must of necessity be laid at least three or four feet below ground level.

The regulations which have hitherto governed the installation of septic tanks in this province required all absorption systems to be constructed at a depth which would prevent them freezing, or seven feet below the ground surface.

(To be continued)

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

SOME recent price increases contrast sharply with the declines that have been apparent in the trend of quotations on many plumbing and steam-fitting supplies. Other reductions, however, are also announced, but these are chiefly of a minor nature, and the basic products remain practically unchanged.

Solder prices are increased 2 cents per lb. on the different grades, and 2½ cents on wire solder. The primary lead markets are very firm. Ingot metals are developing a firmer tone, and some higher quotations are evident. The copper market is strong, but prices on sheet copper and tubing remain at previous levels.

Range boiler quotations are very irregular, with price-cutting and general unsettlement still in evidence. A new discount list, effective May 20, is announced on radiators, which gives approximately a 10 per cent. reduction. Enamelled ware

prices are unstable, with closet quotations also unsteady. In both cases jobbers are offering more attractive discounts to obtain business, but purchasing is reported light, and future conditions are pending upon an improved demand.

There has also been a slight reduction on the 28 gauge and 10 3-4 oz. galvanized sheets. Other minor changes include a small revision in malleable fittings; lower prices on some classes of valves and cocks, and a new discount sheet has been issued covering one line of taps and dies.

Compression goods, corrugated sheets, boiler tubes, bar iron and steel, wrought pipe and fittings, soil pipe and eavestrough, scrap materials and cotton waste are all maintained at previous price levels. A slightly better demand is manifest on lines in general, but marked building activity is still the tonic needed to restore normal conditions and all-around improvement in the trade.

MONTREAL MARKETS

MONTREAL, May 28.—Of interest to the plumbing trade are the reductions announced on range boilers and radiation. A new price list on range boilers shows a reduction from 10 to 27 per cent. on the different sizes. Both upright and wall radiators are now selling under increased discounts, they being raised 5 per cent. on both kinds in steam and hot water. Solders also feature the markets, but in the shape of an advance. Bar solders are increased 2 cents a pound, wire 2½ cents.

Minor changes include a revision on the Penberthy line of valves, cocks, etc., and Butterfield & Co. announce lower prices on many of their tools through issuing a new discount sheet to their catalogue.

Enamelled ware continues unsettled with a small demand being shown. Corrugated sheets, galvanized and black sheets, boiler tubes, wrought pipe and fittings, bar iron and steel, soil pipe and eavestrough are all unchanged. A slightly better demand is manifest on all lines in general but lack of the anticipated activity in building construction is still the obstacle in the way of marked improvement.

Penberthy Goods Revised

Montreal.

Lower quotations are given, through a revision, of the Penberthy line of valves, petcocks, ejectors, etc. Following are the discounts on some of the best sellers: Injectors, 50 off; ejectors, 60 off; petcocks, 33 1-3 off; regrounding globe and angle valves, 20 per cent. off list.

Taps and Dies Reduced

Montreal.

A new discount sheet has been issued for the catalogue of Butterfield & Co., makers of various kinds of tools, revising many lines to lower levels. Following are the new discounts on their best known products:

Reece's screw plates	35%
Ordinary machinists' hand taps, 1-16 to 15-64	65%
Do., ¼ to ¾	55%
Machine screw taps, No. 12 and smaller ..	65%
Do., No. 14 and larger	55%
Pipe taps, right hand, up to 1 inch	70%
Do., 1¼ to 2 inch	65%
Do., 2¼ to 3 inch	45%
Do., 3¼ to 4 inch	30%
Stove bolt taps, 3-16 inch	65%
Do., ¼ in. and larger	55%

Lead Firm; Solders Advance

Montreal.

In the lead product market this week bar solders of all grades have been advanced 2 cents, wire solders 2½ cents per pound.

This is the result of the continued firm tendency in the lead and zinc market, and with this continuing it would not be

surprising if other lines of lead products follow in line with higher prices ruling in the near future. On the primary market lead is again very firm, the easing at the close of last week being fully recovered. Zinc also continues with a fairly active demand. Added to these conditions a scarcity is becoming apparent in the above mentioned metals. Tin remains firm owing to a scarcity in English supplies, thus causing the manufactured lead products to have a very firm outlook. Following are quotations:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs, sq. ft., lb	0 10¾
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 29
Do., strictly, lb.	0 27
Do., commercial, lb.	0 24
Do., wiping, lb.	0 24¾
Do., wire, lb.	0 37½
Zinc, sheets, casks	0 13
Do., broken lots	0 13½

Small Sales in Corrugated

Montreal.

No further change has been made on corrugated sheets since the issuing of the new list two weeks ago. Even the reduction shown on all gauges has not stimulated trading to any extent. Dealers still report business very light and express themselves as feeling that little increased activity will be shown until building construction is greatly improved from what it is at present. Locally, the unsettled feeling that existed a few weeks ago still remains and even the lower prices have not had the effect that was hoped for among different job-

bers and wholesalers. Whether this will improve in the near future is doubtful, but present figures are considered as being well down to the bottom. Following are the quotations:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	8 50
No. 26 gauge	9 25
No. 24 gauge	15 00
No. 22 gauge	16 00
No. 20 gauge	18 00
No. 18 gauge	24 00

Less 7½%.
Lighter than 24 gauge and wider than 27 inches,
75c a square extra.

Compression Goods Hold

Montreal.

No further changes have been made in the quotations on the different lines of compression goods since the readjustment of two weeks ago. Dealers report a little more activity, but of the general sorting order, denoting that buying is confined to the sorting of the merchant's stock, notwithstanding the reduced prices. Following are the unchanged quotations:

Compression work, standard	37%
Fuller work, standard	30%
Bath cocks, compression	29%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard ..	40%
Roundway stop and waste cocks, standard ..	34%
Brass steam cocks, standard	10%
Radiator valves, standard	23%
Do., removable disc	38%
Globe, angle and check valves, standard....	5%
Gate or straightway	Net
Jenkins globe	10%
Jenkins gate valves	10%

Enamelled Ware Unsettled

Montreal.

Enamelled ware continues to sell on an unsteady market, and while 10 per cent. off the following net prices seem to be the ruling quotations, jobbers are offering more attractive figures to obtain business. Asked if any improvement is likely to be shown in the near future, one local jobber stated that although there were no present signs of settlement, it was purely a war among the wholesalers, and an increased demand would assist more than any other factor. The trouble seems to be that purchasing is very light and little encouragement is offered with conditions as they now stand. Following were the former net prices with the extra 10 per cent. off:

Sinks, roll rim, 18x30 in.	18 40
Sinks, flat rim—	
16 x 24	\$6 00 \$5 92 \$5 84
18 x 30	6 96 6 88 6 80
20 x 30	7 92 7 84 7 76
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	41 12
Bath tubs, 5½ feet	45 68
Lavatories—	
17x19" Apron F139 or P4045.....	12 24
18x24" Apron F154 or P3845 or P3847..	18 82
18x21" Apron F169 or P4205	14 08
17x19" Roll Rim, F241 or P4345.....	10 08

Less 10%.

Closet Quotations Unsteady

Montreal.

The extra 10 per cent. is not offered on closets, but these are by no means on a steady price basis, and little uniformity in quotations is given among the different jobbing houses. As in the case of the other lines of enamel ware the

following are the former net prices, although generally an extra discount is offered. Building construction is still obstructive to the sale of these products and little improvement may be expected until more activity is shown in new building.

Closet, standard outfit	32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat ..	35 00
Do., add for reversible trap bowl.....	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe.....	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	17 60
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat	19 00

No Change in Tubes

Montreal.

No change is made in the quotations on boiler tubes and little improvement is shown in the demand. Jobbers are now satisfied that business in boiler tubes will be confined to repair work principally, which offers a movement on the best selling sizes only. Quotations are the following:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00	25 00
1¼ inch	27 25	26 00
1½ inch	26 25	27 00
1¾ inch	29 75	27 00
2 inch	29 25	22 90
2¼ inch	33 00	26 00
2½ inch	44 75	28 00
3 inch	49 25	35 00
3½ inch	63 50	40 75
4 inch	85 00	51 75

Soil and Pipe Fittings Weak

Montreal.

Soil pipe continues to sell at the unchanged discounts given below, and as in the case of many other plumbers' supplies sales are small and for actual requirements only:

SOIL PIPE (medium and extra heavy)—
2, 3, 15%; 5 and 6-inch, 20% discount.
4-inch, 25% discount.
8 inch, add 20% to list.

FITTINGS—

2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

Wrought Pipe Slow

Montreal.

Wrought pipe list No. 51 continues to be the selling price on wrought iron and steel piping. Business is quiet among the jobbing houses; merchants doubtless having their stocks now well sorted to meet the small demand that exists at present. Although new lists have been issued quite often since the beginning of the year, the future of piping, as regards even lower prices, seems doubtful. Following is list No. 51:

Price List No. 51.		April 25th, 1921.	
Standard Butt-weld Pipe S/C			
Per 100 feet.			
Size	Steel		Gen. Wrot. Iron
	Blk.	Galv.	Blk. Galv.

Do., 4½" and larger	Net list
Pound Goods—	
Class B	0 20 0 28
Class C	0 13 0 20
Add 10%.	

Ferrous Scrap Lowered

Montreal.

Iron and steel scrap have been generally revised to lower levels, but conditions as a whole are unchanged, very little improvement being shown. Wrought pipe, pipe scrap, stove plate and machinery cast are now quoted \$1.50 per ton less, dealers being adverse to offering the higher prices. Non-ferrous metals, with the exception of lead, are very inactive. Lead has a little better demand and the price has again been raised one-half cent. Foreign markets are reported as stagnant, and until these improve little betterment is hoped for by the local dealers. Following are the nominal quotations:

Dealer's Buying Prices.	
Automobile tires	0 75
Yellow brass	0 05
Red brass	0 08½
Light brass	0 04
Scrap zinc	0 04
Lead, heavy	0 04½
Lead, tea	0 02
Light copper	0 07½
Heavy copper	0 10½
Wrought iron, R. Rd., No. 1 per gr. ton	10 50
Malleable scrap (ton)	10 50
Pipe scrap (ton)	7 00
Heavy melting steel	6 50
No. 2 busheling	4 00
Boiler plate	0 08
Boiler plate	0 10
No. 1 machinery cast	22 50

Range Boilers are Reduced

Montreal.

A new price list is now issued on range boilers, showing a general reduction.

The amount of the decrease varies from 10 to 27 per cent. on the different sizes and weights. One local manufacturer stated that the lower prices were beyond expectation and below what the actual value warranted, but owing to the recent unsettled market, and price cutting, the new list was adopted.

There is not yet time to determine whether the lower prices will stimulate business to any extent, but this seems doubtful, as dealers do not seem disposed to purchase in any quantities, but rather to confine buying to actual needs. The thirty-gallon boiler is practically the only size selling, and these are moving in small orders compared with other years. Reduced quotations follow:

RANGE BOILERS—	Standard	Ex. heavy
30 gallon	8 75	11 25
35 gallon	11 25	13 50
40 gallon	13 50	16 00
52 gallon	20 00	23 00
66 gallon	28 00	35 00
82 gallon	35 00	45 00
100 gallon	45 00	54 00
120 gallon	54 00	

Sheet Prices Unchanged

Montreal.

Business in sheets, both galvanized and black, is still limited, and only small orders are being shipped. Quotations are unchanged with the same range in prices given. While the tendency seemed toward lower prices a few weeks ago, buyers are now of the opinion that reduced prices would not help sales, and conditions on the foreign markets do not warrant lower levels at present.

The future of steel products, including sheets, is considered doubtful; but with the demand continuing light, little change may be looked for. Following are quotations:

PLATES—		
10 gauge	5 25	6 25
12 gauge	5 30	6 30
14 gauge	5 45	6 45
16 gauge	5 55	6 55

BLACK SHEETS—		
14 gauge	5 45	6 45
16 gauge	5 55	6 55
18-20 gauge	6 15	7 15
22-24 gauge	6 25	7 25
26 gauge	6 35	7 35
28 gauge	6 50	7 50
Sheets 36 in. wide, 10c per 100 lbs. extra.		

GALVANIZED SHEETS—		
U.S. Standard—		
10% oz.	8 75	9 75
28 gauge	8 25	9 25
26 gauge	8 00	9 00
22 and 24 gauge	7 85	8 85
20 gauge	7 65	8 65
18 gauge	7 65	8 65
16 gauge	7 50	8 50

English Standard—	Queen's Head	Fleur-de-lis
28 gauge	10 00	9 25
26 gauge	9 75	9 00
24 gauge	8 15	8 60
22 gauge	8 80	8 15
18 and 20 gauge	8 10	8 00

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Bar Demand Quiet

Montreal.

Prices on iron and steel bars are holding unchanged both on the local and foreign markets, although recent wage reductions were thought to be an indication of future lower prices.

Inactivity continues among the wholesalers, and while this is in evidence there seems smaller chances of lower levels,

as buyers are generally firm in their opinion that reduced prices would have no marked stimulating effect on sales. Unchanged quotations follow:

Common bar iron, 100 lbs.	3 70
Refined iron	5 20
Iron finish machinery steel	3 75
Mild steel	3 70
Single reeled machinery steel	5 75
Band steel	3 70
Spring steel	5 00
Sleighshoe steel	3 70
Tire steel	3 90
Toe calk steel	4 60
Harrow tooth steel	3 85
Mining tooth steel, per lb.	0 23
Black Diamond tool and cast steel, per lb.	0 23

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Radiators Reduced

Montreal.

Lower prices are announced on radiators, effective May 20. Hot water radiators are now quoted less 53 per cent., steam less 54 per cent. Wall radiators are also lowered from 45 to 50 per cent. off list prices. Boilers remain unchanged. Following are now quotations:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53% for hot water and 54% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 55% off list.

Square or sectional hot water or steam boilers, 15-in., 5%.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in., 5% off list.

Square or sectional steam boilers, 19-in. to 36-in., 5%. Ontario Government trimmings, net list.

Round steam boilers, standard trimmings, 15 per cent. off. Ontario Government trimmings, 10%.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Eavestrough Improving

Montreal.

The seasonable demand for eavestrough, conductor pipe, etc., is now

active, and the fact that outside merchants held off in their buying until the season was at hand is making dealers all the busier at present. The reduction of two weeks ago holds, with following being the present quotations:

EAVETROUGH—

O.G. Square Bead—	Per 100 ft.	Per 100 ft.

5 inch, list	24 00
6 inch, list	29 00
Less 55 per cent.	

Ingot Prices Firm

Montreal.

The recent fluctuations in ingot metals have resulted in slightly higher prices on some metals locally. Present indications are for a quiet market, but on the whole more or less steady. It is thought that the demand will have to increase before any marked changes will be noted.

TIN.—In spite of the light demand, tin holds fairly steady, with an advance of one-half cent made in local quotations this week, now being quoted at 41 cents.

SPELTER.—Spelter continues easier in the United States but holds firm in London. If the London market advances much more, American spelter will be on an export basis, which will mean an advance on this side. Local price unchanged at 8½ cents.

COPPER.—This metal is quite strong, with considerable buying in New York for export account. Whether the strength will last or not is hard to determine, and a reduction would not be surprising. Local prices advance one-quarter cent, quoted at 18¼ for electro and 17¼ for casting.

LEAD.—Although on a quieter tone than last week, lead is now from steady to firm. This tendency is expected for some little time as the reaction of last week was soon recovered. Seven and one-half cents continues the ruling price.

ANTIMONY.—The market in the East on antimony has been weak; being disappointing as it has not responded to fluctuations as have the other metals. Local price, Chinese, 7½ cents; high-grade English, 8¼ cents.

ALUMINUM.—Aluminum continues dull on the market, with price unchanged at 34 cents.

It Pays to Give Your Customers the Best

Satisfied customers are your best advertisement—as they are ours. Your customers deserve the best that you can give them—in Brass Goods as well as in workmanship.

MUELLER Brass Goods are made with such infinite care and precision that no special fitting is necessary for their installation—thus saving you time that means profit on the job.

MUELLER ADJUSTABLE TRAPS

You can save time by installing **MUELLER** Adjustable Traps—either plain like A 2090 or vented like A 2094, illustrated above. **MUELLER** also makes “S” traps both plain and vented. All with cleanout plugs if desired.

MUELLER Traps, like every **MUELLER** product, are made from carefully selected materials by skilled artisans, who take pride in their work. The name **MUELLER** is a guarantee of excellence.

TORONTO MARKETS

TORONTO, May 28.—In contrast to the general trend of reductions which has recently been prevalent in prices on numerous plumbing and steamfitting supplies is the increase announced in solder. The price of wire solder has advanced $2\frac{1}{2}$ cents per pound while the increase on the other grades is shown at 2 cents.

The copper market also registered a stronger tone, but local prices on sheet copper and tubing remain unchanged at present. White lead shows a firmer tendency and is reported heading towards an increase. Prices on linseed oil advanced another two cents per gallon. Current ingot metal prices also show activity with tin now 2 cents per pound higher and another small increase in lead. Copper has also developed a firm tone.

Copper Market Stronger

Toronto.

With the recent increase in price on the primary copper markets, a corresponding stiffening in sheet copper conditions is evident. Prices, however, are still maintained at previous levels by local dealers, although any marked demand would tend to promote higher quotations. Present prices follow:

BRASS—	
Sheets, base, per lb.	\$0 29
Rods, base, per pound	0 26
Tubing, base, per lb.	0 36
COPPER—	
Rods, base, per pound	0 34
Soft sheets, plain, 16-oz. and heavier, lb. 0	34
Do., plain tinned " " " "	0 40
Do., polished and tinned " " " "	0 45
Tubing	0 39

Solder Prices Advance

Toronto.

A firmer tone continues in lead and zinc products, and the outlook is reported as brighter. A fair quantity of small orders is being received, but no exceptional business is expected. Lead is quoted as very strong on the primary markets, and another advance in price developed. Increases in solder prices have resulted, the new quotation being 2 cents per pound higher than the previous level. Other quotations remain unchanged.

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to discount of 10%.

Do., guaranteed, lb.	0 29
Do., wiping, lb.	0 24
Zinc sheets, per lb.	0 16
Calking lead	0 08

Boiler Prices Unsettled

Toronto.

The range boiler situation appears to be temporarily unsettled, and local quotations are very indefinite. Some cutting was reported to have taken place last week, and due to this keen competition among dealers, boilers are said to have been quoted at much below the current list. Market values indicate that any reductions would bring the prices below cost. The present nominal list is given below. Some lower prices have prevailed in certain quarters, but were not definite nor sustained, and a new list is expected to be issued shortly.

RANGE BOILERS—		Standard	Ex. Heavy
30 gallon	12 50	15 00	
35 gallon	15 00	17 00	
40 gallon	17 00	19 00	
52 gallon	24 00	28 00	
66 gallon	32 00	38 00	
82 gallon	40 00	50 00	
100 gallon	50 00	60 00	
120 gallon	60 00	70 00	

Soil Pipe Remains Steady

Toronto.

No change has been announced in the discounts on soil pipe or fittings, but a slight improvement in demand has been noted in some quarters. Conditions, however, are reported as below normal for this season of the year, and the development of a firmer tone is hoped for. The ruling prices follow:

2 and 3 inch, 10%.	
4 inch, 20%.	
5 and 6 inch, 15%.	
8 inch, add 5 %.	
FITTINGS—	
2 to 6 inch fittings, 40%.	
8 inch fittings, plus 5%.	

Revision Probable in Closets

Toronto.

No change is shown in closet prices, and conditions are also reported to be practically unchanged. Very little new business is in evidence, and the demand continues light. Rumors of some future revision in prices are not yet definite and following are the general prices at present:

Closet, standard outfit	\$32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enamel-iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 80
Do., oak, or oak-vitro tank, with fittings, less seat	16 50
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies	18 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 40

Pipe Quotations Unchanged

Toronto.

Wrought iron and steel pipe are maintained at list No. 51, which recently came into effect. A sorting movement has been in progress and stocks are now said to be in good shape. Improvement in conditions, if any, has been very slight. Sales being irregular, and generally on a small scale.

Radiation Discounts Revised

Toronto.

Prices on radiators are now revised and

the new discounts quoted show approximately a 10 per cent. decrease on the standard radiator. On the 2, 3, 4 and 5 column sizes the discounts now are: Water, 53 per cent. off list, and steam, 54 per cent. off.

In the 1 column size, and hospital radiators of the 2, 3 and 4 column sizes, the discount remains unchanged, being: Water, list less 48 per cent., and steam, less 49 per cent. The discount on wall radiators is also changed from 45 per cent. to 50 per cent. off list. Boilers remain at previous quotations. The revised list is effective from May 20 and is as follows:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5-column sizes, 53% for water and 54% for steam.

Discount on 1-column size, and 2, 3 and 4-column hospital sizes, 48% for water and 49% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.

Oil Prices Advance

Toronto.

Another increase is reported in the price of linseed oil, the new quotations being 87 cents for raw and 90 cents for boiled on 1 to 2 barrel lots. This is an advance of two cents over previous quotations, and uncertainty exists as to what range of prices will prevail here in the near future. Some further increase is looked for in some quarters, but while opinions on this are not general, the average tendency shows expected fluctuations.

Cotton Waste Unchanged

Toronto.

Prices on cotton waste remain unchanged. Some dealers report that owing to a slight increase in demand, market conditions now contain signs of future improvement.

Enamelled Ware Sales Light

Toronto.

Buying in enamelled ware continues to be light and a tendency to cut on some prices has been reported. Quotations generally are, however, adhering to the prices and discount shown below:

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
All Steel Enamel Baths, 4, 4½ or 5 ft., net \$16 25

20 x 30	9 70 9 80 9 90
All above list except lines marked net.	
Discount 20/10% off these prices.	

White Lead Stronger

Toronto.

A very strong feeling is evident on the white lead market, and while quotations on white lead in oil remain unchanged at present, yet the lead situation is apparently heading towards an increase.

St. John, N.B.—H. G. ROGERS, 147 Prince William St. Vancouver, B.C.—CYRIL AMES, Wilton Block
Montreal and Toronto—From Head Office, Guelph, Ont.

Mine production of lead is reported to be relatively small, and a strong summer demand has created a firm tone. The United States prices on white lead show an advance, but this has not yet affected local prices.

Elbow Sales Improve

Toronto.

There is a better movement of conductor elbows and sales are showing some improvement. Quotations remain unchanged and are as follows:

CONDUCTOR ELBOWS—

Plain round or round corrugated—

2 inch	5 25
3 inch	6 00
4 inch	10 50
5 inch	24 00
6 inch	29 00
Discount 55%.	

No Change in Belting

Toronto.

Conditions show a very slight improvement on leather belting and laces, but the market is still below normal, and little immediate improvement can be expected. Dealers are still purchasing according to present requirements only. No changes in prices are anticipated until next fall, when some reductions or readjustment on a lower basis are looked for in some quarters. Future revisions are, however, not generally quoted, as the market in hides is uncertain.

Iron and Steel Bars Unsettled

Toronto.

Business in bar iron and steel has been far from large, but market reports indicate that prices are not yet being cut to any extent, either locally or in foreign markets. Except for current small orders, buyers are still adopting a waiting policy, and the demand is generally very slack.

IRON AND STEEL

Mild steel, 3-16 in. and lighter	\$ 4 50
Do., 1/4 in. and heavier	4 00
Bar iron, 3-16 in. and lighter	4 50

Hoop steel	6 00

Warm Air Furnaces

Toronto.

Dealers report that there has been a noticeable increase in the number of inquiries for warm air furnaces.

Corrugated Sheet Lower

Toronto.

Corrugated sheets remain at the lower quotations shown in the previous current quotations, and the market conditions also continue unchanged, with just a slight tendency towards seasonable improvement. Present price list follows:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	8 50
No. 26 gauge	9 25
No. 24 gauge	13 00
No. 22 gauge	16 00
No. 20 gauge	18 00
No. 18 gauge	24 00
Less 7 1/2%.	

Tube Prices Unchanged

Toronto.

Prices on boiler tubes remain unchanged this week; the new lower quo-

tations recently in effect on lapweld tubing still holding. A slow sorting movement is apparent on both seamless and lapweld. Following are the current quotations:

BOILER TUBES—

	Seamless	Lapweld
1 inch	26 00
1 1/4 inch	27 25
1 1/2 inch	26 25
1 3/4 inch	29 75	25 00

2 1/4 inch	33 00	25 00
2 1/2 inch	41 75	27 00
3 inch	49 25	35 00
3 1/2 inch	63 50	40 00
4 inch	85 00	50 25

Activity in Range Sales

Toronto.

Ranges and stoves of various kinds have recently increased in demand. Chief among these items reported to be selling well at this time are electric ranges, oil stoves, gas ranges, oil stove ovens and similar products.

Compression Prices Hold

Toronto.

The readjustment in quotations on standard compression work, announced in the last issue of Sanitary Engineer, still remains in effect. No direct change in market conditions is apparent and the following prevailing quotations are expected to hold:

Compression work, standard	37%
Fuller work, standard	30%
Bath cocks, compression	29%
Do., Fuller	25%
Flatway stop and waste cocks, standard	40%
Roundaway stop and waste cocks, stand.	34%

Emco Check Valves	10%
Webber Gate Valves	15%
Basin Cocks—	
No. 1 and 1 Puller pattern	30%
Quick opening, No. 3633	37%

Eavestrough Prices Steady

Toronto.

The new discount announced in the last market report on conductor pipe and eavestrough still remains in effect. Except for the development of a more optimistic tone among dealers, there has been no apparent change. Industrial activity is looked for in some quarters with the advent of summer weather, and this is expected to create a slightly better demand for these products. The following are current prices:

TROUGH (Eave)			
O. G., Square Bead and half round. Size in girth:			
	Per 100 ft.		Per 100 ft.

Galvanized Sheets Lower

Toronto.

Galvanized sheets show a lower revision of prices on the 10 1/4-ounce and the 28 gauge. This is taken in some quarters as an indication of the market tendency, but can also be attributed to the keen competition in sheets and plates among dealers. Stocks are reported to be ample for present demands, and little fresh business is evident, the majority of orders being small. Current quotations are as follows:

BLACK SHEETS

14 gauge	5 10	6 10
16 gauge	5 20	6 20
18-20 gauge	5 75	6 75
22-24 gauge	5 80	6 80
26 gauge	5 85	6 85
28 gauge	6 00	7 00

PLATES

10 gauge plate	5 00	6 00
12 gauge	5 05	6 05
14 gauge	5 10	6 10
16 gauge	5 20	6 20

GALVANIZED SHEETS

Premier and Apollo

10 1/4 oz.	8 40	9 40
U.S. 28 gauge	8 00	9 00
U.S. 26 gauge	7 75	8 75
22 and 24 gauge	7 35	8 75
18 and 20 gauge	7 60	8 60
16 gauge	7 45	8 45
12 and 14 gauge	7 40	8 40

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10 1/4 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Waste Prices Unchanged

Toronto.

Prices on scrap remain nominally unchanged. No large amount of trading has been in evidence, but dealers evidently expect business to gradually develop. White metals were slightly more active, but no change in prices resulted.

Non-ferrous wastes have been practically at a standstill, but quotations have remained firm in view of the stronger tone in virgin metals.

Ingot Tin Price Increases

Toronto.

Another advance of two cents per pound in the local price of tin, and a slight increase in the quotation on lead, are the chief features of the ingot metal markets. The price of copper is at present stationary, and it is reported that copper has many admirers, but few buyers are in evidence.

The Stability of Dunham Standards

THE experimenting which determined the principle of the Dunham Radiator Trap ended twenty years ago. Refinements in its appearance have, of course, been made since it was placed on the market, but improvements here and there have only accentuated the ideal principle on which it operates.

The basic principle of the Dunham Radiator Trap is one involving the laws of thermodynamics. The permanency of this principle makes unnecessary any juggling with the purely mechanical side of the trap.

Permanency in mechanical construction is vital also. The best proof we know of is that furnished by 18-year-old Dunham Traps operating to-day, with promise of keeping at it indefinitely. Much of that can be credited to the honest craftsmanship of eighteen years ago—and to this standard we adhere to-day, in what is said to be one of the finest industrial plants in Canada.

In using Dunham Radiator Traps and other Dunham products, you place your confidence in standards that have matured, that will never be sacrificed to commercial expedencies.

Full details of the Dunham Trap, and the other Dunham specialties, will be sent on request.

Jenkins Valves are big factors in good plumbing

FIG. 106

Suitable for 250 lbs. Working Water Pressure
or 175 lbs. Working Steam Pressure

JENKINS VALVES are made of brass, iron or cast steel in types and sizes to meet all requirements of plumbing and heating service.

Now, as for some 57 years, "JENKINS" are specified as the valve equipment for good plumbing. They are dependable and trouble-free under every condition, because each valve in every type is made for maximum service and so tested before it leaves the factory.

Supply houses everywhere carry a complete Jenkins stock.

Plumbing and Heating contractors should write for Catalog No. 8 and descriptive literature on Jenkins Diamond-marked Valves for every plumbing and heating requirement.

BRANCHES IN ALL THE PRINCIPAL COUNTRIES OF THE WORLD

Positive Circulators for Hot Water Heating

These pumps are especially designed for use on hot water heating systems and are built in four sizes to take care of radiation up to 15,000 feet.

They save money in installation owing to the reduced radiation and pipe sizes required. They save money in maintenance of the system because every part of the system is kept at approximately the same temperature as the water in the boiler.

They allow greater flexibility in the placing of pipes and radiators to clear openings. Radiators may be placed above or below the return, at any distance from the boiler and the circulator will ensure circulation through them.

If you are contemplating the installation of a heating system let us show you how to get increased efficiency at a reduced cost.

Are You Ready

for the big fall rush on Furnaces? Building conditions are improving and the demand for heating equipment will undoubtedly be good. Are you prepared to take care of your territory? Have you placed your order for fall requirements? If not, you should do so at once and protect yourself from loss of much business by not being in a position to supply your customers' needs.

Long experience in manufacturing and selling has made us realize that the essential thing to the buyer is genuine service. With the JEWEL line of Pipe or Pipeless Furnace you are assured of giving your customer a real, serviceable and economical heating appliance at a right price. We are in a position to meet your requirements promptly and satisfactorily.

MULTIPLY your sales by placing in use the furnace that has been the most successful line for upwards of fifty years.

You can do it with the Jewel!

Floor and Ceiling Plates

These sell in constantly increasing numbers because they are the most popular plates offered to the Canadian trade.

They are well made of selected, cold-rolled steel, heavily copper-plated, and finished handsomely in nickel-plate. The narrow pattern is especially desirable for twin connection or one pipe work. The sizes available in Toronto stock are $\frac{1}{4}$ " to 4".

Cone Top Tank Bulb

These are exceptionally well made, carefully designed, and a superior quality of rubber is used in them. The top is heavily reinforced; the bottom is soft and pliable. The sizes are $2\frac{1}{2}$ ", $2\frac{5}{8}$ ", $2\frac{3}{4}$ " and 3". Stock is available in Toronto.

B-M Gas Water Heaters are made in Canada

Buy Canadian-made goods
and refuse to buy any
other, even to the extent
of doing without—is our
loyal duty now.

This applies — whether
it's food, luxuries — or
whether it's gas water
heaters.

B-M Heaters are Cana-
dian-made Gas Water
Heaters with a reputation
for high heating-efficiency
and low operating-cost.
Combining range boiler
and heater in one they are
installed with fewer con-
nections, more easily and
at a lower cost to your cus-
tomer.

They save the plumber's
time, at the same time give
him a generous profit. In-
vestigate B-M Heaters.

Who Wants the *Westco* Tankless Water System?

For the information of all Westco dealers and prospective dealers, here is a list of uses to which the Westco Tankless Water System can be put:

Farms and Suburban Homes.

Pressure water supply service, and pumps for general pumping duty.

For City Homes.

Water supply systems where city pressure is inadequate and where soft water is desired.

For Schools.

For distributing drinking water, and sanitary arrangements.

Boiler feed pumps.

Fire protection, etc.

For Hotels.

Booster service pumps.

General water supply service.

Ice water supply.

Fire protection.

Auxiliary heating plant service, etc.

For Group Service.

Groups of summer cottages.

Sub-Divisions.

Rural Communities.

Wherever water supply systems are used for general pumping and fire protection.

For Public and Private Institutions.

Orphanages, Dormitories, Fraternal Homes, Religious Institutions, Gymnasiums, Sanatoriums, Hospitals and all Public Institutions.

The Westco Tankless Water Systems now going on the market have new features that make them a very attractive line to handle.

Write us for full particulars of dealers' discounts, and co-operative plan.

Anthes Syphon

USERS SAY:

"It Works Perfectly"

Read the following letters from farmers who are using the Anthes Syphon for their Sewage Disposal Systems:

Wawanesa, Man.

I like the system first-class. It works so well that I have not seen into the tank for six years, so expect the syphon is working well. It is perfect and no well equipped farm should be without it.

(Signed) S. H. HENDERSON.

Balcarres, Sask.

The septic tank is working O.K. Too much praise cannot be given it if it always works like it has. And the comfort of it cannot be told in words.

(Signed) S. STEPHENS.

WHAT A WOMAN HAS TO SAY:

Holland, Man.

March 24th, 1921

Our Septic Tank and Sewage Disposal System installed last August has given entire satisfaction. All through the winter there has never been any indication of freezing, or any other objectionable feature.

The system has proved a very great comfort, which the whole family appreciates.

(Signed) M. E. (Mrs. W. J.) CHARTERS.

Balcarres, Sask.

April 5th, 1921

.....I had no trouble from freezing. I do not know of any improvements that could be made. Everything works fine.

(Signed) THOS. STEPHENS.

Lenore, Man.,

March 25th, 1921

With regard to septic tank, everything has worked O.K. since it was installed in October, 1918. It has never given trouble from frost and the syphon valve has worked perfectly. The whole system is entirely satisfactory.

(Signed) R. J. BRAY.

Regent, Man.,

March 25th, 1921

I must say that we are more than satisfied; the system works perfectly. I have been speaking well of it to anyone that has asked me. The system has been installed nineteen months.

(Signed) DOUGLAS POTTER.

Oak Lake, Man.,

March 30th, 1921

The installation has given perfect satisfaction. There are no objectionable features.

(Signed) V. M. DUNLIVIE.

There are many farmers who do business with you that still jog along without sanitary plumbing in their homes. Think of the excellent prospect for sales that this means to you, not only for the Anthes Syphon, but also the plumbing fittings that must go with it.

Write us for full details and plans showing how to install the Anthes System.

THE

“Two in One Fitting”

The “Emco” a 332 Stop and Waste Cock has met with universal approval and is proving one of our best sellers.

It possesses five points of superiority as will be readily seen by referring to the diagram.

Note the adjustable bonnet which allows the needle waste valve to be placed in proper position for catching waste water.

Also the needle valve which shuts off independently thus preventing a rush of water out the waste tube when turning water off and on.

We test all our products thoroughly before shipment.

“If it’s an Empire Product you know it’s right.”

TINKER TOM'S TALKS

No. 315

GALVANIZED SECONDS

You may be able to do two things by using our seconds—

1st—Get your average cost down.

2nd—Land those “cheap jobs.”

These Galvanized Seconds are pretty good sheets, too.

They have stains, metal marks, or are shop worn and are about equal to what English Mills call “Corrugating quality.”

The price is away down!

Ask your jobber - he can quote you, or if not, ask us.

TINKER TOM.

Quality

is an essential in the upbuilding of any business with permanence. Quality is one of the three legs of the Tripod of Business. This Tripod is as necessary to the stable support of business as is the Famous Tripod of Life—the heart, lungs and brain—to human existence.

Efficiency

represents the second leg of the business tripod. Without efficiency there can be no success, because efficiency signifies a satisfactory relation between the result obtained and the effort invested. We burn so much coal to obtain a certain horsepower in steam. We invest a given sum of money in business; if the business is efficient it produces at satisfactory return.

Service

is the positive complement of Quality and Efficiency, without which they could no more stand alone than could a three-legged stool with one leg lacking. The amount of our service to society at large is practically the measure of our receipts from the world—especially in business.

EFFICIENCY FACTS versus BIASED OPINION

Made-in-Canada

SPENCER WATER-TUBE STEAM BOILER
Capacities 1,000 to 10,000 sq. ft.

MODERN boiler construction versus antiquated types, IS positively demonstrated in the construction and operation of the SPENCER Self-feeding Boiler.

It is the only type of boiler on the market that will successfully burn all of the various sizes and grades of fuel in a positively smokeless manner, with minimum attention and the greatest economy.

Every owner of a Spencer Boiler is privileged to purchase the lowest priced fuel in his particular district. These facts were conclusively proven during the memorable months in which the fuel rationing ordinance was in vogue, especially in Eastern Canada.

REMEMBER, the name of the Spencer Self-feeding Boiler stands for the best heating service known at this age, either for Hot Water or Steam in any type of building.

A few installations will drive home to you these **EFFICIENCY** facts.

PLANT - PENETANG, ONT.

Fortunes that are made and lost

OIL! Men grow rich in an hour. Stocks rise and fall like meteors. A mighty industry yet in the making. Giant pumps that pull from the very bowels of the earth the juice that drives the tractor or lights the city, or lubricates its mill-wheels, or heats a thousand homes.

To most men, that's the oil country. But to you, this scene has still another meaning. Look past the romance of it all and see the thousands and thousands of miles of just plain pipe!

Think of the elbows, joints, unions, all worked into a compact, serviceable system ready for any strain put upon it.

That system made possible the modern oil-well, a thing for the plumbing and steam-fitting trade to be proud of. The tools that cut those threads

are not the old fashioned, experiments of a decade ago but the same quick-acting sure-working servants that you find in any good workman's kit today.

GTD has built a line of pipe tools that are earning the praises of thousands of users.

The GTD Receding Pipe Threader will make it possible to thread pipe three times as fast—the "Trio" Die Stock will net you in dollars, twice as much work as you have been getting, and the GTD Pipe Wrench will give you longer service and better wear than any tool you ever held in your hand. These are not extravagant claims—but merely plain statements of the facts which we believe every man on a big plumbing job today, ought to know and make use of.

Reliability, Strength and Efficiency

These cardinal factors of success are all present in the Electric Weld Range Boiler. Reliability, because it has been made by the latest and most efficient method of modern science — the Electric Weld Principle. Strength, because in the Electric Weld the seam practically ceases to exist; there is a solid union of metal. Efficiency, because with these advantages, the user is assured of a boiler fully engaged in giving useful service.

THE CANADIAN JOHN WOOD MFG. CO., Limited

Electric Weld

Modern, Efficient Scientific RANGE BOILERS

Standard Size for New Work

The Things Most Folks Know Are The Things That Most Folks Don't Know

By Booster Biny

Would you believe it, our square boiler grate have been shaking half at a time ever since Carlo was a pup.

In spite of which, one day before the way I said to the Big Boss, "let's put an ad. in the trade papers about our grates shaking half at a time, and so shaking half again as easy.

Let's tell them how they can run half the boiler or all of it just as the weather requires.

Let's tell them it's like having two boilers for the price of one.

A little boiler, always right there inside the big one.

"All nonsense," says the Boss, "everybody knows that."

However, it let me carry out my hunch. And will you believe it, we got well nigh a bushel basket of inquiries, about

our "two-in-one-boiler" as a lot of them called it.

Why—man dear, fellows like Harry Biddle and Charlie Long and Will Pender wrote in wanting to know particulars.

All of which reminded me of the chap with a wheel-barrow, who just to be smart, I asked if he could run it backward. Replied he "didn't know, as so far he was always going the other way."

Which furthermore, only goes to prove that: the things most folks know are the things that most folks don't know. Next time am going to tell you about something that's for sale, that has 2 stories and a basement.

The Pilot Superior Pipeless Furnace

And The Proof

Read What These Impartial Third Parties Say :

The Hall Zryd Foundry Co. Ltd.,
Hespeler, Ont.

Dear Sirs:—

It gives me much pleasure to recommend the Pilot Superior Pipeless Furnace No. 840, installed by Mr. J. C. Tweddle of Fergus.

We had the furnace in our 8 roomed house all last winter and we never had any heating apparatus that gave us the same satisfaction on the small amount of fuel as this furnace.

We would recommend the Pilot Superior Pipeless Furnace as the one and only furnace to give abundance of heat on a minimum of fuel.

Yours truly,

C. Cunningham,
R. R. 3, Fergus.

Elora, Ont.

April 6th, 1921

The Hall Zryd Foundry Co. Ltd.,
Hespeler, Ont.

Dear Sirs:—

The Pilot Superior Pipeless Furnace installed in our home last fall has proven satisfactory.

The heat was evenly distributed throughout the house while the cellar was absolutely cool.

I can recommend the Pipeless Furnace for heating the home.

Yours truly,

Lewis Cameron,

Stationary Engineer.

Annual Convention of Canadian Society

Parent Body of Domestic Sanitary and Heating Engineers Holds 24th Annual Convention in Quebec City—Advantage of Uniform Prices Emphasized—Development of Trade Extension in Canada—Manufacturers and Wholesalers Confer with Delegates

(By Sanitary Engineer Staff Correspondent)

In the council chamber of the City Hall at Quebec, the 24th annual convention of the Canadian Society of Domestic Sanitary and Heating Engineers was formally opened with about 55 members present. Among those attending were:—J. E. Walsh, Montreal; T. Latourelle, Montreal; Jos. Griffin, Montreal; J. F. Murnaghan, Charlottetown; J. E. Matte, Quebec; J. C. Huot, Quebec; F. Brosseau, Quebec; A. Noel, Montreal; J. B. Pettigrew, Toronto; F. Gingras, Quebec; J. L. Letart, Quebec; U. F. Drouin, Quebec; E. F. Wright, Toronto; W. J. Cracknell, Toronto; R. I. Hearn, Toronto; S. R. Byrne, Toronto; P. Paradis, Quebec; W. G. Berland, Montreal; D. A. Bethume, Montreal; H. Mahoney, Guelph; C. Baker, Prescott; G. F. Frankland, Toronto; T. J. Minnes, Brantford; E. G. Brosseau, Quebec; J. A. R. Seguin, St. Hyacinthe; John Watson, Montreal; C. H. Chapman, Toronto; K. B. Allison, Toronto; Stanton Jennings, Toronto; T. Bissonette, Levis; James Buchan, Montreal; M. Germain, St. Romuald; J. D. Germain, Three Rivers; A. Charrette, Montreal; H. Lavigne, Montreal; W. H. Hornsey, Galt; W. H. Pinkett, Galt; D. Brown, Galt; T. M. Maxwell, Toronto; D. K. Trotter, Montreal; H. C. Weinraub, Toronto; P. C. Ogilvie, Montreal; Jos. A. Francoeur, Montreal.

His Worship, Jos. O. Samson, Mayor of the city of Quebec, read an address of welcome. The Mayor pointed out that he realized the importance of sanitary plumbing, and he sincerely assured the delegates that recommendations as a result of their deliberations would receive the serious consideration of the City Council. He stated that Quebec was full of unique buildings which must be preserved, and in order to conserve them they must be modernized according to needs of sanitary science. The city too was growing fast and for the safety of the public by-laws must be passed and put into force with care so that in future all buildings put up would have the most modern improvement.

Following the Mayor's address, business was proceeded with and the following committees appointed:

Credential Committee—G. F. Frank-

land, Toronto; U. F. Drouin, Quebec; D. K. Trotter, Montreal.

Audit Committee—J. Watson, Montreal; F. Gingras, Quebec; R. Hearn, Toronto.

Resolution Committee—E. G. Brosseau, Quebec; Major D. Bethume, Montreal; H. Weinraub, Toronto; T. J. Minnes, Brantford; J. C. Huot, Quebec.

Nominating Committee—P. C. Ogilvie, Montreal; T. Maxwell, Toronto; E. Matte, Quebec; H. Lavigneur, Montreal; J. Cracknell, Toronto.

The conference with manufacturers and wholesalers, held in the afternoon is outlined fully elsewhere in this issue.

On Wednesday morning the new officers for the ensuing year were elected, (as shown elsewhere.)

Many Offices go to the East

It will be observed from the names of the officers for 1921-1922 that the delegates from the East will fill practically all of the important posts

TELLES LATOURELLE

Montreal, elected president of the Canadian Society D. S. & H. E. for 1921-22 at the convention held in Quebec

this year. The men that have been selected are capable and experienced and much should be accomplished by them that will promote the welfare of the Society during the coming year.

Motion to Confine Delegates to Convention

Considerable discussion arose over a motion submitted by President Mahoney to confine the number of delegates attending the annual convention of the Canadian Society to the officers and Provincial Presidents, the expenses of the latter to be borne by the Provincial Associations. This idea had the general approval of the delegates but the Montreal group thought that the Provincial Vice Presidents should attend as well and that all expenses should be borne by the Can. Society. This would necessitate increasing the per capita tax from \$1 to \$3 or \$4 and the Toronto group felt the members would not pay the increase. The Montreal group felt different. The original motion was put to a vote and lost so no change is made.

In the afternoon at 4.30 p.m. the delegates were taken by special car to visit St. Anne de Beaupre and later to the Kent House at Montmorency Falls, where an informal banquet was tendered to the members by the manufacturers and wholesalers.

At the banquet T. J. Minnes spoke for a few minutes on, "The Best Means of Raising the Efficiency of the Industry." Mr. Minnes was to have taken this subject up on Tuesday evening but it was deemed advisable to defer his address until the evening of the banquet when more would have an opportunity to hear the address.

Mr. Minnes had very little time at his disposal at the banquet for his remarks owing to the necessity of leaving early, but he gave some very valuable points on Trade Extension which were well received.

"Trade Extension," said Mr. Minnes, "is the biggest question in the world. The day has come when plumbers cannot sit in their offices and wait for business to come to them. Anybody can make such sales. Plumbers should go out and show consumers that they need plumbing

goods." The speaker stated that both the craft and the wholesalers listen eagerly to ideas but fall down in acting upon them.

Value of Trade Papers

He asked the wholesalers and manufacturers how many of them could point to a particular article they had read in the trade papers recently. He strongly urged the craft to give more time to reading their trade papers and stated that it was just as important for them to read their trade papers as it was for their children to go to school.

The speaker advised the craft to avail themselves of a cost service. Its use would save them a lot of time and money. He also pointed out the value of a retail cost service. "In any city where such a service is not in use you will get different prices from almost every dealer." The speaker asked what effect this had on the public and stated that the only way to get the confidence of the public was to have uniform prices.

New Secretary

A change effected by the election of officers was that D. K. Trotter, Montreal succeeds G. F. Frankland, Toronto, as Secretary of the Society.

President Mahoney in his closing remarks at the convention thanked the members for their support and hoped that the new officers would enjoy their work as much as he had his.

Following this a vote of thanks was given to the trade press for taking notes at the convention.

In looking back over the three days the delegates convened and enjoyed the hospitality of the Quebec members it is little to say that the delegates will not forget the kindness and good fellowship extended so heartily to them.

P. C. OGILVIE

Montreal, elected chairman of the Apprenticeship Committee, Canadian Society D. S. & H. E.

SUGGEST NEW PLAN OF ORGANIZATION

Lack of Funds Due to Insufficient Per Capita Tax Hinders Organization Work—Work of Trade Newspapers is Appreciated

Report of President Harry Mahoney to 24th Annual Convention Canadian Society, D. S. & H. E. in Quebec City.

IN presenting my report at this twenty-fourth Annual Convention of the Canadian Society of Domestic Sanitary & Heating Engineers, I feel that it will not differ much from those of my predecessors who, like myself, learned from study and experience that it was impossible to accomplish an end without the means, by which I mean that the per capita tax now received is not sufficient to permit of any organization work whatever.

I appreciate and thank you, gentlemen, for the honour you conferred upon me in electing me as your President, but regret that the lack of means above mentioned, prevented anything being done to further the work of our Society. This is not a new thing as your worthy President of last year

HARRY MAHONEY

Que'ph, Ont., retiring president of Canadian Society D. S. & H. E.

dwelt at considerable length on the same question.

It is with pleasure that I mention the good work done by the Sanitary Engineer, Plumbers' Trade Journal and Sanitary and Heating Journal, in showing through their columns, the benefits which might be received by being members of this Society, you as a Society, and your President would be lacking in appreciation if we did not make particular mention of the valuable work done by our own Secretary Frankland. He is our main stay.

Notwithstanding the seeming failure to make this Dominion Organization a success, I am still firm in the opinion that one should exist in the future, but with amended constitution

and by-laws; may I be allowed to offer a few suggestions along this line. First, the Presidents of the several provinces to constitute a parent body, they to elect their own president and secretary from among their number, preferably from the province in which the next Convention shall be held, each Province to pay the expenses of their President delegate to the Canadian Society, the expense of the secretary to be paid by the parent body. The Canadian Society to hold its annual session at the same time as the Provincial Convention is being held. The only matter to be dealt with by the Canadian body to be questions of Dominion character or any others which may be referred to it by the Provinces.

I am indebted to the Ontario Society for much valuable information obtained at Evansville, Indiana, last December, having been sent with the Toronto delegation to study Trade Extension in the plumbing and Heating industries.

The Ontario Convention held at Toronto, on April 7th of this year, with the valuable assistance of several of the manufacturers and jobbers, perfected a Trade Extension organization, with Mr. T. J. Minnes, of Brantford, President, and Mr. Larry Anthes, of the Anthes Foundry Co., Toronto, as Secretary-Treasurer. On Tuesday evening at 8 p.m., Mr. Minnes will address the convention on this most important question.

The programme shows that there will be considerable business to transact in the three days and many reports of importance to discuss. I would therefore ask that the members be on hand so we can start business promptly.

I trust that this convention meeting at Quebec City will be a success and will materially assist in making our Canadian Society greater.

(Sgd) Harry Mahoney,

President.

PUBLISH REPORTS IN FRENCH

Reports in French of the formation of the Quebec Provincial Society of Domestic Sanitary and Heating Engineers, and of the Quebec Vice-President to the 24th annual convention held in Quebec, will be run in a later issue of Sanitary Engineer for the accommodation of the French speaking sanitary and heating engineers who will be interested in these reports.

Sanitary Engineer planned to run the reports referred in French in this issue but the present printing difficulties made it impossible.

AS Vice-President of the Ontario Society, I beg leave to report as follows for the year 1920-1921.

Throughout the past year our Society has enjoyed prosperity throughout the Province, our membership not increasing to any great extent, but pleased to say that we have at least held our own, and, as I consider, gratifying when taking into consideration the quiet period which we are passing through. I will not burden you with any figures or statistics as, no doubt, your secretary will include these in his report.

I wish to state that the Ontario Society held their Convention on April 7th and 8th in Toronto which was educating and successful from every standpoint. At this Convention my term had expired as president of the Ontario Society, and therefore, will at this Convention automatically relinquish the office as Ontario Vice-President of the Canadian Society, which office I have felt it an honor to fulfill, and which was always my endeavor to the extent of my ability and time at my disposal.

Jobber Required Education.

Our efforts in the past year have been practically concentrated on the Trade Extension movement, in the way of educating the plumber, manufacturer and jobber. We have found that the latter requires considerable education as well as the plumber. However, I am pleased to report that at the Ontario Convention, the Canadian Trade Extension Bureau was organized with the following officers elected by a joint meeting of manufacturers, wholesalers and operating plumbers.

T. J. Minnes, Brantford, President.

G. C. Crawford, manager of Standard Sanitary Mfg. Co., Vice-Pres.

J. H. Cummings, plumber, Welland, 2nd Vice-Pres.

R. E. Belyea, plumber, Toronto, 3rd Vice-Pres.

L. L. Anthes, soil pipe manufacturer, Toronto, Treasurer.

G. F. Frankland, Toronto, Secretary.

Since the organization there has been several meetings of the directors to talk over ways and means of raising the necessary funds and the appointment of a managing secretary. We have been successful to date in raising the sum of \$4,575.00, but have not

quite enough money yet, as we wish to start with at least \$7,500.00. There are still a few manufacturers who have not made a contribution as yet, but we hope and expect they will after due consideration as these gentlemen are waiting for a policy to be announced, their ideas being more or less in diverse with our policy. Or in other words, some of the manufacturers have an idea that what is required

at this time is a campaign of advertising with the plumbers supporting this propaganda. However, those who are conversant with the plumbing trade and Trade Extension ideas believe that this cannot be successfully performed until the plumbing trade is educated to this point. That is really one of the main planks in the Trade Extension platform. We hope at some date in the near future to be able to announce that the Trade Extension is in actual operation.

T. J. MINNES

Brantford, Ontario, elected vice-president of Canadian Society D. S. & H. E. for 1921-22.

Late in April we had a conference of plumbing operators in Hamilton to consider rates of wages, hours of labour, and agreements pending, this being the second conference of its kind held in Ontario, and which we have found to be very successful. I am of the opinion that if this idea was carried out in all the provinces that a clearer understanding would exist between employee and employer; also a better understanding amongst the employers themselves.

The above report covers the main activities of the writer while Ontario Vice-President of your Society.

Thanking you for the honour bestowed upon me, and best wishes for a successful Convention.

Thos. J. Minnes,
Ontario Vice-President.

DIFFICULTIES IN NEW BRUNSWICK SOCIETY

Membership List Reduced Due to Unscrupulous Action of Jobbers' Representatives in Selling Direct to Consumer or Contractor

Report of G. S. Dorman, New Brunswick Vice President to 24th Annual Convention Canadian Society D. S. & H. E., Quebec City.

I REGRET that our membership list has been reduced by the loss of six members due to the unscrupulous actions of representatives of certain jobbing houses in selling direct to the consumer or contractor.

We have tried to keep these jobbing houses in line, but it is next to impossible. They will make all kinds of promises only to break same at the first opportunity, with the excuse that if they did not sell these parties some other house would.

The latest move of our contractors here is to get some master plumber who is not connected with the Association to order the goods and ship them to the point that they are to be installed, paying him cash and allowing him a small commission on the sale.

Of course this class of contractor or consumer feel that they have won a great victory in blocking the plumbers from securing legitimate trade which would enable them to continue business and pay their bills.

The New Brunswick Society is making an effort to reclaim the lost members and also those that are not or ever have been connected with the Association, and we feel that they would be easily won over if they were not interfered with or influenced by representatives of jobbing houses who tell them that the Association will not assist or benefit them in any way as they can buy just as cheap and get as good terms outside the Association as in. I do not mean to infer that all representatives do this as the Association has some good supporters representing the trade.

I have no doubt that other Provinces are having the same trouble as New Brunswick along these lines.

I regret that New Brunswick will not have a representative at the Dominion Convention at Quebec this year but if I can possibly make arrangements I will endeavor to be present in my capacity as Provincial Vice President.

Our present membership is 31.

GEO. S. DORMAN,
Vice Pres. for New Brunswick

CREATING UNIFORM SANITARY LAWS

Problem in Legislation is to Establish Uniform Legislation Covering All Conditions in City and Country—Suggest Get-together Movement to Curtail Friction Between Employer and Employees.

(Report of J. A. Francoeur, Montreal, Chairman, Legislative Committee before convention of Canadian Society D. S. & H. E., in Quebec)

To the Officers and Members, Canadian Society of Domestic Sanitary and Heating Engineers.

"You, no doubt, know that the present regulations for Sanitation and Heating are a draw back to the Sanitary Engineers, if you consider that cities surrounding big centres have altogether different Sanitary regulations.

As President of the Legislative Committee it was my duty to take advantage of my position so as to create uniform Legislation concerning the Sanitary and Heating by-laws of one Province.

It is a pleasure for me to draw your attention to the fact that the city of Montreal has already very seriously considered during this year, together with her neighbors, a general uniform Sanitary Regulation. Unfortunately, up to now, conditions have not changed, but I firmly believe that, before long this new by-law will be put into force.

You all remember the troubles that have existed between employers and

employees during the past year, and I dare say that it is now time for us to get down to work, and not only think, but put a little action with it, so that we will not come across in the future, what we have been running up against in the past.

Courses in Technical Schools

I have had the opportunity on different occasions, of meeting men who were interested in Sanitation & Heating as well as in general Construction, and all share my opinion, that we should begin a get-together movement and obtain support from the Provincial Legislatures, so that Sanitary and Heating Courses be taught in our Technical Schools.

The two propositions mentioned above are not, for many of you, new ones, as you have had time and again the opportunity of finding the weak spots of to-day's by-laws.

I would therefore suggest that they be debated before an open meeting of the present Convention.

(Sgd) J. A. Francoeur
Chairman Legislative Committee

Should Remedy Marketing of Prices

Deplorable and Detrimental to Have to Give Prices to General Contractors Who Tender for Total Equipment of Building—Relations With Supply Houses—Good Relations with Catholic Syndicate—Big Growth Expected in Quebec

Report of Vice-President Telles Latourelle to 24th Annual Convention Canadian Society D. S. & H. E., Quebec City.

AS Vice-President of the C. S. of D. S. and Heating Engineers,

I take much pleasure in presenting a report to this 24th annual convention held in the City of Quebec.

It has come to my notice that the year 1920 was remarkable for several reasons, business in general was favorable to most of the members of the society, work being plentiful in all districts and above all one good move I wish to bring to your notice is the new organization of plumbing and steamfitting tradesmen, and also several improvements brought to the execution of plumbing, steamfitting and ventilation industries.

I think it is my duty to mention at this 24th convention that the Province of Quebec has seriously accomplished good work in the way of organization and the credit is due principally to the Quebec members who have taken a lead in this movement, and I hope that within three months the Province of Quebec will be far ahead of the Province of Ontario which has given us a good example. But it must be admitted that the Province of Quebec has somewhat branched out in the manner of forming an organization with their workmen, because for several years the S. of D. H. Engr., has

been misled by the workmen's unions; therefore, it was high time to put a stop to such misunderstanding, and we have refused to recognize individual unions, but now find it opportune to give each workman his individual merits according to the fulfillment of his work towards his employer, and above all, the maintenance of open shop.

The Catholic Syndicate.

The year 1920 has also furnished us with a new organization of plumbers and steamfitters known under the name of the Catholic Syndicate of Plumbers and Steamfitters. This Syndicate has some very good principles and advantages to its credit. Numerous meetings between the Syndicate have resulted in an agreement which was made for 12 months.

This first agreement expired on the 1st of May last and the same agreement was renewed for another 12 months for the ensuing year, and beside this agreement or contract, the Master Plumbers' Ass'n., has the privilege of recognizing any other Syndicate or National Union providing that the conditions or by-laws are the same or similar to these now in force with the Catholic Syndicate.

The name of the Catholic Syndicate is only a distinctive title, having in mind good understanding and friendship between employers and employees. The Syndicate is administered by experienced men who know how to handle groups of workmen and these men at the head of the Syndicate apply the correct manner of making and executing their agreement so as to be appreciated by the employers; no preference is shown whatsoever, as capable and experienced non-catholic members of the Syndicate are all welcome the same as any other confreres.

I am pleased to say that the by-laws governing the Syndicate have been sanctioned and approved by non-Catholic authorities. I quote here a few words from Sir William Price, President of the Price Bros. Co., Ltd, who has ordered the following notice to be put in the lumber mills at Jonquiere and Kenogami. "The Price Brothers Co., Ltd., will not tolerate to be dictated to by any one belonging to any international union, and such member will not be admitted or given any work in the mills. The Canadians can very well manage their own unions or organization without having to refer to outsiders to settle affairs between employers and employees, etc., etc." This is enough to prove that we have made progress in supporting a syndicate having strictly Canadian ideas.

Business with General Contractors

It is sometimes deplorable and detrimental to have to give information

and prices to general contractors who tender for the total equipment of a building. I wish to bring to your notice that prices for heating and plumbing which are given to a general contractor are not always kept a secret. It is left entirely in the hands of the one who secures the general contract to deal at his own discretion, to cut prices at liberty so as to make as much as possible out of the subcontractors; sometimes such a contract is almost auctioned out like second-hand furniture, and more often the work of installing plumbing and heating is allotted to one who has never even tried to make a price, but by simply saying Mr. So and So's price is so much, can you meet same? and that ends it.

There should be some remedy that this society can impose to put an end to this marketing of prices. A committee can be appointed to interview the association of Architects and see if some improvement can be arrived at so that plumbing and heating contracts would receive fair play.

Relation with Supply Houses.

In connection with this subject I would say that a great deal has been said, written, and discussed regarding the manner which some supply houses have of protecting the plumbing trade.

I was told by an official of a large supply house, also a manufacturer of a very extensive plant, that they like to do things their own way. That is all correct, but the way to do things must not be injurious to the plumbing and steamfitting community, and I say that a supply house who sells its products to every and anybody is not entitled to the patronage of any member of this association. I strongly advise that when a representative calls for your support he should be always received courteously, but no business transaction should be entertained until the rights of the legitimate plumber are respected, and I am sure that if you will adhere to this ruling you will, within six months, notice that your clients will come back to you saying that they are sorry for being away so long from the legitimate and upright plumbing establishment.

I hope I have not been personal in my remarks, what I said was in good faith and without prejudice to any one.

Telles Latourelle,
Vice-President.

J. FRANCOEUR

Montreal, Chairman of the Committee on Legislation, who was re-elected for 1921-22.

MAKE SOCIETY AN EXECUTIVE BODY

Secretary Frankland Gives Notice of Motion to Change Form of Canadian Society—Progress of Trade Extension.

Report of Secretary G. Frankland, to 24th Annual Convention Canadian Society, D. S. & H. E., in Quebec City

I AM again privileged to place before you my stewardship of the responsibilities and duties be- holden to my handling of the position you selected me to last Convention, and I trust this summing up will merit the trust that you reposed in me.

One of the most essential items to my mind, that was considered at the last Convention, for the general welfare of our Society, was the question of so arranging the affairs of the Society that it functions as an executive body, and thus permit it to carry out a wider scope of usefulness, inasmuch as it could more effectually touch the numerous provincial associations, and bring about a closer relationship and co-ordination of the different Provincial Associations' activities than exists at present.

I covered this matter at length in my past year's report, and will refrain from again including my ideas in this report, but will insert the Notice of Motion, which was the outcome of the discussion last year, on this subject, which will bring out the desired particulars in debate.

That Clause V of the Constitution be amended to read: "That the Canadian Society of Domestic Sanitary and Heating Engineers shall consist of a President, Vice-President and Secretary-Treasurer, and the President of Provincial Associations. Any clause that may be affected by the change in Clause V be amended to conform with the meaning of this resolution."

As your delegate I attended the Annual Convention of the National Association of Master Plumbers held in Pittsburg, Pa., held in June, 1920, and was accorded the utmost courtesy by the officers and members, being granted the privileges of the entire convention. I also attended conferences of the "National Secretaries' Bureau," which is composed of all local and State Secretaries throughout the United States. This Bureau during the past year has had committees working on the many features that enter into the activities of Trade Association such as ours and will submit report at this year's National Convention, which takes place in New Orleans on the same days as we are in Convention, and I would suggest that a telegram of good will and best wishes be dispatched to your brother craftsmen of the United States from this Convention extending our fraternal greetings.

As a member of the Secretaries' National Conference I have been favoured from time to time with particulars as compiled and issued by the Conference, in respect to the Trade Agreements and Association activities throughout the States.

The approval of the American Plan of Employment, or in other words, Open Shop, was one of the outstanding features of the Pittsburg Convention.

The approval of the National Trade Extension Bureau at Evansville, to the extent of a Two Dollar per Capita by the National Master Plumbers' Association, and the increase of their membership fees to Five Dollars per member, gives some idea of the need for finance to successfully operate an Association of this kind.

The benefits being derived by our American craftsmen from their National Trade Extension Bureau at Evansville have proved that the methods of trade improvement carried out by this Bureau are correct and what was needed by our industry.

Trade Extension

During the past year, a party of twelve, including our President and Provincial Vice-President, T. J. Minnes, with others from Toronto and throughout Ontario, visited the Bureau at Evansville, being most cordially received and enlightened as to the activities of the Bureau by its most able and congenial manager, Mr. Wm. J. Woolley, and his entire staff. To this visit and the untiring efforts of Mr. Thos. Minnes, we owe the inauguration of a Canadian Trade Extension Bureau, and I am sure President Minnes of the Canadian Bureau will announce at this Convention the consummation of his efforts, in respect to the formation of the Canadian Trade Extension Bureau.

I have been favoured with reports from Alberta, New Brunswick, Ontario, Prince Edward Island, Saskatchewan and Quebec, that shows the spirit of Association will not down, as these Provinces continue to carry on, but for Nova Scotia, Manitoba and British Columbia I regret to have to report no progress.

I wish to make mention of an address that was given by our Provincial Vice President for Quebec, Mr. E. J. Brousseau, on Sanitary Plumbing, before the members of his local Rotary Club, and which appeared in the columns of trade papers during the past year. To such efforts as this of our members we owe many thanks, because in no way that I know of can we do as much for our calling as by placing the facts pertaining to the importance that surrounds our industry, before our fellow citizens, in such a credible manner, as this subject was dealt with.

I also wish to mention such stalwarts as George Dorman, of Moncton, who is ever ready to do his bit. Robert J. Priestly, of Calgary, who is again doing duty in Alberta, and Mr. J. F. Murnaghan, of Charlottetown, Prince Edward Island, who again leads the Island Society. In centres such as Montreal and Toronto, we are blessed with some real supporters, who are ever ready and willing to carry on, but wish to particularly mention one of my own City, and that Gentleman is our Grand and Only John Wright. To us

in Toronto, and I must include Ontario, he has become our Rock of Gibraltar, and his efforts on behalf of our Craft will assure for all time a monument and guide for those who follow on.

To one and all I wish to express my hearty thanks, and extend to our entire Craft my sincere wish for their prosperity and good health.

G. F. Frankland,
Secretary.

Communication from British Columbia
Secretary Frankland read the following communications from the secretaries of the British Columbia and Manitoba Associations:

Vancouver, B.C.,
May 17th, 1921.

"We are still of the same opinion, and would very much like to avail ourselves of the opportunity to become members of the Canadian Society, but owing to trade conditions being far from what they should be and the Association being taxed as much as is deemed possible, we are not in a position to either entertain an affiliation or sending anyone as delegate to your coming Annual Convention.

Wishing, however, the Convention the success it deserves, and thanking you for your letter.

R. G. Hargreaves,
Secretary,

Winnipeg, Can.

I regret to say that the Winnipeg Society of Sanitary Heating Engineers is practically out of existence. I had the honor of being president last year, but we have not elected new officers for the coming year. In fact, there was not sufficient present at our yearly meeting to form a quorum, and as far as attending the annual convention to be held in Quebec on June 6th, 7th and 8th, I am sure it will be impossible for the association to send a delegate. Personally, I would very much like to be present to mix with and renew acquaintances among the members.

Chas. D. Kirk.

OFFICERS OF QUEBEC PROVINCIAL SOCIETY D. S. & H. E. 1921-22

President, E. Matte, Quebec

Vice-President, J. C. Huot, Quebec

Secretary, J. L. Letart, Quebec
Chairmen of Committees

Essay, M. Gervais, St. Remond

Auditors, Messrs. Caron, Delorme, Landreville.

ORGANIZING WESTERN CANADA PLUMBERS

**Suggests Canadian Society be Executive Body
Only Dealing with National Problems and Inter-
provincial Bodies to Deal with Local Questions**

**Report of R. J. Priestly, Alberta Provincial Vice-President
to Convention of Canadian Society D. S. & H. E., Quebec**

To the Officers and Members of the Canadian Society of Domestic Sanitary and Heating Engineers.

I beg leave to submit my report as the Alberta Vice President. The Alberta Provincial Association has a membership of fifty-three, thirteen of whom are new members enrolled during the past year. Edmonton, Medicine Hat, Lethbridge and Calgary have local associations who are affiliated with the Provincial organization, as well as individual members from different part of the Province. We issue a retail Price Book to the members at a small fee per month, which is kept up to date by the Provincial Association.

The Province is divided into districts for organization purposes and a chairman appointed for each district, whose duty it is to obtain new members for the Association, in this way we hope to increase our membership materially.

Two years ago when we re-organized, the need of a Provincial Plumbing by-law was felt in order to protect the health of the rural population. At that time a Committee was appointed to wait on the Provincial Health Department. This Committee was later received by the Provincial Minister of Health in a very cordial manner and handed over to the Provincial Sanitary Engineer, and with his co-operation new by-laws were drafted and came into effect last October. While we were not successful in getting all we went after, we appreciate what we did get and believe that we will be able to get the remainder in the near future. The City of Calgary I believe is the only City which has an examination for Steam Fitters, and this examination has to be taken by both Master and Journeymen.

Advocate Separate Letting of Plumbing Contracts

For the past two years we have been advocating the letting of Plumbing and Heating Contracts separate from the General Contract but without success. We are now advocating that when submitting his tender the General Contractor state who his sub-contractor is to be, (this to stop peddling the sub-contractors price after the job has been let) and that when the General Contractor submits his estimate for payment, he state in such estimate the amount due on the sub-contract, for Plumbing and Heating, and the payment be made direct to the Plumbing and Heating Contractor, this of course insuring the sub-contractor in getting his payment when due.

To Organize The West

At our Convention held in March last, our Provincial Association went on record as being in favor of organizing an Inter-Provincial Association at the same time retaining our affiliation with the Dominion Association. The Inter-Provincial Association we propose organizing will be composed of the four Western Provinces. We feel that we are too far away from the parent body to get the desired results that could be obtained through an Inter-Provincial Association and at the present we are working along those lines. While we are working harmoniously with the wholesalers in Alberta, sometimes we have wholesalers from the other Provinces causing a little trouble, for instance; just recently a wholesaler from the East of us sent a catalogue broadcast through the Province giving the quantities of material required for a five fixture job with the wholesale prices attached. This you can readily see could be handled by an Inter-Provincial Association much better than by the Dominion Association. Then again we have the question of making plans, taking off quantities of material, and the sending of discount sheets to people who should not have them. My personal opinion is, if I may be permitted to express one, that the Dominion Association be an Executive body only and should be used for Dominion legislation only as its chief Officers will always be in the East near the seat of the Dominion Parliament. Organize Inter-Provincial Associations whose Officers would make up the Dominion Executive Body. You can quite readily understand the expense entailed to have delegates from the extreme East and West attend Conventions, in addition to their per Capita Tax is prohibitive while the expense of an Executive Officer could be borne by his Inter-Provincial Association, as in the West divided between the four Provinces and therefore would not be too heavy on any one particular district. To create interest among the members, they must know what is being done between Conventions as well as at them and how the legislation adopted at them is carried out. We read a lot about Trade Extension in the proceedings of your last Convention but up to the present we have neither seen nor heard of results through the Dominion Association.

Trusting you will have a very successful meeting and that your efforts will be of benefit to the Craft throughout the Dominion.

R. J. PRIESTLY, Calgary

Alberta Provincial Vice-Pres.

Ventilation Now

Principal Feature

The Canadian Society of Domestic Sanitary and Heating Engineers.

"Your Ventilation Committee beg to report: That during the past year this branch of your business has made considerable progress and is now recognized as one of the principal features in all good buildings.

We would draw to your attention the unsanitary condition of many dwelling houses and especially the class of apartment house which has come into vogue of late years; where the bath, water closet, basin and kitchen are one, made out of a clothes closet with no attempt at ventilation. We would recommend that this matter be given your careful consideration. On behalf of the Ventilation Committee

D. A. BETHUME,

Chairman."

MAJOR D. A. BETHUME

Montreal, formerly chairman of the Ventilation Committee who was elect-chairman of the Heating committee for 1921-22.

NEW FIRMS

Mr. C. H. Watson a war - who previous to enlistment plumbing business in S. and repairs business has been serious!

"The Inefficiency of Wholesalers"

No Definite Plan Evident in the Plumbing Industry—Comparative Ability of Plumber and Supply House to Create Business—Wide Field of Potential Business

Report of H. A. Weinraub, Chairman Essay Committee to 24th Convention Canadian Society of D. S. & H. E. in Quebec City.

THE inefficiency of the wholesalers is making the Master Plumbers and Fitters unsuccessful business men. The Master Plumber and Fitter of to-day, and those to come in the future, will not become efficient until the root of inefficiency has been entirely removed, and by that I mean that all wholesalers dealing in plumbing and heating supplies must first become proficient and then the Master Plumber and Fitter will automatically fall in line. The fundamental principles of all successful business is the carrying out of a sound policy laid down by those in control of it based on a definite plan. In our industry there seems to be no such policy, and efficiency is therefore an unknown word in the Plumbing and Heating industry. Let us illustrate this by an example: The Architect plans the building, the Builder follows that plan, and if the plan is good the building is good, whereas if the plan is poor the foundation is weak, the structure faulty and the owner dissatisfied. Who is to blame, but the Architect who planned wrongly.

Wholesaler is the Architect

In the plumbing and heating industry the wholesaler is the Architect, the Master Plumber and Fitter the builder and the public the owner. The public naturally pay for all the inefficiency and none of us can escape shouldering our share of the condemnation arising from this inefficiency which has its root with the wholesaler. In making this statement I am not prompted by any antagonism towards any branch of our industry, nor do I hold brief for another branch, but as you have elected me to the Chairmanship of the Essay Committee, I feel it my unbounded duty to call to your attention the weakness which exists in the chain of marketing plumbing and heating supplies. Let me submit some questions on this matter and might I ask the serious consideration at this time of all those present so that sane, definite answers may be the immediate result.

1. What demand is created by the supply interests for plumbing and heating material?
2. Does the Master Plumber and Fitter create any demand for plumbing and heating goods?
3. Is the neat display of goods in a plumbing and heating store of advantage to the supplying interests?
4. What policy have the supply interests adopted to take care of question 3?

5. Should the wholesaler deliver material in quantities of less than \$25.00 invoice value?

6. Should the wholesaler make a delivery charge on quantities of less than \$25.00 invoice value?

7. Should a Master Plumber and Fitter carry a staple line of stock?

8. Should a Master Plumber and Fitter have to make pick-ups of small jobbing material from wholesalers and charge the customer for time lost in procuring same?

9. Should a Master Plumber do business from his home in business hours?

10. Should a Master Plumber do business from a store?

11. Should a Plumber or Fitter receive credit when he starts in business, minus capital?

12. Does a Plumber or Fitter doing business from a residence without capital create business for the wholesaler?

16. Is it the duty of the supply interests to give their moral and financial support to a plan whereby the Master Plumber and Fitter is trained to the possibilities of increasing the volume of plumbing and Heating Sales?

17. Should there be a preferential for some Master Plumbers and Fitters or should buying be based with special discounts for quantity?

18. Should booked orders be eliminated?

In asking above questions my sole idea is to find the cause of this business being in the rut that it is in as I believe the rut has been, and is allowed to exist from lack of broad vision and selfishness on the part of the supply interests. We need men who will think big, act big, and not be swayed by petty jealousies, and I feel that the wholesalers should lead the way.

Not until the whole of the industry is elevated to a higher plane will business men invest their good money in a proposition that shows as little returns for the money invested. I know of a number of Master Plumbers operating from their homes who have invested considerable money in another business because they have lost faith in the possibilities of their own business. This is only to be expected as long as a business requires no capital to start and permits of undeveloped business men starting in it.

We realize we are in one of the most essential businesses on earth, protected by by-laws with penalties attached which prohibits outsiders from doing our work, and yet we cannot make a success of same. There is a reason, gentlemen, and we should find out what that reason is. The plumbing and heating field has not been scratched, nor will it be scratched until the Architects of our industry proceed with a policy for the whole of the trade that will be profitable for the industry as a whole, and Master Plumbers and Fitters can create business and the profits accruing therefrom will be an incentive for them to go after more business. Bear in mind that we are in this business for the money we can get out of it in legitimate profits.

I am submitting this report after giving it considerable thought and hope it will be the means of finding a solution for the remedying the faults of our industry.

H. Weinraub,

Chairman Essay Committee.

H. E. WEINRAUB

Toronto, formerly chairman of the Essay Committee whose essay on "the inefficiency of the wholesalers" as reproduced herewith, brought forth some comment at the convention.

13. Would you consider a Plumber or Fitter starting in business without capital a sound credit risk?

14. Should a Plumber or Fitter starting in business without capital be extended credit?

15. Do you think it is fair for the Master Plumber and Fitter or the public to be burdened with the additional expense caused by bad debts created by the inefficient policy of our wholesalers in extending credit?

Need Universal Sanitation Standards

Small Centres Destined to Grow to Importance and Amendments to Old Sanitary Laws Are Insufficient—Speculative Building a Hindrance to Efficiency—Ontario Spends Large Amount on Waterworks and Sewerage

Report of John Wright, Chairman of Sanitation, to 24th annual Convention Canadian Society D. S. & H. E., Quebec City.

It is with pleasure that I again take the opportunity of presenting to you for your consideration the following facts which are of such great concern to all residents in Canada.

Health: A Question of National Moment

That Health is a question of National moment, no one will dare deny, and the National or Federal Government must play its part and there are legal limitations within which the Federal authorities are able to act Constitutionally, and these must be respected. It is the duty and the prerogative of the Federal Government to have a well organized and equipped Department of Health which shall strengthen and assist the Provincial Departments of Health, which in turn give authority to the Municipal Boards of Health and Civic councils to pass by-laws to establish conditions which would result in a marked improvement in the general Health of the entire community which the people of every class would benefit thereby to an undreamed of extent.

Efficient Methods of Sanitary Plumbing, Heating and Ventilation

The most important problem in the interests of the health of the community is undoubtedly the adopting of efficient methods of Sanitary Plumbing, Heating and ventilation, therefore the larger the city the more important it becomes and it is our duty to seek and obtain legislation along these lines if we would protect and prolong the life of our people.

Federal, Provincial and Municipal Sanitation

While, as I have already said, Legislation is necessarily divided among our Federal, Provincial and Municipal Departments of Health, and laws of varied scope must be enacted by each and all of them, these various laws and regulations and by-laws must be so framed as to co-relate and supplement each other and work together to the up-building and betterment of conditions for the general Health and not so as to destroy or make useless or hinder the working out of the laws and by-laws passed by one or other of them. Health being a matter of national paramount importance the Federal Government should see to it that all matters having for their object the improvement of the health of the people should be speeded up and not allowed to drag along as they have been doing hitherto.

Scientific Sanitation

Scientists, the Medical profession, Sanitary engineers, the Public Councils and Committee have for a number of years been engaged in framing up and introducing measures in our legislation that would result in standards of efficiency along the lines of a Sanitary System based on fundamental

scientific principles which might well be adopted all over the world. These standards can only be established or maintained by a certain amount of restrictive legislation, and the enforcement of restrictive legislation always meets with a great deal of opposition from those who are ignorant of its value and necessity to the welfare of the nation and the protection and benefit of its future life.

General Conditions in Canada

When we turn our attention to the general conditions prevailing throughout Canada, as a whole, we are confronted with the fact that we have,

JOHN WRIGHT

Toronto, formerly chairman of the Sanitary Committee, Canadian Society D. S. & H. E., who has retired from the chairmanship of this committee after long and valued service.

as yet, not generally recognized standards regarding Sanitary Plumbing and Ventilation. There are a multiplicity of laws and by-laws, adopted by the various cities and towns throughout our country, and enforced more or less according to their own interpretation of the moment. Toronto adopted the first plumbing ordinance as early as 1887, which has since been followed by many others, and to-day the majority of our cities and towns have some form of ordinance. There are places where we find recognition of splendid principles, which, if enforced, would make for effectiveness; but, unfortunately, they are not enforced. There are others where we find no recognition that any law exists, so that even Sanitary Plumbing is installed in such a manner that it becomes a menace instead of a safeguard to Public Health.

Our larger cities realizing the im-

portance of the proper installation of sanitary plumbing have endeavoured to so amend their by-laws as to meet these conditions by examining and licensing the men engaged in this occupation, with such good results that others are falling into line, as it is an essential point in placing sanitary plumbing on a properly recognized basis in its relation to Health. We are, however, confronted with the fact that from Coast to Coast there are many varieties of Sanitary Plumbing, some of which testify to the forethought and intelligence of our Boards of Health and Municipal Councils, whilst others are a positive disgrace to the name of Sanitation, and some of the abuses call for serious consideration.

Universal Standard Essential

We must bear in mind that smaller cities and towns are destined to become large centres in the near future, and therefore means should be taken to improve their Sanitary conditions, and this calls for a **Universal Standard**. Mere amendments to their old laws is seldom satisfactory, as they often lack the knowledge of scientific Sanitation, and as they do not recognize any set principles, following along the lines of what some other city or town has done, and which may or may not suit their own local conditions, it becomes evident that we require a **Central Authority** if a set Standard is to be established, and therefore the Federal Government should legislate along these lines, to prevent the useless experimenting and continual alteration of laws in these smaller centres, so that an efficient Scientific Standard of Sanitary Plumbing, Heating and Ventilation may be recognized and established throughout the length and breadth of our country.

Speculative Building a Hindrance to Efficiency

The Speculative Builder, owing to the competitive system prevailing—whose sole aim is the profit he hopes to make on the house when sold, and which he does not intend to ever live in himself, disregards all Standards of efficiency, devotes his talents to securing an attractive outside appearance and in trying to bring the cost of erection down to a minimum, neglects the health of its future occupants. If he cannot evade the law by using inferior materials, he will hire incompetent mechanics, who in turn may sublet the work at such prices that competent men know full well that some means are being taken to evade the law. As thousands of homes are being built every year, we can easily see what will be the result to our future citizens if we do not take the necessary measures here and now to secure such

(continued on page 32)

Various Trade Branches Convene

Manufacturers and Wholesalers Agree to Co-operate with Plumbers in Every Way Possible—Much Renewal of Plumbing Fixtures to be Done—Big Business to be Secured from Rural Districts.

ON the afternoon of the opening day a Conference with the manufacturers and wholesalers was held, which took the form of a series of short talks from the different representatives.

At the beginning of the conference President Mahoney asked Mr. H. Weinraub, of Toronto, Chairman of the Essay Committee, to read an essay on the "Inefficiency of Wholesalers," which is outlined in full in another part of the paper.

Mr. Boucher, Warden King Mfg. Co.; Mr. Wall of the Mott Co. and Mr. Delcourt of the Jas. Robertson Co., said that they would co-operate with the plumbers in every possible way and realized the importance of getting closer together.

Major Anthes, of the Anthes Foundry Co., of Toronto, drove home in a forceful manner several striking facts. He pointed out that sanitation was the foremost necessity to health and the primary requisite in the making of a good race. He stated that many people were prejudiced against the plumbers and their business and considered them a necessary evil. While they are necessary they were, he hoped, not an evil.

Major Anthes urged for more confidence between the plumbers and man-

ufacturers and wholesalers. Without doubt more harmonious relations exist now between these bodies than in olden days, but closer co-operation would accomplish a great deal in the interest of all connected with the trade and the public.

In touching on trade extension, Major Anthes said, thousands of jobs installed 30 years ago needed to be renovated and that trade extension would result in a development of this business. Also, there is no reason why the people in the country should not have sanitary conveniences as well as the city people, and that there is big business to be developed through this channel.

Mr. R. Robinson of the Crane Limited, said, that in the City of Ottawa contractors did not ask for prices, and asked why the same conditions could not exist here. In Quebec he pointed out that they were obliged to sell to contractors because other firms and manufacturers sell them. He stated sincerely that the Crane Co. wanted to co-operate with the trade and would do so in every possible way. Further that the Crane Co. had lost a lot of business when they refused to sell only to plumbers as outsiders were able to buy direct from the manufacturer. Mr. Robinson then asked the question how could this be

eliminated?

Mr. Walsh, of Montreal, in remarks referring to Quebec Province particularly stated that many consumers used the Journeyman Plumber as a means to order through and get the trade prices. In such cases the Journeyman Plumber takes out a master plumbers license by paying the extra fee, and the consumer merely orders his supplies through him. He mentioned that he brought this to the attention of a wholesaler and this firm promised not to sell to the public. The promise, however, had not been kept. Before sitting down Mr. Walsh stated that he wanted to thank the manufacturers and wholesalers heartily for coming to the conference this afternoon.

President Mahoney replying to the speeches made by the manufacturers and wholesalers thanked them for their expressed co-operation, saying that he was pleased to have them at the conference and that the whole idea behind the meeting was to encourage closer co-operation and to help to find ways and means to overcome their difficulty. He pleaded strongly for closer confidence in the future.

Mr. E. G. Brousseau also thanked the manufacturers and wholesalers for attending the conference, and also for their splendid generous subscriptions.

GETTING BUSINESS THROUGH ADVERTISING

E. G. Smith, manager Quebec "Telegraph" Tells Sanitary Engineers in Convention How They Can Use Advertising to Boost Their Business—Importance of Trade Papers Emphasized

Introducing his remarks by a pre-ambule in French, Mr. Smith proceeded to explain many public misconceptions of advertising, emphasizing that advertising does not perform miracles, that it is a simple and economical means of diffusing information of all kinds. He instanced how various campaigns had increased, industrial, agricultural, and military production, and the power of advertising for the recruiting of men during the late war. He pointed out the raising of vast sums of money for war purposes all of which has been effectively accomplished by the employment of various advertising media. The speaker said that advertising produced economical habits which usually have an uplifting tendency.

He said advertising has been a great factor for building good will and that it is destined to be even a greater moral force. "Some advertising creates demand," said Mr. Smith "it follows that none but those propositions bearing the closest scrutiny can survive. Consequently we find a general superiority of ad-

vertised wares as also a superiority in advertisers service, the continuity of which guarantees the public against imposition.

"Again," he said, "every man feels his responsibility for owning a home" and suggested that the present Association of Domestic Sanitary and Heating Engineers form a committee for the purpose of studying the promotion of a campaign which would be nation wide or even conducted locally. The speaker illustrated his remarks by detailing the possible method and the probable cost of such a campaign, making it clear, however, that the broad phase of advertising did not rest alone with the printed word.

Mr. Smith pointed out various institutional campaigns now being conducted on this continent all for the purpose of meeting either crop conditions or opposing public hostility to the purchase of luxuries. He quoted figures showing that the construction contracts for the Dominion of Canada for the first three months of 1921 showed a loss of 35 per cent. over the same period last year.

Referring to the popular idea of

caricaturing the plumber, Mr. Smith suggested that the remedy for improving the status of the trade was entirely in the hands of the Society who could educate themselves at the same time they were educating the public.

Read Trade Papers

"Read your trade papers," advised Mr. Smith "and read them thoroughly." "You will find them a ready reference library and a tremendous source of information." Support the trade papers for the reason that they are your nearest link with the manufacturers."

"Be your own advertising emissary. Talk construction everywhere, interest literary men and bankers, endeavor to address public societies, fraternity meetings, Boards of Commerce and above all use advertising collectively and individually to teach the nine million population in the Dominion of Canada how comparatively easy it is to own one's home and enjoy the comforts of modern sanitation, and heating, not forgetting" Mr. Smith said in conclusion "to show the man in the street some simple rules for financing his property venture."

Various other speakers voiced approval of Mr. Smith's sentiments. Honorable Frank Carrel also spoke a few words of welcome and the meeting terminated with a vote of thanks to the speakers of the evening.

Quebec Provincial Association Formed

Progressive Step Taken by Sanitary and Heating Engineers in Province of Quebec—To Improve Sanitation Conditions Within the Province.

On the first day of the 24th annual convention of the Canadian Society of D.S. & H.E., in Quebec city, preceding the formal opening of the convention, the organization of the Quebec provincial association took place and its membership to the Canadian society was accepted.

The addition of this important link to the Dominion society should add considerable strength to the parent body and will measurably increase the effectiveness of its work throughout Canada.

Without doubt, one of the first undertakings of the new provincial body will be to study the sanitary conditions in towns and cities throughout the province and secure proper legislation that will provide for

Credit is due to the members of the craft throughout the province for getting together and forming an association that will take active steps to secure proper legislation to protect the health of the public and raise the business status of the trade. Credit also is due to Mr. E. G. Brousseau, of Quebec, chairman of the Legislative committee in the new provincial body, for his leading efforts in securing the active support of the prominent members of the craft in forming the new association.

Frank Carrel, proprietor of the Quebec Telegraph congratulated the members and the new organization. He paid a fitting tribute to the craft when he pointed out that he and

other prominent business men in Quebec had endeavored to secure adequate plumbing by-laws for Quebec city without success. He was glad to say that new laws were now being formed as result of an address by Mr. E. G. Brousseau, before the Rotary club, a short time ago.

The officers who will guide the work of the new association during its first year of existence are well selected for their respective positions and much good is expected to be accomplished. Judging from the active interest shown by the Montreal and Quebec members during the convention the new organization has members who will work with a means to an end and their organization should soon be one of the most effective in the Dominion.

ANNUAL CONVENTION OF P. E. I. PLUMBERS

Association Affairs in Flourishing Condition—

New Members Accepted—Outlook Thought to be

Such as to Justify Optimism

J. E. MATTE

Manager Vandry & Matte, Quebec, who was elected president of the newly formed Quebec Society, Domestic Sanitary & Heating Engineers just prior to the convention of the Canadian Society in Quebec city. Mr. Matte has the honor of being the first president of this organization which is expected to accomplish much in improving sanitary conditions in that province.

the necessity of installing modern sanitary conveniences in all buildings.

It has been well established that the progress of sanitary engineering is largely responsible for the present day public health campaigns. Sanitation is one of the most important problems being faced by the province of Quebec. A large percentage of the buildings in the city of Quebec for instance, were built long before the days of modern plumbing and need renovating in accordance with the demands of modern sanitary practice.

J. F. MURNAGHAN

elected President of the Prince Edward Island Association of Sanitary and Heating Engineers at the recent convention held in Charlottetown, P. E. I.

Owen Sound, Ont.—Two new sanitary sewers were put in during the spring and most of the residents on the streets are taking advantage of the improved service afforded them by having modern plumbing fixtures installed.

C HARLOTTETOWN, P. E. I.—The annual meeting the provincial association of sanitary and heating engineers has been concluded after a very successful and enthusiastic gathering. The following firms were represented: Bruce Stewart & Co.; Stanley, Shaw & Peardon, F. H. Trainor, James McEachern, Higgins & McLean, Harold Henry, Currie & Murnaghan, of Charlottetown, Morrison & McDonald and Thos. Johnston Co., of Summerside, P. E. I.

The election of officers for the ensuing year returned the following: President, J. F. Murnaghan, Charlottetown; Vice President, Arthur Johnston, Summerside; Sec. Treasurer, F. H. Trainor, Charlottetown.

The application of two new firms for membership were read and accepted.

In reviewing the work of the past year it was evident that the association affairs were in a flourishing condition and the outlook was thought to be such as to warrant optimism. The question of having a representative at the convention of the Canadian Society D. S. & H. E. was also taken up.

Improving Quebec Sanitary Conditions

Pioneering Work of Quebec Master Plumbers in Organizing Association— Sanitary By-law for Quebec City as Result of Activity of Master Plumber —Local Merchants in Other Trades Could Buy Plumbing Fixtures at Same Price as the Plumber

Report of E. G. Brousseau, Quebec Provincial Vice-President, before 24th Annual Convention Canadian Society D. S. & H. E. in Quebec.

THE Provincial Vice-President of Quebec extends to you all, a hearty welcome to our capital, his only ambition is that the statement which appears in the circular letter signed by both President Mahoney and Secretary Frankland, that this convention should be the biggest and best in the history of this Canadian Society, should come true. If we should once in a while remember that we are responsible for this society of business men, then get together and put the shoulder to the wheel to start it in renewed motion every time we meet with difficulties. Then, and only then, would we be true to our calling.

Aiming at such a desirable state of affairs I submit that the programme of any convention always be made accordingly, then perhaps one would know much more in advance what questions are to come before the chair, subjects could then be discussed with a greater knowledge and more intelligently; and this Association would be recognized as a real live one, as of course, it should be. This is only my opinion and I shall be required to be convinced that I am wrong.

You may say this is not a Provincial report. I admit it, but, as I read somewhere, that I was a member of the executive and not having had within the whole year the opportunity to attend to the duties pertaining to this position, I thought I should not escape this first opportunity to fulfill my obligations. May I make a suggestion for the welfare of this Association before I report as Provincial Vice-President? My suggestion is, that any member who will be elected on the next executive, should not accept if he cannot decide in advance to sacrifice a little of his own business time in order to do the work required of his office.

Now, what about the Province of Quebec? When this report will be read maybe Quebec will have its own Provincial Association, but, at the time I write, it is not yet organized. However, I hope that if the new members stick to their promise, Montreal, Quebec, Three Rivers, St. Hyacinthe, Sherbrooke and Levis will have joined together to form that so long expected "Quebec Provincial Association."

How did we proceed in that direction, I should rather say how did I proceed because I don't want to incriminate anyone else in connection with this Provincial organization, as it would not be fair to themselves owing to the fact that so little really has been done.

Like my predecessors, I wrote several letters to a prominent member of the craft in each city, accompanied

with printed report of the last convention together with booklets of my lectures on Sanitation. But unfortunately I did not receive any replies. So I discovered this was not the right way to get at them. Then I tried to reach them by the medium of some friend journalists. Their interviews to leave the city at the time, I was not discouraged because I knew while this was the easiest way to reach them it was not the best. Finally I decided to meet them and try to stamp on their minds the necessity for them to belong to such a body as ours. However, as it was absolutely impossible

E. G. BROUSSEAU

Quebec, elected chairman of the Sanitary Committee, Canadian Society D. S. & H. E. for 1921-22. Mr. Brousseau holds the same position in the new Quebec society.

to leave the city at the time I was fortunate enough to have an able man by me, our Secretary, Mr. U. F. Drouin, who was despatched to see them. He returned with what I could call a success, having six applications from Three Rivers, three from St. Hyacinthe and four from Sherbrooke; also the promise that every one of these cities would be represented by at least two delegates.

Fixtures Furnished by Builders

With reference to the City of Quebec only two questions of vital interest deserve to be mentioned in this report, that is: Lack of protection of the craft by the wholesalers and manufacturers, and lack of efficient Sanitary

By-laws. Referring to the former, it is my intention to deal with this matter as soon as I can get the local boys interested enough in this matter to meet and discuss the subject to a finish, which I hope will come soon as it is known all over this city that, any merchant, no matter if he is a dry goods dealer or grocer, can buy at the same price from the wholesaler as the plumber, providing he will say that he can get it from any other dealer at plumber's prices. He does not need to prove it, his statement is sufficient. This is very detrimental to the plumber and it also explains why in so many instances the owner of a building in Quebec calls for tenders with the reserve that he will furnish the fixtures.

Not only the dealers of Quebec are to blame in this direction, some of the outsiders are as bad, if not worse, and in their fight to get the orders for large contracts for public buildings, they go over the head of the plumber and sell goods direct to the owners, not only at the price the plumber is entitled to, but in some instances for 25 per cent. less.

As I understand it, the Extension Bureau was not established and supported by wholesalers and manufacturers for that purpose. I am glad to say, however, that the majority of the jobbers and manufacturers protect the plumbers and these firms should get our business.

Now for the second point, namely, Sanitary Laws.

Sanitary Laws

Quebec City will soon be governed like a great number of other cities, by good and practical Sanitary By-laws. I will try to give you just a summary of what has been done to convince the people of Quebec and our civic body of the necessity for such by-laws, also how we succeeded in obtaining the good results we have facing us to-day.

The idea came to me ten years ago when I started to advocate it whenever I had the opportunity to do so, until five years later when a few directors of the Quebec Builders' Exchange, who were general contractors resolved we should study the question and name a committee for that purpose, this committee met but two or three times, and went as it came, noiseless. I kept quiet on that question for over two years, being somewhat discouraged until a committee known as "The Civic Progress Committee" was founded by one of our most respected citizens, the late Eug. Jurien. This committee was composed of two representatives of every association of Quebec and I was one of the representatives of the Quebec Builders on that body.

Problems of the Heating Engineer

Heating Engineers Should Be Qualified by Examinations and Should be Able to Give Advice to Clients on Best Systems—Vapor Heating Flexible and Economical—Means for Protecting the Public

Report of J. C. Huot, Chairman Heating Committee to 24th Annual Convention Canadian Society D. S. & H. E. in Quebec City.

Being chairman for the past year of your committee on Heating subjects, and having given some considerable time and thought to this subject, I feel I should tell you something of my conclusions and offer a few joints for your discussion at this meeting, with the hope that we may all learn something from each other, and from a free discussion of the subject that will enable us better to cope with the problem the Heating Engineer is constantly confronted with.

If I were to attempt to write a paper on Heating in all its different forms, hot water, both tank and forced circulation, steam, high and low pressure, exhaust, one and two pipe systems, vapor, warm air, blower, indirect and ventilation the whole time of all this meeting would not be sufficient to scarcely touch the subject, so large a one is it.

I will content myself, therefore, with making a few observations about the hot water and steam system of heating, as met with in our ordinary daily practise, and offer a few questions for discussion, and I feel sure you will all have had experiences that will enable you to add something to our general knowledge of these subjects.

During the past twenty-five or thirty years, hot water as a method of heating has been used, almost to the exclusion of every other, in all kinds of buildings, whatever their size or whatever purpose they are used for.

Do you think that this practise of heating all kinds of buildings indiscriminately with hot water has been a wise one?

Has the march of progress stood still in the science of heating, or have we been keeping pace with modern thought and abreast of the times?

Is there any co-relation between coal consumption and the type of heating apparatus selected for any particular building?

Should we, as Heating Engineers, give our clients any heating apparatus they ask for, or should we not rather try and educate them to appreciate newer and better methods, if there are any, and explain to them why?

These few questions may form a basis for your discussion, and I am not offering them without having formed certain conclusions of my own, which I purpose to set forth as briefly as possible.

Educate People on Heating Facilities

Heating Engineers, I believe, have at the present time, more than at any previous time, and particularly in this province, a wonderful opportunity to educate the people to understand and appreciate modern heating methods, to guide their choice so that they may decide on the particular system best suited for their purpose, and the one that will be the most economical on fuel.

Personally, concerning heating by hot water, it is my opinion that the open tank gravity system, as commonly used in our flats and small dwellings, is the best and most economical yet devised, always provided the system has been properly designed and balanced. That the boiler or heater is sufficiently large to handle the radiation and the radiators large enough to properly warm the house in which they are placed.

This is where the competent Heating Engineer comes in on work of this kind.

If laid out by the amateur or rule of thumb workmen, some rooms may not have sufficient radiation, with the result that to try and bring them to the proper temperature, other parts of the dwelling are overheated and much coal wasted and dissatisfaction caused.

I have also satisfied myself, (whether you agree with me or not) is what I would like to hear you discuss freely, that most large buildings, stores, warehouses, halls, churches, etc., would be heated better, the apparatus would not cost any more and a con-

community, enabling them to save thousands of tons of coal, that are now wasted, and with coal at present prices, this seems to me to be the golden opportunity of the real Heating Engineers.

Owners, architects and builders require, and in fact, invite knowledge and look to you for advice and there never has been a time when the Heating question requires more careful thought than to-day.

Vapor Heating Economical

My own experience, and I believe I may state that modern Heating Engineering experience has proved that Vapor Heating is a very flexible and economical system.

It is simply circulating steam or vapor at a very low pressure and heating the radiators with it in place of by circulating hot water, and it has these advantages over hot water for heating large buildings.

There is less water to heat—from one-sixth to one-tenth what there is in a Hot Water System.

It is quicker. In twenty minutes to half an hour you could circulate vapor in every radiator in a large building where with hot water it takes hours.

Any radiator may be shut off completely or any number of radiators without interfering with the rest of the system.

It is as silent in operation as Hot Water.

It is economical because there is less water to heat and because there is no waste, you only require to generate vapor enough to fill the system when the dampers are automatically shut.

You can get mild heat in moderate weather, and plenty of heat in cold weather.

I know of a Vapor Heating job in the coldest part of this Province containing nine hundred feet of hot water radiation and a No. 7 boiler, and you all know what the fuel consumption would have been.

Take Themselves More Seriously.

I believe, gentlemen, that the Heating Engineers should take themselves more seriously. They should endeavor to educate the public, the builders and the architects. They should examine each heating proposition that is brought to them by a client on its merits. Study the building, the chimney, the use to which the building is to be put, and advise the client what system is the best for him to use for his particular requirement. In other words be the physician of the Heating System and prescribe for the client not what he thinks he wants, but what you know he should have, and if a client comes to you with a heating proposition that you know will not be satisfactory to him and reflect no credit on you when finished, have nothing to do with it.

J. C. HUOT

Quebec, who was elected chairman of the Essay Committee, Canadian Society, D. S. & H. E., and who was also vice-president of the newly formed Quebec provincial society.

siderable saving of fuel would be effected, if heated by a modern system of Vapor Heating instead of Hot Water.

I am not making this statement without having what I consider very good arguments to substantiate it, and if I am correct, what an opportunity does this offer to the Heating Engineer of doing a real service to the

Problems of the Heating Engineer

By doing this you will be assisting to raise the standard of your profession and inspiring in the public a confidence in the Heating Engineer.

There is only one further observation I would like to offer for your discussion.

Protecting the Public

Do you not think the time has arrived when the public should be protected against the incompetent posing as Heating Engineers of any Tom, Dick and Harry who can screw a piece of pipe, who hangs out a shingle and calls himself a Heating Engineer, Architect, Lawyer, Doctor and others are protected by law after passing qualifying examinations. Why not Heating Engineers?

I respectfully offer for your consideration, whether the time is not now opportune to ask the Government to consider appointing a qualified Heating Engineer as an examiner and holding examinations say twice a year when applicants might be examined by written paper and orally as to their fitness for undertaking, designing and carrying out heating work. Each applicant passing the examination to be given a certificate stating the particular type of heating apparatus that he is qualified to design and erect.

J. C. Huot,
Chairman Heating Committee.

Need Universal Sanitation Standards

(continued from page 25)

Legislation as will safeguard their health.

Codification and Unification of Plumbing Laws and By-laws

The advances and improvements that are constantly taking place in Sanitary Heating and Ventilating equipment, calls for a codification and unification of all the laws dealing with this most important part of our national life. This fact comes home to us more forcibly every year. While it is true that the multiplicity of our legislative enactments make this extremely difficult, yet by co-operation and loyalty each to all and all to each, these may be overcome. We find a variety of interpretations of these laws as they are now, more or less due to the slackness in their administration and at times we find them being administered by an unsympathetic Department of Health, at times we find that Inspectors are employed who are ignorant of the most elementary rules of Sanitary Plumbing, having been engaged from purely personal or political reasons. It is, therefore, not surprising to find low standards of workmanship which are frequently a positive menace to the Public Health of the community.

Federal Legislation To Ensure a Minimum Standard

It becomes, therefore, more and more apparent that the cities and towns of the Dominion recognize the value and necessity of by-laws for the control of Sanitary Plumbing, Heating

and Ventilation in their own localities and are doing their best to meet the situation by local regulations, but these are not sufficient. It is necessary and essential that the Federal Government should pass legislation requiring a compliance with a Minimum Standard of Sanitation, while leaving the different Provinces and cities free to enlarge upon these laws by any special regulations, laws and by-laws they may consider necessary to meet their own climatic conditions, and requirements.

Ontario

The total estimated cost of work undertaken in the Province of Ontario during the past year in the extension of waterworks and sewerage systems is represented by the sum of \$7,873,518.60. This is an increase over any previous year in the history of the Province. The smaller municipalities undertaking the installation of waterworks continue to increase in number. There are also a great many sewers being laid in the smaller municipalities accompanying the street improvements it being good policy to lay sewers before the road surface is permanently established. As soon as these sewers have been laid, and an outlet provided to take care of the storm water there comes a general demand for access to them for the purpose of disposing of sanitary and domestic wastes. In several municipalities the introduction of a sewerage system has brought to their mind the need of plumbing regulations.

The sanitary and domestic engineering trades have of late years, and especially since so much research has been carried on by the different associations for the advancement of the interest of the trade, become a well defined calling, closely allied with the other professions having to do with Applied Science. The more instruction we are able to develop in the Technical Schools, and through apprenticeship courses the more firmly established the essentials of the Trade will become.

In regard to the regulations, governing the installation of sanitary conveniences, of the Province of Ontario under the Bill No. 64-1916 which is shown in the 36th annual report of the Provincial Board of Health.

These regulations should be enforced to work in conjunction with the Ontario Housing Committee, as the outside Municipalities are in want of said Regulations. We were in hope that at the sitting of this last Sessions of the House of Parliament that the above regulations would have come into force in the face of all the opposition that has been brought to bear on same.

Trusting that this convention will see its way to adopt said regulations for the Dominion.

We have a few copies for your approval.

London, Ont.—Prof. A. F. Dallyn, of the Provincial Board of Health, rather effectively shot to pieces allegations that the new Ontario Plumbing by-laws are designed to particularly benefit the trade, at a meeting he held here last week with the local Board of Health. He declared emphatically that the new Ontario regulations are based on the best plumbing practice over

a period of sixty years. They are the result, he pointed out, not of one man's experience, nor of one district's experience, but of what has been learned by the best men in the business operating under all sorts of conditions and having all kinds of problems to solve.

Dr. O. I. Cunningham, a dentist, is chairman of the Board of Health in London and criticized the by-laws because they had been drawn up largely upon information from the sanitary and heating engineers.

"Where else would you expect to get the information required?" asked Professor Dallyn pointedly, and he went on to state that the plumber's guild in Toronto is one of the best organized self-instructing organizations in the Dominion. They are thoroughly abreast of the times, he declared, and carry on a campaign of education among their members that makes constant efficiency. Toronto, he said, has one of the best sets of plumbing regulations to be found, not in Canada, but in America.

Prof. Dallyn was in conference with the local board over points of difference in connection with back venting. Chairman Cunningham took the stand that back venting is an unnecessary and useless expense. He gave it as his opinion that plumbing regulations should be under the jurisdiction of the building inspectors rather than the boards of health.

The provincial officer pointed out that even if this were effective any regulations proposed would still have to meet with the approval of the Provincial Board of Health. It did not matter, he said, what department did the work. In connection with back venting he stated that a clause had been inserted in the regulations by which exceptions could be made. The London authorities had completely eliminated clauses in their regulations in reference to back venting and he made it plain that the provincial Board could not agree to this. The additional cost of installing back vents was equalised, he said, by the fact that repairs could be carried out at considerably less expense than on non-vented systems.

Plumbing Control

The control of plumbing in the Dominion may be said to consist of four parts—licensing, regulation, permits and inspection. In all the cities and in many towns which have adopted plumbing regulations master plumbers and journeymen must be examined and licensed in order to establish their competency to do plumbing work. This requirement is in line with compulsory education, and is intended to be a guarantee against ignorance and lack of skill. Regulations consist of setting up minimum requirements for the design, standard of materials, and workmanship in Plumbing. These regulations differ very greatly in different parts of the Dominion and these differences are sources of great annoyance to plumbers and added expense to householders. In some towns there are no regulations whatever, and in these towns anybody can work at the business of plumbing. Permits to do specific jobs where regulations are in

(continued on page 48)

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

OBITUARY

Summerside, P.E.I.—After a long and trying illness, Fred W. Johnston, youngest son of Mr. and Mrs. Thos. Johnson, passed away at the home of his parents. Deceased was one of Summerside's most popular young men. After leaving school he entered the employ of Thos. Johnston Ltd., and there, in his chosen career, as plumber and electrician, made good.

NOT SANCTIONED BY BOARD OF HEALTH

Hanover, Ont.—Dr. John W. S. McCullough, Chief Officer of Health for Ontario, sent Town Clerk Taylor the following:

"I have the honor to enclose herewith approval for your By-law No. 302 re improvements and extensions to the waterworks system, including a filtration plant. This approval is granted on the understanding that all drainage above the waterworks will be intercepted and carried below the dam. Your Engineer has advised this Board that the town has considered putting in septic tanks, or other works, and continuing the drainage. This solution of the difficulty does not meet with the Board's sanction, and if the waterworks is to be located as agreed upon the sewage must be intercepted."

WHERE PLUMBING COSTS ARE HIGHER THAN 10 PER CENT OF VALUE OF HOUSE

Sanitary conveniences to cost \$314 for a house assessed at \$575 as a local improvement was one of the recommendations of the Toronto Board of Health that caused some comment at the controllers' meeting. The owner has five years to pay for them. In another case the conveniences cost \$320 and the property assessment is \$400. The recommendations were adopted.

WESTERN PLUMBERS STRIKE

Regina—Concerted action by journeymen plumbers in Regina, Moose Jaw and Saskatoon has resulted in a plumbers' strike in the three cities. The men want \$1 an hour, while the master plumbers offer 90 cents. Employers claim they are willing to reduce the charge to the public from \$1.45 to \$1.25 an hour if the men will accept the lower rate.

BUSINESS CHANGES

New Hamburg, Ont.—Geo. Steiner, plumbing and tinsmithing has been succeeded by Wm. Heimbecker.

J. L. LETARTE

elected Secretary of the newly formed Quebec Society Domestic Sanitary and Heating Engineers.

SOON MANUFACTURE PLUMBING SUPPLIES

The Grinnell Co., Dundas St. Toronto advised that they expect to be manufacturing their own plumbers' and Steamfitters' supplies at this plant within a month. At the present time this firm is handling other lines to the trade.

MONCTON PLUMBERS' STRIKE

Moncton, N.B.—Journeymen plumbers and pipe fitters are out on strike after their demand for 85 cents an hour was refused, the master plumbers offering them 65 cents. About a month ago the men affected went out on the same complaint, but a temporary agreement for the month was then made, which agreement has expired. In the vicinity of thirty men, it is pointed out are affected by the strike.

CONTRACTS AWARDED

Newmarket, Ont., S. T. Worthington of Toronto, being the lowest tenderer for three miles of sewers in the town was awarded the contract by the Town Council at a special meeting. Mr. Worthington's tender was about \$30,000.

Orillia, Ont.—The Committee on Sewers opened the tenders for the sewer on Mississauga street, from O'Brien to McKenzie streets. Five tenders were received, the lowest being that of Curran and Clement who offered to lay the 10-inch main sewer for \$2.25; the 6-inch connections for \$1.27 with \$80 for manholes. They were awarded the contract. The total cost will be about \$7,300. The work is to be completed in six weeks. The figures were considerably lower than those for the Coldwater road sewer, which has just been completed.

Courtenay, B.C.—At a special meeting of the Courtenay City Council the tender of the E. J. Ryan Contracting company of Vancouver was accepted to put in a water supply for \$73,700 with 10 per cent added for contingencies which brings the total amount to be found to \$80,700.

DURO PUMP CO. OFFICIALS ADDRESS CONVENTION

C. A. Kuebler and H. I. Field, of the Duro Pump Mfg. Co., addressed the delegates at the convention for a few minutes at the close of E. G. Smith's address on advertising. They invited the delegates to see the pump in action displayed at the Chateau Frontenac and answered several questions from the audience regarding the working of their pumps.

WELLAND PLUMBERS BACK

Welland, Ont.—The plumbers' strike is ended and the men have returned to work at 80 cents an hour. The men went out when it was announced that a cut of ten cents would be put into effect. The new agreement will be effective till August.

AN EXECUTIVE BODY

THE suggestion made by Western members at the recent convention of the Canadian Society D. S. & H. E., to the effect that the Canadian Society should be an executive body only and that inter-provincial associations should look after local affairs, is one that requires some consideration. It has always been apparent at the conventions of this society that it was difficult to secure adequate representation from the distant parts of the country, and for a body which acts in the capacity which this society has done in the past, this is obviously a handicap. Frequently recommendations have been practically decided upon by the members present when it became quite obvious that such would not be applicable to the distant parts not represented. It is evident that local bodies can best make recommendations regarding local affairs, but a national organization is needed in order to give the necessary backing to recommendations of a national character. The question is worth much consideration as results will be attained only in proportion to the efficacy of the organization which makes the recommendations.

PROGRESS BEING MADE

JUDGING by the proceedings of the conventions of sanitary and heating engineers, as these gatherings are held from year to year, definite progress is being made toward fulfilling the long desired attainment when the operators in this industry will have the status which they deserve. This year's convention of the Canadian Society D. S. & H. E. in Quebec city was notable for the amount of discussion which centred around national problems and the recommendations forthcoming. This indication that the trade in their conventions have risen above the

petty matters which for too long dominated all such gatherings, is a real indication of progress.

Master plumbers of Montreal were called into conference in connection with the framing of the city's plumbing by-laws which are looked upon as highly efficient. The chairman of the Legislative committee, a master plumber from Montreal, is now favoring the creation of uniform sanitary laws covering all conditions found throughout the province. The relations of employer and employee came in for much consideration and it is an indication that the trade have in mind the welfare of the coming generation of sanitary and heating engineers that unanimous support is given the scheme of securing provincial aid in establishing technical courses. This branch of work conducted in Toronto for some time past has been valuable and its influence should be extended.

Reports of the better organization of operators in Western Canada provide a hopeful outlook for developments in that section of the country. It is notable that already the co-operation of master plumbers has been sought in the West in the framing of plumbing by-laws. Some little disappointment has been caused over the failure of the Western members to secure a ruling that plumbing and heating contracts should be let separate from the general contract, but a new plan is now being advocated in its stead, namely that when submitting his tender the general contractor must state who his sub-contractor is to be. Obviously this plan is to put a stop to the peddling of the sub-contractor's price after the job has been let. Another important provision is that when the general contractor submits his estimate for payment he state the amount due on the sub-contract for plumbing and heating, and the payment to be made direct to the plumbing and heating contractor. This would insure the sub-contractor in getting payment when due.

BRIEFS

The adjustment of the sink level to suit the height of the housewife is a suggestion recently made. The idea may have some merit providing plumbing fixtures were easily adjustable without disturbing drain pipes, etc., but in the great majority of installations where a house is occupied by a family for only a limited time the idea would cause more confusion than the adoption of a standard height. "Made to measure" plumbing is not highly popular as yet.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

REDUCTIONS continue to be the feature of the current market quotations. Among the declines noted are copper and brass tubing and sheets, a revision in discount to a lower price basis on one line of valves, a 10 per cent. reduction in standard closet outfits, and a lower range on cotton waste prices, both white and colored. Other lines reduced are faucets and wrenches, while scrap metal prices show slight declines, and a market reaction has been reflected in ingot metal quotations.

MONTREAL

MONTREAL, June 13.—Changes in market conditions, with variations in prices, feature the current quotations on plumbing supplies. A seasonable improvement is reported in the demand for conductor pipe and eavestrough, and corrugated sheet prices are unchanged. Soil pipe and fittings are moving slowly for this season of the year, and these products, together with radiators, closets and enamelled ware, are dependent upon an increase in building activity. Range boiler quotations are still unsettled, but trimo wrench prices are reduced. Sheet quotations are nominally unchanged, although where stocks are heavier some slightly better figures have been quoted in an effort to obtain business in fairly large quantities. The tone in ingot metals is easier, and some reductions have been recorded.

Trimo Wrenches Reduced

Montreal.

A slight reduction has been made in quotations on trimo wrenches, these now selling at 37½ per cent of list. Former discount was 35 per cent.

Pipe Quotations Hold

Montreal.

List No. 51 continues the selling basis of wrought iron and steel piping. While a number of new lists have come into effect since the beginning of the year, each with reduced prices over former levels, the present selling basis has been fairly well maintained.

Lead Product Demand Fair

Montreal.

The market tendency of all lead products remains fairly firm, notwithstanding the recent weaker tone of pig lead on the primary markets. This metal in the ingot stage has been reported with a falling off during the last two weeks from the strength of previous quotations. However, this is not yet reflected in the finished products. With the demand fair, prices are unchanged as follows:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50

Note—Lead pipe is subject to a discount of 10 p.c.

Lead traps and bends	10 p.c. off
Lead wtol, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs. sq. ft., lb.	0 10¾
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼c lb. extra and cut out sheets to size, ¾c extra.	
Solder, guaranteed, lb.	29
Do., strictly, lb.	0 27
Do., commercial, lb.	0 24
Do., wiping, lb.	0 24¾
Do., wire, lb.	0 37½
Zinc, sheets, casks	0 13
Do., broken lots	0 13½

Boiler Tube Sales Small

Montreal.

There has been no further change in the prices of boiler tubes since the revision of three weeks ago. The movement has shown no improvement in the last two weeks, sales being small and of a sorting order. Following are quotations:

BOILER TUBES—Seamless Lapweld		
1 inch	26 00	25 00
1¼ inch	27 25	26 00
1½ inch	26 25	27 00
1¾ inch	29 75	27 00
2 inch	29 25	22 90
2¼ inch	33 00	26 00
2½ inch	44 75	28 00

With the exception of an increase in the price of linseed oil, other products are maintained at previous levels. An improved demand has been recorded in corrugated sheets, conductor pipe and eavestrough, and pipe fittings. The range boiler situation remains unsettled and a readjustment in prices is looked for. Dealers in enamelled ware, soil pipe, and radiators, are depending upon building operations to increase activity in these lines.

3 inch	49 25	35 00
3½ inch	63 50	40 75
4 inch	85 00	51 75

Prices On Pipe Fittings Remain Steady

Montreal.

Conditions with regard to pipe fittings are unchanged. Quotations on the many lines hold, while sales are small. It is significant that dealers are only buying to sort there stocks for actual requirements. Prices on the various kinds are the following:

Cast iron fittings	20 p.c.
Bushings, cast	30 p.c.
Do., malleable	30 p.c.
Flanges	27 p.c.
Plugs	22½ p.c.
Flange Unions	20 p.c.
Malleable Unions	40 p.c.
Dart Unions, black	29 p.c.
Do., galvanized	8 p.c.
Nipples, ½ to 4" close and short	40 p.c.
Do., long	50 p.c.
Do., 4½ to 8" close and short	30 p.c.
Do., long	40 p.c.
Couplings, 4" and under	20 p.c.
Do., 4½" and larger	Net list
Pound Goods—	Blk. Galv.
Class B	0 20 0 28
Class C	0 13 0 20
Add 10 p.c.	

Sheet Prices Nominal

Montreal.

The quotations on both black and galvanized sheets show no change, but are considered nominal. Wholesalers with stocks not nearly so heavy as in the earlier months, are endeavouring to keep them as low as possible and still take care of the demand. Therefore slightly better prices than those given below are quoted to obtain business in fair quantities from some quarters where stocks are heavier. Little change is reported in the outside markets where the demand is

still very light. Following are quotations with a range:

PLATES—

10 gauge	5 25	6 25
12 gauge	5 30	6 30
14 gauge	5 45	6 45
16 gauge	5 55	6 55

BLACK SHEETS—

14 gauge	5 45	6 45
16 gauge	5 55	6 55
18-20 gauge	6 15	7 15
22-24 gauge	6 25	7 25
26 gauge	6 35	7 35
28 gauge	6 50	7 50

Sheets 36 in. in. wide, 10c per 100 lbs. extra.

GALVANIZED SHEETS—**U.S. Standard—**

10½ oz.	8 75	9 75
28 gauge	8 25	9 25
26 gauge	8 00	9 00
22 and 24 gauge ...	7 85	8 85
20 gauge	7 65	8 65
18 gauge	7 65	8 65
16 gauge	7 50	8 50

Queen's Fleur-

English Standard—	Head	de-lis
28 gauge	10 00	9 25
26 gauge	9 75	9 00
24 gauge	8 15	8 60
22 gauge	8 80	8 15
18 and 20 gauge ...	8 10	8 00

NOTE—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Enamelled Ware Inactive**Montreal.**

Sales in the different lines of enamelled ware have shown little improvement, if any, during recent weeks. Building operations, on which these lines are very much dependent especially this season, have not opened up as much as jobbers looked for, and until an improvement is reached along these lines, sales of enamelled ware are expected to show very little more activity. Quotations are remaining at 10 per cent off net prices given below.

Sinks, roll rim, 18 x 30 in.	18 40
Sinks, flat rim— 1 only 2 only 3 only	
16 x 24	\$ 6 00 \$ 5 92 \$ 5 84

17x19" Roll Rim, F241 or P4345	10 08
Less 10 p.c.	

Radiator Discount Holds**Montreal.**

No further change is recorded in prices on boilers and radiation since the decline of two weeks ago, and following are the lists and discounts:

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26;	
--	--

22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53 per cent for hot water and 54 per cent. for steam

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50 per cent.

Boilers—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 55 per cent off list.

Square or sectional hot water or steam boilers, 15-in., 5 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in., 5 per cent of list.

Square or sectional steam boilers, 19-in. to 36-in., 5 per cent. Ontario Government trimmings, net list.

Round steam boilers, standard trimmings, 15 per cent. off. Ontario Government trimmings, 10 per cent.

All prices f.o.b. Toronto, Montreal Guelph, Hamilton, St. Catharines or Brantford.

Eavetrough Sells Well**Montreal.**

Eavetrough and conductor pipe continues to sell briskly with no change in prices. Following are the present quotations:

EAVETROUGH—**O.G. Square Bood—**

Per 100 ft.	Per 100 ft.

Ingot Metal Tone Easier**Montreal.**

Quotations on most metals in the ingot markets are slightly lower, while the undertones are generally easier. The demand is now very limited, a slackening being noticed in the past week or ten days. Much depends on the coal strike in England, with regards future trend and activity, and an early settlement is hoped for in this direction.

TIN—Tin has eased appreciably in London and the market looks weak at the moment. An improvement is looked for as soon as the coal strike is over. Local price is fairly steady at 38 cents, owing to a scarcity of supplies.

COPPER—Owing to the severe decline in exchange, European buying has ceased, with the result that market is easier. Present prospects are for a dull market. Quotations are 18 cents for electro and 18 cents for casting.

LEAD—London has had a fairly sharp decline but recovering to some extent while the American market is also lower. The decline is not expected to continue but the demand is very limited at present. Local price is now 7 cents.

SPELTER—Spelter has had a sharp decline in London, and East St. Louis has also touched a new low point of \$4.50. The market is weak at present and current prices are considered very low. Prices are from 7¼ to 8 cents.

ANTIMONY—This metal is being offered for shipment from the East at a very low basis, and there is no sign of improvement. Quotations are unchanged at 7½ cents for Chinese and 8½ cents for high grade English.

ALUMINUM—Quotations on this metal are held at 33 cents although it also shows signs of weakness and continues dull on the market.

Light Sales In Corrugated**Montreal.**

Sales of corrugated sheets continue light and mostly confined to the 28 gauge. Quotations remain unchanged since the revision of last month when the new list prices were issued. Following are the present ruling prices on all gauges:

CORRUGATED SHEETS

	Per 100 sq. ft.
No. 28 gauge.....	8.50
No. 26 gauge.....	9.25
No. 24 gauge.....	15.00
No. 22 gauge.....	16.00
No. 20 gauge.....	18.00
No. 18 gauge.....	24.00

Less 7½ per cent.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

Boiler Quotations Unsettled**Montreal.**

Range boilers are still selling under the following list although it was expected by some wholesalers that a revised list would be issued this week raising the prices on practically all sizes. Prices continue unsettled with sales light, the 30 gallon boiler being practically the only size moving. Local quotations follow:

RANGE BOILERS—

Standard Ex. heavy	
30 gallon.....	8.75 11.25
35 gallon.....	11.25
40 gallon.....	13.50 16.00
52 gallon.....	20.00
66 gallon.....	28.00
82 gallon.....	35.00
100 gallon.....	45.00

Soil Pipe Sales Slow**Montreal.**

Soil pipe is moving slow for this season of the year, but as in the case of many plumbers' supplies building construction is still not as brisk as it might be thus holding back the scales of these pipes and fittings. No change has been made in the discounts which are as follows:

SOIL PIPE (medium and extra heavy)
2, 3, 15 per cent; 5 and 6-inch, 20 per cent discount.

4-inch, 25 per cent discount.
8 inch add 20 per cent to list.

FITTINGS—

2 to 6 inch fittings, 40 per cent. discount.

8 inch, net.

Bar Iron And Steel**Montreal.**

Little change is to be reported in bar iron and steel. Sales are of a small order, with little improvement looked for among the jobbers during the summer months. Quotations on the different grades are holding at \$3.70 base.

Common bar iron, 100.....	3.70
Refined iron.....	5.20
Iron finish machinery steel....	3.75
Mild steel.....	3.70
Single reeled machinery steel..	5.75

Do., post hinge seat and cover	4 75
Do., add for bar hinge.....	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat.....	19 00

TORONTO

TORONTO, June 13.—Several reductions are evident in current quotations on plumbing and steam-fitting supplies. Among the price changes noted is a 10 per cent. decline in standard closet outfits, also reduced quotations on copper and brass tubing and sheets, and a revision of the Emco valve discount on a lower price basis. Cotton wastes, both white and colored, have decreased from 1 to 2 cents on the various grades, and through a revision in discounts one line of faucet prices is now lower. Scrap metal prices show declines and a reaction is noted in ingot metal markets with some lower quotations.

The only price increase recorded is in linseed oil. The boiler tube market is dull, while the recent changes in radiator discounts still hold. Enamelled ware activity depends upon building operations, and a readjustment is looked for in range boiler quotations, the current nominal list being the result of recent price cutting. An easier market tone is noted in lead and zinc products. Pipe sales are reported irregular, but an improvement in demand is evident for pipe fittings, also on eavestrough and conductor pipe. The current demand for corrugated sheets has improved, and more sales in soil pipe are looked for at this season. Small orders are prevalent in bar iron and steel, and similar conditions govern sheets and plates. There is a firm tone in lead, with no price change.

Standard Closet Outfits**Reduced 10 Per Cent.****Toronto.**

Closet price reductions to the extent of approximately 10 per cent, are announced on standard outfit quotations. Conditions in this market are practically unchanged, and little new buying has been reported. Current demand has been light, and dealers report the price revisions as a step to stimulate activity as well as to settle the general market tone. Following are prevailing prices:

Closet, standard outfit oak.....	\$28.80
Do., with post hinge seat.....	29.70
Do., white, vitro, pussyfoot, vitreous china or enamel-iron with wash-down bowl and oak or mahogany post hinge seat.....	31.50
Do., add for reversible trap bowl.....	1.25
Do., add for syphon jet bowl..	7.00
Do., for ¾ in. valve on supply pipe.....	1.50
Do., deduct for supply pipe...	0.80
Do., deduct for floor flange..	0.60

Do., wash-down bowl less spud	11.50
Do., reversible trap bowl less spud.....	12.75
Do., syphon jet-bowl less spud	19.00
Do., "Richelieu" bowl.....	10.50
Do., extra for spud.....	0.80
Do., oak, oak-vitro or pussyfoot tank with fittings, less seat.....	16.50
Do., white, vitro, pussyfoot, vitreous china or enameled iron tank with fittings, flush elbow and supplies.....	18.50
Do., wood strip seat and cover	3.75
Do., post hinge seat and cover	4.75
Do., add for bar hinge.....	0.40

Firm Tone in Lead**Toronto.**

The fluctuation on the primary lead market has not affected white lead in oil, and local quotations remain unchanged. A firm tone is still evident, and with linseed oil registering a further advance in price, the strength of white lead is expected to continue while these two raw materials maintain their present conditions, accord-

ing to dealers reports. Corroders are stated to be busy keeping stocks parallel with the present demand, which is good, and no large surplus of supplies is evident at this time. Local prices on white lead in oil are: \$14.95 per 100 lbs. in ton lots, and \$15.30 per 100 lbs. in smaller quantities.

Enamelled Ware Activity Depends Upon Building

Toronto.

Very little improvement, if any, has been evident in enamelled ware buying, and the market on these products is still dependent for future activity upon seasonable building operations. Prices are maintained at former levels, and the current discounts recently announced is applied to the list as quoted below:

Enamelled Iron Baths, 3" roll rim 4 ft., 4 ft. 6 in 5 ft.	\$51.40
Do., 5½ feet.	57.10

All above list except lines marked net. Discount 20-10 p.c. off these prices.	

Cotton Waste Reduced

Toronto.

Reductions have been announced in prices on both white and colored cotton waste. The extent of the decrease varies between 1 and 2 cents on the different grades. Demand is reported as fair, with the present market containing some signs of slight improvement. Following are the revised quotations:

WASTE—

	per lb.

No. 7.	0 12½
No. 1A.	0 11½
No. 1B.	0 10½

Above lines subject to trade discount for quantity.

Linseed Oil Price Higher

Toronto.

Linseed oil prices are still on the upward trend, and another advance of 10 cents per gallon has been recorded. This additional increase brings the current price for raw to 97 cents per gallon, and \$1.00 for boiled, on 1 to 2 barrel lots. The prevailing demand is good, and there is reported to be a brisk movement of flax seed, with slightly higher quotations. Foreign oils are also on a higher level, and a decidedly firm market tone is evident.

Faucet Quotations Lower

Toronto.

A reduction has been announced in the price of Perfection faucets, and the discount on these products is quoted at 35 per cent off list.

Radiator Discounts Hold

Toronto.

The recent revisions in the discount on water, steam and wall radiators remain unchanged, and current prices are maintained at the quotations noted in the last issue of Sanitary Engineer. It is not yet apparent whether the price reductions will result in stimulating the sales of these products to any extent, as the present demand is reported far below normal. Building activity on a large scale is looked for to improve the market tone and generally tone up prevailing conditions. The following is the revised list:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4, and 5-column sizes, 53 p.c. for water and 54 p.c. for steam.

Discount on 1-column size, and 2, 3, and 4-column hospital sizes, 48 p.c. for water and 49 p.c. for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50 p.c.

Expect Improvement In Soil Pipe Demand

Toronto.

Current conditions on soil pipe and fittings are reported as below normal for this season of the year. A slight improvement in demand has been noted in some quarters, and dealers are looking for better activity as the season advances. No price changes have been recorded this week, and the pre-

vailing discount quotations follow:

2 and 3 inch, 10 p.c.
4 inch, 20 p.c.
5 and 6 inch, 15 p.c.
8 inch, add 5 p.c.

FITTINGS—

2 to 6 inch fittings, 40 p.c.
8 inch fittings, plus 5 p.c.

Readjustment Looked For On Boiler Prices

Toronto.

Some degree of unsettlement still prevails in the range boiler situation. Due to the recent price-cutting, a new list has been in effect; dealers hoping that the lower quotations would revive the market. A further price readjustment however, is looked for, manufacturers claiming that present levels are below actual value. Some jobbers also have maintained prices in advance of those generally quoted, being reluctant to sell at a distinct loss. Under these conditions, it is expected that a new list will be issued in the near future showing prices in advance of those given below, which quotes the average range at which boilers are selling locally:

Range Boilers—	Standard	Ex-heavy
30 gallon.	\$ 9 00	\$11 50
40 gallon.	13 80	16 50
52 gallon.	20 40	25 20
66 gallon.	28 80	34 80
82 gallon.	36 00	47 40
100 gallon.	45 60	56 40
120 gallon.	55 20	64 80
144 gallon.	78 00	93 00

Lead and Zinc Easier

Toronto.

The tone in lead products is now a little easier, due to the recent fluctuations on the primary markets. Current local quotations remain unchanged, and a firm demand continues. Whether the reaction in the price of ingot lead reflects the future strength of this market, or is just a temporary decline, is too early to ascertain. The tone of zinc is fair and easier. Following are prevailing prices:

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb.	0 13½
Do., over 8 in. list, per lb.	0 14½
Lead pipe ds subject to discount of 10 p. c.	
Lead traps and bends.	10 p.c.

Irregular Pipe Sales

Toronto.

Prices on wrought iron and steel pipe are being maintained at List No. 51. Sales are small and of an irregular nature. A constant sorting of stocks is apparent, with dealers ordering very sparingly. The market in these products, however, is still dull, and very little improvement has been noted.

Price List No. 51 April 25th, 1921

Less 7½ p.c.	

Reduced Quotations On Copper And Brass

Toronto.

The sudden reaction evident in the primary metal markets, has resulted in a decrease in the price of copper and brass. A 2-cent reduction has been announced on copper and brass tubing, while the base price of sheets is also lower 2 cents per lb. The local market in these products has been dull, and due to the revisions, an improved demand is looked for. The new quotations follow:

BRASS—	
Sheets, base, per lb.....	\$0 27
Rods, base, per pound.....	0 27
Tubing, base, per lb.....	0 34

Valve Discount Revised

Toronto.

A revision in the discounts bringing prices on Emco valves to a lower level, is the only change recorded on compression brass goods this week. The new discount on Emco J. D. and check valves is 20 per cent, the previous quotation being only 10 p.c. The reduction is in line with other revisions recently announced, and improved activity in sales of these products is looked for in the near future. The following quotations prevail locally:

Compression work, standard..	37 p.c.
Fuller work, standard.....	30 p.c.
Bath cocks, compression.....	29 p.c.
Do., Fuller.....	25 p.c.
Flatway stop and waste cocks, standard.....	40 p.c.
Roundway stop and waste cocks, standard.....	34 p.c.
Brass steam cocks, standard..	10 p.c.
Globe, angle and check valves, standard.....	5 p.c.
J. M. T.....	20 p.c.
J.M.T. C.....	25 p.c.
J.M.T. Gate Valves.....	15 p.c.

Radiator valves, standard....	23 p.c.
Do., removable discs.....	38 p.c.
Emco J. D. Valves.....	20 p.c.
Emco Check Valves.....	20 p.c.
Webber Gate Valves.....	15 p.c.
Basin Cocks—	
No. 1 and 1 Puller pattern..	30 p.c.
Quick opening, No. 3633....	37 p.c.

Demand Is Small For Sheets And Plates

Toronto.

While local prices of sheets and plates are being well maintained, yet it is intimated that the lack of a strong market keeps quotations at their present level. In the southern steel markets, some unsettlement over sheet prices is evident, a revision on a downward grade being looked for in some quarters. No declines generally are expected however, until an improvement in demand is shown. No changes have been noted in local conditions, the trend of orders being of the small variety. Nominal quotations remain as follows:

BLACK SHEETS		
14 gauge.....	5 10	6 10
16 gauge.....	5 20	6 20
18-20 gauge.....	5 75	6 75

22 and 24 gauge.....	7 35	8 75
18 and 20 gauge.....	7 60	8 60
16 gauge.....	7 45	8 45
12 and 14 gauge.....	7 40	8 40

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10½ oz. and 28 ga., when shipped cut in sheets 3 feet wide. The extra charged over prices shown above is from 20c to 30c per 100 pounds. Other gauges show no change for widths of this size, but in some cases there is a further extra for 4 ft. widths on all gauges.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Boiler Tube Market Dull

Toronto.

A dull tone prevails in the boiler tube markets, and present conditions are reported as slightly unsettled. Some price revisions have been looked for in certain quarters, but current quotations remain unchanged. The demand is light, and doubt whether price reductions would stimulate market activity is quoted as the reason for holding to the present list, which fol-

HEAT YOUR HOME RIGHT-SAVE MONEY!

Get A FREE Estimate and Learn How Little This Fine Furnace Costs

You're making money trying to heat only two or three rooms with a small furnace and have the whole house cold and warm if you install a HECLA Pipeless Furnace. For the HECLA Pipeless has a family-sized firepot that burns one ton of coal in a day. It's only one register, and it makes the whole house warm as a bath. There's no need for any other pipes, absolutely without qualification. And the modern heating system gives you a coal bill without the old-fashioned space heating pipes.

Costs Less to Install—Less to Run. Guaranteed to Heat Any House Up to Fifteen Rooms.

Learn all about the HECLA Pipeless Furnace, its features, its advantages, its economy, its safety, its simplicity, its beauty, its durability, its modernity, its efficiency, its reliability, its economy, its safety, its simplicity, its beauty, its durability, its modernity, its efficiency, its reliability.

EXTRA Business!

Pipeless Jobs Open New Market!

And This Furnace Outmatches Competition!

"Hecla" Pipeless Furnace advertising is appearing in all the leading publications throughout Canada because

- we know the furnace is right. No other furnace can compare with it.
- we realize the tremendous market this fine economical modern heating system has opened up.

It offers YOU a quick, clean profit.

Every month in the year is an open season. Houses new and old, even with the cellar only partly excavated, are prospects. And the price is right!

Thousands of "Hecla" Pipeless Furnaces have been installed. Not a complaint has been received. And in selling the "Hecla" you can easily outmatch competition for you talk features of real merit—Steel-Ribbed Fire-pot, Patented Fused Joints, Circular Waterpan, and other superiorities.

Moreover you can sell the Hecla on a guarantee that has NO STRINGS!

There's business in your town. Let's show you how to get it. We've a booklet ready on selling "Hecla" Pipeless Furnaces—the arguments used by our most successful dealers. Write for it—it's free.

IMPORTANT FEATURES

1. Steel-Ribbed Firepot —saves coal.
2. Patented Fused Joints — prevents leaks of gas and dust.
3. Circular Waterpan —gives ample moisture.
4. Cast-iron Combustion Chamber—guaranteed for five years
5. Automatic Gas Damper.
6. Individual Grate Bars
7. Large Firing Door.
8. Tripe casing—lining really galvanized.

A BETTER FURNACE

And Saves One-Third On Fuel Bills

The "Hecla" Pipeless Furnace enables a builder to save many valuable dollars on the cost of a house and yet give what you please. It adds a valuable selling feature, for it not only heats the home properly, but it does so on much less fuel than any other heating system.

Guaranteed Against Leaks of Gas or Dust!

The HECLA Pipeless Furnace is the only burner that's been sold in such large quantities. It's the only burner that's been sold in such large quantities. It's the only burner that's been sold in such large quantities.

Eavestrough In Demand

A good demand for conductor pipe, eavestrough and conductor elbows is now reported. Better weather conditions, coupled with the erection of numerous small buildings and minor house repairs has resulted in this seasonable activity. The present movement in these products is now stated as more satisfactory. Price quotations still remain at the new discount levels recently announced. Following are current prices:

Small Orders Prevalent In Iron and Steel

Local price quotations on bar iron and steel remain unchanged this week, and with an understanding having been reached among the dealers, future revision are expected to be dependent upon conditions and changes prevailing on the Pittsburg markets. Present business continues to be chiefly composed of very small orders, and no immediate improvement in demand is looked for.

Rumors that another price war is anticipated between the steel mills in the United States continue to slightly upset the stabilized markets, and consequently buying for future delivery is retarded in many lines. The present unsettled condition of the steel industry, is reflected in the small amount of new business, buyers declining to commit themselves in advance.

Current prices remain locally as follows:

IRON AND STEEL

Mild steel, 3-16 in. and lighter...	\$ 4 50
Do., ¼ in. and heavier.....	4 00
Bar iron, 3-16 in. and lighter...	4 50

Norway iron	15 00
Toe caulk iron	5 40 6 40
Hoop steel	6 00

Scrap Prices Show Declines Toronto.

Scrap metal prices are easier this week, due to the continued indifference of consumers. Quiet conditions prevail and little interest is evident. Improvement in operations is very slow, and consumers are still purchasing according to immediate needs only. Sentiment is developing, however, that an increase in the buying of some lines of waste materials is anticipated in the future.

The following list shows a slightly lower range on certain prices, which are the average nominal quotations for fairly large quantities:

WASTE MATERIALS

No. 2 busheling.....	\$13 00

Reaction In Ingot Metals

Easier market tones and some reductions are among the changes in ingot metals this week. A reaction has been evident in foreign buying, which for the past few weeks was the chief support of the strength recorded in

the of copper, lead and tin.

COPPER—The copper market is reported much easier, and quotations are now holding steady. The presence of surplus stocks of scrap copper has had its effect on the market. The heavy slump in the exchange rate resulted in a decrease of foreign buying, which has been the main support of the domestic situation during recent weeks. Very few inquiries are in evidence, and reports indicate that ample stocks are available for present needs. Local quotations remain unchanged at 18 cents.

TIN—The recent fluctuations in exchange made foreign values of tin very uncertain. A corresponding weakening in the domestic markets has been noted, and a sagging in price resulted. This reduction brings the nominal quotation to 38 cents, and the demand at present is dull. Future recovery is looked for in some quarters.

LEAD—The lead market is reported dull and unsteady this week, and buyers are adopting a waiting policy pending future developments. Foreign quotations have declined slightly, and this has been reflected locally with a decline of 25 cents, the average price being \$6.50.

SPELTER—Spelter is still selling below cost, with a feeble demand on all markets. Business is reported as very dull, and lower quotations have not served to bring any new buyers into the market. Surplus stocks are heavy. A reduction has been recorded locally, the price of \$7.25 being made on recent inquiries.

ANTIMONY—Consumers are showing little interest in antimony at the present time. The slight concessions that have been made by some dealers failed to increase their business to any extent. Values are therefore unchanged from previous levels, and the local current prices are maintained at from 8 to 10 cents.

ALUMINUM—This market is reported almost neglected, but prices are holding at previous levels. Foreign markets maintain that present quotations could be shaded for any large amount of business, but the price of 30 cents is still in effect locally.

WINNIPEG

WINNIPEG, June 13.—A downward trend is still in evidence on prices covering some lines of plumbing and steam-fitting supplies. Compression work and cocks are lowered in price, also eavestrough and conductor pipe being marked down. Quotations on pipe fittings remain steady, and wrought pipe is also quiet.

Sheet and plates still hold at previous levels, but bar iron and steel have been reduced. Soil pipe and cotton waste are unchanged in price. Business conditions show gradual signs of improvement, and wholesalers and jobbers are becoming more optimistic regarding prospects for the summer and fall seasons.

**When You
Sell Them A
JEWEL
You Sell
Them What
They Want**

There is no other line that offers you so great an opportunity to create goodwill and furnace reputation. With the Jewel you are giving your customers the best their money will buy—giving them real quality that means enduring service for years.

All materials entering into the manufacture of "Jewel" Furnaces are highest grade and they are erected by skilled mechanics under the supervision of experts, which ensure the dealer and user entire satisfaction.

IMPROVING QUEBEC SANITARY CONDITIONS (continued from page 30)

The first thing on our programme was the healthy housing scheme to build houses with the federal government loan and as soon as they started to talk about healthy homes in Quebec, I replied "You cannot build healthy homes without Sanitary Plumbing." They did not pay much attention to what I said until I had repeated it at least twenty-five times. Then, I suppose they thought I was going crazy and they asked me what I meant. My reply was: "Give me about an hour to explain and you will understand me." They agreed to allow me to speak on the subject at the next meeting. Then I gave the first lecture on Sanitary Plumbing in Quebec. It is necessary to tell you that they were astonished to hear that plumbing was not only an absolute necessity for every modern city, but that it was also a danger for the health when it was not done in compliance with scientific principles.

A resolution asking the civic authorities to draft such by-laws as mentioned in my lecture was approved of and immediately sent to the City Hall but the City Council did not find it was yet necessary and they kept quiet until six months later, when I was asked by the Rotary Club to give a lecture on the nature of my business, and there again I spoke on Sanitary Plumbing. This second lecture was published by both the "Sanitary Engineer" and "The Sanitary and Heating Journal" and I wish to thank both of them for their splendid co-operation. The Rotary Club of Quebec took immediate action on the subject and a delegation went to the City Hall to meet the Mayor the very following day and we came out with the promise that the City Council would act very shortly on the matter. Notwithstanding the Mayor's promise, which I am sure was sincere, three months passed without hearing anything on the question. Then with the co-operation of the Quebec Builders' Exchange we published five hundred booklets of my two conferences and delivered them in the City of Quebec, to every prominent man, not forgetting the Aldermen and the Health Officers. This, then was the real motor which started the machine which is now running at full speed. To conclude I will read you an editorial from the Quebec Telegraph of May 27th, 1921, which will give you exactly the position as it is now. This is what the editor says: "It is extremely gratifying to know that Quebec is at least to have a proper system of sanitary plumbing governed by a municipal by-law framed in accordance with the most modern sanitary rules. Several weeks ago we published at considerable length a report of a very able address delivered before the Rotary Club by Mr. E. G. Brousseau. The result of all this agitation was the appointment by the City Council of a special committee to consider the matter thoroughly and to draw up a by-law to govern the system of plumbing to be adopted in all future buildings in this city. This committee, which consisted of the mayor, Aldermen Dr. Martin, Dr. Bedard, Dr. C. (continued on page 43)

“THE NEW IDEA” PIPELESS FURNACE

*Is our latest achievement, and
of which we are mighty proud.*

For seventy-five years we have been successfully manufacturing “New Idea” Warm Air Pipe Furnaces which have been recognized by engineers all over Canada as the most scientific heating plant that has ever been built.

Now we are also manufacturing the “New Idea” Pipeless Furnace which is also carrying the fame of our company broadcast because it is really doing everything we claim for it, and more.

Make up a list of the houses in your town that are not equipped with a furnace and you will find you have a large number of good prospects. Then write us for our exclusive Agency plan for your town and district. The season for installing furnaces is now at hand so don't delay—but write today. Catalogues and pamphlets mailed free on request. Address all Correspondence to head office at Hamilton, Ontario.

Need Universal Sanitation Standards

(continued from page 32.)

force are granted to master plumbers, and in a few such localities to journey-men plumbers, but in these towns of the Dominion without regulations no permits are required. Inspection, which is carried on under the direction of the local Board of Health or the local building department, is intended to give assurance that the work has been done properly and in accordance with the regulations—a guarantee against dishonesty, carelessness, flaws in materials, and accident. Licenses, permits, regulations, and inspections invariably go together, a town adopting all or none.

The practice of examining and licensing plumbers appears to be working quite satisfactorily. The inspection service does not always give the protection expected of it, because of the difficulty of enforcing penalties. Failure of the authorities—namely, boards of Health, building departments and even the courts to back up the inspectors and secure compliance with the law naturally tends to discourage the inspectors and causes many of them to carry on their work in a perfunctory manner. Failure of the inspectors to be on the job at just the time desired causes delay in building, with consequential losses. The inspection does not always include a test of the system after the fixtures are set, but only a water test of the piping. There is not provision for "Follow Up" inspections after the installation has been once approved, and regular inspections by the health authorities are not generally made. Yet it is the old plumbing rather than the new which needs attention. The granting of permits to journeymen, which is sometimes done, has thrown an increasing burden on the inspector, and this practice does not tend to give the best results.

In our opinion the laws should be modified, so as to throw a greater responsibility upon the master plumber—that is, upon the man of experience—placing less dependence upon the combination journey-man and inspector. Master Plumbers, maintaining a permanent shop, have a business and a craftsman's reputation to sustain; journeymen and inspectors do not have to do this to the same extent.

If the practice of issuing permits to journeymen were done away with, and if it were made possible to establish minimum requirements for plumbing installations in small communities which at the present time are without regulations, either omitting entirely permit and inspection, or making more general the district system authorized by law, and trusting to some extent to licensed master plumbers to comply with the regulations, with a penalty of loss of license for not complying with them; we believe that in sparsely settled localities the public interest would be sufficiently safeguarded. In other words, we believe that the Dominion plumbing regulations would be well enough administered in small communities under the district system or by the master plumbers themselves who have

personal reputations to maintain among their neighbors, but that in large places where this personal relation cannot so readily exist there should be the regular system of permit and inspection. Objection may be urged that this plan is impracticable because so much work is done today in small places by cut-of-town plumbers, but the answer is that the public needs to have local plumbers to look after repair work, and it is not for the best interest of small communities to have all their plumbing work done by the plumbers of the larger cities. We are of the opinion that each community should take the initiative and decide for itself those matters which relate to business and administration.

Regulation of Plumbing Design

The regulation of plumbing design is on a different basis. It does not involve business or administrative matters, but rests on scientific laws and upon practical experience. These are the same in one town as another, and there is no reasonable justification for the great variety of regulations found in the cities and towns of our own Dominion. On the other hand, buildings differ, and regulation of design applicable to one type of building is not appropriate for all other types of buildings. The single cottage house presents one problem; the three-decker and the apartment of four or more stories another problem; the office building still another; and the school-house and factory different problems. There is no reason why a plumbing design unsuited to a three-decker in Montreal is not equally unsuited to a three-decker in Quebec, barring possible differences in the proximity of other buildings and the existence or absence of a sewer in the street. It seems to us that by carefully studying the needs of different buildings it will be possible to effect a classification which will accomplish two things—first, to reduce the cost and trouble to the owner and builder of the small cottage house of the sort desired by the wage earners and commonly found in small towns; secondly, to give greater protection to those who live in multiple houses, which may be regarded as quasi-public dwellings, against the misuse of the common plumbing system by their co-occupants; and third, having made this classification, to be able thereby to extend the plumbing regulations in a uniform manner to the entire Dominion.

Such a classification will require care in its working out, and discussion by all who are interested in the housing problem.

We are of the opinion that the laws regulating plumbing should be more elastic, but that they should be relatively uniform throughout the Dominion in all localities operating thereunder, our suggestions being as follows:—

- 1.—That the licensing of master plumbers and journeymen be compulsory throughout the Dominion.
- 2.—That minimum plumbing regulations for buildings of different classes be established and made uniform throughout the Dominion; that these be mandatory for cities and large town, but permissive for small towns.
- 3.—That the permit and inspection

systems be mandatory for cities and large towns, but permissive for small towns.

4.—That the installation of water piping systems which convey water to fixtures be regarded as plumbing work and subject to supervision and inspection the same as the drainage system.

In submitting to you the account of my humble efforts and at the same time laying down the responsibilities of the office with which you have honored me, let me extend to the officers and all other interested friends associated with me that gratitude which every man feels who has been nobly assisted in the work. I trust that my successor may have your continued and kindly consideration, your loyal support, and greater enthusiasm given him by the individual members as well as by his associate officers.

JOHN WRIGHT, Toronto,
Chairman of Sanitation.

Improving Quebec Sanitary Conditions

(continued from page 46.)

R. Paquin of the Health Board, Mr. Arthur Picard and E. G. Brousseau, has just gone carefully into this whole subject and has finally confided the preparation of a by-law to Messrs. Brousseau and Picard who have special practical knowledge on the subject and to Dr. Paquin, Medical Health Officer of the City.

Mr. Brousseau is now at work upon the details of the by-laws which will be submitted to Messrs. Picard and Paquin, who will study what additions, if any, should be made, and will aid in drafting it in proper form, after which it will come before the entire committee and the City Council. We may now expect without unnecessary delay to have a modern plumbing by-law which will not be an exact copy of those in force in either New York or Montreal, but will be of a character more specially suitable to the needs of Quebec, based upon latest provincial legislation on the subject with the additions of provisions justified by more modern experience. We may thus look forward at an early date to the filling of a long-felt want in Quebec, and the next important step in this direction will then be the due enforcement of the new by-law in such a measure as will insure the protection of life and health.

Gentlemen, this editor is right. I am at work drafting this by-law and they are going to get it within this month, and by the fall Quebec, I am sure will have a modern civic plumbing system.

Now, members of the craft, I hope I have not annoyed you with so many details on this question of plumbing by-laws, if I have I am sorry. But my idea in doing so was to stamp on your minds that if with some energy and a good knowledge of the questions we advocate, any one man with no influence can obtain such a result, can you not conceive what such a body as the Canadian Society of Domestic Sanitary & Heating Engineers as a whole, could obtain if they would only stick to their motto and work in the spirit of "All for one, One for All."

E. G. Brousseau,
Quebec Provincial Vice-President.

It is not necessary to wait until

*The 12th of July for
William the Third*
to test the

Pussyfoot Closet Tank

for here we have our

A Step Forward in Efficiency Victory Radiators

An improvement in engineering and design.

The Victory Radiator is made with two flat, hollow castings, one for the top and the other for the bottom, with tubes inserted in them. One tube is within the other. In this way, water is caused to circulate through the headers and be-

tween the two tubes. This is a series of double tubes; 8 in the smallest castings, up to 54 in the larger ones. This adds the outside surface radiation of the larger tube, and the inside surface radiation of the smaller tube, to that of the top and bottom headers. So Victory Radiators

SAVE ON

Coal, Shipping and Handling Weigh Cost of Installation and Fittings

Further investigation proves them still more efficient. Steel tubing is thinner and gives better radiation. The air circulation is better. The radiators occupy a minimum of space. They are artistic in appearance.

Since there is only $\frac{1}{8}$ as much water in Victory Radiators, it is quickly heated, and stimulates circulation of the water, making radiators hotter and radiating more heat. A smaller furnace can be used to heat the lesser quantity of water. Write for the remainder of the advantages.

To Advertisers and Readers of
Sanitary Engineer

It is common knowledge that the union printers in many towns and cities in Canada and the United States are on strike. For the first time in its 35 years' history The MacLean Publishing Company is involved and we believe you will be interested in receiving a statement as to what the printer's unions are striking for and why their demands cannot be granted.

A year ago (although the wage agreement at that time had over a year to run) the Toronto Publishers and Master Printers gave their employees voluntarily a 10 p. c. advance in wages, making the minimum wage \$35.20 for a 48-hour week. This was given in recognition of the fact that living costs were then advancing. This voluntary agreement for \$35.20 a week expired June 1st. Notwithstanding that the cost of living has declined 22 p. c. since March, 1920, the printers' union demanded a 44 hour week and a wage of \$44.00. This means four hours per week less work and an increase in rate of pay per hour of 33 per cent. Employing printers can grant neither shorter hours nor higher wages and the saner printers realize that their union's demands are unreasonable. A large percentage of our own men did not want to strike, but the union leaders in the United States have ordered it and the strike is on.

Negotiations have been carried on for months. The employing printers have been tireless in their efforts to bring about a settlement without a strike. They are now engaged in a fight, not only for their existence but for a principle in which every business man is interested. If the unions secure their unreasonable demands then the fight would surely be carried to other industries. Business men with whom we have discussed the matter have been most emphatic in urging us to take a most determined stand. "Stay with it and we'll stand with you," they say.

And so we shall "carry on". We shall be somewhat handicapped, especially at first there may be occasions when you can extend your co-operation and support and we feel that we can count on you. It is our intention to issue our publications regularly and as promptly as possible. There will be difficulties to be overcome, and for a short term our service may not be up to its usual high standard. If, therefore, your publication does not reach you on time, if we have to repeat a former advertisement, if proofs are not submitted, or if we fall short of full efficiency in any way, we ask your kind indulgence. We are fighting for greater efficiency at a critical juncture in the world's history, and your co-operation and moral support will help.

Anthes Syphon

USERS SAY:

"It Works Perfectly"

Read the following letters from farmers who are using the Anthes Syphon for their Sewage Disposal Systems:

Wawanesa, Man.

I like the system first-class. It works so well that I have not seen into the tank for six years, so expect the syphon is working well. It is perfect and no well equipped farm should be without it.

(Signed) S. H. HENDERSON.

Balcarres, Sask.

The septic tank is working O.K. Too much praise cannot be given it if it always works like it has. And the comfort of it cannot be told in words.

(Signed) S. STEPHENS.

WHAT A WOMAN HAS TO SAY:

Holland, Man.

March 24th, 1921

Our Septic Tank and Sewage Disposal System installed last August has given entire satisfaction. All through the winter there has never been any indication of freezing, or any other objectionable feature.

The system has proved a very great comfort, which the whole family appreciates.

(Signed) M. E. (Mrs. W. J.) CHARTERS.

Balcarres, Sask.

April 5th, 1921

.....I had no trouble from freezing. I do not know of any improvements that could be made. Everything works fine.

(Signed) THOS. STEPHENS.

Lenore, Man.,
March 25th, 1921

With regard to septic tank, everything has worked O.K. since it was installed in October, 1918. It has never given trouble from frost and the syphon valve has worked perfectly. The whole system is entirely satisfactory.

(Signed) R. J. BRAY.

Regent, Man.,
March 25th, 1921

I must say that we are more than satisfied; the system works perfectly. I have been speaking well of it to anyone that has asked me. The system has been installed nineteen months.

(Signed) DOUGLAS POTTER.

Oak Lake, Man.,
March 30th, 1921

The installation has given perfect satisfaction. There are no objectionable features.

(Signed) V. M. DUNLIVIE.

There are many farmers who do business with you that still jog along without sanitary plumbing in their homes. Think of the excellent prospect for sales that this means to you, not only for the Anthes Syphon, but also the plumbing fittings that must go with it.

Write us for full details and plans showing how to install the Anthes System.

The PILOT Superior Pipeless Furnace

Talking Points :

- 1 Takes up little room in the cellar.
- 2 Sends the heat to the house immediately it is created.
- 3 No heat lost by absorption in the cellar and therefore less coal needed to keep the house warm.
- 4 Cellar remains cool when full fire is on and fruits will not spoil.
- 5 The price is right.

Full information on request.

PROOF

The Hall Zryd Foundry Co., Ltd., Hespeler, Ont.

Dear Sirs:—In the beginning of the present winter I had installed in my dwelling house one of your Pilot Superior Pipeless Furnaces, and I must say that I am very much pleased with the said Furnace.

We can have the house very comfortable both up and down stairs as the furnace draws all the cold air from all parts of the house and replaces it with hot air.

The heat is very evenly distributed all over the house and the cellar is cool as no heat is lost from the furnace in the cellar. Wishing you the best of success,

Yours truly,

Geo. H. Harshaw, Post Master

Obtains Greatest radiator efficiency
Uses steam at most economical pressure.

In a properly installed system, results are as positive and the response almost as quick as with an electric lighting system. Not unlike the snap of a switch — the turn of the valve admits as much or as little heat as required, when and as needed at the radiator.

To pass on practical installation suggestions to mechanics, steamfitters and apprentices, as well as to contractors who may be interested, a series of suggestions, that apply to all steam heating as well as to Dunham Heating, will follow in subsequent issues of this Journal.

This is put forward in the interest of "Better Heating" and to create an asset for all contractors through satisfied owners of steam heating, by securing more "Perfect Installations."

Wolverine Genuine Fuller Balls

Blunt and Tapered Patterns in Sizes— $\frac{3}{8}$ ", $\frac{1}{2}$ ", 9-16", $\frac{5}{8}$ ",
11-16", $\frac{3}{4}$ " and 1"

"Non-Splitting"—Guaranteed to stand any degree of Hot
or Cold Water.

Our stock of Fuller repairs includes Stem Packings,
Brass Rings, Caps, N. P. Eccentrics, Stems, Screws, Nuts,
Etc.

Other Wolverine Lines include Bibb Washers—Sure-Seat Tank Balls—the real rubber
kind—Syphon Rings—Sink Stoppers—Solid Rubber Plugs. But why attempt a complete
list here. All we want to tell you is "Wolverine Products are quality goods and will
help you to produce good work and satisfied customers."

Going Into Reverse

While the tramp was having his "bite to eat" the lady of the house remarked on the aimlessness of such a way in life and asked how he ever made up his mind which way to go in the morning. "I always turn my back to the wind," he said.

Our Quaturn Basin Cocks turn their back to trouble—they **close with the pressure**—the reverse of the ordinary type.

These Basin Cocks not only turn their back to trouble but are **double quick** in action—just pull the lever toward you one quarter turn for a full drive of water—the reverse movement closes one "tight" **instantaneously**; and you will not "bark your hand" in the operation—just that feeling of **satisfaction** instead.

A-1900 QUATURN
BASIN COCK

Neither will it be necessary to "yell" after Johnny to "be sure to close the Faucet **tight**." Johnny always did "make a stab" at closing the faucet—less than that will close these tight, the pressure helping. They close **with the pressure**.

Our A-1900 (Top handle) and A-2000 (Side handle) are built for **speed, safety and satisfaction**. All working parts replaceable, bodies stay installed permanently.

Ask your Jobber or write us direct.

Complications in Tinsmiths' Case

**In Face of Ruling from Ottawa Concerning Status of Tinsmiths for Purposes of Taxation, Reports Are Received that Local Collectors Are Both-
ering the Trade and Making Rulings of Their Own—Definite Statement
Given Sanitary Engineer Readers Herewith by Deputy Minister of Inland
Revenue.**

THE old question of whether a tinsmith should take out a manufacturer's license and collect the sales tax is again brought up even in the face of the recent decision in the test case.

W. H. Turnbull & Sons, Brantford, Ont., write that the local collector advises that as he reads the act a tinsmith is a man who does nothing but repair work and soldering, while a sheet metal worker does furnace work, makes up eavestroughs and is therefore a manufacturer, even under the latest provisions.

Collector Has Erred

But the local collector in this instance has erred in his attempt to define a tinsmith. This fact is established as the result of an interview the Ottawa representative of Sanitary Engineer had with George W. Taylor, assistant deputy minister of the Department of Customs and Inland Revenue. When asked for a definite ruling as to what constitutes a tinsmith, and whether he is liable for the collection of the manufacturer's tax, Mr Taylor said:

"The whole question rests upon the nature of the man's business. If the work he is doing is being done for the consumers, regardless of what he is making or assembling, then I say most emphatically he is a retailer and cannot be classed as a manufacturer. If the local collector in this case has made a ruling, it is not necessarily final. Under the new provisions where there is any doubt or dispute, either the dealer or the collector, or both, have the right to refer the matter to the Minister of Customs and Inland Revenue, who is the final authority.

"If it is established that the firm in question are manufacturers, then they are liable for the collection of the tax from the commencement of the present fiscal year.

"If the firm is satisfied that it is doing a strictly retail business, then all it has to do is to mark 'Abandoned' upon the taxation papers and return them to the department, and of course if the department takes no further action a firm may then con-

sider that it is not liable for the payment of the tax upon any of this year's sales."

From the above statement and ruling it is to be seen that the whole question is one of individual rather than collective adjustment. Each case will be decided upon its merits by the minister of the department who is the final authority. This should be comforting news to the tinsmith, because he knows now that he has the right to challenge any decision or ruling made by the local collector.

Regulations

The following is a copy of a circular letter sent by the secretary of the Dominion Board, Retail Merchants' Association of Canada, to the secretaries of the various provincial boards dealing with this matter in a general way:

"Excise taxes are to be paid by manufacturers or producers and wholesalers or jobbers.

"Excise taxes shall not be payable on sales of goods made to the order of each individual customer by a business which sells exclusively by retail under regulations by the Minister of Customs and Inland Revenue, who shall be the sole judge as to the classification of a business.

"Until the Minister of Customs and Inland Revenue makes his rulings regarding the retail trade, it is very necessary before any retail merchant makes application to take out a manufacturer's license, or before they inquire from the Customs Department, or decide what class they come under, they should first refer their case to the secretary of the association in their province, who is asked to take the matter up with our office here, so that we may know exactly under what classification the retail merchant should be placed. This is very important, otherwise we will find ourselves in the same position as we were in before, when all sorts of rulings were made which were contrary to the act."

Raising Efficiency of Plumbing Industry

Business Standards of Average Operator Are Low—Requirements of An Up-to-date Plumbing Office — Read Trade Papers — Trade Extension

Address by T. J. Mines, Brantford, Ont., before 24th Annual Convention Canadian Society D. S. and H. E., Quebec City

WE have all had a very nice time here this evening, and also throughout the three days of our visit in Quebec, but there is a serious side to life that means a great deal to us all. I venture to say after our three days Convention here, that many of us to-morrow will have forgotten the things that we have learned in these three days. The position I find myself in this evening is not an envious one, I assure you, for while any of you Gentlemen present undoubtedly could make any number of suggestions where the efficiency of our industry could be raised, I take it that what is required of me is to express my opinion from personal observation, experience, and from the particular point of view that I naturally would take from the standpoint of one who is engaged in the Plumbing Industry in common with the rest of you.

Such an engagement, of course is actuated by the desire of bettering our condition in the Trade of which we have been educated in a practical, mechanical way, or in other words, having secured an apprenticeship to the Trade of Plumbing, thereby becoming in due course a journeyman by educative and practical experience, up to this point by the way we advance step by step. The next step, however, is a stride, probably it would be best defined as a jump. You will note that before we became a journeyman plumber it was necessary for us to have a technical teaching before we were able to grasp the Why's of our doing certain things with waste pipes, traps, vents, back water valves, circulating pipes, etc. We were taught why certain ways were considered good practice, and what would be the consequence if we deviated from along recognized successful ways.

Up to this point the majority of us have been successful thanks to the guiding hand of those of experience but we became dissatisfied with our position in life and we took the jump, that I have intimated to you, and launched into business. The question that I would like to ask now is: **What Qualifications Have You to Justify Your Actions?** True you have served your apprenticeship and tuition, have become a plumber; but what tuition or apprenticeship have you served to become a business man, for as a business men you must be able to command success in the Commercial world. The fact of a man being a machinist does not qualify him to master an industry manufacturing machines, as does the same thing apply to a boiler maker or a moulder. Can any of you recall the letter or an enameller managing a successful enamel plant, or a soil pipe Foundry. How many brass moulders

or finishers can you count managing or proprietors of a brass works? How many wholesalers of plumbing supplies do you know who have served their apprenticeship as moulders, brass finishers or plumbers. You have the answer any one of you. What is it? Apprenticeship, tuition, education, any of the three, it matters not which you call it, but the definition is **Business Training**. I know and you know some of the best plumbers that ever poured metal from a ladle, plumbers whose technical knowledge is respected beyond question, who have entered into the plumbing business industry made a rank failure of it, and for what reason? Because they were simply a plumber. It never occurred to them that it was necessary to have a business training. I have known men who have made a success of the plumbing business, who, as a plumber, might be termed a darned good shoemaker but he had the one essential for success—**Business Training**.

Success in business should not be measured entirely from the dollar and cents standpoint, nor do I look upon it entirely from that angle. But rather from the angle of service to the community in which you are engaged in business. How should you perform this service? Employ good workmen, yes; help people out of trouble when their water pipes burst, or their waste pipes stop up, repair their faucets and closets when need be, yes—but these things are mechanical things that we were educated to throughout our apprenticeship, and the things that are expected of us from the public. These are the things we have been giving our attention to and we should give our attention to these things but a journeyman plumber can take care of these. They are mechanical that is why we employ the journeyman. When we engage ourselves in plumbing as a business, we would take upon ourselves the greater responsibility and serve the public as they are entitled to be served. We should fit ourselves to advise the public as to the proper type of plumbing fixture required for his particular requirement, the proper installation of the fixture, the grade or quality of the fixture for his convenience and service.

The question now arises, how is the plumber going to give this service. Can he make suggestions, give advice and recommend fixtures by catalogue? If he can, very well and good, but why go to the plumber, why not order from the mail order house who will give the information for the asking? The plumber is only too free to criticize the mail order house or wholesaler who sells direct to the consumer, and really, I am free to confess that only too often without cause, for the plumber as a rule, is nothing more or less

than a mail order man, there are exceptions, of course.

The man engaged in the plumbing business should have an office, a show room complete enough at least, to give prospective customers an idea of what they require not what they want, for as a rule the customer does not really know what he wants, and is almost invariably open for suggestions. The plumber should also carry a reasonable stock of staple articles at least, that he may be able to supply the requirements of the public without having to operate on the mail order principle.

I think now, sir, that you will agree with me in the main of what I have said. Let us get nearer to the point. You say that is good theory, but I can't put it into practice for the reason that I have to meet the competition of the man without a shop. You are right, it is only too true that class of competition is becoming greater all the time especially in these times of depression. Personally I know of two concerns who have maintained show rooms for years in a city of a population of something less than 40,000 people, that have been forced to abandon their show rooms and operate from their woodshed, a lamentable state of affairs, you will agree, but how is it to be overcome. In my humble opinion it is caused by lack of confidence. The wholesaler has no confidence in the operating plumber, nor has the plumber confidence in the wholesaler; the system of both is entirely wrong.

Now, let me see where it is wrong. 1st. what has placed the two men with the fairly equipped showrooms back to the woodshed, why the operating plumber without a place of business why in this same city I know of a case where an apprentice who has been away from the Trade for several years (and by the way he would never make a plumber if he tried for a hundred years) he was out of work and he applied for a plumber's license. Another case two fellows from the country had helped some pipe fitters. They were out of a job, applied for a license to do plumbing and knew practically nothing about plumbing. Fortunately these two cases have been stalled, but there are others who have secured licenses by different means and are operating to the detriment of the Trade in general. Is it any wonder that a plumber gets a bad name? **When I say detriment to the Trade in general** I mean the manufacturer and wholesaler. Why? Because in the first place his whole aim is to get contracts irrespective of service or quality of work, which reflects upon the fixtures and materials he installs. In the second place he is handling business

(Continued on Page 24)

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

(Continued from June issue)

ADEQUATE means of access, for inspection purposes, should always be provided at each end of the drains, especially when same runs underneath a building. Underneath buildings and in bad ground drainage pipes constructed of cast iron make the best drains, having longer life and few joints, or if vitrified pipes are used they should be surrounded by at least six inches of Portland cement concrete.

Fig. 38

Iron pipes should be laid in ground free from cinders and ashes and should be coated inside and outside with Dr. Augus Smith's hot bituminous solution or with coal tar, varnish or asphalt. The spigot and socket joints are run with lead and well caulked.

It is usual to place suitable traps or syphons, provided with proper means of access for purposes of cleansing on the main or branch connecting drains except the one from the soil pipe which acts in the capacity of the main ventilating shaft for the private house drains.

Traps are made of similar material to the pipes and to be effective must have a depth of water seal of at least 1½ inches and be free from all angles, projections, cavities, etc. that may interfere with a free flush and lead to the deposit of solid matter and should be located outside the building wherever possible and always be self-cleansing. Traps are placed on drains

to ensure as much as possible a sufficient and constant barrier or seal against the passage of sewer gas.

The very best designed trap is liable to failure through the evaporation of the water in the trap when the system is very little used, so that in empty houses provision should be made for renewing the water in the

Fig. 39.

trap. Also the pressure of foul gas within the drain may force the water seal which may be remedied by efficient and proper ventilation. Water can also be sucked out of the trap by syphonic action and the placing of an air pipe connecting with the top of the trap beyond the seal will remedy this danger.

Lastly, the trap always imposes a certain amount of obstruction to the flow of sewage in the drain and tends to cause stoppage, and for this reason proper provision should always be made for good ventilation of the house drains by providing at least two untrapped openings to such drains; one opening should be as near as practicable to the main trap, next to the sewer connection, and the second should be at the farthest distance possible from the point at which the first mentioned opening shall be situated. The first opening shall be finished off near the level of the surface of the ground adjoining, by means of a suitable pipe, shaft or disconnecting chamber. The other opening shall be obtained by carrying up a pipe or shaft at least 4

inches in diameter to such a height and in such a manner as to effectually prevent any escape of foul air, from such pipe or shaft, into any building in the vicinity thereof. Both these openings should be protected by means of a suitable grating or cover which will not retard the ventilation or free passage of air but prevent any obstruction in or injury to any pipe or drain by the introduction of any substance through any such opening.

All drains should be laid deep enough to allow the lowest basement flow level being connected to same allowing ample fall and always taking into consideration the depth of the trap. In new structure the drainage connection and sanitary fittings should be installed towards the completion of the structure as rubbish etc., sometimes finds its way through the fittings into the drains and creates a blockage. At every quick change of direction or grade of the drain and inspection chamber should be constructed out of brick with cement concrete invert or cast iron airtight cover, as at these points the drains are liable to become choked and if at all possible—without increasing the first cost—all the branch drains should discharge into this chamber and same should be constructed large enough for a person to operate cleaning rods for locating and releasing any blockage that may occur in any part of the drain, as illustrated in Figs. 38, 39 and 40.

Fig. 40.

Problems of Sewage Disposal in West

Investigation and Recommendations of Commissioner of Public Health in Saskatchewan Reveal a Solution of Intricate Problems of Sewage Disposal Found in Western Canada Where Subsoil is Nonabsorbent, Where There Is Scarcity of Watercourses and Where Frost Penetrates Deeply Into the Ground

Report presented by M. M. Seymour, Commissioner of Public Health, Saskatchewan, and Hon. G. Langley, Minister in Charge of Public Health

While the deep system is the only one which this Bureau can guarantee against failure during the winter months investigation has shown that septic tanks and absorption fields may be operated at shallow depths if certain requirements are rigidly observed. These requirements are:—

1. The absorption field, whether shallow or deep, must be constructed in ground which will absorb water. The more absorbent the soil the less danger of freezing.

The surface of the liquid in the septic tank must not be higher than the original ground level. In some instances the sewer connection has been brought from the house above the ground line in an effort to provide a shallow absorption field and the practice has invariably been accompanied by the freezing of the liquid in the tank.

3. The septic tank and all pipe lines, manholes and field tiles must be covered with a layer of straw at least 12 inches in thickness during winter months:

4. The tank and absorption field must be kept in continuous use throughout the winter. If the house is left vacant for a few days the system will freeze and be useless until the frost leaves the ground.

Discharge of Effluent on the Ground Surface

Where the ground is incapable of absorbing liquid the only practicable system of disposal is to pump the effluent from the septic tank and remove it to some distant point, where it may be discharged on the ground without giving offence.

This is the only system permissible for the disposal of sewage from houses situated within the limits of cities, towns or villages and which are not connected to sewerage systems.

Sewage Pump Well

The effluent from the septic tank should flow into a pump well which is designed to hold at least one week's flow of sewage (See Figs. 3 and 4 and accompanying table. In a household of six the minimum capacity of the pump well would be 180x7, or 1,260 gallons or a tank 6 ft. by 6 ft. by 6 ft. deep. The liquid may be pumped from the tank by hand or by power as desired.

In towns and villages the council should provide a tank wagon and undertake the regular emptying of all tank effluents.

In rural districts the effluent should be discharged on the ground at a point as far removed from the house as

practicable, and in no case nearer to the house than 100 feet.

During the winter months this distance should be considerably increased, for frozen effluent will accumulate on the ground and cause a serious nuisance when the frost goes.

Location of Sewage Pump Well

The sewage pump well and septic tank should be situated at least 50 feet from the house. The drain from the house to the tank should be four inch vitrified pipe with cement mortar joints laid carefully at a grade of 1 in 40 or a fall of approximately $\frac{1}{4}$ of an inch to the foot.

Vegetable Gardens

The question has been asked as to whether it is safe to eat vegetables which have been grown on soil irrigated by a septic tank effluent.

It is only safe if the vegetables have been cooked. Those which are eaten raw, such as radish and lettuce, should not be grown on such areas.

Distance of Sewage Pump Well and Absorption Field From Water Supply

It is impracticable to state any minimum distance from an underground water supply at which it is safe to discharge sewage on or into the soil. The sewage disposal system and the well should be as far removed from each other as possible and in no case should a septic tank effluent be discharged on or in the ground within 100 feet of a well or other water supply.

OPERATION INSTRUCTIONS

Septic Tank

The scum which gathers on the surface of the tank should not be disturbed unless it exceeds 12 inches in depth, when part of it should be removed. The scum by excluding light and air from the liquid, provides conditions under which the bacteria multiply on its under surface and in the solids which settle to the bottom of the tank. When the solids in the base of the tank reach a depth of 15 inches they should be removed and ploughed into the ground. This will necessitate pumping out the tank once or at the most twice yearly.

Syphon Chamber

Before starting the system the syphon must be filled with water. The manhole cover on the syphon chamber should be lifted occasionally and the action of the syphon examined.

If the flush is not acting properly the bell of the syphon should be removed, the syphon filled with water and the ball replaced.

Sewage Pump Well

A float with indicating rod projecting through the roof of the pump well can easily be arranged to show when the well requires emptying.

The sewage should not be allowed to rise higher than a level which is six inches below the overflow from the septic tank.

Any solids or scum which may be present in the pump well should be removed when the septic tank is being cleaned out.

Care should be taken to prevent fouling of the ground below the pump discharge. A watertight chute or pipe should be used to convey the liquid to the wagon or to the point at which it is discharged on the ground.

Absorption Field

The cover on the distributing manhole should be lifted at regular intervals and the operation of the system noted.

Protection Against Frost

Not later than October 1 of each year all pipe lines, field tiles, manholes and tanks which are less than seven feet below the surface should be covered with a layer of damp pressed straw 12 inches thick.

This layer should extend four feet on each side of tanks and pipes.

Manure must not be used for this purpose; not only is it insanitary, but it will not protect the ground sufficiently against frost.

General Conclusions

The conclusions arrived at from a study of the information embodied in the foregoing pages may be stated briefly as follows:—

1. The cesspool is an obsolete and unsatisfactory method of sewage treatment or disposal. The construction of cesspools is contrary to law.

2. No matter what means of final disposal of the effluent are adopted, a septic tank should be built in every case for the treatment of sewage, where there is no connection to a public sewer.

3. A septic tank will remove the greater part of the solids from the sewage and so lessen its offensiveness. These solids which remain in the tank will accumulate and will require to be removed by hand once or twice yearly.

4. The effluent from a septic tank is just as dangerous to health as the raw sewage discharged from the house.

(Continued on Page 24)

Patterns for Wash Boiler Cover

A subscriber wishes to have a pattern for wash boiler cover according to sketch submitted. The drawing will give the strict geometrical treatment and can be applied to any size design

of cover met with. The same method also holds good for making oval or round cornered pan covers as used for steam tables and the like.

Let 1-Z be the length of the boiler.

And in making covers it is well to always go according to the measurements of the bottom because the top is very liable to be out of shape.

FUTURE OF PLUMBING PRICES

EVERYONE is interested in the probable course of prices in the near future. For some years prices have been a very interesting feature, since the rapid rise to unprecedented levels during the war years and the steady decline evident since the armistice was signed. The recent trend has been a gradual readjustment to lower price levels, and interest in the probable course of prices is heightened by predictions from some quarters that the process will not be completed until pre-war levels are returned.

Sanitary Engineer has secured some interesting views on this topic. A prominent wholesaler and banking official is of the opinion that in basic iron and steel commodities pre-war prices will return, the process of returning to be largely governed by the extent of the discomforts of the readjustment period. Already prices on dairy and some agricultural products are down to 1914 levels or below, but the manufactured products have been maintained chiefly on account of high overhead costs, labor costs and freight rates. The present condition of decreased production is not conducive to lower prices as costs are raised as result. Plant extensions were made in many cases during the recent active periods and this all results in a higher rate of overhead. It is expected that this condition may be offset to some extent by the perfection of industrial processes which may lower costs without necessarily lowering the wages of labor. Of course labor costs will also reduce as the period of readjustment progresses, but no one wants the acute condition likely to result from a sudden drop in labor's earnings while the expense's of the laboring man are still as high as at present. One of the most serious impediments to lower labor costs at present is high rentals and it is unlikely that this conditions will improve until the housing shortage is relieved, and until the building industry is again encouraged as a means of profitable investment. Landlords will not be inclined to lower rents as long as conditions prevail under which they could just as well withdraw their investment from building properties and place it to good advantage in gilt-edged securities paying good returns, as at the present time.

Recent tax and tariff legislation was thought, by this official, to be a further hamper to imports and therefore to trade generally at this time. While this and other factors tend to restrict trade and to maintain high production costs, it was thought that the other factors which will operate naturally, will tend to continue the process of readjustment until price levels of 1914 are again returned.

MINOR OFFICIALS AND TINSMITHS

IT is quite an average thing to find some merchants who cannot figure out their responsibility under the Government's tax legislation, but it is a sad commentary on the legislation that local collectors of Customs and Inland Revenue do not in many cases fully understand the law themselves.

In connection with the much debated case of the responsibility of the tinsmith, it has clearly been set forth in Sanitary Engineer on numerous occasions that the tinsmith who makes up articles sold directly to the customer is not liable as a manufacturer. Some merchants, acting upon this advice, have been informed by local collectors that they are mistaken, that they are manufacturers and should take out license as such and make returns of sales tax collected on such as is "manufactured." One collector recently attempted to define the law himself, interpreting it as classing a tinsmith as one who does nothing but repair work and soldering, while classing a sheet metal worker who does furnace work, makes up eavestrough, etc., as a manufacturer.

This ruling is erroneous and the correct ruling stands as outlined in Sanitary Engineer, namely that any tinsmith who makes up articles for sale directly to customers is, for purposes of tax legislation, a retailer.

In order to clear up this matter a definite ruling has been secured by Sanitary Engineer direct from the Deputy Minister of Customs and Inland Revenue, as outlined elsewhere in this issue. This official points out that if there is any dispute tinsmiths may write the word "abandoned" on the tax papers and return them to the department. The ruling of the local collectors is not final so that if the tinsmith has a good case and believes himself to be a retailer under the act he need not be scared into taking out a manufacturer's license by any local official, but take no action except to refer the matter to higher authority.

TWENTY THOUSAND Farmer's Account Books have been supplied to Canadian farmers by the Commission of Conservation for the purpose of keeping records of farm accounts. This is evidence of greater business efficiency on the part of farmers and it should indirectly help the plumbing and heating trades in rural districts.

THE ADOPTION of a production schedule, as outlined in this issue, should help to clear the plumbing trade of the criticisms levelled in the past concerning the unbusiness like methods of operators. Under this plan the customer who thinks he is being overcharged for work done can be shown the schedule which outlines a complete day's work, as laid down by the master plumbers as a body.

Montreal Plumbers Adopt Schedule

Production Schedule Arranged Showing What Constitutes A Day's Work

—Need of Suitable Standard Felt For Some Time

THROUGH a mutual agreement between the Master Plumbers' Association of Montreal and the plumbers' section of the National and Catholic Unions the wages for the present season provide for 75 cents per hour for first class mechanics and for less efficient and experienced, 70 cents and 60 cents per hour respectively. To ascertain what constitutes a day's work the following schedule was carefully drawn up and agreed on by both parties, thus a clear understanding is reached in this direction, and the men can be graded accordingly.

Working out of this schedule of work was an interesting task and the acceptance of it as a basis indicated the desire of both parties to provide for the present building season.

That great interest has been taken from all sides in the new system to be adopted here is manifest by the large number of enquiries received in the past few weeks by the Secretary of the Association.

The schedule is as follows:—

MEMORANDUM of what the Master Plumber's Association of Montreal considers a fair and reasonable production from journeymen plumbers and steamfitters:

PLUMBING:

Erecting cast iron underground drains, less digging and back-filling, allowing a fitting at an average of every ten feet:—

3"	Number of feet per 9 hours	50
4"	" " " " " "	45
5"	" " " " " "	40
6"	" " " " " "	35
8"	" " " " " "	25

Erecting upright stacks of Medium Soil Pipe, allowing a fitting at an average of every ten feet:—

2"	Number of feet per 9 hours	70
3"	" " " " " "	60
4"	" " " " " "	50
5"	" " " " " "	45
6"	" " " " " "	35
8"	" " " " " "	25

Erecting Medium Soil Pipe Back Vent Stacks, allowing a fitting at an average of every ten feet:—

2"	Number of feet per 9 hours	70
3"	" " " " " "	60
4"	" " " " " "	50

Erecting Wrought Iron Stacks of soil pipe for Durham System, allowing a fitting at an average of every ten feet:—

4"	Number of feet per 9 hours	30
4½"	" " " " " "	27
5"	" " " " " "	25
6"	" " " " " "	20

Erecting Wrought iron back vent pipe, allowing a fitting on an average of every ten feet:—

1¼"	Number of feet per 9 hours	60
1½"	" " " " " "	55
2"	" " " " " "	50
2½"	" " " " " "	45
3"	" " " " " "	40
3½"	" " " " " "	37
4"	" " " " " "	35

Erecting Upright Stacks of galvanized iron water pipe, allowing a fitting at an average of every ten feet:—

¾"	Number of feet per 9 hours	100
1"	" " " " " "	90
1¼"	" " " " " "	75
1½"	" " " " " "	70
2"	" " " " " "	60
2½"	" " " " " "	45
3"	" " " " " "	40
3½"	" " " " " "	35
4"	" " " " " "	30

Time for roughing in a three piece bath room, with all waste, hot and cold water, and back vent, complete, using cast iron soil pipe for hot and cold water, at an average distance from the stack of three feet:—

20 hours—man and helper.

Allow for setting up this bath room with standard enamelled iron lavatory on brackets, standard enamelled iron bath, and low down closet combination:—

15 hours—man and helper.

Time for setting up same bath room with porcelain pedestal lavatory, porcelain bath, syphon W.C. with flushometer valve:—

30 hours—man and helper.

Time for roughing in the same bath room, using Durham System:—

30 hours—man and helper.

Time for setting up the same bath room with enamelled iron fixtures, using Durham System:—

30 hours—man and helper.

Time for setting up the same bath room with porcelain fixtures, using Durham System:—

30 hours—man and helper.

Time for roughing in waste, hot and cold water and back vent for a kitchen or pantry sink, at an average of ten feet from the uprights:—

10 hours—man and helper.

Time for setting up this sink:—

5 hours—man and helper.

Allow for roughing in of waste, back vent, hot and cold water, for one pair of wash tubs, at an average distance from the connections on the drain of ten feet:—

12 hours—man and helper.

Time for setting up this pair of wash tubs, from the floor line up:—

10 hours—man and helper.

Allow for the roughing in of porcelain or enamelled iron slop sink on pedestal, waste, hot and cold water and back vent, at an average distance from the upright stacks of 5 feet:—

9 hours—man and helper.

Allow for the setting of same from the floor line up:—

5 hours—man and helper.

All the above work is figured on the basis of the way being clear for everything, that is, thimbles and sleeves, being provided in concrete work in concrete construction, and cutting being done by others when wood construction.

HOT WATER HEATING:

Time for setting the different sizes of furnaces after foundation is made:—

No. of hours man and helper for boilers No. 1 to No. 4..... 4 hrs.

No. of hours man and helper for boilers No. 4½ to No. 6..... 6 hrs.

No. of hours man and helper for boilers No. 6A to No. 8..... 8 hrs.

Time for erecting hot water mains in pairs on ceiling only allowing for a fitting at an average of every ten feet:—

1"	Number of feet per 9 hours	90
1¼"	" " " " " "	85
1½"	" " " " " "	70
2"	" " " " " "	50
2½"	" " " " " "	40
3"	" " " " " "	30
3½"	" " " " " "	25
4"	" " " " " "	20

Time for erecting branches across the ceiling and through the ground floor with valve and elbow on, the proper height to receive radiator:—

¾"	Number of branches per 9 hrs.	6
1"	" " " " " "	5
1¼"	" " " " " "	4
1½"	" " " " " "	3

Time for erecting a pair of risers from 3" to 1", allowing a fitting at an average of every ten feet:—

1"	Number of feet per 9 hours	65
1¼"	" " " " " "	55
1½"	" " " " " "	40
2"	" " " " " "	35
2½"	" " " " " "	25
3"	" " " " " "	20

Number of branches that can be run from these risers to the various radiators, at an average distance from the riser of 8 feet, with branches brought through the floor the proper height to receive elbow and valve for the radiator:—

¾"	Number of branches per 9 hrs.	6
1"	" " " " " "	5
1¼"	" " " " " "	4
1½"	" " " " " "	3

Features of Electric Furnace

Many Advantages claimed for Electric Furnace for Melting Metals Compared with Fuel Fired Furnace—Temperature Always under Control—Eliminate occluded Gases in Metal

(By Courtesy Empire Brass Mfg. Co. London, Ont.)

AN innovation among manufacturers of plumbers' brass goods is the recent installation by the Empire Brass Mfg. Co., London, Ont. of an electric furnace, for melting metals. Certain advantages are claimed for the process of melting by electricity as compared with fuel fired furnaces and some aspects of the process will be discussed briefly herewith.

The furnace is cylindrical in shape 7 feet in diameter; insulated with infusional earth; and lined with highest grade refractories. The hearth is a shallow bowl, holding 1500 to 2000 pounds of metal. The heat is generated within a carborundum trough supported on piers and filled with crushed carbon material. A relatively low voltage current passes through this carbon material, bringing the trough and carbon to incandescency, similar to the filament of a huge incandescent lamp. This heat is radiated from the bottom and sides of the trough to the hearth, and from the top of the trough to the roof of the furnace, and reflected to the hearth.

The metal lying on the shallow hearth is therefore melted by a soft radiant heat uniformly distributed.

The temperature is under absolute control of the operator, as it is only necessary to increase or decrease the amount of power put into the furnace by shifting a switch. A pyrometer located in the furnace insures the desired pouring temperature, which of course may be changed to meet any alloy, and duplicated at will.

The heating medium employed in this type of furnace, consisting of a large source of crushed carbon at incandescency, results in a reducing atmosphere in the furnace chamber. This practically eliminates all metal loss due to oxidation or volatilization. After the furnace has been charged, and the tight fitting plug type door closed, the oxygen admitted is rapidly consumed by the incandescent carbon long before the metal starts to go into a molten state. The furnace is poured with the door closed by tilting and pouring through a small opening below the charging door, which is plugged up tight during the entire melting period.

Inasmuch as there is practically no metal loss, any analysis may be obtained in the castings merely by charging the proper proportions into the furnace.

The elimination of any occluded gases in the metal; the absolute control of the analysis, melting time and pouring temperature; result in the production of castings which cannot be equalled as to quality or uniformity in other types of melting equipment.

This furnace has a capacity of 1500 pounds and is guaranteed to melt 750 pounds per hour.

An Electric Furnace of proper design makes it possible to obtain and duplicate at will any alloy desired. The pouring temperature and melting time is under exact control of the operator at all times. The atmosphere of the furnace is reducing and nonoxidizing, and always the same. The possibility of contamination of the metal from furnace gas is entirely eliminated, as there is no fuel, and therefore, no gas.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

WESTERN ONTARIO NEWS

Williams and Roberts of London, Ont., were awarded contract for plumbing and heating for two new dwellings costing \$15,000 for W. T. Spettigue, 261 Hill St., London.

City Engineer, Harry Brazier, London, Ont., wants prices immediately on four sewage pumps, electrically driven and controlled, each 1500 gallons capacity per minute.

Work will proceed shortly at Petrolia, Ont., on a new pump house for the Canadian Oil Co.

The Hunt Plumbing Co., London, has plumbing contract, and George Rutherford the heating, for new residence for W. Snell, 917 William St.

Richard Williamson, Watford, Ont., wants prices on heating, plumbing and electrical work in connection with new \$5000 residence.

The Fireproof Warehousing Co., of London Ont., W. Webster, manager, is preparing plans for a new warehouse to cost \$100,000 and wants prices on heating, plumbing and electrical work.

A. E. Jamieson, Forest, Ont., wants prices on hot air heating, plumbing and electrical work for new \$5000 dwelling to be erected this summer.

Alex. Milne, of London, Ont., was awarded contract for installing hot water heating system and plumbing in new jewelry store of N. Agranove.

Joseph Moore, R. R. 7, Forest Ont., wants prices on heating and plumbing for new \$5000 dwelling.

F. A. Hough, Amherstburg, Ont., wants prices on heating, plumbing and electrical work in connection with remodelling building for a duplex.

Mrs. George Powell, 334 Queen's Ave., London, wants prices on heating, plumbing and electrical work for new \$12,000 duplex.

John Peart of Cayuga, Ont., plans to completely rebuild residence and wants prices on heating and plumbing.

Noble and Rich, London, Ont., have been awarded contract for plumbing and heating in connection with new \$50,000 garage for the Car Owners Garage Co.

E. Hill, 58 Windsor Ave., London, wants prices on heating, plumbing and electrical work for new \$5000 dwelling.

Fred Merrill, Port Lambton, Ont., is preparing plans for new pavilion to be erected at a cost of \$25,000.

Prices are wanted on hot air heating and electrical work in connection with new \$15,000 church being erected by the Baptist congregation at Salford, Ont., Rev. C. H. Innes, pastor.

A Canadian branch factory of the Peter Smith Heater Company of Detroit is to be located at Walkerville,

The firm has secured temporary premises in the Walker Power Building but plans to locate in its own new factory later.

Plans are to be prepared at Springfield, Ont., for a new six roomed public school to cost \$40,000, T. Leeson, chairman of Trustees.

W. T. Wilkinson wants prices on heating and electrical work for new store to cost \$9000 to be erected at Amherstburg, Ont.

CONVENTION OF THE CANADIAN SANITARY ASSOCIATION

The Annual Convention of the Canadian Sanitary Assn. will be held this year at Ottawa, Ontario, on September 6th, 7th and 8th.

It is tentatively proposed to give the first day for papers and addresses by local gentlemen, the second day for papers by members and the third day for executive business. Any member who has or will prepare a suitable paper is asked to communicate with the Secretary, Alex. Officer, City Health Dept., Winnipeg.

E. H. RUSSEL RETURNING FROM AUSTRALIA

London, Ont.—Word has been received here that E. H. Russell, who early in the Spring disposed of his residence and plumbing business here and started for Australia, where he intended to reside, is returning. It is understood that he and his wife were unable to stand the intense heat, the temperature according to letters received being 125 degrees often. Mr. Russell was very prominently identified with the plumbing trade not only in London, but as an officer of the Canadian Society of Sanitary and Heating Engineers and it will be good news to a wide circle of friends in the trade that he is returning. Letters received recently indicate that the family expects to reach Canada again some time in August.

BUSINESS CHANGES

Smiths Falls, Ont.—Herbert D. Moss has taken over the plumbing business for some time conducted by Alfred Gould, at Smiths Falls, and will add a tinsmithing shop department.

Kingston, Ont.—The Dickie Construction Company, of Toronto, has been awarded the contract for the construction of the new service building at the General Hospital. The contract price is \$94,984.

PLUMBERS TAKE ON NEW LINES

Wallace and Roberts, Tinsmiths, Plumbers and Heating Contractors, Bassano, Alberta, have taken over the agency for the Twin City line of tractors, Threshers and Motor trucks for the Bassano district.

NEW FIRMS

Mr. Soper of Calgary has opened up a plumbing and heating business at High River, Alberta, under the name of the High River Plumbing and Heating Co.

TO INSTAL CENTRAL HEATING PLANT

Kingston, Ont.—The governors of the General Hospital have decided to install a central heating plant in conjunction with Queen's University. The hosiery mill site has been acquired and the central plant will be erected as soon as the present building is torn down. The power house will be connected with the hospital and the university by means of a tunnel. In addition to the power house, there will be a hydraulic laboratory, and here the students in science at the university will receive their practical work in mechanics, electricity and mechanical engineering. The hospital laundry will also be located at this site.

CATALOGS AND BOOKLETS

"New Idea" Pipeless Furnace

One of the recent folders issued by the Hamilton Stove and Heater Company, specially illustrates the "New Idea" pipeless furnace. As the name indicates, the feature of this heating apparatus is the fact that no pipes are required, and stacks, cold air returns, and similar installations are eliminated. The duplex grate, and the heavy flanged one-piece cast iron fire-pot, are also other points emphasized by the manufacturers. The folder is adequately illustrated showing the special designs and the manner in which the "New Idea" furnace is intended to cover the heating problem of any small building, either store, home or other structure.

L'Amelioration des Conditions Sanitaires de Quebec

Travail Fondamental des Plombiers Maitres de Quebec Dans l'Organisation de l'Association—Lois Locales Sanitaires pour la Cite de Quebec le resultat de l'Activite des Plombiers—Marchands Locales dans les Autres Metiers Pourraient Acheter Articles a Plombage au meme prix que le plombier

Rapport de E. G. Brousseau, Vice-president de la Societe Provinciale de Quebec au 24me Convention Annuelle de la Societe Canadienne de D. S. et H. E. a Quebec

Le vice-président provinciale vous offre une bienvenue cordiale à notre capital. Son ambition est que le désir exprimé dans la lettre signé par M. le Président Mahoney et M. le Secrétaire Frankland, que la convention soit la plus grande et la meilleure dans l'histoire de cette Société Canadienne, serait réalisé. Si, de temps en temps, nous nous souviendrons que nous sommes responsables pour cette société d'hommes d'affaires, et si nous nous déciderons à pousser à la roue chaque fois que nous rencontrerons des nouvelles difficultés dans ce cas, et dans ce cas seulement, serions nous fidèles à notre métier.

Ayant en vue cette condition d'affaires tant à désirer, vous soumetts que le programme de n'importe quelle convention devrait être toujours arrangé conformément à cette idée, afin qu'on pourrait savoir plus à l'avance les questions qui doivent être discutées et on pourrait dans ce cas, les traiter avec plus d'intelligence. Et puis l'association serait reconnue comme vive et énergique comme il devrait être. Celle-ci est mon opinion et je demande être convaincu si j'ai tort.

On dira peut-être que ceci n'est pas un rapport provincial. Je l'admets mais comme j'ai lu quelque part que j'étais membre de l'exécutif et comme pendant toute l'année je n'ai pas eu l'occasion d'exécuter les devoirs de la position, je n'ai pas voulu manquer l'occasion de remplir mes obligations.

Avant de donner mon rapport comme vice-président provinciale, je voudrais bien faire une suggestion pour le bien-être de cette Association.

La suggestion est que personne n'accepterait une position comme officier de la Société sans qu'il se décide à l'avance qu'il peut devouer un peu de son temps pour faire le travail nécessaire.

À l'égard du province de Quebec, quand ce rapport sera lu, il est bien possible que Quebec aura son Association provinciale à lui, mais, au moment

que j'écris, elle n'est pas encore organisée. J'espère, cependant, que si les nouveaux membres tiennent leur promesse, Montreal, Quebec, Three Rivers, St. Hyacinthe, Sherbrooke et Levis, s'auront réuni pour former "L'Association Provinciale de Quebec" depuis longtemps attendu.

Qu'est-ce que nous avons fait à cet égard ou plutôt peut-être je devrais dire qu'est-ce que j'ai fait, parceque je veux engager personne autre sur cette affaire vu que tant peu a été accompli.

Comme mes prédécesseurs j'ai écrit plusieurs lettres aux membres principales du métier dans chaque cité et en même temps je leur ai envoyé un rapport de la dernière convention avec une brochure de mes lectures sur Sanitation. Malheureusement je n'ai pas reçu des réponses. J'ai un par conséquent que cette méthode n'était pas effective pour les intéresser. Et puis j'ai essayé les atteindre par le moyen des amis journalistes. Mais je n'ai pas réussi. Enfin je me suis décidé les voir et les convaincre de la nécessité de se joindre à une Société telle que la nôtre. Mais comme il m'était impossible à ce moment à quitter la cité, M. U. F. Drouin, notre secrétaire, un homme très capable, qui heureusement était avec moi était envoyé les voir. Il est rentré avec six applications de Trois Rivières, trois de St. Hyacinthe et quatre de Sherbrooke; et en addition une promesse que chacune de ces cités serait représentée par au moins deux délégués, un résultat que j'ai trouvé très satisfaisant.

Deux Questions Importantes.

À l'égard de la cité de Quebec, il n'y a que deux questions d'un intérêt supérieur auxquelles j'appellerai votre attention dans ce rapport, c'est-à-dire, le manque de protection fournie au métier par les fabricants et les marchands en gros, et le manque des Lois Locales Sanitaires effectives. Quant au premier sujet, j'ai l'intention de m'en occuper aussitôt que je puisse intéresser suffisamment les membres locales à se réunir et à discuter à fond la matière. J'espère que ça sera bientôt, car tout-le-monde sait bien, par toute la cité, que n'importe quel marchand, soit épiciers ou marchand de drap, peut acheter du marchand en

gros au même prix que le plombier, pouvant qu'il dise qu'il peut le procurer d'un autre marchand aux prix du plombier. Il n'est pas nécessaire qu'il le prouve, sa déclaration suffit. Tels conditions sont très injustes au plombier, et en même temps elles expliquent pourquoi dans plusieurs cas le propriétaire d'une structure à Quebec demandera des soumissions, avec la reservation qu'il lui-même fournira les articles l'installation à plombage.

Ce n'est pas seulement les marchands de Quebec qui sont coupables à cet égard, quelques uns en dehors sont également, si non plus, coupables, et dans la butte pour les contrats pour les constructions publiques ils vendront de la marchandise directement aux propriétaires pas seulement au prix auquel le plombier a droit mais même à un réduction en quelque de 25 pour cent moins.

Le Bureau d'Extension, comme je le comprend, n'était pas établi par les fabricants et marchands en gros avec cette intention. Je suis, toutefois, content de dire que la plupart des fabricants et des marchands en gros protègent les plombiers et ces maisons devraient obtenir notre appui.

Lois Sanitaires.

Quant au second sujet, les lois sanitaires, la cité de Quebec, comme une grande nombre d'autres cités, sera bientôt réglée par des Lois Locales Sanitaires bonnes et pratiques. Je vais essayer vous donner une idée de ce qui a été fait pour convaincre le peuple de Quebec et notre conseil municipal de la nécessité de ces lois, et en même temps je vais vous dire comment nous avons réussi à obtenir les bons résultats que nous avons aujourd'hui.

Il m'est venu l'idée il-y-a dix ans et je l'ai avancé à toute occasion possible jusqu'à cinq ans plus tard quand quelques directeurs du Quebec Builders' Exchange, qui étaient entrepreneurs générales se sont décidés d'étudier la question et de nommer une comité s'est assemblé deux en trois fois mais il n'a rien fait.

Pendant deux années j'ai resté tranquille, et puis "The Civic Progress Committee" était formé par un de nos citoyens les plus estimés, le feu Eng-Julien. Ce comité était composé de deux repré-

sentants de chaque association de Québec et j'étais un des représentants des constructeurs de Québec sur ce comité.

Le premier article sur notre programme était le projet pour bâtir des maisons saines et salubres avec l'emprunt du gouvernement fédéral. Aussitôt qu'ils ont commencé à parler des maisons salubres à Québec j'ai dit "Vous ne pouvez bâtir des maisons salubres sans plombage sanitaire."

Ils n'ont pas fait attention à ce que j'ai dit avant que je l'avais répété au moins vingt-cinq fois. Et je suppose qu'ils ont dû croire que j'étais fou, car ils m'ont demandé ce que j'ai voulu dire. Ma réponse était:

"Donnez moi à peu près une heure pour vous expliquer, et vous me comprendrez."

J'étais permis de parler à l'assemblée suivante. A cette occasion j'ai donné ma première lecture sur "Sanitary Plumbing in Quebec." Il faut que je vous dise qu'ils étaient étonnés à entendre que le plombage n'était pas seulement une nécessité pour chaque cité moderne, mais qu'il était même un danger à la santé, quand il n'était pas fait en accord avec des principes scientifiques.

Une décision demandant que les autorités civiques préparent une loi locale qui accord avec ma lecture était approuvée et envoyée à l'Hotel de Ville mais le Conseil Municipal ne l'a pas trouvée nécessaire et rien n'était fait jusqu'à six

mois plus tard quand j'étais invité par le Rotary Club à donner une lecture sur la nature de mon métier; et encore une fois j'ai parlé sur Sanitary Plumbing. Cette deuxième lecture était publiée, et par le "Sanitary Engineer," et par "The Sanitary and Heating Journal," et je veux remercier tous les deux journaux pour leur coopération splendide.

Le Rotary Club de Québec a envoyé immédiatement une délégation à l'Hotel de Ville et M. le Maire a promis que le Conseil Municipal prendrait action sur l'affaire presque immédiatement. Mais trois mois sont écoulés et je n'ai rien entendu sur le sujet. Et puis avec la coopération de The Quebec Builders' Exchange nous avons publié 500 brochures de mes deux conférences et nous les avons envoyées à tous les hommes importants à Québec, les Conseillers et les Officiers de la Santé inclus.

Celui-ci a fait rouler la machine qui à présent court à grande vitesse.

En conclusion, je vous lirai l'opinion de l'éditeur du Québec Telegraph, May 27, 1921, qui donne exactement la position telle qu'elle est à présent.

M. Brousseau à ce point a lu l'article en question qui exprimait la nécessité pour les Lois Locales Sanitaires. Et puis il a continué:

Messieurs, cet éditeur a raison, je suis occupé à présent à préparer cette loi. Je le leur donnerai ce mois-ci, et avant l'automne Québec aura, j'en suis sûr, une

système moderne de plombage civique.

Or, membres du métier, j'espère que je ne vous ai pas ennuyés avec tous ces détails sur la question des lois locales de plombage. Si je l'ai fait, je le regrette. Mais l'idée que j'avais était de vous faire voir que si avec un peu d'énergie et une bonne connaissance du sujet un homme, sans influence, tout seul, peut obtenir un tel résultat, qu'est ce qu'une société tel que le Canadian Society of Domestic Sanitary and Heating Engineers ne pourrait pas accomplir si ils s'en tiennent à leur mot et travaillent avec l'idée "Tous pour Chacun, Chacun pour Tous?"

E. G. Brousseau,

Vice-Président Provincial de Québec.

Association Provinciale de Québec Etablie

Demarche Progressive Fait par les Ingenieurs Sanitaires et de Chauffage dans le Province de Québec—Pour Ameliorer les Conditions Sanitaires de la Province.

Au premier jour de la 24^{me} convention annuelle de la Société Canadienne des D. S. et H. E. de la cité de Québec, avant l'ouverture formelle de la convention l'Association Provinciale de Québec était constitué et admise comme membre de la Société Canadienne.

L'addition de cet anneau important à la société de la Dominion ajouterait une influence considérable au corps maternel et rendra bien plus effectif son travail par tout le Canada.

Sans doute, une des premières entreprises de la nouvelle société sera l'examination des conditions sanitaires dans les villes et les cités du province, et l'invitation de législation qui insistera sur la nécessité d'installer des arrangements convenables et sanitaires dans toutes les maisons du province.

Il est certain que le progrès de l'art de l'ingénieur sanitaire est largement responsable pour les campagnes qu'on

fait aujourd'hui pour la santé publique. Par exemple, une grande partie des batiments dans la cité de Québec était construite avant les jours du plombage moderne, et ces batiments ont besoin de renouvellement selon les demandes de cet plombage moderne.

On doit donner crédit aux membres du métier par tout le province pour avoir organisé une association qui prendra des mesures actives pour obtenir législation qui gardera la santé de la publique et qui aura l'effet d'élever la position du métier sanitaire. On doit, en même temps, donner crédit à M. E. G. Brousseau de Québec, président du comité législatif de la nouvelle société provinciale, pour les efforts splendides qu'il a faits afin d'obtenir l'appui actif des membres importants du métier dans la formation de la nouvelle association.

M. Frank Carrel, propriétaire du Québec Telegraph a félicité en même temps les membres, et la nouvelle organisation.

Il a complimenté le métier en indiquant que lui même, avec d'autres promineurs dans les affaires, il avait essayé à obtenir des bons lois locales pour Québec, quoique ses efforts n'avaient pas réussi. Il était content de pouvoir déclarer que des nouvelles lois étaient en course de formation, comme le résultat d'une adresse par M. E. E. Brousseau avant le Rotary Club il-y-a quelque temps.

Les officiers qui dirigeront le travail de la nouvelle association pendant la première année de son existence sont bien choisis pour leurs positions respectives et on attend un résultat très satisfaisant. Si on est permis de juger de l'intérêt démontré par les membres de Montréal et Québec pendant la convention, la nouvelle organisation comprend des membres qui travailleront avec un but définitif et la société provinciale sera bientôt un des plus effectives du Canada.

Patterns for Wash Boiler Cover

(Continued from Page 15)

This is especially so with wash boilers, and by taking measurements from the bottom the cover is made to these measurements and then the top of boiler is reshaped to suit this cover. The only thing care must be taken not to get it too big or too small.

With 1-Z as the length and T-6 as half the width of boiler, we are able to describe the 2 quarter circles on the ends, which will have a radius of T-6 and which is set back as 1-X and Z-X'. Then the side lines we join to meet the arcs.

Divide one-quarter circle in any number of equal parts as 1-2-3-4-5, and from each point, using T as center, describe an arc to the center line of 1-Z.

Observe this answers the same purpose as though we would pick these lines as T-2-3-4-5-6 and set them on the horizontal line in points shown.

Then let H-T represent the rise the cover is to have and the line H-1 and H-Z will be the outline of cover. By drawing light lines to the remaining points in line 1-T, we have the true lengths.

Set one leg of dividers to the apex H and use each of these points in line 1-X as radius, describe an arc indefinitely.

With dividers pick the girth spaces as 1-2 from plan and starting with the center line on arc 1 and 1'; walk from one arc to another as 2' is on the second arc; 3' is on the third arc; 4' is on the fourth arc, etc. Then pick the side line 5-6 from plan and set it as 5'-6'.

Draw lines through all points thus established and you have the outline for pattern. Laps are required to make joints as at R and must be allowed extra as well as the seam along center.

Raising Efficiency of Plumbing Industry

(Continued from Page 12)

which is already created, and this work would be done in event of his existence or not, and he is eating into the vitals of the legitimate business of men who carry large stocks, assume the expense of showrooms, advertise plumbing goods and create business that would not be were it not for his enterprising ways.

How can these conditions be remed-

ied. I hear you ask? By confidence on the part of the plumber and wholesaler in one another, by the co-operation of the two legitimate factions which are essential to the plumbing industry if it is to survive as a business worthy of honest endeavour.

You notice I use the term legitimate. There has developed in the last few years the so-called Manufacturers' Agent, who had no scruples in the manner in which he disposes of his wares. He is, as a rule, on a par with the shoestring plumber. There may be exceptions, I will not argue, but as a rule he is a man without capital, no stock, no office or place of business, nothing at stake, calls on the Trade when business is good, deserts it when business is bad and saves expense money, the fellow who gives you the 5 p.c. confidential discount, suggests something just as good and always looking to substitute fixtures in a specification to the advantage of himself and disadvantage of the consumer. You men know him and are oftentimes pleased to get the extra 5 p.c. but he is a parasite and you know the Trade would be better off without him.

Trade Journals. We can get some of the greatest education from the Trade Journals, but I am afraid too many of us do not read these as we should. Personally, I am a subscriber to four Plumbing Journals as well as three Electrical. Of course it is impossible for me to read all the articles in these Journals, but I always endeavour to give them at least the once over, and if I notice something of particular interest that might be applied to my business with success, I pick these articles to read. In conversing with some manufacturers, I am surprised to learn that many things of interest to the Plumbing Trade in general has been published in these journals and has not been seen by many manufacturers and wholesalers. Now when this circumstance exists, how in the world can these men who are advertising in these Journals expect others to see their ads if they give the Journals the same consideration as the advertiser. Our Trade Journals should be read by Wholesalers, Manufacturers and operating Plumbers.

Cost Price System. Everyman engaged in the Plumbing business in justice to the public, his business and himself should have a cost price system of some kind, for I am satisfied that the difference in prices of tenders or contracts let is not caused by the difference in the gross or net profit as allowed by the different tenderers, but the trouble lies in the fact that we do not get honest costs. Therefore it is essential that we have some means in getting in touch with present market prices in order to overcome this difficulty. This also applies to a **Retail Price System** as well as to the cost system. Of course if we have proper cost there can be very little difference in the retail price of an article.

Trade Extension was lightly touched by merely the mention of a few things such as plumbers carrying an ample stock, showrooms and show-windows, etc., it being impossible for the

speaker to give any time to this as he had to depart to catch a train.

Problems of Sewage Disposal in West

(Continued from Page 14)

5. Where the basement is not drained and the soil pipe leaves the house at a shallow depth the septic tank should be built close up to the house.

6. No septic tank effluent or liquid wastes may be discharged into a creek, river or lake, unless a special permit has been obtained from the Commissioner of Public Health.

7. The discharge of a septic tank effluent or of liquid wastes into the subsoil within the limits of any city, town or village in the province is contrary to law.

8. If the subsoil shows signs of sand or gravel an absorption field should be made and the effluent from the tank disposed of underground.

9. If the subsoil is clay throughout, the construction of an artificial absorption field is useless, and unless a surface outlet is available the tank effluent must be pumped.

10. Septic tanks and pipe lines may be successfully operated during winter at shallow depths if certain requirements noted in this bulletin are observed.

11. A system of sewage disposal, whether surface or underground, should be as far removed from the house and from any source of domestic water supply as practicable.

Notes on Materials and Installation of System

The construction of tanks and pipe lines requires skilled labor.

The plumbing contractor, if he does not specialize in this work himself, will usually undertake to see it properly done.

Glazed fireclay pipes should be laid true to line and to the grades shown on plans. Pipes should be jointed with cement mortar in the proportion of 1 of cement to 2 of clean sand.

Cast iron pipes should be used in place of fireclay inside all concrete sewer line is laid close to the surface cast iron pipes should be used under any roadways or ground that is subject to traffic.

Concrete should be mixed in the proportion of 1 part of Portland cement to 6 parts of clean pit-run sand and gravel, or 1 part of cement to 2 parts of sand and 4 parts of broken stone.

Gravel should be free from alkali and salt water should be used.

Concrete if mixed by hand on a board should be turned over three times dry and three times wet.

Walls and floors should be trowelled to a perfectly smooth finish with a coating of one part of cement to one part of sand.

Distribution manhole may be constructed of 24 inch or 30 inch diameter concrete pipes set on end, if these are available locally.

MUELLER DOUGLAS FLUSH VALVE

FOR LOW DOWN WORK

The body is of high quality red brass—uniform in thickness, with clean core work. The seat is reinforced by a bead, to prevent distortion and to insure a perfect cut-off.

Double guide for bottom wire always seats the float properly. Accurate tapping and machining insure perfect action of the *MUELLER* Douglas Flush Valve, No. A1-1275. The float is of highest quality rubber.

Prices upon request. Mail orders given prompt attention.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

AS heralded by the shaping of recent events on the primary markets, sharp declines have occurred on many steel and metal prices. Many of these reductions vitally affect various products pertinent to the plumbing and steamfitting trades. Revised quotations on black and galvanized sheets follow similar lower levels in steel mill circles. Another important reduction is noted on bar iron, with a noticeable increase in the number of steel inquiries. Prices on solder and sheet zinc are also lowered, due to the tendency on the primary markets. Scrap metal prices also dropped considerably, with a dull tone prevailing. There is a weaker tendency on copper and brass; a movement that is reflected all through the ingot metal markets, with decreases on copper and spelter. Soil pipe sales are reported as only fair, and there has been no marked

development in either boiler tubes or pipe fittings, sales in these products being light. Some further revisions are announced in the discounts on radiator and gate valves. Building activity may revive sales in radiators, but the current movement is below expectations. Nominal quotations on range boilers remain at the recent lower level, and any looked for adjustment has failed to materialize, the situation still being somewhat unsettled. Closet outfit sales, and also the movement in enamelled ware, are just ordinary, and due to a certain degree of disappointment in spring building enterprise, the activity recorded up to the present is below the volume anticipated. Stove orders received for fall delivery have only been fair, but there is a brisk movement in conductor pipe and eavestrough, and a seasonable demand is noted for corrugated sheets.

MONTREAL

MONTREAL, June 29.—The downward trend is again noticed on certain lines for plumbers' supplies. Galvanized and black sheet show a slight reduction from previous levels, owing to a small decrease in prices from the U. S. mills. Prices on cotton wastes and wipers are reduced in most qualities, and zinc sheets are now quoted lower owing to an easier tone of the basic metal on the primary market.

Enamelled ware shows little, if any, improvement in the last two weeks, the unsettled feeling still existing with quotations varying among the jobbing houses. Wrought pipe, pipe fittings, radiators, range boilers, iron and steel bars, soil pipe and eave trough are quoted without change. Business generally is quiet, although some lines are selling well for the season of the year.

Closet Prices Unsteady

Montreal.

Following are the net prices on closets, but some wholesalers are quoting a little less than these. Little improvement has been shown in the past two weeks, but dealers are hopeful of increased business in the following summer months:

Closet, standard outfit.....	32 00
Do., with post hinge seat.....	33 00
Do., white vitro, vitreous china or enamelled iron, with wash down bowls and oak or mahogany post hinge seat....	35 00
Do. add for reversible trap bowl	1 25
Do., add for siphon jet bowl...	7 00
Do., for $\frac{3}{4}$ in. valve on supply pipe	1 50
Do., deduct for supply pipe...	0 80
Do., deduct for floor flange...	0 60
Do. wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richilieu" bowl	10 50
Do., extra for spud.....	0 60
Do., oak, or oak-vitro tank, with	

fittings, less seat.....	17 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge.....	0 25
Do., white vitro, vitreous china or enamelled iron tank, with fittings, flush elbow and supplies, less seat.....	19 00

Enamelled Ware Sales Light

Montreal.

There is practically no change to report on enamelled ware, sales are still light with little new business in sight at present. Wholesalers and jobbers are anticipating an improvement both in sales and prices in the near future, the market still being unsettled and quotations slightly lower in some quarters than in others.

Corrugated Movement Light

Montreal.

No change has been made in prices on corrugated sheets. While the present movement is slow and mostly of the lightest gauge, dealers report this is not unusual at the present season of the year and do not look for much improvement until the late summer.

Wrought Pipe Quotations Hold Montreal.

Wrought iron and steel pipe are maintained at list No. 51, the selling basis for piping since April. A sorting movement continues with little improvement, if any, showing. Stocks are now good in all sizes in the different warehouses.

Soil Pipe Discounts Unsteady

Montreal.

While the discounts on soil pipe are unchanged, there is a somewhat unsettled feeling existing, and slightly lower quotations are obtainable from a few sources. However, most jobbing houses are maintaining their prices at the following discount:

SOIL PIPE (medium and extra heavy)
2, 3 15 p.c.; 5 and 6-inch, 20 per cent. discount.

4-inch, 25 p.c. discount.
8 inch, add 5 p.c. to list.

FITTINGS—

2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

Eavestrough Sales Fair

Montreal.

With no changes in quotations on eavestrough, conductor pipe, etc., sales are continuing fair. Many outside dealers did not lay in a large stock in the winter and early spring months, but waited until the actual demand, and this undoubtedly will stimulate sales well up until the fall. Stocks are still ample to meet requirements with present conditions prevailing.

Radiator Sales Quiet

Montreal.

Quotations on radiators and boilers are unchanged since the change in discount on radiation last month. Little new business is in evidence and dealers report a quiet demand at present, but are anticipating an increased activity during the summer and early fall months.

Cotton Waste Prices Reduced

Montreal.

With the exception of "6X special" White, and "Keen" colored waste, these being the lower qualities—prices on cotton wastes are reduced from 1-2 to 2 cents per pound. Cotton wipers, both white and colored are again lower in price, this being the second reduction on these in recent weeks. Dealers report a slight increase in demand for the past two weeks. Following are the new quotations:

Cream, polishing	0 20
White	
XXX	0 17
XX	0 16

White Cotton	0 22
Colored Cotton	0 16

Above lines subject to trade discount for quantity.

Compression Prices Hold

Montreal.

The readjustment in quotations of the Emco line of valves two weeks ago, is the last change in compression goods. The tone of the market generally is a little easier, notwithstanding many lines of valves and bibbs have shown decreases in price during recent weeks. A general sorting demand is reported and fairly satisfactory for the season of the year. Quotations show an inclination to vary in some quarters, but the prices recently listed are being generally maintained.

Light Steel Market

Montreal.

No change is made on bar iron and steel, and little variation is expected while the present slackness in demand is prevailing. Prices from the U. S. mills have shown a slight reduction, but this has had no reflection locally as yet, and is not thought sufficient to result in any startling price lowering on the local markets.

Zinc Sheet Prices Lowered

Montreal.

Zinc sheets offer the change in quotations on lead products, these now being quoted at 11½ cents in casks and 12 cents in broken quantities. These reductions are said to be in sympathy with the recent weakness of

the basic metal on the primary markets. Other lead products while holding, now have a little weaker tendency than in previous weeks due to the same cause. Local prices are the following:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10 p. c.	
Lead traps and bends	10 p. c. off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs. sq. ft., lb.	0 10¾
Do., 4 to 8 lbs. sq. ft.	0 10
Cut sheets 1-4c lb. extra and cut sheets to size 3-4c lb. extra.	
Solder, guaranteed, lb.	0 29
Do., strictly, lb.	0 27
Do., commercial, lb.	0 24
Do., wiping, lb.	0 24¾
Do., wire, lb.	0 37½
Zinc, sheets, casks.	11½
Do., broken lots	0 12

Pipe Fittings Unchanged

Montreal.

Quotations on the different pipe fittings are unchanged, with the sales reported a little more brisk than in the past few weeks. Dealers are buying only in a sorting way, however, as orders are for small quantities.

Decrease In Sheet Prices

Montreal.

A small decline in quotations on black and galvanized sheets has been made in sympathy with slightly lower levels being reached at the U. S. mills. While another series of price-cutting is hardly the state of affairs throughout the different fields, the smaller independents reduced their prices to a slightly lower basis to obtain business and it is now reported the larger interests have fallen in line. This is not expected to continue as manufacturers generally reflect the opinion that reduced prices do not stimulate business, and a revival in trade is looked for as a precedent to any great improvement being made. The demand locally is still backward, sales being of a small order for repair or replacement work. Following are present quotations still showing a range:

Black Sheets—

10 gauge	5 00 to 6 00
12 gauge	5 05 6 05
14 gauge	5 35 6 35
16 gauge	5 45 6 45
18-20 gauge	5 80 6 80
22-24 gauge	5 85 6 85
26 gauge	6 00 7 00
28 gauge	6 10 7 10
Sheets 36 in. wide, 20c per 100 lbs. extra.	

Galvanized Sheets—

U. S. Standard—	
10½ oz.	8 00 to 9 00
28 gauge	7 50 8 50
26 gauge	7 25 8 25
22-24 gauge	7 00 8 00
20 gauge	6 75 7 75
18 gauge	6 75 7 75
16 gauge	6 75 7 75
Queen's Fleur-de-lis	
28 gauge	10 00 9 25
26 gauge	9 75 9 00
24 gauge	9 15 8 60
22 gauge	8 80 8 15
18-20 gauge	8 10 8 00

NOTE.—These prices are for full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken bundles. These quotations are nominal.

Boiler Tube Movement Slow

Montreal.

No change can be reported in prices or sales of boiler tubes. Quotations remain at former figures, with the movement at present slow, confined to replacement work. Little change is expected during the summer months.

Range Boilers Still at Lowered List

Montreal.

While it was expected that prices quoted a few weeks ago on range boilers would be increased to higher levels in the near future, no change has been made up to the present. Resulting from a series of price-cutting the new prices were issued in the hope of stabilizing the market. Manufacturers claimed that they could not sell at present prices and retain a profit, and in all probability quotations would be raised the following week. Boilers, however, can still be bought at the following prices:

Range Boilers—	Standard	Ex. heavy
30 gallon	8 75	11 25
35 gallon	11 25
40 gallon	13 50	16 00
52 gallon	20 00
66 gallon	28 00
82 gallon	35 00
100 gallon	45 00
120 gallon	54 00

Quiet Markets In Ingots

Montreal.

Ingot metal markets are still much depressed with business more or less at a standstill. Present indications do not offer many signs of an improvement in the near future. Tin and copper continue to ease on English and American markets, while spelter and lead have steadied a little.

TIN.—Tin continues to decline in London where stocks are gradually increasing, and the sentiment generally is bearish. The demand locally is light as there is still difficulty in procuring supplies in England. Local price 36½ cents.

COPPER.—This has been declining steadily in London and New York, largely owing to the falling off of export demand. Locally the market is easier in sympathy at 17¼ cts. for electro, and 17½ cts. for casting.

SPELTER.—The market on spelter holds steady both in London and East St. Louis and it is hoped the bottom has been reached. The demand however continues light with quotations at 7¾ cents.

LEAD.—This metal does not show much change although the American market is slightly lower. It is doubtful, however, if prices, will go much lower as consumption continues fairly good and no appreciable change is looked for. Quotations 6½ cents.

ANTIMONY.—There is little improvement to report in this metal as consumption is still on the light side with stocks ample for all needs. Chinese is quoted at 7½ cts., high grade English 8½ cents.

ALUMINUM.—Aluminum is still dull and quotations are a little easier at 32 cents.

TORONTO

TORONTO, June 29.—Many important price reductions, which vitally affect quotations on plumbing and steam-fitting goods, feature the current market reports. Sharp declines on the primary markets have resulted in lower price levels on solder and sheet zinc, and a weaker tendency on copper and brass. Other marked revisions include reductions on black and galvanized sheets, and a lower price on bar iron. A noticeable drop is recorded in scrap metal quotations, with a weaker tone in the ingot metal markets. Some reductions on radiator and gate valves complete the list of new price changes.

A gradual improvement is noted in building activities, and this is expected to develop a corresponding improvement in the movement of such products as compression goods, radiators, enamelled ware, piping, and so on. Business is reported as gradually showing a more satisfactory trend, especially in seasonable trading. Collections continue fairly good.

Solder Prices Lowered

Toronto.

Recent fluctuations on the primary markets have resulted in an easier tone on lead products. The advance recorded a few weeks ago on solder prices has now been lowered through reductions noted this week. Wire solder shows the largest decline with 2½ cents per lb., and the price revisions on other grades vary from 1 to 2 cents. Following are the new quotations:

Lead pipe, list, per lb...	0 12½
Lead waste pipe, list, per lb.	0 13½
Do., over 8 inch list	0 14½
Lead pipe is subject to discount of 10 per cent.	
Lead traps and bends.....	10 p.c.
Lead sheets, 4 to 6 lbs. sq. ft. in rolls, lb....	0 09½
Cut sheets ½c to ¾c lb. extra and cut sheets to size 1c lb. extra.	
Solder, wire, lb.	0 33
Do., 40-60	0 27½
Do., 50-50	0 30
Do., strictly, lb.	0 25
Do., commercial, lb....	0 22
Do., guaranteed, lb. . .	0 27
Do., wiping, lb.	0 21½
Zinc sheets, per lb.	0 13
Calking lead	0 08 0 09

Soil Pipe Sales Only Fair

Toronto.

Prices on soil pipe and fittings remain nominally unchanged. The movement in these products has recently registered some slight improvement, but sales are still reported slow, and not up to expectation for this season of the year. Current prices follow:

Soil Pipe—

2 and 3 inch, 10 p.c.
4 inch, 20 p.c.
5 and 6 inch, 15 p.c.
8 inch, add 5 p.c.

Fittings—

2 to 6 inch fittings, 40 p.c.
8 inch fittings, plus 5 p.c.

Sharp Declines In Scrap Metal Prices

Toronto.

There have been sharp declines not generally continues very dull, and prevailing conditions are reported as disappointing. Heavy melting steel shows ed in the metal price list. The market

a considerable decrease, and cast iron grades have been equally stagnant with price cuts noted on stove plate and on No. 1 cast. Lead scrap is easier with a lower range recorded, and other reductions are also noted on yellow brass and scrap pipe. The following revised prices are the average nominal quotations for fairly large quantities:

Waste Material

Nc. 2 busheling	\$11 00
Stove plate, per ton ...	12 00 13 00
Yellow brass	6 00 7 00
Red Brass	9 00
No. 1 machinery cast ..	17 00 18 00
Heavy melting steel ...	11 00 12 00
Heavy Copper	10 00 11 00
Scrap Zinc	3 50 4 00
Light brass	4 00 4 50
R. Rd. wrought iron, No 1, gr. ton	11 00 12 00
Scrap Pipe	6 00 7 00
Heavy lead	4 25 4 50
Old rubber boots & shoes	2 50 3 00
Overseas lumbermen's rub. boots	1 50 2 00
Auto tires	0 50 1 00
Tea lead	2 25 2 50
Solid Tires	0 75 1 25

Pipe Outlook Improves

Toronto.

Some increase in the number of inquiries, combined with firmer tone reported in foreign markets, has resulted in improving the current outlook for pipe. Local sales continue of a restricted nature, but the increased construction of building is looked for to create a more satisfactory tone in this market. Prices at present are being maintained at List No. 51.

Decline In Prices On Sheets And Plates

Toronto.

Following the general downward tendency of prices on sheets and plates in steel mill circles, local quotations on these products are also on a lower level this week. The large majority of the orders being handled, remain principally of the small variety, and the current market is limited. A considerable range is recorded in prices on certain gauges, but the following prices are generally quoted for fairly large purchases.

PLATES—

10 gauge	from \$5 00 - \$5 50
12 gauge	" 5 05 - 5 55
14 gauge	" 5 10 - 5 60
16 gauge	" 5 20 - 5 70

BLACK SHEETS—

14 gauge	" 5 10 - 5 60
16 gauge	" 5 20 - 5 70
18-20 gauge	" 5 30 - 5 80
22-24 gauge	" 5 35 - 5 85
26 gauge	" 5 40 - 5 90
28 gauge	" 5 50 - 6 00

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots. An extra 10c pr 100 lbs. is also charged on sheets 36 ins. wide.

GALVANIZED SHEETS—

Premier and Apollo

10¼ oz.	" 7 90 - 8 40
U. S. 28	" 7 50 - 8 00
U. S. 26	" 7 20 - 7 70
22 and 24	" 7 05 - 7 55
18 and 24	" 6 90 - 7 40
16	" 6 75 - 7 30
12 and 14	" 6 60 - 7 20

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10¼ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charge of from 25c per 100 lbs. is from 20c to 30c per 100 pounds. Other gauges show no change for different widths.

Prices shown are full cases. An extra charge of 25c per 100 lbs is made for less than case lots.

Reduction In Bar Iron and More Steel Inquiries

Toronto.

The reduction of bar iron from \$4.25 to \$4.10, and some further seasonable inquiries, are the features of the steel market this week. The best period in inquiries is reported for some time past, but what proportion of business will result is difficult to estimate. The view is expressed in some quarters that these are merely intended to test out the current market tone, and the prevailing buying prices. Based on this general surface improvement, however, prospects are considered as a little brighter than they were a month or two ago, for it is stated as encouraging to receive inquiries in this volume after the recent months of steel depression.

On the other hand, the week's business is described as another brief spurt, with a reaction expected as soon as current demands have been filled. Mill conditions are still very much varied. The average steel and iron quotations are noticeably a shade lower, but it is practically conceded that better prices could be secured on large orders, if there was a generous volume of business apparent. Every order can be said to be receiving treatment on its individual merits, with the basic quotations for small purchases which still predominate. No marked development in steel business is anticipated for several weeks. Current prices are as follows:

Allpriser

The Reliable Price Clerk

Allpriser is an accurate price clerk that guarantees correct buying and selling prices, thus saving the plumber many dollars he might lose on a years business through errors in pricing.

Allpriser Service consists of a flexible, leather bound book 7 by 9", of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest change.

Stove Orders Only Fair**Toronto.**

Manufacturers report that ranges, cook stoves, and heaters of all kinds are moving fairly well. It is stated that the current demand cannot compare with the volume of sales recorded last year, but up to the present just correspond very well with the 1919 orders. Now that many new stove catalogs and descriptive booklets have been distributed to the trade, improved activity in this line is looked for during the next few weeks.

Valve Discount Revisions**Toronto.**

Some further revisions are noted this week in the prevailing discounts on radiator and gate valves. The price reductions resulting from these changes, conform to the recent lower quotations recorded on other lines of compression work. Sales in these products are reported as just fair, and not up to expectations. The apparent decline in large construction operations which were contemplated and looked forward to this spring is attributed by some dealers as lessening a seasonable brisk movement. The erection of small buildings, however, offers the opportunity for numerous small orders. Following are prevailing prices:

Compression work, standard..	37 p.c.
Fuller work, standard.....	30 p.c.
Bath cocks, compression.....	29 p.c.
Do., Fuller	25 p.c.
Flatway stop and waste cocks, standard	40 p.c.
Roundaway stop and waste cocks, standard	34 p.c.
Brass steam cocks, standard..	10 p.c.
Globe, angle and check valves, standard	5 p.c.
J. M. T.	20 p.c.
J.M.T. C.	25 p.c.
J.M.T. Gate Valves	15 p.c.
Gate or Straightway	16-10 p.c.
Jenkins Globe	10-10 p.c.
Radiator valves, standard	30 p.c.
Do., removable discs	42 p.c.
Emco J. D. Valves	20 p.c.
Emco Check Valves	20 p.c.
Webber Gate Valves	20 p.c.
Basin Cocks—	
No. 1 and 1 Puller pattern..	30 p.c.
Quick opening, No. 3633	37 p.c.

Building Activity May Revive Sales In Radiators**Toronto.**

An improvement in the volume of sales recorded on radiators is generally reported, now that seasonable building activity is becoming more noticeable. The total erections during May, easily eclipsed the somewhat dis-

appointing April, and current indications point to a further improvement in the volume of June Building. Progress in building generally, however, is not up to expectations outlined in the early spring; but a fair amount of business is now reported, with merchants stating that the current outlook shows gradual improvement, and a more optimistic tone is developing as regards prospects for business in radiators during the ensuing summer months. Prices remain unchanged, with the recent revisions in discounts still holding.

Range Boiler Quotations Still Unsteady**Toronto.**

No new understanding has yet been announced with regard to prices on range boilers, and the recent reductions are still holding. The local price for the 30-gallon standard boiler is now quoted at \$8.75, and the quotations on the 35-gallon size are \$9.50 and \$13.80. The claim is still in evidence that present price levels are below actual value, and some future readjustment is looked for in certain quarters. Orders, however, are being taken at the following nominal prices:

Range Boilers—	Standard	Ex-heavy
30 gallon.....	\$ 8 75	\$11 50
35 gallon.....	9 50	13 80
40 gallon.....	13 80	16 50
52 gallon.....	20 40	25 20
66 gallon.....	28 80	34 80
82 gallon.....	36 00	47 40
100 gallon.....	45 60	56 40
120 gallon.....	55 20	64 80
144 gallon.....	78 00	93 00

Closet Outfit Sales Are Below Expectations**Toronto.**

For the past few weeks prospective buyers of closet fixtures appear to have adopted a hold off attitude. Conditions in this market are identical with the prevailing tone in the enamelled ware situation. A very slight improvement has been recorded in recent orders, but the total volume of sales still leaves much to be desired. Reports indicate that the trade generally looks for some little improvement in business as the summer advances. Prices on all lines remain unchanged, the recent revisions on the standard outfit still being maintained.

No Marked Development In Enamelled Ware**Toronto**

Business in enamelled ware is reported as just ordinary. A slight gradual improvement has been noticed in these products, and sales generally are expected to develop a firmer tone as the summer progresses. The total volume of business, however, is still short of expectations, with little prospects of any marked stimulation. The recent quotations, with discounts unchanged, are being well maintained.

Boiler Tube Sales Light**Toronto.**

The revisions on prices of boiler tubes which were looked for in some quarters, have failed to materialize up to the present. Current quotations are holding, but any developments are reported as being dependent upon future reduction in mill costs. Conditions and prices remain unchanged at present on local markets.

Eavestrough and Conductor Pipe Move Well**Toronto.**

Manufacturers and distributors of conductor pipe, eavestrough and conductor elbows report a brisk movement in these products. Building activity on houses and numerous small structures, combined with seasonable weather conditions, have presented more opportunities for current sales. The prevailing quotations remain at the revised discounts recently announced.

Weaker Tendency on Copper and Brass**Toronto**

Large quantities of scrap copper and brass are reported to have flooded the current markets, and with very little outlet at present for this surplus, a corresponding depression in these metals is being experienced. Copper and brass tubing, sheets and rods, reflect this weaker tendency, and the recent lowered prices on these products are still being quoted.

Activity Reported In Corrugated Sheets**Toronto**

Activity is evident in corrugated sheets, and a fair seasonable movement is reported. Sales are of the small variety, but are more numerous. No change has been recorded in prices on corrugated, but dealers state that conditions have improved during recent weeks, and a more satisfactory tone now prevails.

Fair Sales in Pipe Fittings**Toronto**

The recently recorded increase in the volume of sales in pipe fittings, has now registered a slight falling off according to reports received this week. It is stated that the movement is still fair, however, with current prices remaining unchanged.

Weaker Tone Evident In Ingot Metals**Toronto**

Announcement that the looked for settlement in the British coal strike failed to materialize, naturally makes the current outlook unfavorable for metal demand on the outside markets. Prospects for increased domestic consumption are anything but promising at this time, it being reported that the foreign situation is having some influence on current markets here. A weaker tone is evident in ingot metals, and now that the outlook is apparently headed towards a further decline, consumers are more inclined to refrain from the market at the present time. Prices changes are few, the only tendency recorded being towards slightly lower levels.

COPPER—Local quotations on copper have now dropped to 17½ cents. This is a decrease of one-half cent on the price that has recently prevailed, and follows the easier tone reported during the last few weeks. The decrease in foreign buying, the slump in the exchange rate, and the noticeable lack of inquiries, have all combined to weaken the copper market.

TIN—A weaker tone is evident in the current tin market, this metal reflecting the unsatisfactory develop-

Kerr Valves

**Give
Character
to Work**

They reflect credit on the man who specifies them, the man who installs them, and they give complete satisfaction to the men who use them. Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face to face dimensions; observe the accessibility of the stuffing-box; the strong, generous flanges and the properly spaced bolting.

Sanitary Engineer

ment in the British coal strike. Prices have registered a gradual tendency to lower levels, and the current local quotation is now 37 cents.

LEAD—Lead is still very dull locally, and a waiting policy prevails in this market generally. Prices are being fairly well maintained, with the lower range of \$6.50 noted last week prevailing in some quarters, and the slightly higher level of \$6.75 also being quoted. Whether prices will shortly be equalized is uncertain at the present time, for it is noted that the foreign markets also show an easier tone.

SPELTER—With a large increase in surplus stocks of spelter noted, prices are now being shaded a little in order, if possible, to keep stocks down. A further reduction in local prices has been announced, the prevailing quotation now being \$7.00. This is a decline of 25 cents on the previous price level.

ANTIMONY—The general dullness in all ingot metals is evident in this market also. Sales are reported as few and far between, but prices are unchanged from previous levels. The present local quotation is still from 8 to ten cents.

ALUMINUM—The aluminum market is practically stagnant at present, with prices remaining nominally unchanged. A marked improvement in those trades, such as the automobile industry, where aluminum is used in fairly large quantities, is reported as the only development likely to bring about a revival of interest in this metal. The price of 30 cents is still in effect locally.

Waste Revisions Steady

Toronto

The reductions recently announced on both white and colored cotton wastes are being generally maintained. No further price revisions have been reported, and dealers state that few changes, if any, are now expected. Market conditions are reported fair, with some signs of an optimistic tone developing.

Problems of Sewage Disposal in the West

(Continued from Page 24)

Reinforcing. The roof slab covering the septic tank, syphon chamber and sewage pump well should be reinforced with iron rods, heavy fence wire, strap iron or any similar material which may be available.

It is advisable to reinforce also all concrete walls and floors to prevent cracking. Manhole frames and covers should be of cast iron. Covers over Septic tank and syphon chamber must be air-tight. If made on the ground from concrete, covers should be provided with lifting rings and should be sufficiently light to be easily removed.

Sewage Pump Well—In villages and towns where contents of the pump well are removed to the nuisance ground, the pump should be set on a platform so that the liquid may be pumped direct into a wagon.

Montreal Plumbers Adopt Schedule

(Continued from Page 17)

Time allowed for setting and connecting of each radiator with an average connection of 1":—

1½ hours—man and helper.

Time allowed for setting and connecting one automatic expansion tank complete:—

9 hours—man and helper.

The above time allowed includes all necessary hangers on the basement ceiling, and all necessary straps and supports on risers. No cutting or repairing of passages of pipes included.

SINGLE PIPE GRAVITY STEAM JOB

Time allowed for erecting steam main on ceiling with a fitting at an average of every ten feet:—

2"	Number of feet per 9 hours	65
2½"	" " " " " "	55
3"	" " " " " "	45
3½"	" " " " " "	40
4"	" " " " " "	35
4½"	" " " " " "	32
5"	" " " " " "	30
6"	" " " " " "	25

Time for erecting drip line back with a fitting at an average of every ten feet:—

1½"	Number of feet per 9 hours	90
2"	" " " " " "	80
2½"	" " " " " "	70
3"	" " " " " "	65

Time for erecting single riser with a fitting at an average of every ten feet:—

1"	Number of feet per 9 hours	100
1¼"	" " " " " "	90
1½"	" " " " " "	80
2"	" " " " " "	75
2½"	" " " " " "	60
3"	" " " " " "	55
3½"	" " " " " "	50
4"	" " " " " "	45

Number of branches that should be run from these risers to the various radiators at an average distance from the riser of 8 feet, with branch brought through the floor, the proper height to receive an elbow and valve for the radiator:—

1"	Number of branches per 9 hrs.	12
1¼"	" " " " " "	10
1½"	" " " " " "	8
2"	" " " " " "	6

Time allowed for setting and connecting of each radiator:—

1"	Number of radiators per 9 hrs.	20
1¼"	" " " " " "	18
1½"	" " " " " "	16
2"	" " " " " "	12

This time is all based on providing thimbles and sleeves in concrete work and the cutting being done by others in wood work.

TWO PIPE VACUUM SYSTEM STEAM JOBS:

Time allowed for erecting pipe from the top of the boiler along the ceiling of basement, allowing a fitting at an average of every ten feet:—

2"	Number of feet per 9 hours	65
2½"	" " " " " "	55
3"	" " " " " "	45
3½"	" " " " " "	40
4"	" " " " " "	35

5"	" " " " " "	30
6"	" " " " " "	25
7"	" " " " " "	20
8"	" " " " " "	18

Time for erecting the corresponding return line with a fitting at an average of ten feet:—

1¼"	Number of feet per 9 hours	95
1½"	" " " " " "	90
2"	" " " " " "	80
2½"	" " " " " "	70
3"	" " " " " "	65
3½"	" " " " " "	55
4"	" " " " " "	45

Time for erecting risers with a fitting at an average of every ten feet:—

1"	Number of feet per 9 hours	100
1¼"	" " " " " "	90
1½"	" " " " " "	80
2"	" " " " " "	75
2½"	" " " " " "	60
3"	" " " " " "	55
3½"	" " " " " "	50
4"	" " " " " "	45

Time for erecting return risers with a fitting at an average of every ten feet:—

1"	Number of feet per 9 hours	100
1¼"	" " " " " "	90
1½"	" " " " " "	80
2"	" " " " " "	75
2½"	" " " " " "	60

Time required for erecting branches from these risers to the radiators with connections brought through floor and left at the proper height to receive elbows and valves for the radiators with an average distance of five feet from the risers:—

1¼ hours—man and helper.

Time allowed for the setting, and connecting of each radiator:—

1¼ hours—man and helper.

Time allowed for connecting in the boiler room of the standard outfit comprising:—

- 1 Boiler Feed Pump and receiver.
- 1 Vacuum Pump with all necessary steam and exhaust connections, suction and discharge connections, at an average distance from the boiler of 20 feet.

The average pipe connections will be as follows:—Steam 1", Exhaust 1¼", Cold Water Connections to Receiver ¾", Discharge from Pump to Boiler 1½", Suction on Vacuum Pump, 4".
60 hours—man and helper.

A Step Forward in Efficiency

Victory Radiators

An improvement in engineering and design.

The Victory Radiator is made with two flat, hollow castings, one for the top and the other for the bottom, with tubes inserted in them. One tube is within the other. In this way, water is caused to circulate through the headers and be-

tween the two tubes. This is a series of double tubes; 8 in the smallest castings, up to 54 in the larger ones. This adds the outside surface radiation of the larger tube, and the inside surface radiation of the smaller tube, to that of the top and bottom headers. So Victory Radiators

SAVE ON

Coal, Shipping and Handling Weigh Cost of Installation and Fittings

Further investigation proves them still more efficient. Steel tubing is thinner and gives better radiation. The air circulation is better. The radiators occupy a minimum of space. They are artistic in appearance.

Since there is only $\frac{1}{8}$ as much water in Victory Radiators, it is quickly heated, and stimulates circulation of the water, making radiators hotter and radiating more heat. A smaller furnace can be used to heat the lesser quantity of water. Write for the remainder of the advantages.

Positive Circulators for Hot Water Heating

These pumps are especially designed for use on hot water heating systems and are built in four sizes to take care of radiation up to 15,000 feet.

They save money in installation owing to the reduced radiation and pipe sizes required. They save money in maintenance of the system because every part of the system is kept at approximately the same temperature as the water in the boiler.

They allow greater flexibility in the placing of pipes and radiators to clear openings. Radiators may be placed above or below the return, at any distance from the boiler and the circulator will ensure circulation through them.

If you are contemplating the installation of a heating system let us show you how to get increased efficiency at a reduced cost.

Quality

The First Consideration

A MUCH abused word—QUALITY—and yet it is the only one word that describes Perfecto Brass Goods. Careful selection of materials—perfect casting, accurate machining, particular finishing—these thing all go to make up the QUALITY of Perfecto Brass Goods. Standarized parts and absolutely uniform threads are two more features of Perfecto Brass Goods that save time and trouble for the man who instals them.

QUALITY is the reason why Perfecto Brass Goods are chosen by Canadian plumbers who know the importance of having a job well done. When you put Perfecto Brass Goods in a job you ar meaking another customer—because you are proving the QUALITY of the work you do.

Saves Hot Water and Fuel

When used on the hot water side of systems, this Empire Self Closing Basin Cock will show a marked saving in hot water, which means less fuel consumption.

The sectional illustration points out a few of its superior features, one being the specially hard nickel alloy roller bearings. These bearings will wear indefinitely.

Empire Basin Cocks are made from best quality Red metal and give long service.

We make the same pattern and shape basin cock with ordinary compression thread matching the hot water self closing cock in appearance.

Jobbers everywhere stock the Empire line of sanitary fixtures and plumbing supplies. Get in touch with one nearest you.

"If its an Empire Product you know its right."

JARDINE

"Jardine" & "Toledo" Pipe Threading Tools

Every Sanitary Engineer will appreciate the unusual qualities of these tools. There are no complicated parts to get out of order and the dies only cut with the mouth of the cutter. The proper taper can be made, the dies opening out as the tool advances on the thread.

All friction is eliminated and every ounce of strength is used in making the cut; time and labor is saved in this way.

These are but a few of the many valuable features of these tools.

Write to-day for our illustrated catalogue, which gives further particulars in detail.

We are the sole makers of "Jardine" Pipe Threading Tools and sole licensees to make and sell the "Toledo" machine.

Good Health

vs.

Ill Health

The ANTHES Syphon is a real missionary in preventing disease and bringing good health. Disease is lurking around the homes of hundreds of prospects in your district unconsciously to them.

If the health question is laid bare before them many will want conditions about their home remedied immediately.

Does not the importance of proper sewage disposal impress you when we point out that the death rate from typhoid fever in the country is five times as great as it is in the cities.

On the farm where space and fresh air are in abundance you may well say "can this be possible?" It is, and the cause of it is directly due to the lack of proper sewage disposal. And in the majority of instances where the sewage is not adequately taken care of the water in the wells is contaminated.

But the ANTHES Syphon makes city conveniences possible in the rural districts.

During 1920 over 800 were installed in Ontario alone.

Success in Saskatchewan Where Climate is Severest

PERFECTLY SATISFIED

COPY. Stalwart, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Gentlemen:

I am perfectly satisfied with your system of sewage disposal.

See no room for improvement; no trouble at all.
Certainly a boon for the farmer, and all.

Yours very truly,
(Signed) W. H. ETTER.

Balcarres, Sask.

The septic tank is working O. K. Too much praise cannot be given it if it always works like it has. And the comfort of it cannot be told in words.

(Signed) S. STEPHENS.

WORKING FINE

Kenaston, Sask., Nov. 25th, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:—

In regard to my septic tank, I can highly recommend it, as it has been working fine ever since I have had the plant put in.

It has never frozen nor has it refused to work.

I must say that the system has given every satisfaction.

Wishing you every success,

I am, yours very truly
(Signed) HUGO TIETJENS

PUT IT IN LATE IN THE SEASON, BUT

COPY. Cotton Woods, Nov. 28th, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dears Sirs:

In answer to yours I might just say that so far the Septic Tank system of sewerage is a success.

I have not as yet found any deficiency in either construction or operation.

We have used the system for about six weeks, beginning just one week before freeze-up. It did not even get a fair chance, but as yet it has withstood the frost, being covered to the depth of six inches with clay earth. I spread strawy fresh horse manure over the disposal bed to a depth of one foot, and everything is working well so far.

I would highly recommend this system of sewage disposal to every farmer.

Sincerely yours, W. THOMPSON.

HAS NEVER TOUCHED IT SINCE INSTALLING

COPY. Imperial, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

The system I have has been working satisfactorily.

I have had nothing done to it since it was installed, and everything is in perfect order as near as I can see, in fact I have never given the system a thought.

(Signed) O. D. JOHNSON.

Balcarres, Sask., April 5th, 1921.

I had no trouble from freezing. I do not know of any improvements that could be made. Everything works fine.

(Signed) THOS. STEPHENS.

Bring the health question right home to your prospects and it will result in many new installations and profitable business. We have bulletins recently prepared containing useful information that will be valuable to you. Kindly instruct us to send them.

What Two Tools And Two Men Did To One Boiler

Briefly they set up in business.

For doing which those two men got themselves very much disliked by the coal men. An investigation proved that every time one was set up; the coal man's business gets a set back.

When I asked the two men about it, they said the Burnham's digestion was so dog-gone good that it could do more work on less coal than the others.

After which I wrote a letter of condolence to the coal men and told them not to shut up shop as the Burnham would always be using some coal.

Which you'll agree was a very cheering Christian-like thing to do.

And before I forget it, next time I want to tell you how Sir Walter Raleigh weighed smoke.

Extent of Plumbing and Allied Industries

Plumbing, Heating and Tinsmithing Industries to Number of 1963, Employing 11,935 Employees Manufactured Products Valued at \$47,009,238—
Interesting Statistics Showing Size of Industry in Which Sanitary and Heating Engineers Are Engaged.

AN extensive report just secured by Sanitary Engineer from the Dominion Bureau of Statistics showing the operations of plants engaged in plumbing, Heating and tinsmithing during 1919 gives some interesting facts concerning this industry which will be interesting to sanitary and heating engineers and tinsmiths.

The report covers the operations of 1,963 individual plants distributed by provinces as follows:—Ontario, 845; Quebec 534; Manitoba, 136; British Columbia, 113; Nova Scotia, 95; Alberta, 95; Saskatchewan, 78; New Brunswick, 50; Prince Edward Island 16; Yukon 1.

The quantity and the cost value at the works of all material used during the year is shown as follows:—

Tinplate.....	333,367	boxes	\$ 6,688,945
Terne plate.....	5,102	boxes	107,107
Galvanized iron.....	13,693,606	lb.	1,418,141
Lead pipe.....	1,233,842	lb.	197,402
Iron pipe.....	10,974,828	ft.	1,506,228
Solder.....	975,667	lb.	394,112
Packing.....	57,501	lb.	20,889
Acid.....	27,890	gal.	51,087
Gasoline.....	201,197	gal.	75,838
Radiators.....			1,172,654
Furnaces and parts.....			1,477,547
Fillings, valves, etc.....			640,655
Unions, elbows, etc.....			612,855
All other materials.....			10,177,529

Total Cost of Materials.....\$24,540,989

The selling value of the products of the industry and the value of work done during the year is given in the summary as follows:—

Cans.....	\$13,869,033
Kitchen utensils.....	2,906,189
Dairy utensils.....	1,109,404
Stove and furnace pipes.....	736,081
Eave troughing and cornice work.....	708,264
Roofing, tin and galvanized iron.....	2,605,786
Plumbing and heating.....	9,362,458
Gas and steam fitting.....	2,981,182
Sheet metal work.....	1,733,085

Collapsible tin tubes.....	141,263
Custom and tinsmithing repairs.....	2,447,983
Plumbing and heating repairs.....	5,871,516
All other miscellaneous products, not specified.....	2,536,991

Total Value Goods Made and Work Done....\$47,009,238

Number of Employees

Some idea of the immensity of this industry is gleaned from the statistics of the number of employees, salaries and wages paid. Officers, superintendents and managers (male) number 605, (female) 23. These draw salaries of \$1,159,357. Clerks, stenographers, etc. (male) 597, (female) 346, drawing salaries of \$893,827. Wage earners, average number 9,555 (male), 734 (female) drawing wages of \$9,564,320. Outside piece workers number (male) 69, (female) 6, with wages of \$19,362. This makes a total of 10,826 male employees, 1,109 female employees, and total salaries and wages paid of \$11,636,866.

A classification of employees according to weekly wage earnings shows that there are 2,377 earning \$30 per week and over; 663 earning \$28-\$30; 1347 earning \$24-\$28; 1582 earning \$20-\$24; 2,176 earning \$15 to \$20; 1805 earning \$10 to \$15; 1499 earning \$5-\$10; and 165 earning under \$5 per week.

Capital Investment

The amount of capital invested in the industry is summarized as follows:—Ontario, total \$14,502,026; Quebec, \$8,552,714; Manitoba \$2,007,443; British Columbia and Yukon \$2,908,631; Nova Scotia \$993,035; Alberta \$852,748; Saskatchewan \$916,080; New Brunswick \$413,937; Prince Edward Island, \$111,601. Total capital investment is \$31,258,215, divided as follows:—land, building and fixtures \$8,159,593; Machinery and tools \$4,905,023; Materials on hand, stocks in process etc. \$8,774,909; Cash, trading and operating accounts etc. \$9,418,690.

It is therefore evident that products to the value of \$47,009,238 were made from materials which cost \$24,540,989 by 11,935 employees in 1963 establishments, these employees drawing \$11,636,866 for their services.

IS AGAINST FIXING PLUMBERS' WAGES

Ottawa Board of Control Will Not Fix Pay of Plumbers and Steamfitters for Civic Fair Wage Schedule.

The Ottawa Board of Control has for plumbers and steamfitters decided against fixing the pay for the civic fair wage schedule. It had previously reported to council in favor of an eighty-five cents an hour rate an increase of five cents per hour over last year. Council however, sent it back.

Controller Cameron made a strong plea for the 85 cent rate, claiming that so many had signed for this that the rate was established. Controllers Ellis and Balharrie thought the city should make no change from last year's figures till the strike had been settled one way or the other and this was agreed to. A representative of the master plumbers promised that an effort would be made

to have an agreement reached as soon as possible.

Of no little interest is the following letter to the public, from some of the master plumbers, published in the newspapers, a day or two previous to the Board of Control meeting: "Are you paying enough for plumbing and heating? The Board of Control, your representatives, custodians of your money, answer 'No' and are recommending to the city council that an increase be granted to the plumbers and steamfitters, in spite of the fact that the laborers, carpenters, brick layers, and, in fact, all the building trades, have accepted a reduction of from 10 to 15 per cent., or settled on last year's basis.

"It is your fight. Are you satisfied to pay more? The Board of Control, by their recommendation to council, answer this question for you and say 'Yes, you must.'

"The council will undoubtedly reject this recommendation, if you strenuously show your disapproval. The following employers, who engage 85 per cent. of the plumbers and steamfitters under ordinary conditions, are fighting this strike to give the public a reduction in plumbing and heating work, and stimulate the building industry.

"Plumbers and steamfitters rate last year was 80 cents. With the cost of living falling, why should it be increased?"

The letter is signed by the following: McKinley and Northwood, Holloway and Son, Coldrey and Chapman, Gauthier and Company, W. G. Edge, Limited, J. R. McLennan, A. Archambault, L. Gendron and J. Fitzpatrick.

"PUSSYFOOT" CLOSET TANKS.

A booklet illustrating and describing the "Pussyfoot" closet tanks is now being distributed to the trade by the Canada Metal Company, Limited. This company manufactures several lines of tanks for this purpose, which are completed through the addition of special "Pussyfoot" fittings, including silent ball cock, lever action, and syphon jet bowl. This catalog describes the "Pussyfoot" closet tanks in three finishes, oak, white and mahogany. The "Pussyfoot" valve action is featured in the booklet, as well as the various sizes and designs of these products.

HAMILTON STOVE CATALOG NO. 78.

The latest stove catalog No. 78, of the Hamilton Stove and Heater Company, is now ready for distribution, with net trade price list No. 78 applying to same. "Souvenir" stoves and ranges illustrated are designed to meet any requirement and include various classes of kitchen steel ranges, for the home, cook stoves, hotel kitchen ranges, combination cast iron cook stoves, the two-in-one souvenir heating, cooking and baking stove, parlor heaters, brick-lined heaters, van heaters, and van cook stoves, laundry stoves and many other lines.

This 40-page catalog of "Souvenir" products contains useful references to the ordering of repair parts, and timely foreword as to service, terms and shipments. The various designs in stoves and heaters are suitably illustrated, with full descriptive matter giving dimensions, weight, and reference numbers. The Hamilton Stove and Heater Company Limited, are successors to the Guernsey, Tilden Company, with factory at Hamilton, Ont.

A Letter To Prospects

When recently commencing in the plumbing and heating business in Ottawa, the firm of May & Pattison conceived the idea of sending out a personal letter to business prospects in the district, acquainting them with the firm name and its service. This letter contains some good points and is reprinted in full as follows:—

Dear Sir:

You need three things when you are looking for plumbing and heating service. These are experience, promptness and honesty.

We have both gained our EXPERIENCE through long association with Mr. J. T. Blyth, who for twenty-three years, as you are well aware, conducted a thoroughly reliable and progressive plumbing and heating business in this city. For some considerable time we have individually been carrying on business, during which period we have gained not only increased experience, but a gratifying degree of patronage. We feel that by joining forces we shall be in a position to give even better service than formerly.

PROMPTNESS is at times as essential in the plumbing business as in the Medical Profession. We have two motor cars, business and house telephones. If you take a map of Ottawa and put your finger in the very centre of it, you will be pointing right at our store at 480 Bank St. near Gladstone Ave. We can serve you promptly no matter where you live.

HONESTY. Please do not smile. This is the bed-rock of our business. Honesty may mean telling you frankly that some dilapidated plumbing fixture or pipe work SHOULD BE SCRAPPED even when to remain silent would mean a large repair bill in our favor. Honesty means that when we undertake to heat a house to 70 degrees at 20 below zero, the goods and labor are there every time to fulfil our contract. Honesty means to be just to ourselves as well as to our customers; To obtain a fair price in order to enable us to grow in business and always be in a position to render more efficient service.

We are young, ambitious, willing and eager, always studying and learning better ways and methods. There is no standing still in this or in any other business, and we are not standing still.

What we do know and what we have to give are now and always at your service. PLEASE TRY US.

Yours respectfully,

Suggestions For Timely Advertising

Helpful Pointers Contained In Advertising of Other Plumbing and Heating Engineers Designed to Encourage Business from Prevailing Sources Pending Revival of Building Activity.

WITH the continued shortage of new building and no definite prospects for an early revival in this industry, plumbing and heating engineers are turning more attention to the possibilities of developing business from other sources, by means of the wider use of advertising in its various forms. One of the chief mediums is the use of the newspaper which covers the district it is desired to reach, this effort being in some cases backed up with letters sent to prospects and the distribution of other literature. To help plumbing and heating engineers in the preparation of effective advertising copy the following statements, taken from advertisements as used by others in this industry should be of assistance.

Under the heading "Sanitary Plumbing" an ad by the Port Colborne Supply Co., Port Colborne, Ont., states "Plumbers sell sanitation. Homes have sanitation or they do not—there is no half-way mark—and civilization cannot progress rapidly unless there is complete sanitation in every household. Thousands of homes are now healthy, happy and livable through the promotion of sanitation by good plumbing.

"Yet there are abundant opportunities where sanitary equipment is badly needed. Our business is to fill that need. A word from you and we will be ready to serve you."

This ad. touches on one of the most important factors in the advertising of plumbing goods, namely, the important part which plumbing plays in our modern civilization, and the happy, healthy homes which result from the use of efficient plumbing.

An Early Bid For Furnace Work

Heating engineers are making an early bid for furnace and kindred work at this time. An ad. by McKinnon, Heating and Plumbing, Kamloops B. C., says:—

"GET THE FURNACE READY NOW for next winter's needs by having the pipes repaired and put in shape, the damper adjusted and perhaps renewed, the body of the furnace patched or otherwise cared for. Our tinning and sheet metal work insures you a perfect working furnace for the next cold spell. We specialize on heating systems."

Plumbing Is Used The Most

Asking the question "What other part of the house is used as much as the plumbing, and assuming that the logical answer is that no other part is used as much, an ad. by Chas. Kirk Co., Winnipeg, continues: "The plumbing therefore should be the first thing for the prospective home builder to consider. An otherwise comfortable home gives little

satisfaction and comfort if it lacks the best plumbing and sufficient warmth on coldest days, or is too hot in milder weather, or the water taps spring leaks just when you think they should not.

"Putting in the best plumbing and heating systems available is the pleasurable part the Chas. D. Kirk Co. will take in the making of your new home. An example of the company's work will be seen in the model bungalow to be shown at the ————— exhibition.

"Good plumbing and heating systems are not a luxury or an extravagance, but a paying and lasting investment. Not only will they give you satisfaction in service but you may be proud of them when showing your new home to friends.

"The proof of the work we can do finds only a small illustration in the bungalow at the ————— exhibition. Not only do we instal plumbing and heating in small homes but ours is a service that is taking care of installations in large schools and other buildings. The knowledge we gain on the larger jobs we can apply to the best possible advantage on the jobs of more moderate size. May we have the pleasure of figuring with you on your new home?"

This ad was run in 1 col. space in large type and on account of its conversational style it was easy to read. Its subject matter is good in that it touches on some of the important phases of plumbing, making an appeal for good plumbing in houses and buildings now completed, and also appealing for business from new construction being planned.

"An Investment In Sanitary Plumbing Yields A Dividend of Good Health"

This is the brief statement made in a 2 column ad. by Knapman Plumbing and Heating Co., Blairmore, Alta., which gives the reader something to think about.

Water Systems For The Farm

Under the heading "Water for your farm at the turn of a tap", an ad. dealing with water systems, by Bryne Bros., Toronto, states "Our complete Plumbing Systems end drudgery and protect your home. Why not a city bathroom in your farm home? Or the comforts of hot and cold water which can be turned on in a moment in kitchen, laundry, barns or garage? Our new catalog and price list describe the complete plumbing systems we are installing in country residences."

Questions and Answers

AIR PASSING THROUGH PIPES

(Question) Will you please show us by formula the number of cubic feet of air that will pass through a 3 in., 4 in., 5 in., 6 in., 7 in., 8 in. pipe 20 inches long that will discharge when same is in a perpendicular position surrounded by the gasses of combustion at the different temperatures of 100 150 200 250 300 350 400 450 500 550 600.

Also tell us the number of sq. inches there are in the circles shown at which is marked No. 1, also the area of the segment of the circles shown in No. 2.—Sanitary and Heating Engineer, Ottawa, Ont.

(Answer) The quantity of air which will pass through a pipe of a given size in a given length of time will vary with the velocity of the air current.

At temperature below 150 degrees the rate of velocity is materially affected by the differences in the temperature of the air in the tube and that of the surrounding atmosphere. At an excess temperature of 150 degrees, the velocity in the tube will be almost at its maximum, viz., 889 linear feet per minute. At higher temperature it will not reach much more than this; so for all practical purposes we may consider that the average velocity will be 900 lin. feet per minute, at all of the temperatures listed.

The allowance that must be made for friction is:

H equals 0.000000089 L-D V²

when H equals Loss of head in feet

L equals Length of pipe in feet

D equals Diameter of pipe in feet

V equals Velocity of flow through pipe in feet per second.

Thus for a pipe 3 inches in diameter, according to the above rules, we find that the amount of air discharged per hr. is .05 x 900 equals 45 ft. per minute.

Now when we make a deduction, because of friction, we find that the quantity of air is reduced by .07 feet.

Regarding the questions asked re the number of square inches contained in the figures illustrated by your drawing:

Fig. 1 contains 247 sq. inches.

Fig. 2 contains 165 sq. inches.

UNIQUE HEATING SYSTEM

(Question) I am taking the liberty of writing you for your opinion of a heating system I have in mind: The system might be called a forced hot air heating system. My idea is to take an ordinary hot air furnace and case it, similar to the ordinary furnace but instead of the air flowing into registers in the rooms force it by means of a fan in the top of furnace through small pipes to radiators in the rooms and return to bottom of furnace the same as done with hot water.

My idea is to have a system that would have the advantages of hot water

be less expensive and no danger of freeze up or bursts and the consequent damage when such does occur. The pipes and radiators could be made of gal. iron and the joints soldered or otherwise made air tight. Will a radiator heated with hot air give off as much heat as if heated with hot water or steam. I have not done any experimenting yet as I want your opinion first.—Western Heating Engineer.

(Answer) Although there may be certain difficulties in the way of detail, we believe a system of heating such as that described in your letter could be developed along the lines suggested.

It appears to us as though much of the success of the apparatus will rest with the design of the furnace casing; the type of radiator used; and the size and disposition of the air circulating pipes.

We must first take up the question of the efficiency of a warm air radiator made of sheet metal. In this connection it may be said that the efficiency of the radiator will be in proportion to temperature of the air which passes through the radiator.

Now, it is not at all likely that with a fan forced system that the temperature of this air will be more than 120 degrees above zero, Faht. And assuming that this is the temperature at which the apparatus is to operate we may consider that the radiator efficiency will be about 80 B. T. U. per square foot per hr. This is about 52 per cent. of the efficiency of a hot water radiator.

When we refer to the matter of the air temperature we find that the casing of the ordinary portable furnaces provides a greater free way for the passage of air than we shall require; therefore we must provide a sufficient number of baffle plates for the purpose of holding the air to a close passage over the heating surface of the furnace.

The size of a pipe delivering air to a radiator must be in proportion to the temperature drop of the air, and to the velocity of the air passing through the pipe.

In a system such as this we can not figure for anything more than a drop of ten degrees; therefore, the quantity of air required will be 440 cubic feet per hr. per sq. ft. of radiator.

Now, an air velocity of much less than 1500 feet per minute will not exert enough force to establish any circulation through the system of piping, etc. This means that for one square foot of radiation that there is required a pipe area of seven-tenths of an inch. A radiator of one hundred square feet of surface would require a 3 in. feed and return pipe.

Of course, the pipe sizes would have to be set so that the highest pipe velocities would be in the mains close to the furnace. That is, the pipe sizes must be equalized to provide for the friction caused by offsets etc. For instance, if you had an installation of 10 radiations of one hundred feet each, it would not be necessary to make the main supply equal in area to the ten 3 in. pipes. What would be actually required is a pipe providing sufficient area to convey the required air at a velocity of 2500 feet per minute.

Lower Costs May Help

Building operations throughout Canada for the month of June showed a falling off from May by \$422,700. Contracts made in June were \$26,436,000, compared with \$26,859,500 in May.

Building activity for the first six months of the year compares very favorably with the same period of previous years, the total investment represented in new buildings up to July 1st of 1921 being \$111,763,500, which is 8 per cent. ahead of the showing at the end of the corresponding period of a year ago. Residential building continues to be active, the contracts let during June for buildings of this nature reaching \$7,943,600, or 30 per cent. of the total. Business buildings amounted to \$10,027,800, or 37.6 per cent.; industrial buildings reached \$458,700, or 1.7 per cent., and public works and utilities \$8,006,700, or 30.4 per cent.

The table following shows the building for June, according to provinces:—

	No. of Projects	Value.
Ontario	1,027	\$ 7,506,830
Quebec	360	6,861,100
British Columbia...	292	5,091,500
Alberta	167	2,776,000
Manitoba	231	2,214,700
Saskatchewan	103	1,188,100
Nova Scotia.....	69	411,600
New Brunswick....	35	368,000
P. E. Island.....	5	19,000

Total for

Dominion2,289 \$26,436,800

The wholesale price index of 48 building materials declined 4.4 points during the month, making a total drop of 23.5 per cent. from the high building cost of May, 1920. Architects report that in many instances bids are being received from contractors at a lower price than the architect's estimates, and this indicates that material and labor costs have receded to a point where a substantial increase in activity may be expected.

Patterns For Range Canopy

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

Answering any inquiry for a layout of a range hood, the following may give the development:

Not having any design of hood to go by, the enclosed sketch will show what we are making in this case.

The length and width and the height can all be made to suit measurements of the job.

First draw the section through front as 1-7 with a 24 inch projection. Divide this in equal parts as shown.

Next draw a section through end as 1'-7' to any desired curvature, making the sweep in section through front.

Now from each point as 1-2-3-4, etc., of section through front, project horizontal lines into the section through end, and this will give points 2'-3'-4', etc.

Observe this will make a butt miter and that the section through end is nothing more or less than the cut on the ends of the pattern for back.

To set out the pattern for front, observe we pick the girth from section through front, by picking spaces 1-2-3-4, etc., to 7 and set off below as 1-7.

Draw stretchout lines from these points and then from each point as 1'-2'-3'-4', etc., of section through end, drop lines thereby intersecting lines of similar number.

Through these points, trace the uniform curve and you have the half pattern for front.

Observe this accounts for the full girth required to span the front and cuts the miters on the ends to suit the curves shown.

To set out the pattern for end pieces, pick the girth from the section through end, as 1'-2'-3'-4', etc., and set off above elevation.

Draw stretchout lines and then from each point in the section through front, erect lines crossing those in pattern of similar number.

This gives points 2'-3'-4'-5', etc. Sketch a line through these intersections and you have the pattern. Observe the width of this and pattern must be equal to the section through front, while it must have a length of the curve in the section through end.

By reasoning these things out in this way, the procedure is quite clear and it saves developing a plan with the change of profile. Laps for seams must be allowed extra and all joints, also for wire edge.

NOBLE ORDER OF THE "ONE IN SIX"

THE advice is now being handed out to sanitary and heating engineers to go out and "dig" for business in order to maintain a fair volume of trade during the slackness in building. All branches of trade find they have to "dig" a great deal more these days than ever before, and this point is well illustrated in an incident recently outlined in a magazine under the heading "The Noble Order of the One in Six," by Bruce Barton, as follows:—

The doorbell rang and I opened the door to find a colored man on the step.

"Your back fence needs fixing, sir," he said politely, "I am a carpenter and I will put it in first-class shape for ———." He named the sum.

Now, that fence has needed fixing for a good long time and many carpenters complaining that things are slow have passed my door. But it remained for this unknown colored man to elect himself to the job.

I gave it to him with my blessing.

A few weeks earlier I had been visiting a friend in B——— when a similar thing took place; this time it was a plumber who called.

"How is your hot water?" he asked, knowing well enough that there is always something the matter with everybody's hot water. He too found a job for himself not only in my friend's house but in half a dozen other houses along the street.

Henry M. Stanley, in his autobiography, tells of the boys who were his fellow inmates in the workhouse where he spent his youth "The fat-witted majority" he says "were just six times more numerous than the boys with energy and initiative."

"This proportion of one in six is very common in the world," he continues, "In ships that I have sailed in, among the military companions with whom I have campaigned, among the blacks and whites of my African expeditions, in the House of Commons, the leaven of one in six seemed to be required to keep things rigly going."

The saving one in six—the noble order of Go-Getters—the blessed little remnant of those who do not wait for things to straighten out but resolutely set themselves to straighten them out—how much more they are needed today than ever they were before.

Workmen bewail slack times, but the colored carpenter who called on me and the plumber who called on my friend, have all the work they can do.

Business men grumble about this and that; but the members of the Noble Order of One in Six are

wasting no time in grumbling; they are busy getting men and machines into motion again.

Nor is this the first time that the world has been askew. The Jews returned to Jerusalem many years ago to find the walls broken down, the city in ruins. It was a hopeless proposition, so the grumblers said; but a gentleman named Nehemiah thought otherwise. He set each man to building the little piece of wall over against his own house.

"So built we the wall," he tells us, "—for the people had a mind to work."

Being willing to work and having a mind to work are two quite different qualities, I take it.

The world is full of folks these days who are willing enough, if work is brought their way; but here and there an ardent spirit has a mind to work and thinks out a job for himself where no job was before.

"It is by the increase of these ardent spirits that the world will be rebuilt. We are weary of campaigns but we really need one more—a whole hearted drive to double the membership of the glorious company of Self-Starters—the Noble Order of the One in Six.

EDUCATING THE APPRENTICE

IN connection with the active steps being taken at present to elevate the status of the plumbing trade, due thought should be given the future, for no matter how rapid the process, it will take years to bring this industry to the level of importance, in the public estimation, which it deserves. In planning for the future one of the most important factors is to give attention to the education of plumbing apprentices of today in order that they will be under no handicap in this regard in future.

In the plan of education it should be impressed upon these apprentices that efficient plumbing is the most important part of a house. Unfortunately people have become so accustomed to the sanitary conveniences that they never stop to think what would be the condition if all plumbing was removed from our homes and buildings. The modern home, factory, school, theatre, office building, hospital, cannot be successfully operated without an efficient system of plumbing and drainage.

When the importance of this industry is realized the apprentice should take advantage of every opportunity to study metals and the effect of water upon them, study mechanical and architectural drawing, learn the principles of back pressure, syphonage and air movements in drainage systems, the velocity of flow in drains etc. Then apart from technical education the apprentice should learn to be an independent business man and a salesman. Sanitary Engineer devotes considerable editorial space to articles showing how to conduct the plumbing business on a thoroughly efficient basis, and to giving pointers designed to assist the sanitary engineer from the standpoint of selling. These articles might well be followed closely and applied to the business of the reader. Many other interesting points in connection with the education of plumbing apprentices, appear in this issue,

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

Article No. 34 of the Series

(Continued from last issue)

(Continued from last issue.)

It is the general custom to place a disconnecting trap just below each sanitary fixture so as to prevent the escape of sewer gas through the fixture into the dwelling, but under no circumstances should a trap be inserted in any branch drain which connects to any soil pipe or other ventilating stick. In the majority of cases drain blockages are due to various articles being fastened in the trap, so whenever possible, the writer strongly advises the traps not being installed except at the junction of the main drain and sewer and the plumbers metal trap under each fixture for eliminating the nuisance of sewer gases escaping into the houses, but special care must be taken that all traps must be separately ventilated by running a branch vent into the main vent or soil pipe at the top of the outer bend of the trap; this prevents syphoning of the traps by the rushing of the water down the pipe from the discharge of a higher sanitary fixture and also provides access for any foul air accumulated in any part of the soil pipe.

All water pressure service pipes should be of iron either cast or wrought. With screw joint connections lead is sometimes used but on account of its softness is very liable to be punctured and ticked out of shape, but for awkward positions and to minimize sharp bends in plumbing, it is always better to install lead pipes in short lengths. The water service, from a sanitary standpoint, should not connect direct with the water main, but all sanitary fixtures should be served by a proper independent water cistern constructed in the roof of the building with branches connecting each sanitary fixture. Water closets should have at least a 3 gallon flush with 1¼ to 1½ pipe leading from the cistern to the fixtures and it is always advisable to have all parts of the plumbing fixtures and pipes exposed so that they may be readily inspected should any part be put out of working order.

All rooms with water closets should be ventilated by constructing a window opening to the outside air, having an area of at least one-fourth or one-fifth the floor area. No tank overflow should connect with any soil pipe, but should

discharge into a trapped sink the end of the discharge pipe being at least 3 inches above the water level of same.

The roof down spouts or leaders should never be connected to the foul water drains direct and if same do not connect to some underground rainwater storage tank, the branch drain from same leading to the sewer should be well trapped and under no circumstances should same be utilized for ventilation shafts for the drains. After the drainage arrangements of houses have been installed a thorough inspection of all the fittings and pipes should be carried out both internally and externally, commencing from the basement and completing each floor until the roof is reached.

All fixtures and connecting plumbing pipes should be carefully examined, special attention being given to the method of trapping the fixtures inside the house, also the method of joining the various connections and the quality of metal used for the waste and supply pipes.

The closed basin should be well examined and the water flush should also be tested and the air pipe from the top of the trap must be looked for. The connection between the trap of the water closet and the soil pipe should be very carefully examined as this is one of the most difficult joints to make secure and watertight.

The inspector must be careful to notice whether the supply pipe is properly cut off from direct communication with the house cistern should one exist, as will be the case if the water supply is not a constant one or if the house is dependent upon a private well for its supply.

The bath waste pipe should be properly trapped under the bath. The overflow pipes from the various cisterns should be noted and traced and either discharged into the open air or into a trapped sink as previously explained.

All the cisterns inside the house, either for drinking water or service storage, should be examined and their overflows properly traced and feed pipes valves examined, and both underground rain water tanks and cesspools, should be noticed for cleanliness and if they are constructed so as to be watertight and in the absence of a public

water supply, their position with regard to the well must be considered. It is impossible for any inspector however competent to positively assert that the drainage of a house is satisfactory from a mere surface inspection and the only method of certifying that the drainage is properly aired and water-tight, is explained below and as same involves but little time or trouble it is advisable to make it an invariable practice, however perfectly the work may seem to have been carried out.

MONARCH RANGES

Among the new seasonable stove catalogues recently received is that of The Enterprise Foundry Company, Ltd., of Sackville, N. B., describing their Monarch line of ranges. A number of illustrations specifying the various features of the Enterprise Monarch, are noticeably attractive. Complete cuts of this line of kitchen ranges, together with details as to size, weight, and other dimensions are also included in the catalogue.

CHINOOK FURNACES.

"Facts about Chinook furnaces" is the title of a new folder issued by the Swift Current Furnace Company, of Swift Current, Sask. Chinook furnaces are of steel construction, and made in two distinct styles, pipe and pipeless. Other features pointed out by the manufacturers are the brick fire-pot, the flat rocking grates, and the combustion chamber baffle plate. Gas tight, smokeless, dustless, and made in Canada, are further claims made for the Chinook in this pamphlet.

HOUSEHOLD AND BATH FIXTURES.

A new catalogue illustrating the Newell line of household and bath-room fixtures, has now been issued by the Newell Manufacturing Co., Ltd., of Prescott, Ont. This firm has specialized in the production of solid brass rods, extension curtain rods, poles, pole brackets and pole ends, brass hooks, combination double rods, and also an assortment of nickel-plated bath room fixtures. The catalog gives many illustrations of these lines, describing the special features of the Newell hand-buffed products.

Education of Plumbing Apprentice

What Apprentices Should Learn and How to Learn It—Study Trade Papers—Money Not the Highest Motive—Efficient Plumbing the Most Important Part of House.

Address by W. C. Groeniger, President American Society of Sanitary Engineering

IN our present day—with skyscrapers, large apartments and beautiful suburban cities—the man who installs water and drainage systems must really be an engineer. Plumbing has developed into the newer profession of Domestic Sanitary Engineering. Plumbing is a science and requires education, either in college or in the university of experience and hard knocks. A good plumber makes a city more healthy; he spoils a great deal of business for the doctor. His motto is: "Prevention rather than cure."

What You Should Learn.

In some of our public libraries there are as many as fifty different books on plumbing. If you have had the benefits of a high school education you should know something of physics and chemistry. Learn all you can about metals and the effects which water has upon them. Study mechanical and architectural drawing, for later you will have to work with blue prints all the time. Learn how to make an isometric view of an elevation showing a complete system of plumbing and drainage, giving the correct sizes. Learn the principles of back pressure—syphonage and air movements in drainage systems—learn the velocity of flow in drains—the formulas for diameters, head, quantity, and velocity. Learn the difference between volume and pressure.

In addition to all these things, you must learn to be an independent business man and a salesman. No matter if you elect to become a journeyman or a master plumber you should also learn salesmanship. By all means learn Courtesy and spell it with a capital C. Courtesy costs nothing and is the greatest little dividend and character producer in business, or professional life. Cultivate courtesy and be rewarded.

Do not ask the other fellow to do something that you yourself would and could not do, if you were in the other fellow's position. Try and put yourself in his position and you will avoid many mistakes.

"Read Your Trade Papers."

Learn to do your work well and profit by your mistakes. Learn to love the business of plumbing and to protect and defend it from the professional jester. Read the trade paper from cover to cover.

Money Should Not be the Highest Motive

There should be a higher motive than that of purely financial returns. Do

not accept remuneration for services unless you have given value received. Learn to co-ordinate your hands and your mind, and you will not only become a skilled artisan but will be a credit to your chosen art and contribute something to the welfare of your fellow man. Remember that America leads the world in that part of Sanitary Science relating to Sanitary Plumbing.

The Relationship Between Sanitation,

Hygiene and Plumbing.

Let us define sanitation, hygiene and plumbing and see if there is any relationship.

Sanitation is the art of practical application of the laws of hygiene to individual environments. Hygiene is the science of health maintenance. Plumbing is the art of installing in buildings, the pipes, fixtures and other apparatus for introducing the water supply and removing liquid and water-carried wastes. It must be installed in accordance with scientific principles and natural laws.

The disposal of liquid and solid waste matter is of great importance. This fact necessarily stands in relation to one of the most definite laws of hygiene which has yet been enunciated, "that all life is checked by the accumulation of its own products." It is so important that failures in adjustment may be followed by the extreme penalty of death.

The value and relationship of Plumbing to Sanitary Science is important because it removes human wastes from the immediate neighborhood of buildings. Plumbing also furnishes the opportunity for the liberal consumption and use of pure wholesome water for drinking, bathing, culinary and other domestic purposes. It represents an art upon which all civilization depends, and must be installed in accordance with scientific principles and natural laws.

Efficient Plumbing the Most Important

Part of a House.

There is nothing in a building that adds more to the comfort and convenience of the occupant than does a simple, efficient and economical system of plumbing. Did you ever attempt to realize what would happen to your city, if all your buildings were deprived of a plumbing system? The thought of deprivation is terrible when you think about the insanitary condition that would follow and the nuisances that would result, also the increased number of breeding places for flies, mosquitoes,

rats and other carriers of communicable, contagious and infectious diseases.

The modern home, factory, school, theatre, office building, hospital, hotel

and public institution of to-day, would not and cannot be successfully operated without a system of plumbing and drainage. The removal of infectious material from buildings is of value to public health. The mental and physical health of the occupants of a home is dependent in a great measure upon the sanitary conveniences. They are essential to the cleanliness of both the person and the apparel. The cleanliness of the body is simplified by the bath tub and shower bath. The cleanliness of the body is simplified by the laundry trays. The cleanliness of the hands, by which many diseases are transmitted to the mouth, is simplified by the lavatory. The sanitary condition of the kitchen and the cleanliness of the cooking utensils and food is in a great measure dependent upon the kitchen sink.

The sanitary drinking fountain has eliminated the danger inherent in the use of the common drinking cup, and the sanitary water closet is the safest method of removing human excrement and urine, which are the greatest hazards to man. This modern convenience has eliminated thousands of foul, germ-producing privy vaults, the chief breeding place of that disease-carrying pest and menace, the common house fly. The elimination of the privy vault has also removed one of the homes of the rat, another pest which is a very expensive boarder and a disease carrier.

Plumbing Increases the Value of a Building.

The intelligent real estate dealer is aware that a system of plumbing increases the value of the building far beyond the actual cost of the plumbing system. The hotel manager is able to charge from fifty cents to a dollar a day more for a room with sanitary conveniences. Running water in hotels is now considered a necessary adjunct by the traveling public. The plumbing system in a hotel not only adds to the comfort, convenience and health of the patrons, but is a source of revenue, which brings large returns for the owner.

The housewife of this country owes a debt of gratitude to the plumbing business because of the progress and measures adopted to lighten the labor of

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Halifax, N. S.—McKay & Bremner, plumbers, have been succeeded by Roy F. McKay.

WOODEN PIPE LINE STILL IN USE

St. John, N. B.—The Mayor, commissioners, city engineer and superintendent of water and sewerage were taken by Commissioner Jones on a tour of inspection of the water main serving the city between Phinney's hill and Little River, a distance of about one and one-half miles.

The party went over the line on foot and examined very minutely the pipe which had been exposed to view in five or six places by city workmen. The mayor and commissioners were well pleased with the inspection and everything was found to be satisfactory, with the exception of slight evidence of "weeping." This pipe is a thirty-three inch wood stave pipe and was laid in 1907. The life of the pipe is now nearly up and it cannot be expected to function perfectly for more than four or five years longer.

ATTENDED WATER-

WORKS CONVENTION

St. Thomas, Ont.—Albert Roberts, chairman of the St. Thomas Water Commission; ex-Mayor George Geddes, commissioner; City Treasurer S. O. Perry, Col. A. F. McLachlin, city analyst, and Alonzo Bowlby, foreman of the city waterworks department, have returned from attending the annual International Waterworks Convention at Cleveland.

CONTRACTS AWARDED

Newmarket, Ont.—The Town Council accepted the tender of the Standard Sewer Co. of Toronto to lay sewers at a cost of about \$32,000.

WATERWORKS BY-LAW CARRIES

Sarnia, Ont.—With a majority of 113 the by-law asking for \$95,000 for waterworks extensions, voted on at Sarnia, carried.

WELLAND PLUMBERS AGREE

ON 80 CENTS TILL AUGUST

Welland—The plumbers in the city have agreed to work till August for 80 cents an hour.

"COMBINE" REPORT SHELVED

Toronto—Pending at least the outcome of litigation in respect to the investigation into the alleged grocers' combine, the Attorney-General's Department will take no action on the report which was made by A. W. Roebuck in regard to the alleged plumbers' combine.

Mr. Roebuck, who conducted the investigation, declined to indicate whether his investigations convinced him that there was or was not a plumbers' combine in existence. Neither was the Attorney-General prepared to divulge anything of the contents of the report.

It is believed that the report sets forth certain facts without making any definite recommendation as to official action. The report has been with the Attorney-General's Department now for three months.

WATER COST \$24.80 YEARLY

Long Branch, Ont.—"The annual cost of water for a house containing five persons, consuming 60 gallons per head daily will be about \$10.80, to which must be added \$14 (capital and local improvement charges), making a total of about \$24.80 per annum per house. The cost of a scheme for present needs would be \$155,932," is a summary of the engineer's report on a waterworks scheme for Area 1.

CANNOT STOP POLLUTION OF BAY

Hamilton, Ont.—That no action could be taken at the present time to prevent the pollution of the waters of Hamilton bay was the advice given by the board of control regarding a resolution from the chamber of commerce about impure drainage into the harbor.

City Engineer Gray advised that a part of the pollution was caused by the emptying of untreated sewage into the bay from the city sewers.

The engineer outlined the work done by the department and spoke of the plans for an intercepting sewer from Queen street on the west to Gage avenue. The purpose of this is to intercept the sewage from Queen street west of Stuart street, and all sewers to the north and south of Burlington street, which discharge untreated effluent into the bay. After reaching the interceptor the sewage will be pumped to a disposal place to be built on the recently acquired Stipe property. When these and subsidiary works are completed the engineer states that no untreated sewage will reach the bay.

PLUMBER SUFFOCATED

Montreal—Suffocated by gas fumes escaping in a cellar where he was working, Domina Charbonneau, 45 years of age, a plumber, employed by Paquette & Fortin, plumbers, of 70 Cathedral street, died at the Montreal General hospital a few hours later.

PLUMBERS' STRIKE SETTLED

Fort William, Ont.—The master plumbers and journeymen plumbers have settled their differences and the men have gone back to work at 90 cents per hour.

This was settled at a general meeting at which J. J. Culliton presided and spoke in favor of settling the dispute. He claimed that it was no use for Fort William to pay a lower scale of wage than was paid in other near-by cities, as it would merely mean the drifting of the best mechanics from Fort William elsewhere.

The men were there in full force, and, while there were only eight of the master plumbers of Fort William there, the recommendation adopted by them will go. Only Fort William plumbers were represented, but it is supposed that Port Arthur plumbers will follow suit.

ADOPT METER SYSTEM

Woburn, Ont.—Utilities Commission will adopt the meter system in connection with the Birch Cliff waterworks system. A charge of 25 cents per 1,000 gallons and a sum of \$32 for installing pipe to the street line has been arranged.

COMPEL USE OF

COVERED GARBAGE PAILS

St. Catharines, Ont.—At a meeting of the Board of Health, Dr. Currey, M.O.H., presented his report as follows:

Garbage Receptacles.—As advised by your Board a notice was published in the St. Catharines Standard notifying householders that covered, metal receptacles must be used after June 1st. With the co-operation of the City Engineer's department this by-law will be strictly enforced this year, and I have advised the Sanitary Inspector to take the proper steps in this regard.

WATERWORKS ENGINEERS

Niagara Falls, Ont.—The Canadian section of the American Waterworks Association met in the Clifton Hotel. Seventy-five Canadian delegates were present. An address was given by Dr. R. C. Snowden, chemical engineer. The delegates visited the filtration plant at Niagara Falls, N.Y. The delegates left by special train to be present at the convention of the parent body, which lasted a week in Cleveland, O.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

PRICE recessions continue to constitute the principal market changes noted on steam-fitting and plumbing supplies. A reduction in prices on radiators from 5 to 10 per cent, through a revision in discounts, is of particular interest as this is the second change recorded in radiator quotations within recent weeks. Solder prices again register further decreases, and lower prices are shown on blue annealed sheets. Revised lower quotations are also recorded on both bland and hoop steel.

A gradual revival in the market tone is shown on other products. Eavestrough, conductor pipe, and corrugated sheet sales are now recording a

seasonable movement, while the volume of trade in pipe and pipe fittings is generally considered fair. A better movement is noted in enamelled wares, and a corresponding slight improvement is shown in orders for closet outfits and fixtures. Range boiler quotations still remain at the lower list, and the expected price readjustment has not yet materialized. No marked development is noted in compression work, with prices remaining unchanged. Boiler tube trade is dull at present, while the revised quotations are holding on copper and brass. Business in the waste material markets is almost at a standstill, and the dull period in ingot metals has shown little variation.

MONTREAL, July 8.—Markets on plumbing and steamfitting supplies are featured with a reduction in radiators and boilers. Through a revision in discounts, these are lowered from 5 to 10 per cent. Enamelled ware and closets will cost less, and while a definite lower price is not given on lines of enamelled ware, closets are now selling 10 per cent lower. Soil pipe discounts are unchanged and range boilers are still selling at the lower list given a few weeks ago. Sheets, bar iron and steel show unchanged quotations, but the market is reported easier, especially on the latter. Eavestrough, conductor pipe and corrugated sheets are selling well at unchanged prices. A few revisions are made in compression goods while pipe and fittings show no change. Ingot metals show a slight improvement over previous weeks.

The usual quiet period of the warmer months of July and August is now noticeable, but a brighter outlook for Fall trade is furnished in different lines by more inquiries now coming to hand.

MONTREAL

Radiator and Boiler Prices Lowered

Montreal—

Radiation and boilers are reduced in price, effective from July 5th. The hot water upright radiators are now quoted less 56 per cent., steam less 57 per cent. Former discounts being 53 and 54 per cent respectively. Wall radiators are now less 53 per cent, a reduction of 6 per cent. All boilers, both in standard and Ontario Government trimmings are lowered from 5 to 10 per cent.

These reductions add assistance to lower building costs from lines relative to the hardware trade, and are in line with other heavier commodities of iron and steel which are now reported easier on the markets.

Manufacturers state they have considered the recent slight decrease in raw materials and have also anticipated the future in lowering their products to the present level. Classed as very heavy goods, transportation costs will have to be lowered before a further reduction to any great extent can be made. Following are the new prices and discounts:—

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot. 45 in. to 38 in., \$1; 32 in., \$1.10; 30 in.,

\$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 56 per cent for hot water and 57 per cent. for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 53 per cent.

Boilers—Round hot water boiler, low base only (high base discontinued) sizes from 0 to 10, 60 per cent off list.

Square or sectional hot water or steam boilers, 15-in., 10 per cent.

For Ontario Government trimmings 5 per cent.

Square or sectional water boilers 19-in to 36-in., 10 per cent off list.

Square or sectional steam boilers, 19 in. to 36 in., 10 per cent. Ontario Government trimmings, 5 per cent.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Sorting Demand For Fittings

Montreal

The demand for pipe fittings continues more or less irregular from week to week, and of a general sorting movement. Prices on all kinds are unchanged as follows:—

Fittings—

Cast iron fittings..	..20	p.c.
Bushings, cast....	..30	p.c.
Bushings, malleable..	..30	p.c.
Flanges....	..27½	p.c.

Class C.....	0 13	0 20
Add 10 per cent.		

No Change in Wrought Iron

Montreal—

Wrought iron and steel pipe are unchanged under list No. 51. Piping has remained fairly steady since the issuing of the latest list on April 25th last, while previous to this the downward trend was characterized by the issuing of new lists at almost regular intervals each with lower prices. Owing to decreased production, in accordance with a quiet demand, the condition of piping is now said to be steady.

Light Sales of Boiler Tubes

Montreal—

Boiler tube sales are very light in line with other heavy commodities of iron and steel. Buyers for local warehouses state that present stocks are lower than is usually kept at this time, and only ample for the small repair work that is being carried out. Following are unchanged quotations;

MUELLER

Ground Key Cocks and Compression Stop, Supply and Drain Cocks

The Cocks illustrated on this page—A-1120, A-1185, A-1128, A-1251, A-1260 and A-1188 (reading down from left to right), represent a few of the many **MUELLER** patterns—each designed to fill a special need to perfection.

MUELLER Plumbing Brass Goods are made from Muellerite—a metal that is 85% pure copper. Muellerite resists corrosion better—can be handled with greater mechanical precision—takes a finer finish and a heavier nickel plating than common brass, which is less than 60% copper.

Once you begin to use **MUELLER** Plumbing Brass Goods, you will quickly recognize their superiority—in the ease with which they can be installed, and in the dependable service they invariably give. Every **MUELLER** Cock is tested to withstand 200 pounds hydraulic pressure without leaking.

Write for detailed description and prices. Mail orders given immediate attention.

Range Boiler Prices Not Yet Settled

Montreal—

No further readjustment in range boilers quotations is announced and the following are prices quoted, although a few wholesalers are maintaining quotations slightly in advance. The 30 gallon boiler continues the popular selling size, the movement of the larger boilers being very slow.

Range Boilers—	Standard	Ex. heavy
30 gallon.....	8 75	11 25
35 gallon.....	11 25
40 gallon.....	13 50	16 00

82 gallon.....	35 00
100 gallon.....	45 00
120 gallon.....	54 00

Closet Prices Lowered 10 Per Cent.

Montreal—

Dealers are now quoting a discount of 10 per cent off former net prices on closets. Accompanied by practically all other lines of enamelled ware, the market has been very unsettled in the past two weeks, and the present price has been obtainable from some sources. Now, however, prices generally are brought to the lower levels. Sales are still limited, little, if any improvement being shown. Following are local quotations:—

Closet, standard outfit	32.00
Do., with post hinge seat.....	33.00
Do., white vitro, vitreous china or enamelled iron, with wash down bowl and oak or mahogany post hinge seat.....	35.00

Do., white vitro, vitreous china, or enamelled iron tank, with fittings flush elbow and supplies less seat.....	19.00
Less 10 per cent.	

No Change In Enamelled Ware

Montreal—

Little, if any, change has taken place in the local condition of enamelled ware, the market remaining unsettled. The list prices with discounts are now shown below, as wholesalers and jobbers who had previously used net quotations, are now quoting the discounts. While 20

and 10 per cent is quoted, lower prices are obtainable from different sources, the result of recent price-cutting. Following are list prices less discounts:—

Sinks, roll rim, 18 x 30 in.....	23.00
Sinks, flat rim— 1 only 2 only 3 only	
16 x 24.....	\$ 7.50 \$ 7.40 \$ 7.30

17x19" Roll Rim, F241 or P3435.....	12.60
Less 20/10 per cent.	

Corrugated Still Selling Well

Montreal—

Sales of corrugated sheets have been up to a fair standard for the past few weeks, and dealers report business holding well at present. While the farmers are now busy, the last months have allowed them to make any necessary repairs and to undertake new building, this undoubtedly stimulating the movement of sheets. The list prices and discounts remain unchanged as follows:—

Corrugated Sheets—	Per 100 sq. ft.
No. 28 gauge.....	8.50
No. 26 gauge.....	9.25
No. 24 gauge.....	15.00
No. 22 gauge.....	16.00
No. 20 gauge.....	18.00
No. 18 gauge.....	24.00
Less 7½ per cent.	

Lighter than 24 gauge and wider than 27 inches, 75 cents a square extra.

A Dull Scrap Market Continues

Montreal—

Dealers in scrap metals report no relief from the prolonged dull period. Little interest is shown, consumers only buying for immediate needs which are very small at present. One large dealer, however, is anticipating greater volumes of sales in the future, when the usual slump of July and August is over. Following are the local nominal quotations:—

Waste Materials—	
Automobile tires.....	0.75
Yellow brass.....	0.05
Red brass.....	0.03½
Light brass.....	0.04
Scrap zinc.....	0.03½
Lead, heavy.....	0.04

No. 2 busheling.....	4.00
Boiler plate.....	0.08
Boiler plate.....	0.10
No. 1 machinery cast.....	22.50

Better Outlook For Sheets

Montreal—

Following the recent revision in sheets when practically all quotations were brought to a little lower level, a few more inquiries are now coming to hand, which lends a brighter outlook for future business. The Fall demand for galvanized iron and tin plates, when furnace work commences, and Canada plate for the making of stove pipes, is said to have caused these inquiries to

be made. At present, however, all kinds of sheets and plates are moving slow. The situation is little changed with a more or less unsettled market, and reductions made from different sources to obtain orders. Local quotations are the following:—

Black Sheets—

10 gauge.....	5.00 to 6.00
12 gauge.....	5.05 to 6.05
14 gauge.....	5.35 to 6.35
16 gauge.....	5.45 to 6.45

Good Demand For Eave-trough

Montreal—

A good demand continues for eave-trough, conductor pipe, etc. Low dealer stocks are undoubtedly assisting the movement of these commodities at present, outside dealers being now well into the season when their customers required their buildings troughed, and are ordering to meet this demand, while in other years their supplies were already in hand. Warehouse stocks are ample to meet the increased activities with prices and discounts unchanged as follows:—

Iron and Steel Prices Hold**Montreal—**

No change has been made in local prices of the different bar iron and steel, but the tendency is easier and a revision to lower quotations would not be surprising in the near future. Business in all lines is at present quiet, but a better outlook is furnished by receipts of more inquiries in the past two weeks. Stocks are lower than usual, buyers not yet disposed to place orders with the present market conditions prevailing. Following are the local quotations.

Common bar iron, 100 lbs.	3 70
Refined iron	5 20
Iron finish machinery steel	3 75
Mild Steel	3 70
Single reeled machinery steel	5 75
Band steel	3 70
Spring steel	5 00
Sleighshoe steel	3.70
Tire steel	3 90
Toe calk steel	4 60
Harrow tooth steel	3 85
Mining tooth steel, per lb.	0 23
Black Diamond tool and cast steel	
per lb.	0 23

NOTE—Regned iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles 50c. per 100 lbs. extra.

Flats, iron and steel, 5-16 and thinner, 50c per 100 lbs. extra.

Valve Discount Revised**Montreal—**

Discounts on standard radiator valves and Gate valves are increased, thus lowering the price on these two lines. Other lines are unchanged, but further price lowerings would not be surprising as the market is by no means settled. Sales in these lines are small at present but an improved activity is looked for in the near future. The following quotations prevail locally.

Compression work, standard	37 p.c.
Fuller work, standard	30 p.c.
Bath cocks, compression	29 p.c.
Basin cocks, Fuller No. 0	30 p.c.
Do., Nos. 1 and 2	30 p.c.
Flatway stop and waste cocks, standard	40 p.c.
Roundway stop and waste cocks, standard	34 p.c.
Brass steam cocks, standard	10 p.c.
Radiator valves, standard	30 p.c.
Do., removable disc	38 p.c.
Globe, angle and check valves, standard	5 p.c.
Gate or straightway	16-10 p.c.
Jenkins Globe	10-10 p.c.
Jenkins gate valves	10 p.c.
Emco Globe Valves	20 p.c.
Emco Check Valves	20 p.c.

Cotton Wastes Show No Change**Montreal—**

No further price change is made in the price of cotton wastes, since the reduction of two weeks ago. Other lines of cotton goods have been shown at reduced prices since the reduction in wastes, but dealers now expect a fairly steady market as the last reduction brought prices down in accordance with the present levels of raw material. Following are the current prices:

Cream, polishing 0 20

White

XXX	0 17
XX	0 16

Colored Cotton	0 16

Above lines subject to trade discount for quantity.

Soil Pipe Discounts Hold**Montreal—**

No change is made in the discounts on either soil pipe or fittings, and the demand for these is still below normal for this season. Following are the local quotations:

Soil Pipe— (Medium and Extra heavy)
2, 3 15 p.c.; 5 and 6-inch, 20 per cent.
8 inch, add 5 p.c. to list.

discount.

4-inch, 25 p.c. discount.

Fittings—

2 to 6 inch fittings, 40 per cent. discount.

8-inch, net.

Lead and Zinc Easier**Montreal—**

Although lead is now a little steadier, the recent fluctuations of this metal and the extreme low prices of spelter on the primary markets still cast a strong reflection on the finished products. While no price changes are made, the tendency is now easier than it has been for some time. Sales of all lines are not as brisk as in last month, but dealers expect a quiet period at present and state sales are up to expectations. Following are unchanged prices:

Lead pipe, per 100 lbs. 12 50

Lead waste, per 100 lbs. 13 50

NOTE.—Lead pipe is subject to a discount of 10 p.c.

Lead traps and bends 10 p.c. off

Do., commercial, lb. 0 24½

Do., wiping, lb. 25¼

Do., wire, lb. 0 37½

Do., wiping, lb. 0 25¼

Zinc, sheets, casks 0 11½

Do., broken lots 0 12

Ingots Show Slight Improvement**Montreal—**

The tone of the ingot metal markets is slightly better than in the last two weeks, although this does not mean that any sustained improvement is in sight. Business remains quiet with no immediate signs of improvement.

TORONTO

TORONTO, July 8.—The focus of attention is now concentrated on the steel markets due to the announcement by the Bethlehem Steel Company of a lower range of prices on steel, which practically brings the official list down to levels that have gradually developed during recent weeks. Locally, some lower quotations are shown on blue annealed sheets, and prices on band and hoop steel are also slightly reduced. Further price revisions are anticipated on radiators, while solder quotations have again registered a decrease. No recessions in either prices or discounts are recorded on other basic products, but conditions are gradually reviving. Fair sales are now recorded on corrugated sheets, conductor pipe and eavestrough, with a slight improvement noted in closet outfit sales, and a better movement reported from some quarters in enamelled ware. Range boilers are still at the lower list, and current orders for pipe, and fittings are generally considered fair. There has been no marked development in compression work, and the revised prices are holding on copper and brass. Boiler tube trade is still dull, and a similar tone pervades the waste material markets. There is a little variation shown in the prevailing conditions on ingot metals, but the outlook for future business is slightly more hopeful.

Lower Quotations Shown On Annealed Sheets**Toronto.**

Reductions have been announced in quotations on blue annealed sheets. This price recession was not unexpected due to the prevailing anticipation of lower levels on the primary steel markets but local quotations on black and galvanized sheets are maintained at previous levels, with future price indications difficult to ascertain. Local dealers point out that

price reductions on the southern markets, have been gradually developing during recent weeks, and that such conditions have naturally been reflected in the local situation. With the anticipation of a general levelling of quotations by the Steel Corporation, future prices are expected to be more evenly maintained. Following is the average range of prices recorded on fairly large quantities, with some higher levels noted in certain quarters, especially for small or broken lots:

The Finest One-Register Furnace on the Market

Jewel Pipeless Furnace

A Successful Heating Appliance

The success is very natural, based, as it is, on exceptional merit, and following where the reliable Jewel Furnaces have already blazed the trail. The efficient Jewel Pipeless has the same splendid qualities that have made the name "Jewel" famous through the Dominion.

Real Serviceable Heat

is the primary requirement for homes, schools, churches and other buildings. The Jewel Pipeless gives real, serviceable heating. The furnace has two casings, the outer casing acts as a Cold Air duct, the inner casing as a Warm Air Flue.

The Duplex Register is directly over the furnace. The outer Section is for admitting Cold Air, and the Inner Section for delivery of Warm air.

The casings can be made suitable to any cellar.

A postal request will bring full information and prices.

Manufactured By

The Burrow, Stewart & Milne Co., Limited

Hamilton - Ontario

Plates—

10 gauge	\$ 4 75 to	\$ 5 05
12 gauge	4 80 to	5 10
14 gauge	4 85 to	5 15
16 gauge	4 95 to	5 25

Black Sheets—

14 gauge	5 10 to	5 60
16 gauge	5 20 to	5 70
18-20 gauge	5 30 to	5 80
22-24 gauge	5 35 to	5 85
26 gauge	5 40 to	5 90
28 gauge	5 50 to	6 00

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 36 in. wide.

GALVANIZED SHEETS—**Premier and Apollo**

10 3/4 oz.	7 90	8 40
U.S. 28	7 50	8 00
U.S. 26	7 20	7 70
22 and 24	7 05	7 55
18 and 20	6 90	7 40
16	6 75	7 30
12 and 14	6 60	7 20

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10 3/4 oz., and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is from 20c to 30c per 100 pounds. Other gauges show no change for different widths.

Prices shown are full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Reductions Shown On Band and Hoop Steel Prices**Toronto.**

Quotations on steel and iron are receiving an unusual degree of attention due to the recent announcement by the Bethlehem Steel Company of a lower range of prices on steel. It is pointed out however, that this approximately gives official recognition to the reduced price levels which have gradually developed in this connection during recent weeks, and while the decreases announced are fairly substantial in some instances, yet the new list was practically already in general effect on the steel markets.

Local distributors of bar iron and steel report that current business consists of small orders only, and also state that the recent tendency on the part of certain southern steel mills to cut quotations has been naturally reflected in local price revisions and slight recessions on iron and steel products. Now that a general standardization of steel prices is again in order, the current levels are expected to be more evenly maintained. A small reduction is noted in quotations on band and hoop steel, and the following is the revised average list of local prices:

STEEL AND IRON

Mild Steel, 3-16 inch	\$ 4 10
Do., 1-4 in. and heavier	3 75
Bar iron, 3-16 in.	4 10
Do., 1-4 in. and heavier	3 75
Angle base	4 00
Horseshoe iron	4 10
Tire Steel	\$ 4 70
	5 95

Band Steel, 5-8 to 4 in.	4 25
Spring Steel	10 75
Crucible cast sheet steel..	30 00
Mining drill steel	23 00
Cast tool steel	20 00
Sleigh shoe steel	4 10
Norway iron	15 00
Toe caulk iron	5 40
Hoop steel	4 75

Slight Improvement In Closet Outfit Sales**Toronto.**

While sales in closet outfits and fixtures are still reported as below expectations in some quarters, yet a slight increase has been recorded in the volume of recent orders. This gradual tendency was described by one jobber as tending towards a more hopeful outlook although still leaving much to be desired in the way of current business. Prices generally remain unchanged at the following quotations:

Closet, standard outfit oak.....	\$28 50
Do., with post hinge seat.....	29 70
Do., white, vitro, pussyfoot, vitreous china or enamel-iron with wash-down bowl and oak or mahogany post hinge seat..	31 50
Do., add for reversible trap bowl	1 25
Do., add for syphon jet bowl....	7 00
Do., for 3/4 in. valve on supply pipe	1 50
Do., deduct for supply pipe.....	0 80
Do., deduct for floor flange....	0 60
Do., wash-down bowl less spud.	11 50
Do., reversible trap bowl less spud	12 75
Do., syphon jet-bowl less spud..	19 00
Do., "Richilieu" bowl	10 50
Do., oak, oak-vitro or pussyfoot tank with fittings, less seat...	16 50
Do., white, vitro, pussyfoot, vitreous china or enamelled iron tank with fittings, flush elbow and supplies	18 50
Do., wood strip seat and cover..	3 75
Do., post hinge seat and cover..	4 75
Do., add for bar hinge.....	0 40

Better Movement Noted In Enamelled Ware**Toronto.**

A slight gradual improvement has been noted in the current business on enamelled ware, and sales are generally reported of a steady nature. No change has been recorded in either prices or discounts, the following quotations still prevailing:

Enamelled Iron Baths, 3" roll rim	
4 ft. 6 in. 5 ft.	\$51 40
Do., 5 1/2 feet	57 10
All Steel Enamel Bath, 4, 4 1/2 or 5 ft., net	16 25
Do., do, 5 1/2 ft., net	17 50
Lavatories—	
17x10" Apron F139 or P40445...	15 30
18x24" Apron F154, P3845 or P3847	23 60
18x21" Apron F169 or P4205....	17 60
18x21" Roll Rim F197, F199 or P4655-6	15 40

20 x 30	9 70 9 80 9 90
All above list except lines marked net.	
Discount 20-10 p.c. off these prices,	

Price Revisions Expected On Radiators**Toronto.**

Further price revisions are anticipated in current quotations on radiators. The actual range of these contemplated changes, however, is not yet available, local dealers stating that the new lists are not completed, although it was admitted that price revisions have been decided upon.

Prevailing quotations on heating boilers are also subject to lower levels, according to the views expressed in certain quarters of the trade. The probable extent of such looked for changes could not be ascertained, but it was pointed out that revisions in the discounts on water, steam and wall radiators became effective in June, and that in spite of such price reductions, the current volume of business was reported as below normal, and certainly not up to expectations. While there is a fair amount of building activity in progress, it is problematical whether any further price recessions will materially affect the degree of future construction, as the season is now advancing rapidly in this respect.

Fair Sales In Conductor Pipe and Eavestrough**Toronto.**

Eavestrough, conductor pipe and elbows continue to register a seasonable movement. Current sales are fair, and numerous small orders are reported. The season's turnover in these products is naturally dependent upon the degree of building, especially in the erection of houses and other small structures. Following are the prevailing unchanged quotations:

TROUGH (Eave)

O. G. Square Bead and half round. Size in girth:

	Per 100 ft.
8 in.	\$ 15 90
10 in.	17 70
12 in.	21 20
Less 60 per cent.	
15 in.	28 80
18 in.	36 50

PIPE (Conductor)

Plain, round or corrugated)

	Per 100 ft. in 10 ft. lengths
2 in., in 10-ft. lengths, list.....	18 40
3 in., in 10-ft. lengths, list.....	22 30
4 in., in 10-ft. lengths, list.....	29 60
5 in., in 10-ft. lengths, list.....	40 00
6 in., in 10 ft. lengths, list.....	49 00
Less 60 per cent.	

CONDUCTOR ELBOWS

2 inch, list	5 25
3 inch, list.....	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 55 per cent.	

HEAT YOUR HOME RIGHT SAVE MONEY!

Get A FREE Estimate and Learn How Little This Fine Furnace Costs

You're wasting money trying to heat only two or three rooms with stoves. You'll use less coal and have the whole house very warm if you install a HECLA Pipeless Furnace. For the HECLA Pipeless has the famous steel-ribbed firepot that saves one ton of coal in six weeks. No heat is wasted, for there are every room in your house as a June day. We guarantee that absolutely—without reservation. And this modern heating system gives you a cool cellar without the old-fashioned open-living pipes.

Learn all about it about the HECLA Pipeless. Get a copy of "Selling Talks" from which you can learn the many advantages of this furnace. It will tell you the furnace is a class by itself. Study these features! FREE!

PRESTON, Ont.

What Did You Pay For? Coal This Winter?

Here's a Furnace that Cuts Down Fuel Bills Surprisingly and COSTS LESS To Install.

Installed in a Day. Guaranteed to Heat Any Home to 15 Rooms!

HECLA PIPELESS FURNACE

CLARE BROS. & CO. Limited
PRESTON, Ont.

A BETTER FURNACE WHICH COSTS LESS

And Saves One-Third On Fuel Bills

The "Hecla" Pipeless Furnace enables a builder to save many valuable dollars on the cost of a house and yet give a heating system of guaranteed efficiency—no matter what size the place. It adds a valuable selling feature, for it not only heats the house properly but it does so on much less fuel than any other heating system.

Guaranteed Against Leaks of Gas or Dust!

The "Hecla" Pipeless Furnace is the only furnace in the world which has been tested and found to be absolutely safe. It has no gas or dust leaks, and it is guaranteed to be safe for the life of the furnace.

Send for Booklet and Estimate Free

You can find out more about the "Hecla" Pipeless Furnace by getting a copy of the "Selling Talks" booklet. It will tell you all about the furnace, its features, and its advantages. It will also give you a free estimate of the cost of installing the furnace in your home.

The "Babe Ruth" Among Pipeless Furnaces

There are lots of baseball players who can maintain a pretty high batting average—but none of them get the crowds like "Babe" Ruth. BECAUSE—he outclasses them all!

And it's the same in pipeless furnaces—the "Hecla" Pipeless has so many exclusive features of real merit that it stands in a class by itself!

Steel-Ribbed Firepot, Patented Fused Joints, Circular Waterpan—these three famous features would alone set the "Hecla" Pipeless ahead of competition.

But there are many other details which give the "Hecla" dealer convincing selling points—and satisfactory sales.

Get into the pipeless business—it opens up a new market. Old homes as well as new—small homes as well as large are your prospects. Each installation takes but a few hours—you make a quick, clean profit.

We've compiled a unique book of "Selling Talks" on the "Hecla Pipeless." It shows just how our most successful dealers go after business. It's yours for the asking. Write now, learn the "Hecla" proposition today. Be the "Babe Ruth" in your local furnace business.

HECLA PIPELESS FURNACE

No Marked Development In Compression Work

Toronto.

Conditions on general compression goods show a tendency towards gradual improvement. While the volume of sales recorded is not large however, the current movement is reported as steady, and the statement was made in one quarter that the present situation could be a whole lot worse. No marked developments are looked for in the future, as the recent revised quotations failed to uncover any noticeable proportion of fresh buyers. The following prices generally prevail:

Compression work, standard	37 p.c.
Fuller work, standard	30 p.c.
Bath cocks, compression	29 p.c.
Do., Fuller	25 p.c.
Flatway stop and waste cocks, standard	40 p.c.
Roundway stop and waste cocks, standard	34 p.c.
Brass steam cocks, standard	10 p.c.
Globe, angle and check valves, standard	5 p.c.
J. M. T.	20 p.c.
J. M. T. C.	25 p.c.
J. M. T. Gate Valves	15 p.c.
Gate or straightway	16 10 p.c.
Jenkins Globe	10 10 p.c.
Radiator valves, standard	30 p.c.
Do., removable disc	42 p.c.

Basin Cocks—

No. 1 and 1 Fuller pattern	30 p.c.
Quick opening, No. 3633	37 p.c.
Emco J. D. Valves	20 p.c.
Emco Check Valves	20 p.c.
Webber Gate Valves	20 p.c.

Range Boiler Quotations Still At Lower List

Toronto.

The lower list of quotations on range boilers still nominally prevails. The looked for readjustment in prices has so far failed to materialize, but a settlement between the manufacturers and various jobbing houses is reported as imminent. Conditions are unchanged, with only a slight improvement noted in the movement of range boilers, and this has been mainly confined to the 30 gallon size. Orders are therefore still being taken at the following prices:

RANGE BOILERS

	Standard	Ex-heavy
30 gallon	\$ 8 75	\$11 50
35 gallon	9 50	13 80
40 gallon	13 80	16 50
52 gallon	20 40	25 20
66 gallon	28 80	34 80
82 gallon	36 00	47 40
100 gallon	45 60	56 40
120 gallon	55 20	64 80
144 gallon	78 00	93 00

Orders For Pipe Fittings Considered Fair

Toronto.

Dealers now report a slight lull in the movement of pipe fittings, and while this condition is a reaction from the activity noted some few weeks ago, yet current sales are still reported fair. The situation was summed up by one jobber in the statement that while the volume of orders might not be up to the standard which earlier predictions had led them to expect, yet, considering trade conditions generally and the fact that merchants and consumers have adopted the policy of purchasing for immediate requirements only, the present proportion

of business was very gratifying under existing circumstances and certainly not to be despised. The present quiet tone was considered as temporary. The prevailing quotations follow:

PIPE FITTINGS

Cast iron fittings	20 p.c.
Plugs, cast iron	27½ p.c.
Do., solid	10 p.c.
Do., countersunk	net
Bushings	30 p.c.
Unions, 1-4 in. to 2-in.	40 p.c.
Do., 1-8 in., 2 1-2 to 4 in.	35 p.c.
Flanged Unions	20 p.c.
Dart Unions, blk., 1-4 to 2in.	29 p.c.
Do., ½ in., 2½ to 4in.	14 p.c.
Do., galvd., add to black	30 p.c.
Nipples, blk. and galvd., ½ to 4 inch, close and short	40 p.c.
Do., 4½ in. and larger	30 p.c.
Do., 4½ in. and larger	40 p.c.
Do., long, ½ in. to 4 in.	50 p.c.
Do., running thread	20 p.c.
Couplings, 4 in. and under	20 p.c.

MALLEABLE FITTINGS

	Black Galvanized
Class A	0 60 0 75
Class B	0 24 0 34
Class C	0 15 0 24

Solder Quotations Again Register Decrease

Toronto.

Solder prices have dropped again. The revised quotations are slightly lower, and follow the declining trend on the primary markets. Although weak in tone, prices on lead pipe and sheets are still maintained at previous levels. The decrease in solder shows an average price lowering of one cent per lb. on the quotations listed last week, but a range is noted in the extent of the decline on various grades. The new prices follow:

LEAD AND ZINC GOODS

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of	10 p.c.
Lead traps and bends	10 p.c.
Lead sheets, 4 to 6 lbs. sq. ft. in rolls, lb.	0 09½
Cut sheets, ½ c to ¾ c lb. extra and cut sheets to size 1 ct. lb. extra.	
Solder, wire, per lb.	0 32
Do., strictly, lb.	0 23
Do., commercial, lb.	0 21
Do., guaranteed, lb.	0 26
Do., wiping, lb.	0 20½
Zinc sheets, per lb.	0 13
Caulking lead	0 08 0 09

Revised Prices Hold On Copper and Brass

Toronto.

Current quotations on copper and brass remain at the lower range recently announced. The easier market tone recorded, is still evident, however, but reports from the American centres indicate that slight improvement is looked for due to the more satisfactory tone of the outside markets, consequent upon the improvement in the exchange situation and the settlement of the prolonged British coal strike. Whether these conditions will tend to offset the recent depression and serve to stimulate activity, is yet too early to ascertain. The reflection in local markets remains steady, with prices on copper and brass sheets,

rods and tubing, maintained at the following levels:

BRASS

Sheets, base, per lb.	\$ 0 27
Rods, base, per pound	0 27
Tubing, base, per lb.	0 34

COPPER

Rods, base, per pound	0 32
Soft sheets, plain, 16 oz. and heavier, lb.	0 32
Do., plain tinned 16-oz. and heavier, lb.	0 40
Do., polished and tinned 16-oz. and heavier, lb.	0 45
Tubing	0 37

Corrugated Sheet Sales Reported Steady

Toronto.

Current sales in corrugated sheets are now reported as seasonably steady. The movement continues fair, but activity recently recorded has slightly subsided. No change has, as yet, been announced in quotations on corrugated sheets, the following prices being well maintained:

CORRUGATED SHEETS

	Per 100 sq. ft.
No. 28 gauge	8 50
No. 26 gauge	9 25
No. 24 gauge	13 00
No. 22 gauge	16 00
No. 20 gauge	18 00
No. 18 gauge	24 00
Less 7½ p. c.	

Lighter than 24 gauge and wider than 27 inch 75c. a square extra.

Soil Pipe Prices Hold

Toronto.

A seasonable volume of sales has been recorded on soil pipe and fittings. The current movement is reported as fair, and while orders are chiefly small, they are more numerous than formerly. Prices are unchanged at present, having been maintained at the following quotations:

SOIL PIPE

2 and 3 in., 10 p.c.
4 inch, 20 p.c.
5 and 6 inch, 15 p.c.
8 inch, add 5 p.c.

FITTINGS

2 to 6 inch fittings, 40 p.c.
8 inch fittings, plus 5 p.c.

Boiler Tube Prices Hold

Toronto.

Dullness is still the outstanding element in the current boiler tube market, and business seems to have adjourned for the present. The quiet period which has developed, offers no incentive for local price reductions, according to the opinion expressed by local merchants, but price changes are stated to depend largely on the Pittsburgh market, and local quotations on boiler tubes remain unchanged as follows:

BOILER TUBES

	Seamless	Lapweld
1 inch	\$26 00	\$
1¼ inch	27 25	
1½ inch	26 25	
1¾ inch	29 75	25 00
2 inch	29 25	22 00
2¼ inch	33 00	25 00
2½ inch	41 75	27 00
3 inch	49 25	35 00
3½ inch	63 50	40 00
4 inch	85 00	50 25

Victory Radiators

SAVE ON

**Coal, Cost of Installation, Shipping and Handling,
Weight and Fittings**

They are superior in design and arrangement; artistic in appearance. Steel tubing is thinner and more effective in radiation so that advantages in air circulation are gained. There are two flat, hollow castings, forming a top and bottom part, with tubes in-

serted—double tubes, one within the other. The water circulates between the two tubes and through the headers. They require less water to be heated, permitting a smaller furnace, and consequent fuel saving.

Write to-day, asking for literature which will make clear the large number of advantages in Victory Radiators.

Montreal General Tool Company, Limited

2419 NOTRE DAME ST., EAST, MONTREAL

True Economy Stack Heater

The Stack Gas Water Heater will heat water in one minute.

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated.

Take notice of the small size and large number of coils; this means quick heat. The numerous small pipes will naturally heat water quicker than one big pipe because of the greater heating surface offered.

More hot water with smaller consumption of gas—that's true economy.

Send for a Stack Heater Display Card

The James Morrison Brass Mfg. Co. Limited
93-97 Adelaide Street West, Toronto, Ontario

Steady Volume of Pipe Sales

Toronto.

Little new business has been recorded in pipe this week. Sales are reported of a steady nature, with no out-standing development. There have been no price changes announced at present, List No. 51 still prevailing. The outlook for an improved volume of pipe sales is reported as interdependent upon other trade activities, and no expression could be obtained as to whether lower quotations would possibly serve to increase future business.

Dull Tone Pervades Waste Material Markets

Toronto.

Scrap metal markets are still maintaining an attitude of depression, and despite recent price declines, very little buying is evident. The new lower quotations are generally holding, and the price changes have had no apparent influence on the market. The following list is an average of dealers' nominal buying prices, f.o.b. Toronto, for fairly large quantities:

WASTE MATERIALS

No. 2 bushelling	\$	\$11 00
Heavy melting steel, gross		
ton	11 00	12 00
R. Rd. wrought iron, No. 1,		
gr. ton	11 00	12 00

Scrap pipe, gr. ton	6 00	7 00
Stove plate, net ton.....	12 00	13 00
No. 1 machinery cast, net		
ton	17 00	18 00
Heavy, lead	3 75	4 25
Tea lead	2 25	2 50
Red brass		9 00
Yellow brass	6 00	7 00
Light brass	4 00	4 50
Heavy Copper	10 00	11 00
Scrap zinc	3 50	4 00
Old rubbers, boots and		
shoes	2 50	3 00
Lumberman's rubber boots	1 50	2 00
Auto tires	0 50	1 00
Solid tires	0 75	1 25

Little Variation Shown In Ingot Metals

Toronto.

COPPER.—Local quotations on copper are maintained at 17½ cents. There is very little interest manifest at the present time, and no changes are reported in either the prevailing price, or the current market conditions.

TIN.—The weaker tone recently evident in the tin market, has now gradually strengthened, owing to the improved foreign situation generally. Local prices have developed a range, the lower level of 37 cents still being noted, as compared with a quotation of 38 cents from another source. Foreign markets are

reported as displaying renewed interest.

LEAD.—This metal is still dull locally and a waiting policy generally prevails. Prices show little inclination to change, however, the lower range of \$6.50 noted last week, being followed in some quarters by the slightly higher level of \$6.75.

SPELTER.—With a large increase in surplus stocks of spelter noted, prices are now being shaded a little in order, if possible, to keep stocks down. The recent reduction in local prices still holds the prevailing quotation now being \$7.00. This is a decline of 25 cents on the previous price level.

ANTIMONY.—The general dullness in all ingot metals is evident in this market also. Sales are reported as few and far between, but prices are unchanged from previous levels. The present local quotation remains from 8 to 10 cents.

ALUMINUM.—The aluminum market is practically stagnant at present, with prices remaining nominally unchanged. A marked improvement in those trades, such as the automobile industry, where aluminum is used in fairly large quantities, is reported as the only development likely to bring about a revival of interest in this metal. The price of 30 cents is still in effect locally.

Education of the Plumbing Apprentice

(Continued on Page 34)

housework. Cooking, washing and the removal of the body and domestic wastes, formerly drudgery, are now simplified by sanitary conveniences. Formerly water had to be pumped or lifted and carried from the well, cistern or spring for drinking, cooking, laundry, bathing and other household purposes, and the wastes had to be carried and emptied. The water was often of questionable quality. The method and place of waste disposal in nine out of ten cases resulted in a nuisance. The back yard privy located at the greatest distance from the house to remove the possible odors in summer, added to the discomfort and inconvenience and the possibilities of added difficulties and irregularities in bad weather.

Go back thirty years or even twenty years and compare women's work then and to-day, and it will be found that most of the drudgery existing has been eliminated by the plumbing system. Hot and cold water for drinking, bathing and domestic purposes is conveniently arranged for use in the laundry, kitchen, bath and bed rooms. Domestic and body wastes are swiftly and safely removed from the immediate premises by the drainage system. Labor has been reduced, comfort and conveniences added and personal cleanliness simplified, pure water supplied, foul odors, unhealthful conditions and the elements favorable to the origin and development of disease have been removed.

Low First Cost of Plumbing False Economy.

Low first cost of plumbing installation is mistaken economy. A second class plumbing and drainage system in cost will prove itself a second class system in service. A year or so in service will reveal the inefficiency of the fixture, device or construction. Discomfort, inconvenience, cost of repairs, foul odors, insanitary and unhealthful conditions are the resulting penalties, which the occupant must pay.

Sanitary Plumbing Better Than Medicine

Sanitary plumbing is of more real value than medicine. Plumbing provides means for keeping the body, wearing apparel, the house and our streets and alleys clean. Cleanliness means healthfulness. A plumbing system stands for cleanliness, which also means that the plumbing system prevents where medicine cures, and prevention is more desirable than the cure.

Investigation has shown that in the absence of sanitary regulations and whenever each person is permitted to install a plumbing system according to his own ideas, insanitary conditions are sure to prevail. Shall the standard of plumbing regulations be determined by the person who lives in the house, by the owner, the manager, real estate speculator, material manufacturer or in conformity with the standard of living and decency?

A great many people still cling to the idea that plumbing codes are created and laws enacted for the sole benefit of plumbers and that the public is made their legalized prey. This idea is kept in motion by real estate speculators, specialty and material manufacturers and others whose only interests are mercenary. No humanitarian, social,

moral, financial or sanitary argument can be adduced against the enactment and the standardization of plumbing codes by state and nation. This will not only eliminate commercially interested individuals and corporations but any other organization whose interests are purely selfish.

The Value of Plumbing Codes and Plumbing Inspection.

To protect the public from insanitary plumbing and the influence of harmful surroundings caused by reckless competition, the use of cheap and defective material and improper installation, sanitary regulations are provided, regulating the location, construction, installation and inspection of plumbing.

I have purposely dwelt upon the definition and relaxation of plumbing to public health to impress upon you that the plumbing in a building is installed for the health, comfort and convenience of the occupants and must be viewed from a public health rather than a construction standpoint.

Plumbing is an important practical application of the laws of hygiene to individual environments. It provides the science of health maintenance.

You, young men assembled here, must have a foundation upon which to build your education.

You cannot make a man any smarter than he is, but you can give him information that, if properly assimilated, may be put to practical application.

When all is said: "An education means your ability to successfully cope with your environment."

Rivets Mean Strength

In a paper read by Harry Brearley, Esq., before the British Iron and Steel Institute, May 5 and 6, it is stated,—

*"The idea that a Weld could
ever be perfect is quite illusory."*

Insurance companies will not insure tanks or boilers under high pressure unless riveted.

To Advertisers and Readers of Sanitary Engineer

It is common knowledge that the union printers in many towns and cities in Canada and the United States are on strike. For the first time in its 35 years' history The MacLean Publishing Company is involved and we believe you will be interested in receiving a statement as to what the printer's unions are striking for and why their demands cannot be granted.

A year ago (although the wage agreement at that time had over a year to run) the Toronto Publishers and Master Printers gave their employees voluntarily a 10 p. c. advance in wages, making the minimum wage \$35.20 for a 48-hour week. This was given in recognition of the fact that living costs were then advancing. This voluntary agreement for \$35.20 a week expired June 1st. Notwithstanding that the cost of living has declined 22 p. c. since March, 1920, the printers' union demanded a 44 hour week and a wage of \$44.00. This means four hours per week less work and an increase in rate of pay per hour of 33 per cent. Employing printers can grant neither shorter hours nor higher wages and the saner printers realize that their union's demands are unreasonable. A large percentage of our own men did not want to strike, but the union leaders in the United States have ordered it and the strike is on.

Negotiations have been carried on for months. The employing printers have been tireless in their efforts to bring about a settlement without a strike. They are now engaged in a fight, not only for their existence but for a principle in which every business man is interested. If the unions secure their unreasonable demands then the fight would surely be carried to other industries. Business men with whom we have discussed the matter have been most emphatic in urging us to take a most determined stand. "Stay with it and we'll stand with you," they say.

And so we shall "carry on". We shall be somewhat handicapped, especially at first there may be occasions when you can extend your co-operation and support and we feel that we can count on you. It is our intention to issue our publications regularly and as promptly as possible. There will be difficulties to be overcome, and for a short term our service may not be up to its usual high standard. If, therefore, your publication does not reach you on time, if we have to repeat a former advertisement, if proofs are not submitted, or if we fall short of full efficiency in any way, we ask your kind indulgence. We are fighting for greater efficiency at a critical juncture in the world's history, and your co-operation and moral support will help.

VITRO
NOTROUBLE
TANK

The Reasons Why of Vitro Tanks

THERE are two features that recommend the Vitro Tank to the plumbing trade. First it is a handsome, high grade fixture—one that reflects credit on the man who installs it. Second, it cannot cause trouble—and there you have the great, outstanding superiority of the Vitro Tank. It cannot cause trouble for the customer—it is built for a life-time of service. And it cannot cause trouble for you—once it is installed your worries are over. There is no going back to “fix” it.

The Vitro “No Trouble” Tank is perfect, smooth-working and permanent. It is a tank that you will find it profitable to instal.

TINKER TOM'S TALKS.

Some Plumbers and Steam Fitters (otherwise known as "Sanitary Engineers") handle a sheet metal department, while others don't.

You can tell the fellows who cover both fields by looking in Dun's or Bradstreet's.

Why not let one overhead cover two lines, thus increasing your profit and prestige? And, by the way, the knowing fellows with the permanent trade use

"PREMIER" GALVANIZED STEEL SHEETS, Made-in-Canada.

Their unequalled "working up" quality, heavy coating, good deliveries and reasonable (deflated) prices all help in the day's work.

TINKER TOM.

Quality

is an essential in the upbuilding of any business with permanence. Quality is one of the three legs of the Tripod of Business. This Tripod is as necessary to the stable support of business as is the Famous Tripod of Life—the heart, lungs and brain—to human existence.

Efficiency

represents the second leg of the business tripod. Without efficiency there can be no success, because efficiency signifies a satisfactory relation between the result obtained and the effort invested. We burn so much coal to obtain a certain horsepower in steam. We invest a given sum of money in business; if the business is efficient it produces at satisfactory return.

Service

is the positive complement of Quality and Efficiency, without which they could no more stand alone than could a three-legged stool with one leg lacking. The amount of our service to society at large is practically the measure of our receipts from the world—especially in business.

* No. 2

HOW STEAM BEHAVES

Casual observation of a boiling tea kettle impresses one with the fact that "steam rises" without force behind it. This is one of Nature's greatest gifts to the science of heating. It means that steam will flow to various parts of the piping system with little if any pressure behind it, if suitable provision is made for free escape of the air contained in the pipes and radiators.

It follows that care in installation must be used not to impose any obstacle to the free movement of either steam to the radiator, or the air out of the radiators.

Engineering practices have been well established for the selection of boilers and the sizing of piping, but the performance of a boiler depends on its erection and the internal cleaning or boiling out, before turning over to the owner.

The cleaning out of pipes of all foreign matter as well as the boiler is essential. Very often, drip pipes choked up with foreign matter are responsible for holding back water, causing poor circulation of steam through the steam main.

Use full size of opening on the boiler. Raise steam main to ceiling and then pitch down with even grade, so condensate will flow in same direction as the steam. Take off all steam connections at 45 from steam main. See that steam mains and boiler are well covered with insulation to **Save the Heat.**

*This is the second of a series of talks on steam heating, appearing monthly in Sanitary Engineer. You will find all very interesting and of help in your daily work.

Sink Faucets

EASY ANSWERS TO PLUMBERS QUESTIONNAIRE

A1002

A1000

Q. What is the difference between your faucet and other makes?

A. The Quatern Faucet differs from other makes in that **ALL** of the **wearing parts are easily removable and renewable**. These are contained in one Standardized Interchangeable Working Unit which fits into and operates perfectly in every faucet bearing the Quatern name.

Q. Do you guarantee your faucets not to leak?

A. No, any faucet which receives friction from running water, the brunt of the pressure, and the constant handling and operation by a variety of people, will leak some time or other. The Quatern is so constructed as to **make repairing easy and cheap**.

Q. Well, if yours leak, too, why are they better than other makes?

A. Because when a faucet leaks, **the water eventually cuts across the seat**, makes the leak greater and destroys the seat. In the ordinary faucet the seat is part of the body, so the faucet itself becomes useless. In the Quatern, **when the seat is destroyed a new seat may be put in**, making the faucet as good as new in operation.

Q. How do your faucets stand up under high pressures?

A. As well as any make on the market, **better than any other quick compression type**. This is due to the combination of high pressure and vibration in buildings tending to open quick compression types which close **AGAINST** the pressure. Quatern closes quickly, but **WITH** the pressure, thus eliminating trouble.

A New High-Grade Bending Spring

The "C. & H." Bending Spring is as far ahead of the old Spring as daylight is ahead of darkness.

1. Made of special flat-faced steel wire—does not crimp the pipe.
2. By turning the handle to the left, spring is released and may be easily withdrawn from the bend.
3. Attachment for connecting iron rod so that bend may be made any distance from the end of pipe.
4. No wear out to them.

They cost a little more but are worth ten times as much and mean an actual saving. 1¼", 1½" and 2" sizes in stock. Send us a trial order.

JENKINS
VALVES**

Successful manufacturers like the Berliner Gramophone Company realize the importance of dependable equipment at every point and, naturally, "Jenkins" is the choice wherever valves are used.

Many years ago Jenkins Valves were installed in the original Berliner plant and functioned so satisfactorily that the Company insisted upon similar valve equipment in the big new factory addition recently completed.

There are no complaints or "come-backs" when Jenkins Valves are installed. And there's a type and size to meet every requirement of plumbing, heating and power plant service.

No. 15

Definite Action To Stimulate Building

First Concerted Action Taken at Joint Conference of all Branches of Building Trades in Toronto—Consider Question of Lowering Workmen's Wages 10 Cents Per Hour—Revision of Freight Rates to Lower Delivery Costs on Building Materials Suggested

THE first definite action along concerted lines, to arouse the building industry from its inertia of the past five years was taken at a joint meeting of those interested in the various branches of the industry, in Toronto. This was not entirely a local conference, there being representatives present from various parts of Canada, and special representatives with authority to act for dominion-wide interests. There were representatives of the Canadian Manufacturers' Association, Toronto Building Trades Council, the Builders' Exchange, manufacturers and building supply house representatives, contractors, architects, and organizers of the various trade unions interested. Senator Robertson, Minister of Labor, was Chairman.

After an all-day discussion of the various phases of the question action became confined to resolutions dealing with the lowering of wages of the trades interested in building, to the reduction of freight rates on building materials, and to the prospect of lower prices on building materials.

The actual resolution, endorsed by labor representatives and which they will put before their respective unions, was moved by J. B. Carswell, Carswell Construction Co., seconded by T. A. Woods, representing labor. The proposed cut in wages, if accepted, will be effective from July 25. The resolution is as follows:—"Moved that inasmuch as figures have been presented at this meeting to show that material costs are rapidly declining, that costs of living are also rapidly declining, and that a reduction in wage rates as suggested below can be put into effect without in any way lowering the present standard of living; Therefore be it resolved that the 19 representatives from the Building Trades Unions take back to their respective unions the suggestion that a voluntary reduction of ten cents per hour be put into effect on July 25. Further, that another

meeting be held between these 19 representatives and the Builders' Exchange on the 25th inst. to conclude the agreement. That the building material manufacturers be present at the same meeting to bring in all and every suggestion possible to further reduce material costs."

Want Reduced Freights

As it was clearly demonstrated by various manufacturers and supply men that high freight rates on their products was largely responsible for high costs, a resolution was passed calling for reduced freight rates on building supplies. A committee was appointed representing the various interests, to confer with the Canadian Freight Ass'n. and, if necessary to make application to the Board of Railway Commissioners for a complete revision of freight rates on those commodities used in the building industry in order to lessen delivery costs. This resolution was moved by F. B. McFarren representing brick manufacturers and seconded by R. J. Fuller representing the contractors.

In opening the proceedings Senator Robertson attached significance to the fact that labor representatives were in conference with manufacturers and supply men in the offices of the Canadian Manufacturers' Ass'n. He thought this was an indication that both sides were showing a more co-operative spirit. In opening the discussion on the problems of the building industry, he emphasized the fact that the unemployment created by lack of building was one of its most serious aspects. In giving figures showing that at present 16.74 per cent. of Canada's 200,000 workmen are out of employment, Senator Robertson painted a dark picture of what the forthcoming winter would bring forth unless some activity was awakened in this important industry.

Labor Shouldn't Bear Whole Decrease

Statistics were given, bearing on this subject, which showed clearly where the adjustment was most needed. He did not think that labor should be called upon to bear all the brunt of the reduction required in building costs, citing the fact that while wages (average) in eight branches of industry in 1914 were 42 cents per hour, this wage is now 86 cents per hr. an increase of 101 per cent. whereas building materials were still 118 per cent. above 1914 levels. He also pointed to the fact that the cost of living was now only 63 per cent. above 1914 levels and compared with the levels of building material prices Construction costs were shown to have increased from 141.5 in 1914 to 403 in May 1920 and are now 309.

Discussing the matter from another standpoint Senator Robertson stated that it was the desire to maintain the standard of living of Canadian workmen as far as possible but that the unfortunate part was that those countries with which Canadian products were in competition were not maintaining any such standard. He compared the wage of \$44 per week paid the steel worker in the U. S., with the approximate wage of \$35 per week in Canada (due to difference in exchange, etc.), with the wage of \$5 paid for the same amount of work in the same industry in Germany, \$9 in Japan. This condition, he pointed out, practically eliminated Canada's chances of developing an export trade in any of its products.

Construction Costs and Rents Hold

In reviewing various costs Senator Robertson attached significance to the fact that costs of construction and rents were practically the only items to remain unchanged, or to have increased recently. He pointed to the fact that the workmen in the building trades were not joining workmen in other industries in accepting lower wages in the interests of a stimulation of activity, and that the result was that there were many men out of work, rents were increasing and

at the same time there was a great need for housing accommodation.

Major L. L. Anthes, Anthes Foundry Co., Toronto, told how his firm, in company with others had kept plants operating throughout last winter largely to give employment, and that warehouses had been filled with stocks for which there was no demand.

Another manufacturer suggested lower freight rates on building materials and asked that the unions adopt a more "elastic" attitude toward their men so that workmen who could find no employment in their particular line would be allowed to take up temporary employment elsewhere if available, and not have to be given relief while other work offered. He drew attention to the fact that while the export markets were hard to develop under existing conditions, that there was a great need for food-stuffs abroad and that this export market for part of Canada's great wheat crop this year should help things considerably.

Not Lowering Wages

A contractor stated that it was not the desire to reduce the workmen's wages but that they should be merely adjusted in proportion to declines in the cost of living since the peak was reached. The average purchasing power of the dollar would be unchanged.

An architect stated that there was \$8,000,000 worth of building in prospect in Toronto alone. He said this was not held up so much because of high costs, but because of the uncertain conditions prevailing which had to influence their recommendations to clients.

The relation of financing to prevailing high costs in the industry was dealt with, representatives of labor drawing attention to the fact that loan companies would not lend money freely for building at present because they figured there would be a big decrease in sale value within the next few years. It was also pointed out that under the present system the builder was forced to secure a larger price for the building to offset the loss consequent upon the discounting of the second mortgage. A labor organizer asked why the loan companies would not take a mortgage for the whole value of the land and up to about 60 per cent. of the value of the property erected, and thus avoid the loss outlined.

Labor Makes Report

At the opening of the afternoon session the labor representatives presented the report of their deliberations concerning the proposed reduction in wages. It was pointed out that while the hourly wage seems large in some cases, that the average earnings for the year in many trades falls low. It was shown that the average yearly wage of carpenters is \$1600, and for bricklayers \$1100. It was pointed out that lower wages would reduce the buying power

of the working classes and this would dampen the needed stimulation of buying necessary to right conditions. Labor also suggested that architects, general contractors, supply men and others curtail their incomes in like proportion in order that the general effect might be as extensive as possible. Replying to this the general contractors stated that 80 per cent. of the cost of a building could be influenced by labor alone, that 15 per cent. represented the contractors' overhead and 5 per cent. represented taxation and other such charges. It was stated that contractors were studying means to increase efficiency and reduce costs and that labor must do the same thing. Replying to labor's contention that wage reductions already effective in some lines had not stimulated trade, Senator Robertson pointed out that general reductions in all branches of trade would have this effect in that it would allow all branches to work in harmony toward a lower general level.

The Plumbing Industry

George Clapperton, Bennett & Wright, Toronto, plumbing and heating engineers, stated that costs were being lowered as much as possible, that in the plumbing and heating industry an agreement had been made with the men at a rate of 90 cents an hour where formerly \$1.15 was paid, and that steps were being taken which would increase the efficiency of the industry probably 25 per cent.

Peter McMichael, Dominion Radiator Co. stated that confidence and co-operation was needed, adding that the manufacturers as a whole were handicapped to-day because people would not invest their money in the country's industry. He emphasized the importance of workmen producing in proportion with the wages paid them, as a factor in bringing costs to their correct basis.

Combatting the contentions of labor that building materials should be reduced further before there was a reduction in wages, Senator Robertson pointed out that while it took \$2.13 to purchase materials which \$1.00 would have bought in 1914, and it took only \$2.01 to purchase labor which \$1.00 would have purchased in 1914, yet building materials were on the downgrade, having declined from \$2.84 as compared with \$1.00 in 1914, while labor in these trades was practically at a standstill.

Labor Cost is Fixed

J. P. Anglin, contractor of Montreal, added that the labor cost is a fixed one while materials is not fixed, that there is no combine to maintain prices of the materials, and that therefore in view of the gradual reductions taking place on materials, the big factor is to get labor costs moving on a downward trend.

In speaking to the resolution calling for lower freight rates Mr. Fuller point-

ed out that these rates are pyramided in many cases and this increases the handicap. It was shown by a brick manufacturer that coal to-day costs what coal and the brick it burned cost in 1914.

Fred Armstrong, Port Hope Sanitary Mfg. Co. spoke briefly pledging the support of his company to any reasonable plans that might be made to stimulate building activity.

"ARE YOU PAYING ENOUGH FOR PLUMBING AND HEATING?"

Under this heading a number of Ottawa sanitary and heating engineers are advertising in their local papers as follows:—

The Board of Control, your representatives, custodians of your money, answer "No," and are recommending to the City Council that an increase be granted the Plumbers and Steamfitters in spite of the fact that the Laborers, Carpenters, Bricklayers and in fact all the Building Trades have accepted a reduction of from 10 to 15 per cent. or settled on last year's basis.

It is your fight, are you satisfied to pay more? The Board of Control, by their recommendation to the Council, answer this question for you and say, "Yes, you must."

The Council will undoubtedly reject this recommendation if you strenuously show your disapproval.

The following employers, who engage 85 per cent. of the Plumbers and Steamfitters under ordinary conditions, are fighting this strike to give the Public a reduction in plumbing and heating work and stimulate the building industry.

PLUMBERS AND STEAMFITTERS' RATE LAST YEAR WAS 89c. WITH THE COST OF LIVING FALLING, WHY SHOULD IT BE INCREASED?

YORK TOWNSHIP PLUMBERS

NOW READY TO STRIKE BACK

The Amalgamated Ratepayers' Association of York Township met to discuss municipal affairs.

It was suggested that city plumbers be excluded from works in the township. Under the present by-law plumbers residing in York Township were not allowed to ply their trade within the city, while city plumbers would work in the township on an equal footing with local men. It was finally decided to ask the council to arrange a conference with the board of control and try and get justice for the York plumbers.

Tests of 16-inch Roof Ventilators

Study of Two Most Important Factors Affecting the Performance of a Ventilator by Experts of the U. S. Bureau of Standards Reveals Many Interesting Facts Concerning Ventilation.

MUCH interest is attached to the following article revealing the result of tests by the U. S. Bureau of Standards, concerning 16 inch roof ventilators.

During the summer of 1920 a study of some fifty 16-inch ventilators was made at the Bureau of Standards. The following paper gives a brief summary of some of the results of the study.

The factors affecting the performance of a ventilator and the things which must be taken into consideration in the choice of a ventilator are so numerous that it was impossible to attempt a complete study. We limited ourselves definitely to certain specific phases of the problem and it must be kept in mind that the tests about to be described are particular tests with a certain experimental arrangement. The question as to how far the results of these tests ap-

ply to any other arrangement is left open.

Our experiments were confined to questions concerning the volume of air exhausted per minute by the ventilators which is dependent upon many factors. For example, if the air does not have free access to the room, little air will be exhausted. If there are obstructions near the ventilator the performance will be affected.

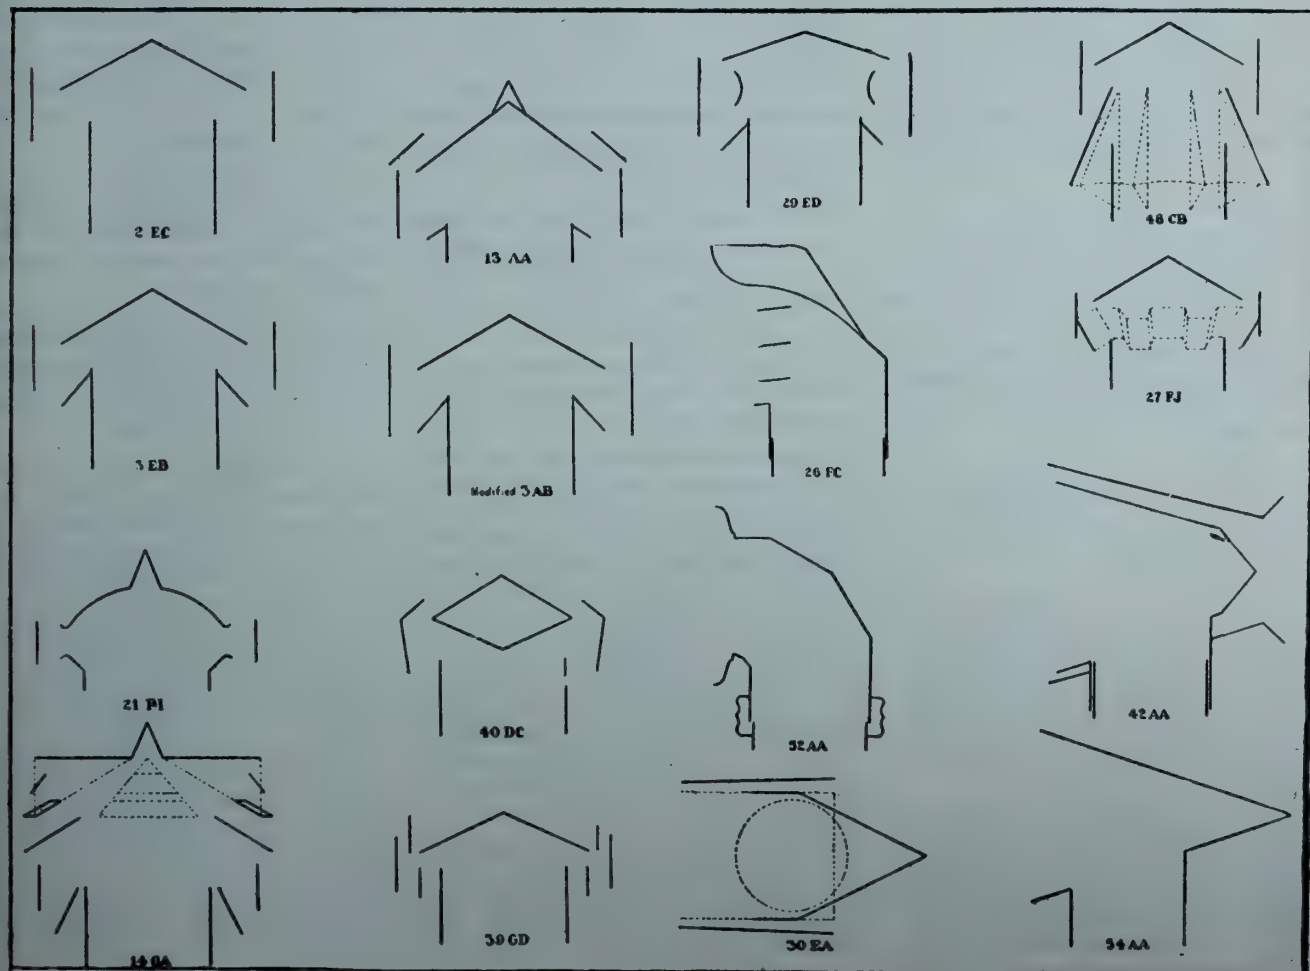

The most important factors, however, affecting the performance of a ventilator are (1) the difference in temperature between the air in the room and the air outside, and (2) the speed of the wind blowing across the top of the ventilator. Our experiments were restricted to these two factors.

The effect of a temperature difference is to produce the familiar chimney action, an action common to all ventilators, in-

cluding an open pipe. The design of the ventilator affects the amount of air exhausted under a given temperature difference only in so far as more or less resistance is offered to the flow of air.

If the ventilator passage is obstructed, less air will be exhausted. From this standpoint, a straight open vertical pipe is the ideal ventilator, but considerations of weatherproofness prohibit its use.

The exhaust due to the wind depends primarily upon the design of the ventilator. Our first experiments were arranged so that the temperature at the entrance and exhaust were the same, so that there was no chimney action. The wind was produced by one of the wind tunnels of the Bureau of Standards. For the purpose of these tests the exhaust fan of the tunnel was removed and a blower fan substituted. By means of suitable honeycombs the velocity was made as nearly uniform as possible across the stream.

The ventilators were placed in front of the mouth of the tunnel on the end of a vertical pipe, the wind stream being horizontal. A horizontal pipe containing the measuring apparatus was joined to this vertical pipe by means of an elbow. The speed of the wind was obtained from the readings of a tachometer connected to the shaft of the wind tunnel motor, the readings of the tachometer having been previously standardized in terms of an anemometer placed in the position later occupied by the ventilators. The volume of air exhausted was obtained from the deflections of a small wire suspended freely in the horizontal pipe from a watch-bearing mounting.

Measurements were made of the volume of air exhausted per minute by the ventilators at wind speeds of 4, 8 and 12 miles per hour. For comparison, index numbers or wind ratings were obtained by expressing the volume exhausted by a ventilator as a percentage of the volume exhausted through the open pipe in the same time at the same wind speed.

The wind rating of the open pipe is therefore 100 at all wind speeds. The accuracy of the measurements is about 5 per cent, and smaller differences in ratings are of no significance.

Some ventilators exhaust less air than an open pipe, some more; the best ventilators have a rating of 150, the exhaust being one and one-half times as much as from an open pipe. The exhaust of an open pipe with the set-up used was about 250 cubic feet per minute for a wind speed of 10 miles per hour.

In addition to the measurements of the volume of air exhausted at varying wind speeds with no temperature difference, measurements were made of the flow of air through the ventilators with a given difference in pressure in order to simulate the effect of a difference in temperature between the air of a room and the air outside.

An electric fan was placed at the entrance of the ventilator pipe line and the volume of air per minute passing through the pipe was measured at various speeds of the fan.

It is evident that if the fan is running at a uniform speed and the same flow is obtained with two different ventilators, the resistances of the two ventilators are equal and consequently under a given temperature difference the same volume of air per minute would be exhausted by the two ventilators.

If the flow through one ventilator is less, its resistance is greater and it would exhaust less air under the same temperature difference. Ratings were again made on the basis of the open pipe as 100. In these resistance ratings

100 is the maximum obtainable, since the resistance of the ventilator is added to that of the pipe. Ventilators may readily be divided into those of stationary and rotary forms, but any further sub-division for purposes of discussion is difficult.

The simplest type of ventilator consists of a cap over the top of an open pipe with a band around pipe and cap to keep the rain from beating in. Such a ventilator exhausted at 91 per cent. as much air as an open pipe at the same wind velocity. In other words it has a wind rating of 94. It permitted 86 per cent. as much air to pass as an open pipe in the second experiment. This will be expressed by saying that the resistance rating is 86.

A simple modification of Number 2 is shown in ventilator Number 3 EB where a lip is placed on the pipe. This ventilator is very sensitive as regards its orientation relative to the wind. On introducing a smoke stream it was found that the air passing under the band separates into two parts, one part passing under the cap and diagonally out at the sides of the ventilator, the other passing underneath the lip and around the pipe. The quantity of air going by the two routes depends on the orientation of the ventilator relative to the air stream. The results varied by about 10 per cent. in different experiments, according to the orientation. The ventilator had a wind rating of 96 and a resistance rating of 88.

To investigate more fully the effect of the band, the band was lengthened as shown in modified Number 3 AB so as to extend a little below the lip. The wind rating increased from 96 to 130 and on an examination with a smoke stream it was found that no air entered the ventilator at all.

The air blowing on the ventilator passed underneath the lip, the ventilator exhausting all the way around. Ventilator Number 13 AA of somewhat similar construction but of different proportions had a wind rating 138 and a resistance rating 95. Other modifications are also illustrated. Number 21 FI illustrates the effect of making openings in the ventilator too small for the air to pass out freely. Its resistance rating was 56 and its wind rating 85. Number 14 GA illustrates a very complicated construction of low resistance, resistance rating 100, wind rating 73.

Number 39 GD is another complicated one, resistance rating 75, wind rating 77. In the case of Number 29 ED extending the band below the lip increased the wind rating from 91 to 113. Its

resistance rating was 78. Number 48 CB is better than the simple types Number 3 EB but not as good as modified number 3 AB, its wind rating being 109 and resistance 93. Number 27 FJ is another ventilator with small exit passage for the air, its resistance rating being 50 and wind rating 80.

These ventilators are typical of the stationary ones and the surprising fact is that the best exhaust is obtained with a very simple construction.

Number 26FC (Figure 4) is a simple type of rotary ventilator consisting of an elbow with a wind vane to hold the opening away from the wind. Its wind rating was 87, resistance rating 83. Its resistance rating is low because of some large damper supports in the pipe which are not shown in the sketch.

Number 52AA differs from Number 26FC in that the pipe is free from obstruction and the air is deflected outward by means of a lip on the elbow. Its wind rating was 150, its resistance rating 95.

Number 30EA is another type in which air is permitted to pass through a passage in the ventilator. Its wind rating was 91. On stopping up the passage, the wind rating was increased to 135, so that the passage way is detrimental to the performance of this particular ventilator.

Number 42AA also has a passageway for the air. Stopping up the passage had no effect on the wind rating, the rating remaining 149.

As a result of this observation we designed the simple form Number 54AA. This cone type had a wind rating 149, the same as Number 42.

In conclusion, two points should be emphasized. The first is that no general statement can be made as to the relative merits of rotary and stationary, or mushroom and siphon, ventilators.

The performance depends on the particular models. It is possible to build a good stationary ventilator as well as a good rotary ventilator, and there are poor ventilators of each type.

The second point is that the most effective way of obtaining a large volume of air exhaust is by making use of the region of low pressure produced at the back of a properly designed obstacle. It is best not to allow the air to enter the ventilator for it must then be exhausted and will be exhausted at the expense of the air in the ventilator pipe.

Price Recessions on Plumbing Supplies

Numerous Revisions In Discounts Bring Lower Quotations On Many

Sanitary and Plumbing Supplies—Price Reductions Feature Current

Markets and Should Stimulate Activity in Fall Construction Work.

IN view of their marked influence in assisting the development of building activity the present marked changes are of more than ordinary importance to the trade.

Price revisions on plumbing and steam-fitting supplies, and the many similar products of vital interest to the sanitary engineer, continue to be chiefly of a downward nature. The general trend of basic prices is towards a lower level, and many outstanding recessions of this description are noted in the current market developments.

It is the reductions evident on a number of lines in a greater or less manner directly affecting the material costs of home building and the early erection of similar structures, which attract a marked degree of attention; for lower quotations on plumbing and steam-fitting products are generally expected to promote the proportion of Fall building. And market changes and decreased quotations tending to accentuate these conditions, include practically all recent price revisions.

While many other circumstances enter into the basic principles of construction, yet the cost of these specific supplies is an important factor in this connection. The contention has been evident that certain manufacturers and distributors

of supplies have failed to meet the popular demand for lower prices; and in refuting this reflection, those most directly concerned indicate that no legitimate ground exists for placing the onus of responsibility entirely upon any one specific element or cause. If high costs have served to retard necessary building, this phase has tended to greatly reduce the volume of business through

out the trade generally; while on the other hand, lower quotations should have the opposite effect of stimulating activity in all branches of the industry.

Cause of Lower Prices

It has been pointed out that the reduction in basic material costs and declines in production and overhead charges, have been primarily responsible for prevailing revisions up-to-date. Among such price changes are noted steel and wrought piping; soil pipe and fittings; standard closet outfits; radiators and boilers; wrought nipples and couplings; stove bolts; stove pipe wire; copper rivets and burrs; carriage, tinnerns and small rivets; boiler rivets and spring steel. The declines noted in a number of these items constitute the second or third price recession shown during recent months.

Other price changes to lower levels are expected varying conditions indicating this future possibility on additional products. Revisions in boiler tube prices have been anticipated in conjunction with the reduction in piping, while a feeling is prevalent in the trade, that increased discounts on conductor pipe, and eavestrough, would occasion no marked surprise.

IMPORTANT PRICE REVISIONS

Steel and wrought iron piping reduced, and new list issued.
Reduced quotations on soil pipe and fittings.
Prices on standard closet outfits again lowered
Discounts again revised to lower level on radiators and boilers.
Similar revised discounts lower pipe fitting prices on wrought nipples and couplings.
Stove bolt prices are lower.
Quotations on stove pipe wire reduced.
Reductions now in effect on copper rivets and burrs.
Lower prices on carriage and tinnerns rivets.
Decline in base price on boiler rivets.
Recession noted on spring steel prices.

BUILDING ACTIVITIES IN JUNE

Figures Show Decline From May Figures—

Good Showing for First Six Months

CONSTRUCTION activity in June Contracts awarded amounted to was \$422,700 less than in May. \$26,436,800 compared with \$26,859,500 in May, and by provinces are as follows:

	No. of Projects	Value
Ontario	1027	\$7,506,800
Quebec	360	6,861,100
British Columbia..	292	5,091,500
Alberta	167	2,776,000
Manitoba	231	2,214,700
Saskatchewan	103	1,188,100
Nova Scotia	69	411,600
New Brunswick ..	35	368,000
Prince Edward Is..	5	19,000
Total for Dominion..	2239	\$26,436,800

Residential building continues very active. In June, contracts for this class of construction totalled \$7,943,600 or 30.3 p. c. of the total. Business buildings amounted to \$10,027,800 or 37.6% of the total; industrial building, \$458,700 or 1.7% of the total; public works and utilities, \$8,006,700 or 30.4% of the total.

Good Showing During First Six Months

Building activity for the first six months of the year compares very favorably with the same period in previous years. The total investment represented by building contracts let from Jan. 1 to July 1 has amounted to \$111,763,500. At the end of January activity from the first of the year to date was 7.6% above the average for the preceding three years at the end of February, 21.9% ahead; at the end of March 8.7% ahead; at the end of April 8.6% ahead; at the end of May 8% ahead, and at the end of June 8% ahead.

The wholesale price index of 48 building materials declined to 309, a drop of 4.4 points for the month; making a total of 94 points or 23.5% from the high mark of May, 1920.

New Building In Sight

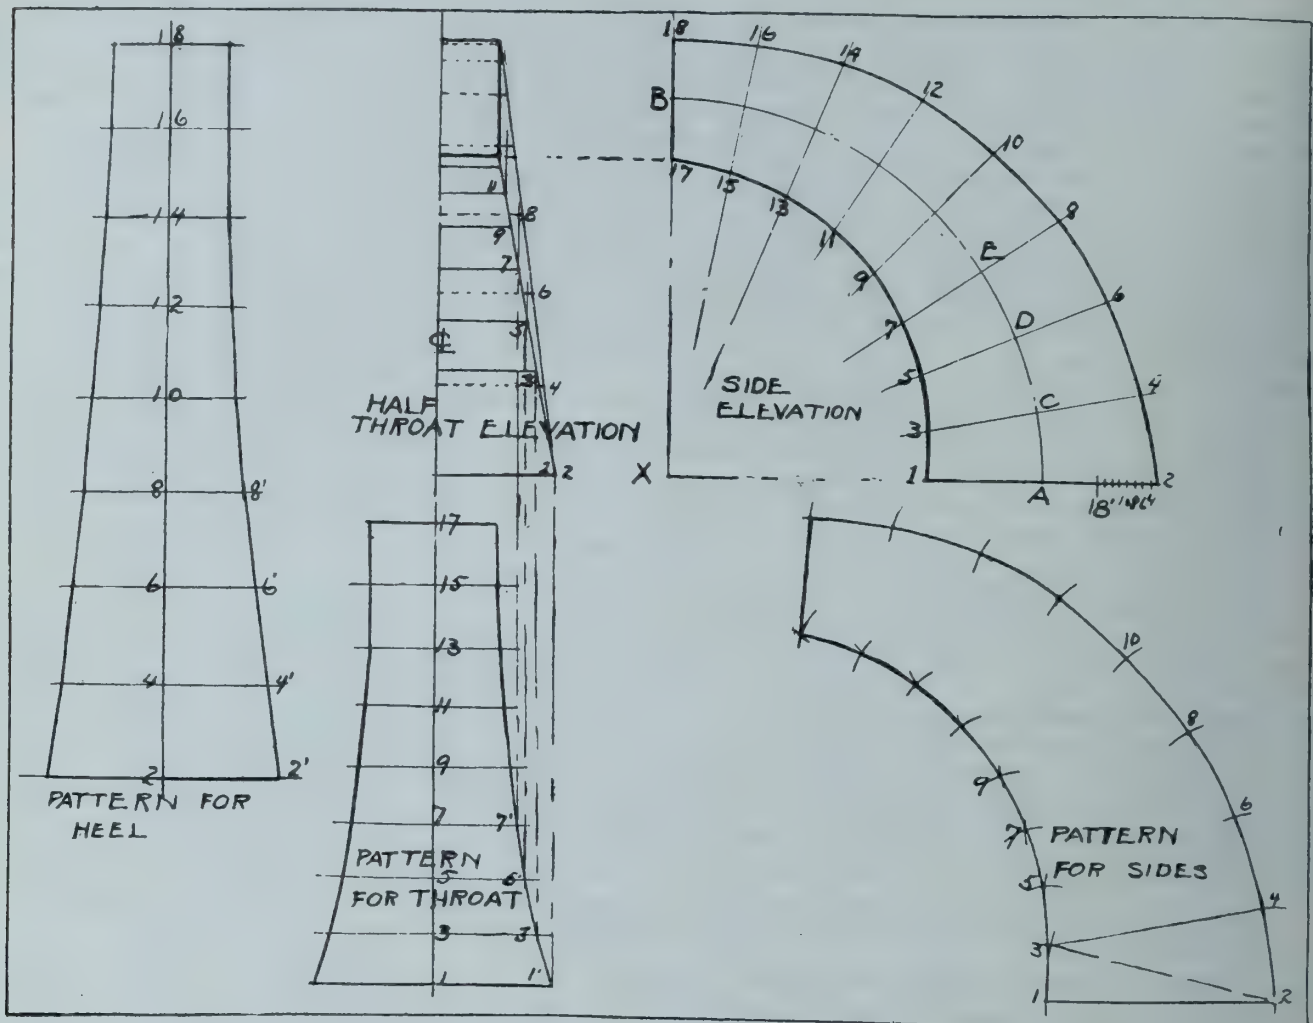

The demand for residences continues strong. Contemplated work was reported in June to the amount of \$16,500,700, distributed as follows:

	No. of Projects	Value
Ontario	250	\$6,134,300
B.C., Alta., Sask & Man.	284	5,423,100
Quebec	135	3,993,000
N.S., N.B. & P.E.I.	32	,950,390
	701	\$16,500,700

During the first six months of the year, \$168,748,500, contemplated new work has been reported. This is \$56,985,000 more than the value of contracts awarded and indicates the pressure of the demand for construction. Architects report that in many instances bids are being received from contractors at a lower price than the architects' estimates. This indicates that material and labor costs have receded where a substantial increase in activity may be expected.

Patterns for Tapering Elbow

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

ON the range hood we considered some time ago was an elbow that transformed from 16"x16" to 8"x8", so we shall lay this out.

We first draw a right angle as A-X-B and describe the center arc A-B.

Divide this arc in any number of equal spaces and draw radial lines from the corner X.

Our point is now to proportion our elevation to give both throat and heel a uniform curvature along the center arc.

So, pick the half small width as B-18 and set as A-18'. Divide this space 18'-2 in as many equal spaces as you have in radial lines of elevation.

Pick these distances as A-4 and set as C-4; C-3; also A-6 and set as D-6; D-5.

Continue in this way until all spaces have been marked off and you can draw the outline for elbow.

Next draw a half throat elevation as shown. This is to show the flare of the sides.

The dotted lines represent heel lines, while the solid lines are throat lines. All are projected over from side elevation.

To set out the pattern for throat pick each space separately as 1-3-5-7-9, etc., and set in pattern below half front elevations as 1-17.

Draw stretchout lines and from each point as 1-3-5-7-9, etc., in throat of elevation drop lines into stretchout as 1'-3'-5'-7', etc.

Through these intersections draw the outline for pattern as shown.

The pattern for heel is set out by picking the girth as 2-4-6-8-10, etc., from side elevation and setting it off as 2-8 in pattern.

With dividers pick the half true diameters of throat elevation, and set them as 2-2'; 4-4'; 6-6', etc.

Repeat this until all points are established and draw the outlines of pattern as shown.

In setting out the pattern for side no true lengths need to be developed, since the rise is so slight that only a slight shortage is produced in the dotted lines. So this can be dispensed with.

Pick the girths from patterns for heel as 2'-4'-6'-8', etc., also throat as 1'-3'-5'-7', etc., and use them in pattern for side.

The elevation lines as 1-2; 2-3; 3-4; 4-5; 5-6, etc., are just simply reproduced in a triangulating fashion and the pattern is done.

Laps for seaming must be allowed extra.

EVERYONE MUST TAKE RESPONSIBILITY

THE question of responsibility for present high costs in the building industry and of establishing those who should take the biggest share of the readjustment to lower levels, is a delicate one to handle. Naturally no one wants to stand any more than is absolutely necessary and some are inclined to think that the next step downward is due in some other quarter.

At the conference of building interests in Toronto some figures were given by Senator Gideon Robertson, Minister of Labor, which illustrate the exact standing of the various branches of the industry as compared with pre-war levels and which show where the "pruning" action might well be started.

The average wage in eight branches of industry concerned with building, is 86 cents per hour today compared with 42 cents per hour in 1914, or an increase of 101 per cent. In other words it takes \$2.01 to purchase labor today which \$1.00 would have bought in 1914. Today it takes \$2.18 to purchase building materials which \$1 would have bought in 1914. The cost of living is still 63 p. c. above 1914 levels.

Workmen point to the fact that building materials have not come down sufficiently but contractors answer that materials are steadily tending downward, that they have reduced from a peak of 184 to 118 (using 100 as pre-war index figure) and that material charges are not fixed, so that they may be expected to continue a gradual tendency downward.

A revision of costs in the building industry should affect all branches and keeping in view sacrifices already made. Such revision is bound to pinch, but everyone must be prepared for their share. The old idea of labor that manufacturers and supply men are trying to put something over them should be dissipated. The latter have given tangible evidence of their good faith, and in view of the fact that workmen in the building industry are about the only ones who have not suffered a decline in wages and that construction costs are maintained out of all proportion as result, it would seem to be in the best interests of all concerned for everyone to set aside such personal prejudices and agree to cooperate to the best of their ability in stimulating this industry. Full time at a slight reduction gives a better return than half time at full scale pay, and it has generally been the experience that when the stimulation has been effected the workmen benefit in proportion.

COOPERATIVE EFFORT WILL WIN

THE many and varied interests concerned with the building industry have at last seen that further ignoring the possibilities from co-operative effort in an endeavor to stimulate activity is going to lead into grave difficulties. For a long time the stagnant condition of this industry has hampered business in general and created much unpleasantness for all interested in it, whether they be manufacturer, supply dealer, contractor, architect or workman. The industry today is in a most peculiar condition, for even in the face of an almost unprecedented demand for their product, there is little or no work being done, workmen by the thousands are numbered among the unemployed, manufacturers and supply houses have had to curtail their efforts and warehouses are filled with stocks manufactured to keep workmen employed as long as possible and for which there is now no demand.

All this may soon assume a changed aspect as result of the important conference just concluded between the various interests. At this conference it was shown by architects that much work is "on the boards" but that it is not being proceeded with due to unsettled conditions. The consensus of opinion of those attending the conference was that a general reduction in building costs would stimulate activity. This statement is questioned by some who have pointed to reductions already made in this and other branches of industry and which have not been followed by any stimulation of business. It is thought however that the readjustment to lower levels in this industry will be merely one of the many which will have to be carried out in all branches of industry before the whole will move forward as a unit toward greater activity.

The financial side of the present condition of the building industry was also touched upon by some of the delegates. It is a recognized fact that the banks, loan companies and other financial houses have recently been withdrawing investments from building properties and real estate in the event of a possible reduction of values within the next year or two. Financial men have been credited with the statement that they would be poor business men to loan money on a security which may depreciate 25 p. c. in value in two years. In view of this condition the financial aspect of the present situation becomes an important one. If funds are not forthcoming at fair rates for investment in the building industry, it is going to suffer as result. Meanwhile definite steps should be hastened as soon as possible to get costs in this industry down to the point where much of this prospective business will become real business.

Opportunities for

LAUNDRY TUBS MAKE WASHING EASIER

Any appliance that will end some of the drudgery of house work deserves a place in the home.

Stationary laundry tubs, with hot and cold water faucets at hand, do away with all carrying of water, and greatly lessen the labor of washing.

The truly modern home has stationary tubs in the laundry. We are prepared to install them promptly and at a minimum cost.

DO YOU HAVE TO TRAVEL TO SEE A REAL BATH ROOM

Many people see a modern bath room only when they are travelling and stopping at good hotels.

The home with a makeshift bath room outfit, or none at all, is not the place in which your family deserves to live. Why not have the facilities in your home for bathing in comfort and convenience.

Now is the accepted time to start home improvements. Begin in the most important place—make your bath room modern.

We'll gladly give you ideas and figures to meet your particular requirements.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

THERE are three well known systems of testing house drainage, namely, by smoke, water and oil of peppermint. The smoke test is by far the most reliable for showing the defects in any drainage system: It consists of filling the drains with smoke so that it will find its way through any faulty joint or defective trap either within or near the house, at the same time showing the exact location of the various faults. For where smoke can penetrate, sewer gas will and in time endanger the health of the inmates of the house. Smoke is blown into the drains to be tested by a proper smoke testing apparatus which usually consists of a double-action bellows, communicating with a cylinder in which the smoke is generated by burning oily cotton waste. An India rubber ring is fixed to a flange at the end of the pipe which connects the cylinder to the drain acting as a plug when connected to the drain.

The best opening at which to blow the smoke through is the air inlet to the drain which should be located on the house side of the trap which disconnects it from the sewer or cesspool. As soon as the smoke is seen to be escaping from the soil pipe or ventilating stacks same should be sealed up as this is the highest point of the drainage system, and it can then be taken for granted that the pipes are fully charged with smoke. By closing all openings and filling the pipes with more smoke pressure is obtained and the smoke will escape through any leaky joints or defective apparatus and easily detected and located and made good.

Testing In Sections

Should it be more convenient to test the drainage system in sections, the smoke pipe can always be inserted through any other convenient trap and the ends and openings plugged in the length of drain under inspection.

The water test is a much more severe test than the smoke and water can be forced into the pipes after the same have been properly plugged at their outlet and inlet to any pressure desired which is usually registered by means of a pressure gauge fixed on the drain indicating the amount of water pressure the drains are withstanding. This pressure should be about ten pounds for a good and reliable test and if there is any defective work or leakage the pressure will soon

decrease and the fault be located.

This water test is best applied in sections for then the location of the defective joints or pipes is not so difficult and any part of the system can be tested separately including the soil pipe and closet connections.

Oil of Peppermint Test

The oil of peppermint test consists of discharging down the soil pipe about 2 ounces of oil of peppermint followed by a few cans of boiling water. This test relies on the discovery of leakage by smelling the escaping strong odour of peppermint so that every precaution should be taken to seal up all exits so that no smell whatever can escape except through defective construction. Owing to the strong smell of peppermint, it is always advisable that the person who handles the oil should not be the one to search for the smell of same along the drainage system, as he carries the odor about with him on his clothes and in time becomes so used to the smell of the oil that it prevents him from detecting any leakage.

Some Working Formulae

It is the desire of the writer to set forth the working of a few of the best known formulae in as lucid a manner as possible so as to enable the reader to work out accurately the desired size of any pipe to take a given quantity of sewage or water without resorting to the standard rule of thumb method of multiplying the diameter of the drain by 10.

$8 \times \text{chord of } 1/2 \text{ arc } AE - \text{chord of whole arc } AC$

$AC = 2AB \text{ and } AB = \sqrt{AD^2 - DB^2} \text{ (EUC I}^{th}\text{)}$

$$= \sqrt{4.5^2 - 1.5^2} = \sqrt{18} = 4.242$$

Therefore $AC = 4.242 \times 2 = 8.484$, chord of whole arc.

Then $AE = \sqrt{AB^2 + BE^2} = \sqrt{4.242^2 + 3^2} = \sqrt{26.994564}$

Therefore $AE = 5.195$ - chord of half arc.

$$\frac{8AE - AC}{3} = \frac{41.56 - 8.484}{3} = \frac{33.076}{3} = 11.0253$$

Wetted perimeter $AEC = 11.0253$.

Sectional area $ABCE = \text{Area of sector } ADCE - \text{area of triangle } ADC$

$$= \frac{AEC \times 1.5}{2} - \frac{49.61385}{2} - \frac{12.726}{2} = 18.443925$$

Therefore the H. M. D. or $\frac{A}{P} = \frac{18.443925}{11.0253} = 1.6728$ inches.

Dividing by 12 we get .1394 feet.

$G = \text{sine of inclination of drain, being the height of the fall divided by the length as } \frac{H}{L}$

In order to obtain the diameter of a pipe one must first calculate the velocity of the liquid of the pipe and all present day formulae for same are based on the well known V-C. V. R. S. which by some is attributed to Leslie and by others to Chezy.

V represents the velocity in feet per second or minute, C a constant arrived at by actual experiment and different authors have given widely varying values to it as: Eytelwein 93.4, Deardmore 94.2, D Aubirson 95.6, Leslie 65 to 100, Downing 100 while Leville gives first 140 and then 11 by employing the cube root.

Ganquillet and Kutters, formulae are most in favor of civil engineers but their constant is obtained by an abstruse calculation involving values of both R and S and other values obtained only in their tables or by the graphic method with the use of a chart.

R, or A, equals the hydraulic mean depth and is obtained by dividing the sectional area "A" of the liquids in the drain by the length of the wetted surface or wetted perimeter and in pipes flowing full or half full this is always taken at one-fourth of the diameter of the pipe in feet and it is very rarely the case to assume any other H.M.D. in a house drain, but if necessary it can be calculated in the following manner. Example, 9 inch pipe flowing one-third full. The wetted perimeter is first found by the following rule:—

Using Small Blowers in Furnaces

Less Fundamental Engineering Data Regarding Furnace Than Any Other Device Used for Similar Furnace Despite Its Popularity and Simple Construction.

SOME interesting data concerning the use of small blowers in combination with ordinary hot air furnaces, is given in the following being an address recently delivered by an authority before a convention of heating engineers:—

"The open fireplace is probably the oldest form of a stationary heating plant for warming buildings. As the stove can not be considered a stationary heating plant then the next oldest and by far the most generally used for domestic heating aside from the stove, is the warm air furnace. Regardless of its popularity, and the vast number of installations, as well as the simplicity of its construction and operation and the many years it has been employed as a heating medium, there is available less fundamental engineering data regarding the furnace than any other device used for a similar purpose.

"Nobody knows definitely the range of heating capacity for any type of furnace when varying volumes of air are passing over the heating surfaces, nor the limiting ratios of heating surface to grate surface, nor the right size to make the combustion chamber for a given ratio of heating surface to grate surface, nor the most effective disposition to make of the heating surface in order to get the maximum transfer of heat to the air.

"The same lack of information about the furnace itself, applies with equal force to the velocity of the air through the ducts, flues, elbows wall boxes and registers, throughout the range of varying temperatures of air and with the varying heights of flues above the crown of the furnace; neither is anything known as to what the frictional resistance amounts to in the various parts of the furnace plant from the point of fresh air supply to the place where the warm air is discharged into the room.

"The design, construction and installation of furnaces should be an engineering proposition, just as much as any other method of heating, and it should be established on the same basis. In order to do so, the factors recited above must be separated from one another and be definitely established. This will entail a long period of experimental research, which it may take years to complete.

"Therefore, until such time as an engineer or architect has in his possession definite data which will enable him to predetermine just what he may obtain, with absolute assurance of the results, the same as he now can do when designing steam and hot water plants, he will naturally hesitate to recommend a furnace heating plant to his client, regard-

less of the fact that it can be installed more cheaply and may in some cases be more easily adaptable to the building than any other system.

"The main objection to a fan or blower has been the first cost and the cost to operate same. This has been mainly due to the fact that almost invariably the inventor has depended on the blower to handle all the air that passes over the furnace, all the time, regardless of weather conditions. When shut down, it usually became such an obstruction to the flow of air that the plant failed to do even as well as an ordinary heating plant would do, when operating simply as a gravity plant.

"What is wanted is some device that will not obstruct the flow of air when it is not in operation to any greater extent than if it had never been installed. It must be inexpensive to install; must be inexpensive to operate; must be so simple to operate that it requires nothing more than the touching of a push-button to start or stop it; must be so simple to install that it requires no engineering or mechanical skill to do it; it must be adaptable to all kinds of buildings and it must have sufficient capacity to deliver the required volume of air against the normal resistances of the average heating plant so as to heat all the rooms to an even and comfortable temperature in any weather.

"We have made an effort to produce such a device and so far as our experiments and investigations have gone, they have left us with every reason to believe that we have succeeded in perfecting a unit which will do all that could reasonably be demanded of it. Before we had completed our developments, the worst of the winter weather was past, so we have not had an opportunity to try it in as many places nor in as many different situations as we would have liked to do, to enable us to present it to you with the same assurance of its absolute dependability that we have of all of the other apparatus we make. Wherever we did install it, the results were entirely satisfactory; so much so that the people refused to have it removed after we were through with our demonstrations.

"We have charted the full range of the capacity of the new device; we know what it will do as an air moving mechan-

ism, but for want of definite and authoritative information as to the limitations of furnace capacities it becomes more or less of a cut and try proposition especially on such plants as approach at all closely to the maximum limits of the capacity of the device.

"We do not mean to imply that there ever was a furnace plant which failed completely to heat all of a building; nor do we mean to imply that all of the furnaces fail to heat some portion of a building; but we all know that there are many of them which fail to heat certain rooms under some weather conditions, or require forcing of the fire to obtain sufficient heat to give satisfactory results at times.

The device we have produced is primarily intended to relieve such conditions, though it should also prove to be a source of considerable economy when used in connection with a furnace plant that otherwise operates satisfactorily. This economy is to some extent obtained by heating the building more quickly, when the temperature has become low like the conditions, which prevail in most houses in the morning, after the furnace has been checked all night.

The greatest saving of fuel is due, however, to the ability of the device to circulate as much or more air at a low temperature as would be the maximum volume obtainable by gravity circulation at very high furnace temperatures.

"The possibilities for the sale of this or some similar device seem almost unlimited in extent. It should engender more faith in the reliability and economy of furnace heating than has heretofore been possible and by so doing should give considerable impetus to the business. It opens up an avenue to additional business for the jobbers and dealers in furnaces, who can go to nearly all of their old customers and make additional sales. If our limited experience is any criterion, a demonstration in any furnace heated house is about all that is necessary to dispose of the outfit.

"One thing to remember is this: Don't expect this little device to do anything abnormal. It has been developed with the one idea of producing constantly, the same results as can be obtained by a gravity furnace heating plant, when properly selected, when installed under the most favorable conditions and when operated in an ideal manner. Those are three factors seldom in combination in

(continued on page 24, col. 3)

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

CONTRACTS AWARDED

St. Boniface, Man.—Bank costing \$60,000 for Bank D'Hochelaga, plumbing and heating, C. D. Kirk Co., Ltd., Winnipeg.

Montreal—Additional contracts for erection of office bldg. costing \$2,000,000 for Canada Cement Co., 273 Craig St. W., are: heating and plumbing, W. G. Edge, Ltd., 116 Craig St. W.

Lakeview, Ont.—Plumbing and heating contracts for school costing \$28,360 for S. S. No. 7, Toronto Twp., are awarded to Sheppard & Abbott, 119 Harbord St., Toronto.

Archydal, Sask.—Heating contracts for school for Summerside S. D. are awarded to E. H. Montgomery, Moose Jaw.

Montreal, Que.—Plumbing and heating contracts for Sunday School costing \$45,000 for Kensington Church, Grand Ave., are placed with John Tweddle & Co., 103 Lagauchetiere St.

Toronto—Plumbing and heating contracts for warehouse costing \$40,000 for Glen Eden Securities, Ltd., 145 College St., are awarded to A. Welch & Son, Ltd., 304 Queen St. W., and W. Schulkins, 932 College St.

Victoria, B. C.—Plumbing contract for three stores costing \$30,000 for Mrs. T. Cusack, Pemberton Rd., is placed with W. R. Menzies & Co., 833 Cormorant St.

Victoria—Plumbing contracts for alterations and addition to bank costing \$45,000 for Canadian Bank of Commerce are awarded to Colbert Plumbing & Heating Co., 755 Broughton St.

Wetawaskiwin, Alta.—Plumbing contract for garage costing \$10,000 for Paulson & Anderson is placed with G. L. Gothard.

Winnipeg, Man.—Plumbing and heating contracts for alterations to restaurant costing \$125,000 for Childs Co., 200 5th Ave., New York, N. Y., U.S.A., are awarded to C. D. Kirk Co., Ltd., Winnipeg.

WATERWORKS, SEWERAGE, ETC.

Winnipeg, Man.—General contract for construction of drains and drainage for Prov. Govt. is awarded to E. W. McLean, Arlington & Alexander Sts., Winnipeg.

Courtenay, B. C.—Contract at \$30,000 for wire wound wooden pipe required for water works costing \$73,700 for Courtenay Council, is placed with Pacific Coast Pipe Co., 1551 Granville St., Vancouver.

Kingsville, Ont.—Town Council plans to make extensions and improvements to water works to cost \$15,000. R. W.

Code, Engr., 14 London St. W., Windsor, Ont.

Kingsville, Ont.—Construction of filtration is contemplated by Town Council. W. G. Long, clerk.

WATERWORKS FOR

COURTENAY, B. C.

At a special meeting of the Courtenay City Council the contract with the E. J. Ryan Contracting Company of Vancouver was signed with the City of Courtenay for the construction of a waterworks at a price of \$73,700 and 10 per cent. set aside for contingencies, the contractors to take city debentures in full payment at 77 per cent. of their face value.

The work is to commence not later than two weeks from June 25th and must be completed in four calendar months under penalty of twenty-five dollars a day in excess of that time. Under the contract, too, the E. J. Ryan Contracting Company have arranged terms with the Foundation Company so that all claims against the City are withdrawn.

Mr. Donald Cameron, who drew the plans for the waterworks for the E. J. Ryan Contracting Company, severs his connection with that company and will act as city engineer at a salary included in the contract price.

MUST DRAIN CELLARS

St. Thomas—A general appeal is being made by the health officials of the city to residents whose cellars were flooded with water recently to clean them up as soon as possible and prevent serious epidemics from developing. Citizens are also being warned against the use of well water without first boiling it, many persons having resorted to the wells on account of the muddy condition of the water in the mains.

PORT CREDIT WATERWORKS

A report on the proposed water works system for the town of Port Credit, Ont., just issued by the Citizens' Research Institute of Canada, states that, due to the acknowledged fact that the water in the majority of the wells was found to be polluted, Port Credit, on the basis of disease prevention alone, is in need of a safe, pure water supply. The lake is declared to be the most satisfactory source of supply, although even this water will require to be filtered and chemically treated to ensure safety. The Port Credit water works, advises the report should be constructed so as to meet requirements of population growth for the next 25 years.

BUSINESS CHANGES

Montreal—M. Bandler & Co., plumbers, has dissolved.

WESTERN NOTES

Drumheller, Alta.—The authorized plumbers of Drumheller, Alberta, have applied to the town council for protection due to the fact that a number of unauthorized plumbers have been making water connections in the town. The Council decided to have the town solicitor prepare a by-law covering the waterworks and general plumbing business of the town.

Drumheller, Alta.—Joe Travis has been appointed works foreman at Drumheller, Alberta, to act in the capacity of waterworks inspector and also general plumbing inspector.

CHANGE FIRM NAME

Montreal—The Presto Mfg. Co., makers of the patented "Presto" gas water heater, announce the change in the firm's name from Dominion Welding Mfg.

Using Small Blowers in Furnaces

(continued from page 24)

one plant. The device we have produced is intended to bring them into closer combination at all times and to make up for either one or perhaps two of them being deficient, or perhaps entirely missing, rather than to perform any fancy or unusual stunts. When any of the latter are to be tried out, select a blower large enough to handle all the air and drive it at a speed that will overcome every possible resistance. In no other way can such things be done.

"The time has long since passed when 'rules of thumb' methods in engineering practice will be tolerated. Everything the engineer has to deal with must have back of it definite and dependable data that he can rely upon with absolute certainty. What we have aimed to do is to produce a little, dependable inexpensive device, that can be applied to any domestic furnace either old or new and by having such a thing available it is hoped it will in some measure at least restore any lost confidence in furnaces, bolster up the minds of any 'doubting Thomases,' and at the same time fill a real want in the furnace trade."

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

NUMEROUS interesting price developments continue to add direct importance to current markets. Principally through revisions in discounts, lower prices are recorded on the following list of plumbing and steam-fitting supplies:—steel and wrought iron piping; soil pipe and fittings; standard closet outfits; radiators and boilers; wrought nipples and couplings; stove bolts; copper rivets and burrs; stove pipewire; carriage and tinn-ers rivets; and spring steel. Quotations are also reduced on one line of bolt clippers.

Recessions of this nature are of particular in-

terest at this time, in view of the probable effect of such price changes in stimulating the erection of buildings and homes during the fall season.

Other plumbing and steam-fitting products remain with unchanged quotations, but with variable conditions registering an important trend. The lower prices still remain on range boilers, with the reports of future readjustment still in evidence. The boiler tube market is dull, and price recessions are anticipated, in conjunction with the new pipe list, but the ideal weather conditions have stimulated a seasonable movement in conductor pipe, eaves-trough and corrugated sheets.

MONTREAL

MONTREAL, July 15.—Changes in prices of sundry lines and an easier tone in iron and steel products feature the markets in plumbing supplies. Stove bolts will now cost less, and rivets of all kinds, including tinn-ers' rivets, are lowered in price. Iron and steel products generally are now easier with the report of an expected announcement of reductions on the Pittsburg markets. This will cast a reflection on the local markets on many lines including iron and steel bars, galvanized and black sheets, corrugated sheets, boiler tubes and probably wrought iron and steel pipe.

Enamelled ware is little changed, continuing very unsteady, closets being now reduced to net prices which are 10 per cent. lower than formerly. Metals, both ingot and scrap, are on a very dull market at present. Eavestrough, conductor pipe and elbows continue to sell well with no changes in prices. The looked for stabilized market on range boilers has not yet materialized, prices still varying among manufacturers and jobbers. Radiators and boilers are held at discounts recently announced.

Stove Bolts 65 Per Cent Off

Montreal—

Through a revision in the discount, stove bolts now cost less. The present discount is 65 per cent off list, formerly being 62½ per cent.

No Improvement In Enamelled Ware

Montreal—

Little or no improvement is evident in the sales of enamelled ware, and business generally is now very quiet. Jobbers state they anticipate more activity in the later summer and fall months, when building construction will be more advanced to the stage where enamelled ware is required. Buying in the spring and summer months up to the present has been purely from hand to mouth and it is evident that no purchasing has been done for building now under construction, and when the actual requirements have to be met, this will stimulate sales. Prices remain unchanged at 20 and 10 per cent. off the list, with the

market continuing very unsettled. Following are list prices with the discounts noted:—

Sinks, roll rim, 18 x 30 in....	23.00
Sinks, flat rim— 1 only 2 only 3 only	
16 x 24.....	\$ 7.50 \$ 7.40 \$ 7.30
18 x 30.....	8.70 8.60 8.50
20 x 30.....	9.90 9.80 9.70
Bath tubs, roll rim, 4, 4½, 5 feet	
24 to 30 in. wide.....	51.40
Bath tubs, 5½ feet.....	57.10
Lavatories—	
17x19" Apron F139 or P4045	15.30
18x24" Apron F154 or P3845 or	
P3847.....	23.60
18x21" Apron F169 or P4205.....	17.60
17x19" Roll Rim, F241 or P4345..	12.60
Less 20/10 per cent.	

Scrap Prices Nominally Unchanged

Montreal—

Little change can be reported in the market for waste materials. Prices on all lines are nominally unchanged, and

the market remains exceptionally dull. The market reductions made in many of the metals recently has failed to bring buyers on the market, and local dealers now state that little improvement will likely be shown until the fall months at least. Following are the unchanged nominal quotations.

Waste Materials

Automobile tires....	0.75
Yellow brass.....	0.05
Red brass.....	0.03½
Light brass	0.04
Scrap zinc.....	0.03½
Lead, heavy	0.04
Lead, tea.....	0.02
Light copper.....	0.07½
Heavy copper.....	0.10½
Wrought iron, R. Rd. No. 1 per gr.	
ton.....	10 50
Malleable scrap (ton).....	10.50
Pipe scrap (ton)	7 00
Heavy melting steel.....	6.50
No. 2 busheling.....	4.00
Boiler plate.....	0.08
Boiler plate.....	0.10
No. 1 machinery cast.....	22.50

Cement Prices Hold

Montreal—

Prices on Portland cement are holding unchanged, although revisions to lower levels were expected from some quarters. With a recent reduction made in other lines of building materials, it is felt that a substantial decline in cement prices would act as a stimulus to building construction, notwithstanding the advancing season. Following are local quotations:—

Car Load Lots—	
400 to 1000 bag cars—	
Per bag.....	1 03½
Per barrel.....	4 14
Less Car Lots—	
Per bag.....	1 14
Per barrel.....	4 56
Rebate 20 cents for empty bags, F.O.B.	
Montreal.	

Tinners' Rivets Now Lower In Price

Montreal—

Tinners' rivets, carriage rivets and all small iron rivets will now cost less, the new discount being 45 per cent off list.

Cotton Waste Prices Unchanged

Montreal—

Quotations on cotton wastes continue at the reduction of a few weeks ago. While prices on many other cotton goods have recently shown reduction and were made since the lowering of waste prices, dealers state they do not expect a further decline for the present, but rather are anticipating a fairly steady market. Sales are fair, considering the present season of the year.

Good Sales of Corrugated

Montreal—

Price quotations on corrugated sheets remain unchanged. The demand for sheets has been very satisfactory in recent weeks and although a slight slackening usually takes place at this time of the year, this has not been the case up to the present.

Eavetrough In Good Demand

Montreal—

A good demand continues for conductor pipe, eavetrough and conductor elbows. The open weather, although very warm, offers a good opportunity to the outside dealers to lay the requirements for these for their customers. Restricted sales in the earlier months is also accountable for the active movement at present. Price quotations remain at the discount level announced in former issues.

Boilers Held At Reduction

Montreal—

Hot water and steam boilers, also radiators remain at the reduced figures shown in our last issue of Sanitary Engineer. While it is yet early to determine whether these lower costs will act as a stimulus to buying, dealers are of the opinion that no increased activity will be shown as the buying to-day is very limited, and only as requirements call for. Building construction, which is a great factor in the sales of these lines has had very little improving effect on them up to the present and it is felt that the later summer months will show more activity as buildings now being completed will necessitate buying. Following are the prices and discounts:—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square ft. 45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 56 per cent for hot water and 57 per cent for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 53 per cent.

Boilers—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 60 per cent off list.

Square or sectional hot water or steam boilers, 15-in., 10 per cent.

For Ontario Government trimmings 5 per cent.

Square or sectional water boilers 19-in to 36-in., 10 per cent off list.

Square or sectional steam boilers, 19 in. to 36 in., 10 per cent. Ontario Government trimmings, net list.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines, Brantford, London, Windsor, Sarnia, Amherstburg, Walkerville, Sandwich, Ottawa, Hull.

Bolt Clipper Price Revised

Montreal—

The revised lower price on the New Easy bolt clipper brings the quotations to plus 5 per cent.

Soil Pipe Trade Only Fair

Montreal—

Discounts on soil pipe and fittings remain unchanged. Business in these commodities has slackened considerably in the past few weeks, the summer season being now at hand.

Closet Prices Vary

Montreal—

As in the case of enamelled ware, closets show no improvement in recent weeks, neither in the sales nor market conditions. Trade is very quiet and prices vary among the different jobbing houses. Quotations below are now net, the 10 per cent. reduction being deducted where formerly the higher prices with the 10 per cent. was given below. These prices are more or less general but some firms quote slightly better prices, especially for quantity buying.

Closet, standard outfit.....28 80
Do., with post hinge seat.....29 70
Do., white vitro, vitreous china or enameled iron, with wash down bowl and oak or mahogany post hinge seat.....31 50
Do., add for reversible trap bowl.....1.25
Do., add for syphon jet bowl.....7.00
Do., for 3/4 in. valve on supply pipe.....1.50
Do., deduct for supply pipe.....0.80
Do., deduct for floor flange.....0.60
Do., wash-down bowl less spud.....11.50
Do., reversible trap bowl, less spud.....12.75
Do., syphon jet bowl, less spud.....19.00
Do., "Richilieu" bowl.....10.50
Do., extra for spud.....0.60
Do., oak, or oak-vitro tank, with fittings, less seat.....17.50
Do., wood strip seat and cover.....3.75
Do., post hinge seat and cover.....4.75
Do., add for bar hinge.....0.25
Do., white vitro, vitreous china, or enameled iron tank, with fittings flush elbow and supplies less seat.....19.00
Loss 10 per cent.

Fair Sales Of Pipe Fittings

Montreal—

Discounts on all lines of pipe fittings held, with sales recorded fair for the present season. The movement of pipe fittings has been very satisfactory in recent weeks and although there is a present slight lull, dealers state this is expected at the present period.

Dull Market For Boiler Tubes

Montreal—

The current boiler tube market is still very dull, and while these, with many other lines of iron steel, are now said to be easier due to developments anticipated on the Pittsburg market, dealers are still of the opinion that lower prices will not offer a stimulus to buying. Local quotations are unchanged as follows:—

Boiler Tubes—	Seamless	Lapweld
1 inch.....	26.00	25.00
1 1/4 inch.....	27.25	26.00
1 1/2 inch.....	26.25	27.00
1 3/4 inch.....	29.75	25.00
2 inch.....	29.25	22.00
2 1/4 inch.....	33.00	25.00
2 1/2 inch.....	41.75	27.00
3 inch.....	49.25	35.00
3 1/2 inch.....	63.50	40.00
4 inch.....	85.00	50.25

Easier Tendency on Iron and Steel

Montreal—

While current prices on bar irons and steels have been reported easier for the past two weeks, more indications now exist that lower prices will be reached in the near future although no definite changes have been made. Dealers now fully anticipate reduced figures from the Pittsburg mills, but whether these will be announced in the near future or the next few days, cannot be stated. It is noted that some of the mills have lowered their prices and all that is necessary for a general announcement is the remainder to fall in line. Local current quotations are unchanged so far as follows:—

Common bar iron, 100 lbs.....	3 70
Refined iron.....	5 20
Iron finish machinery steel.....	3 75
Mild Steel.....	3 70
Single reeled machinery steel....	5 75
Band steel.....	3 70
Spring steel.....	5 00
Sleghshoe steel.....	3.70
Tire steel.....	3 90
Toe calk steel.....	4 60
Harrow tooth steel.....	3 85
Mining tooth steel, per lb.....	0 23
Black Diamond tool and cast steel per lb.....	0 23

NOTE—Regned iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles 50c. per 100 lbs. extra.

Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Range Boilers Still Unsettled

Montreal—

Prices on range boilers show no change and with manufacturers and jobbers expecting a readjustment to higher levels comes the report that the market is far from stabilized, and even lower prices are obtainable. A settlement is hoped for and expected in the near future by dealers generally. Following are unchanged quotations:—

Range Boilers—	Standard	Ex. heavy
30 gallon.....	8 75	11 25
35 gallon.....	11 25	...
40 gallon.....	13 50	16 00
52 gallon.....	20 00	...
66 gallon.....	28 00	...
82 gallon.....	35 00	...
100 gallon.....	45 00	...
120 gallon.....	54 00	...

Lead Products Remain Unchanged

Montreal—

No change can be reported in lead products, sales being lessened somewhat in the past few weeks, and metals chief in the manufacture of these products, very dull on the primary markets with no changes of importance in prices. Following are quotations:—

Lead pipe, per 100 lbs.....	12 50
Lead waste, per 100 lbs.....	13 50

NOTE.—Lead pipe is subject to a discount of 10 p.c.

Lead traps and bends	10 p.c. off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs, sq. ft., lb.	0 10¾
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼ c lb. extra and cut sheets to size ¾ c lb extra	
Solder, guaranteed, lb.	0 29½
Do., strictly, lb.	0 27½
Do., commercial, lb.	0 24½
Do., wiping, lb.	0 25½
Do., wire, lb.	0 37½
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

Sheets Again Easier

Montreal—

In line with iron and steel products generally, sheet prices are again easier, although a slight revision to lower levels was made only a few weeks ago. Pittsburg markets are still unsettled, and an announcement of lower prices is expected by local dealers in the near future. Sheets have been more or less unsettled on the market for some time, prices being nominal and necessitating a range to be continually quoted. Whether a further reduction in general would stabilize the market is hard to determine. Dullness continues an outstanding feature in sheets, but with the later summer months approaching such lines as tin plate and Canada plate should show more activity owing to the commencement of furnace work and the making of stove pipes. Following are local prices:—

Black Sheets—

10 gauge.	5.00 to 6.00
12 gauge.	5.05 to 6.05
14 gauge.	5.35 to 6.35
16 gauge.	5.45 to 6.45
18-20 gauge.	5.80 to 6.80
22-24 gauge.	5.85 to 6.85
26 gauge.	6.00 to 7.00
28 gauge.	6.10 to 7.10
Sheets 36 in. wide, 20 cents per 100 lbs. extra.	

Canada Plates—

Dull	
18x24 X 52s.	7 25 box
18x24 X 60s.	7.35
18x24 X 75s.	7.45
Galvanized Sheets—	
U. S. Standard	
10¾ oz.	3.00 to 9.00
28 gauge.	7.50 to 8.50
26 gauge.	7.25 to 8.25
22-24 gauge.	7.00 to 8.00
20 gauge.	6.75 to 7.75
18 gauge.	6.75 to 7.75
16 gauge.	6.75 to 7.75
14 gauge.	6.75 to 7.75
12 gauge.	6.75 to 7.75
10 gauge.	6.75 to 7.75
English Standard—	
Queen's Head	
28 gauge.	10.00 9.25
26 gauge.	9.75 9.00
24 gauge.	9.15 8.60
22 gauge.	8.80 8.15
18-20 gauge.	8.10 8.00

NOTE.—These prices are for full bundles an extra charge of 25 to 35c per 100 pounds is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

Bright Tin Plates—

20x28 IC 112s.	18.50
20x28 IX 112s.	20.50
20x28 IXX 56s.	11.75
20x28 IXXX 56s.	12.50
Terne Plates—	
20x28 IC 112s.	17.50 box

Little Change In Ingots

Montreal—

Very little change is noted in the ingot metal markets, all remaining dull. No change in quotations is noted with the exception of tin, which is again a little easier and the price lowered ½ cent. The summer dullness is expected to continue for some time but Fall should bring much improvement, especially with better conditions in the outside markets.

TORONTO

TORONTO, July 15.—Sharp revisions bring quotations on numerous plumbing and steam-fitting supplies to reduced levels.

Prominent among these recessions is the new pipe list superseding No. 51, which has been in effect since April. Lower quotations on wrought nipples and couplings also feature the current markets, while other price reductions include, carriage and tinnery rivets; stove pipe wire; copper rivets and burrs; soil pipe and fittings; stove bolts; standard closet outfits; and spring steel.

Recent declines on radiators and boilers constitute the third recession noted on these products during the last six months. Revised prices are looked for on boiler tubes, consequent upon the lowering of steel and wrought piping. Range boiler quotations remain unchanged, with a slight unsettlement recorded in enamelled ware conditions.

Quotations On Stove Pipe Wire Again Lowered

Toronto.

A further reduction has been announced in prices on stove pipe wire. The extent of the lower quotation is 25 cents per 100 lbs. The revisions are as follows:—

Stove Pipe Wire—

No. 18 ga.	\$9.25 per cwt.
No. 19 ga.	\$9.50 per cwt.

New Price On Boiler Rivets

Toronto.

A new base price is now announced on round head boiler rivets. The revised quotations is \$6.00 f.o.b. Montreal, Toronto, and London.

Enamelled Ware Movement Better Than Expected

Toronto.

While enamelled ware prices remain nominally unchanged, yet a slight tendency to unsettlement is recorded in local conditions.

No marked development has been reported, however, the current movement being generally quoted as better than was anticipated earlier in the year.

Enamelled Iron Baths, 3" roll rim

4 ft. 6 in. 5 ft.	\$51 40
Do., 5½ feet	57 10
All Steel Enamel Bath, 4, 4½ or 5 ft., net	16 25

18 x 30.	8 50 8 60 8 70
20 x 30.	9 70 9 80 9 90

All above list except lines marked net. Discount 20-10 p.c. off these prices.

Reduced Quotations On Copper Rivets and Burrs

Toronto.

Reductions are now announced on copper rivets and burrs. The revised discounts bringing quotations to lower levels are as follows:—

Copper Rivets and Burrs—

Copper Rivets.	List less 32%
Copper Burrs up to one-third of combined weight of Copper Rivets and Copper Burrs.	List less 32½%
Copper Burrs in excess of one-third of combined weight of Copper Rivets and Copper Burrs.	List plus 10%
Copper burrs only.	List plus 10%

Tinners Rivet Prices, Reduced

Toronto—

Through a revision in the discounts, lower prices are now in effect on carriage and tinnery rivets.

The new discount is 45 per cent, applying on sizes 7-16 inches and under.

Stove Bolt Prices Lower

Toronto—

Price declines announced this week include revised discounts on stove bolts. The new quotation is 65 per cent, compared with the previous discount of 62½.

Closet Quotations Lowered

Toronto—

Further reductions are again being quoted on closet outfit prices. The revised level however is only slightly lower than prices previously prevailing and it is reported that the new changes have not yet been generally adopted. Various reports are being quoted in the trade, as to conditions now governing these products, an unsettled feeling being noted in one quarter as regards prices, while a fairly satisfactory tone is also reported governing the present volume of business. It is stated that the revised quotations are expected to be generally recognized, and following is the new list:—

Closets

Closet, standard outfit cask.	\$26.00
Do., with post hinge seat.	26.75
Do., mahogany vitro or Pussyfoot with mahogany post hinge seat and cover.	29.00

Do., post hinge seat and cover..	4 75
Do., add for bar hinge.....	0 40

Reduced Quotations On Soil Pipe and Fittings

Toronto—

Through a revision in the discounts, reductions of a fairly substantial nature are now shown on prices of soil pipe and fittings. The 2 and 3 inch pipe registers a decline of approximately 17 per cent. with other sizes in varying proportion. Discounts on fittings are also changed. The steady volume of home building now prevalent in the city suburbs and in the larger towns generally, is reflected in the increased number of small sales. Seasonable activity of this nature is now reported to be in full swing and with the reductions in quotations prevailing an improvement is looked for in the current movement of soil pipe and fittings. Following are the revised discounts:—

Soil Pipe—

- 2 and 3 inch, 25%.
- 4 inch, 30%
- 5 and 6 inch, 30%
- 8 inch, net.

Fittings—

- 2 to 6 inch fittings 40-10%
- 8 inch fittings net.

Revised Discounts Lower Pipe Fitting Prices

Toronto—

Following the reduction in the price list of wrought piping, quotations on wrought nipples and couplings are now on a lower level. A revision in the discounts on these products, shows reductions of approximately 10 per cent.. Prevailing conditions in the pipe fitting market, generally indicate that merchants are adhering to the principle of ordering in small quantities. The total volume of purchases, however, is reported as showing a steady average from month to month. With the decline in prices, all tending to effect a reduction in building costs the anticipation of an improvement in the future demand for fittings now prevails in certain quarters. Following are the new discounts:—

PIPE FITTINGS

Cast iron fittings	20 p.c.
Plugs, cast iron	27½ p.c.

New List On Piping

Toronto—

A new list on piping is now being issued. Following the downward tendency recently evident on steel bars sheets and plates and on various steel products, prices on tubular goods are reflecting the easier market tone. The previous list, No. 51 is now superseded, the revisions being effective July 11th. Following is the new list:—

Price List No. 52 July 11 1921 Standard Butterweld Pipe S-C

Discounts Again Revised On Radiators and Boilers

Toronto—

Further reductions are now announced in prices on radiators, which change constitutes the third recession in these quotations recorded this year. The revision in the discounts, brings the new prices to a lower level.

Similar reductions of approximately 10 per cent. are evident in the quotations on both water and steam boilers.

Manufacturers state that in making the current changes, they have taken into account not only prevailing lower material costs, but have anticipated to some extent a future lowering in production levels.

Following are the revised discounts:—

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in. \$1; 21 in. \$1.10; 30 in. \$1.15;
26 in. \$1.20; 23 in. \$1.26; 22 in. \$1.30;
20 in. \$1.36; 18 in. \$1.40; 16 in. \$1.50;
14 in. \$1.55; 13 in. \$1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 56 per cent for water and 57 per cent for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent for water and 49 per cent for steam.

Discounts on 1-column hospital size, water 30 per cent; steam 31 per cent.

Wall Radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 53 per cent.

BOILERS—

Round.....	60% off list
Square.....	10% off list

Steam:

Round.....	15% off list
Square.....	5% off list

Spring Steel Prices Lower

Toronto—

A slight increase in the number of inquiries for steel has been reported, but only a proportion of these have developed into new business. Many of such inquiries are generally calculated as movements to sound out the market tone and the buying prices. The quiet period, therefore, is stated as continuing with the recent announcement of price recessions on the primary steel markets being reflected in local circles by one or two gradual reductions. Last week, both band and hoop steel quotations were lowered and reduced prices are now recorded on spring steel. Other quotations remain generally unchanged as follows:—

STEEL AND IRON—

Mild Steel 3-16 in.	\$4.40
Do., 1/4 and heavier.....	3.75
Bar iron 3-16 in.	4.10
Do., 1/4 in. and heavier	3.75
Angle base.....	3.75
Horseshoe iron.....	4.10
Tire Steel.....	4.70 to 5.95
Band Steel 5-8 to 4 in.	4.25
Spring steel.....	9.50 to 11.50
Crucible cast sheet steel ..	30.00 to 35.00
Mining drill steel.....	20.00 to 23.00
Cast tool steel, medium.....	20.00
Cast tool steel high grade ..	30.00 to 36.00
Sleigh shoe steel.....	4.10 to 4.50
Norway iron.....	15.00
Toe caulk iron.....	5.40 to 6.40
Hoop steel.....	4.75

Steady Sales Recorded In Compression Work

Toronto—

There has been no recent change of importance in the current situation on compression work. Sales are reported of a steady nature with seasonable business evident in small orders. The recent revisions in the various discounts are still holding, the following being the unchanged quotations:—

Compression work, standard	37 p.c.
---------------------------------	---------

MUELLER Bath Cocks and Basin Cocks

In Rapidac, Self-Closing and Compression Construction

The most important part of any plumbing job is the brass goods. Unless they are right, the whole job will be a disappointment to you and to your customers.

MUELLER Bath Cocks and Basin Cocks are right in design, right in manufacture, and right in finish—there is no higher standard in brass goods than those that bear the name MUELLER. Styles A-1500 and A-1400 above, and Styles A-2389 and A-2385 below.

Use MUELLER Brass Goods throughout on every job and insure dependable service and lasting satisfaction.

Write for catalog and prices. Mail orders given immediate attention.

Revised Sheet Prices Bring More Inquiries

Toronto—

Quotations on sheets and plates remain generally unchanged this week with merchants awaiting the results of the recent price revisions. Whether business will respond to these more attractive levels, is considered contingent upon the degree of business activity, but it is stated that any worthwhile reduction is likely to uncover buyers. The formal announcement of a lower scale of steel prices recently made by the Bethlehem Steel Company, has not directly affected local conditions due to the fact that such nominal recessions were only in reality bringing the official prices down to levels which were already in existence on the primary markets. The chief object in such a formality is stated as being a desire on the part of the steel mills to relieve the industry generally from the appearance of securing higher prices than were really being obtained. No new development has been recorded this week in sheets and plates, the prevailing tendency being an abnormal proportion of inquiries compared with the current volume of business. Prices continue to show a range but the following quotations cover the average figures for fairly large quantities:—

Plates—

10 gauge.....	4.75 to	5.00
12 gauge.....	4.80 to	5.05
14 gauge.....	4.85 to	5.10
16 gauge.....	4.95 to	5.20

Black Sheets—

14 gauge	5 10 to	5 60
16 gauge	5 20 to	5 70
18-20 gauge	5 30 to	5 80
22-24 gauge	5 35 to	5 85
26 gauge	5 40 to	5 90
28 gauge	5 50 to	6 00

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 36 in. wide.

GALVANIZED SHEETS—

Premier and Apollo		
10% oz.	7 90	8 40
U.S. 28	7 50	8 00
U.S. 26	7 20	7 70
22 and 24	7 05	7 55
18 and 20	6 90	7 40
16	6 75	7 30
12 and 14....	6 60	7 20

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10% oz., and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is from 20c to 30c per 100 pounds. Other gauges show no change for different widths.

Prices shown are full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Copper and Brass Prices Remain Unchanged

Toronto—

While prices on copper and brass have recorded a slight reduction on the United States markets, local quotations remain unchanged. It is reported that the decrease referred to has not been reflected locally as yet owing to variable conditions in the trade. The current condition of the market shows the jobbing trade falling off considerably with the average volume of business stated as small. The general situation is by no means considered any worse than during recent weeks, however and the revised prices are maintained as follows:

BRASS

Sheets, base, per lb.	\$ 0 27
Rods, base, per pound	0 27
Tubing, base, per lb.	0 34

COPPER

Rods, base, per pound	0 32
Soft sheets, plain, 16 oz. and heavier, lb.	0 32
Do., plain tinned 16-oz. and heavier, lb.	0 40
Do., polished and tinned 16-oz. and heavier, lb.	0 45
Tubing	0 37

Seasonable Sales Recorded in Conductor Pipe

Toronto—

Recent ideal weather conditions have stimulated a seasonable movement in eavestrough, conductor pipe and conductor elbows. Small building activity is steadily showing to advantage and brighter prospects are now evident as regards the prospective total volume of business for the year. A more optimistic tone prevails and orders are reported fairly satisfactory. Prices are held unchanged with the following discounts being quoted:—

TROUGH (Eave)

O. G. Square Bead and half round. Size in girth:

	Per 100 ft.
8 in.	\$ 15 90
10 in.	17 70
12 in.	21 20
Less 60 per cent.	
15 in.	28 80
18 in.	36 50

PIPE (Conductor)

Plain, round or corrugated	
	Per 100 ft. in 10 ft. lengths
2 in., in 10-ft. lengths, list.....	18 40
3 in., in 10-ft. lengths, list.....	22 30
4 in., in 10-ft. lengths, list.....	29 60
5 in., in 10-ft. lengths, list.....	40 00
6 in., in 10 ft. lengths, list.....	49 00
Less 60 per cent.	

CONDUCTOR ELBOWS

2 inch, list	5 25
3 inch, list	6.00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 55 per cent.	

Boiler Tube Movement Reported Light

Toronto—

Current sales of boiler tubes are reported as very light and the dull tone recently recorded still remains. Only small repair work is now being carried out, and little market activity has been noted. It is considered problematical whether any future price revisions would tend to stimulate activity but the recent general reductions in prices on steel and iron, sheets and plates, and certain steel products has evidently led to the impression that future recessions in quotations on boiler tubes are generally possible. No official announcement to the effect has as yet been issued, however, either locally or in the United States markets. Following are the unchanged prices:—

BOILER TUBES

	Seamless	Lapweld
1 inch	\$26 00	\$
1¼ inch	27 25	
1½ inch	26 25	
1¾ inch	29 75	25 00
2 inch	29 25	22 00
2¼ inch	33 00	25 00
2½ inch	41 75	27 00
3 inch	49 25	35 00
3½ inch	63 50	40 00
4 inch	85 00	50 25

Range Boiler Quotations Still At Lower List

Toronto—

Although a few wholesalers are reported to be nominally maintaining prices on range boilers somewhat in advance of the lower list recently recorded, the variation is not so marked as previously, and a more general levelling is recorded. It is noticeable that the price readjustment has not yet been announced, and range boilers are still selling at the reduced quotations which were arrived at early in June, owing to price-cutting activities. The 30-gallon boiler continues to be the popular size, with little movement recorded in other sizes. Following is the unchanged list:—

RANGE BOILERS

	Standard	Ex-heavy
30 gallon	\$ 8 75	\$11 50
35 gallon	9 50	13 80
40 gallon	13 80	16 50
52 gallon	20 40	25 20
66 gallon	28 30	34 80
82 gallon	36 00	47 40
100 gallon	45 60	56 40
120 gallon	55 20	64 80
144 gallon	78 00	93 00

Firmer Tone Recorded In Primary Lead Markets

Toronto—

Little variation has been recorded in the local market tendencies on lead and zinc goods, although a stronger tone is now reported on the primary markets. Quotations on lead products are holding unchanged with solder prices maintained at recent revisions. The current movement is considered fair, the demand having been of a steady nature during recent weeks. Following are prevailing quotations:—

LEAD AND ZINC GOODS

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb. ...	0 13½
Do., over 8 in., list, per lb. ...	0 14½
Lead pipe is subject to a discount of	
Lead traps and bends.....	10 p.c.
Lead sheets, 4 to 6 lbs. sq. ft. in	10 p.c.

Corrugated Sheets Sales In Seasonable Volume

Toronto—

The advent of warm weather has seen a steady increase in the total volume of small building especially in the larger towns and city suburbs. This situation has reflected somewhat in the current sales of corrugated sheets, and a fair volume of sales is recorded. The movement corresponds with the current activity shown in various building products and dealers state that business in corrugated sheets has been fairly good during recent weeks. Following are unchanged quotations:—

CORRUGATED SHEETS

	Per 100 sq. ft.
No. 28 gauge	8 50
No. 26 gauge	9 25
No. 24 gauge	13 00
No. 22 gauge	16 00
No. 20 gauge	18 00
No. 18 gauge	24 00
Less 7½ p. c	
Lighter than 24 gauge and wider than 27 inch 75c. a square extra.	

No Improvement Evident In Waste Materials

Toronto—

Conditions in the waste material markets are absolutely without any indication of improvement and it is reported that all prices quoted are purely nominal with practically no trading in sight. Steel scrap is very dull and scrap metals are in a similar position with neither a buying nor selling movement recorded. White metals are also stated to be in the same predicament. The following prices, therefore, average nominal buying quotations for fairly large quantities f.o.b. Toronto:—

WASTE MATERIALS

No. 2 bushelling	\$	\$11 00
Heavy melting steel, gross ton	11 00	12 00
R. Rd. wrought iron, No. 1, gr. ton	11 00	12 00
Scrap pipe, gr. ton	6 00	7 00
Stove plate, net ton	12 00	13 00
No. 1 machinery cast, net ton	17 00	18 00
Heavy, lead	3 75	4 25
Tea lead	2 25	2 50

Yellow brass	6 00	7 00
Light brass	4 00	4 50
Heavy Copper	10 00	11 00
Scrap zinc	3 50	4 00
Old rubbers, boots and shoes	2 50	3 00
Lumberman's rubber boots	1 50	2 00
Auto tires	0 50	1 00
Sold tires	0 75	1 25

Trade In Ingot Metals Described As Listless

Toronto—

Conditions in the ingot metal markets are still described as listless, and very little trading has been recorded. Quotations on the local markets are nominally unchanged, but a little variation is re-

corded in conditions on the various metals, as follows.

COPPER—No immediate improvement in the copper market is looked for, but it has been pointed out that the formal reduction in prices, recently announced by various steel mills is regarded as a favorable development due to the fact that high prices on iron and steel have had their effect in retaining purchases of copper. Signs of a more optimistic tone developing are therefore apparent, but local quotations remain unchanged at 17½ cents.

TIN—The tin market has recently been quiet, with prices practically stationary. The recent reduction in quotations on tin plate had no effect as the new price had previously been in effect through independent activities. The outlook for any marked improvement is not considered bright, and consumers are not purchasing as previously. The range in local quotations of from 37 to 38 cents is still evident.

LEAD—A firmer tone has recently been recorded in the lead markets, and reports from southern centres indicate

that inquiries have been more numerous. The increase in the number of inquiries appears to be the chief factor at this time. Prices locally are still maintained at \$6.75.

SPELTER—While the dull trend still prevails in spelter conditions generally yet the opinion has been expressed that even if the present small demand shows no material improvement, the current prices are expected to remain firm. The desire to sell at any costs among producing circles, in order to move stocks at a time when there was no particular market evident for the metal is what is quoted as the cause for the recent drop in quotations. The price of \$7.00 still prevails locally.

ANTIMONY—This market is virtually at a standstill as far as demand from consumers is concerned, but current quotations are unchanged. The local price is from 8 to 10 cents.

ALUMINUM—The movement of aluminum has shown no improvement whatever but prices are being maintained at previous levels. The local quotation is unchanged at 30 cents.

PLUMBERS HAVE LIVE BASEBALL LEAGUE

Grinnell Company Lead Local Baseball League

—Now in Second Half of Season

TO prove how fast baseball is catching on, with the industrial concerns in Toronto, one has just to turn to the Toronto Plumbing and Heating Supplies Baseball League for an example. Last year the teams just used to play an odd exhibition game, but this year it is a real live organized affair, with teams representing The Grinnell Co., Dominion Radiator, Jas. Morrison Brass and the Domestic Sanitary and Heating Engineers making up the league. They have finished the first half of their schedule the closing game being June 24th, and started on the second half.

The class of ball, while not being as fast as provided in the senior amateur leagues about town, ranks very highly and has provided the fans with lots of excitement.

All the games are played at Willowvale Park on Monday night, and Perth Square on Friday night of each week.

The officers of the league are Harry Ford (Dominion Radiator), president; W. Boddington (Morrison Brass), vice-president and G. Gingras (Grinnells), sec-treas. They are all hustlers and through their untiring efforts, have made the Toronto Plumbing and Heating Supplies League one of the best industrial leagues in the city to-day.

The Grinnell team captured the first half honors, and will meet the winners of the second half for the league championship. They have a good pair of pitchers in Gingras and Ball, the latter being the pick of the two, but they are a light-hitting aggregation. Dominion Radiator gave them a close run for the honors and were the only team to defeat them, and also have in Gillen a pitcher who would look good on any of the senior teams in the city. Jas. Morrison and D.S.H.E. were right in the hunt in all the

game, and claim they will make the leaders step in the second half to beat them.

The base-stealing honors were carried off by Johnston (Grinnells), with nine thefts, and Gillen (Dominion Radiator) was a close second, with eight to his credit while Radke of Dom. Radiator was the leading batsman, with the grand percentage of .590 for six games.

D.S.H.E. lead in team batting, with a percentage of .342; Jas. Morrison second, with .337; Dom. Radiator, .335, and Grinnells, .201.

The fielding averages of the teams show Jas. Morrison first, with .873, and the rest in the following order: Dom. Radiator, .870; Grinnells, .865; D. S. H. E., .820.

The following were the best fifteen batters for the first half of the league schedule, who played in three games or more: E. Byrne (D.S.H.E.), .666; Radke (D.R.), .590; Porter (M.B.), .474; North (D.R.), .450; W. Menzie (D.S.H.E.), .444; Mortimer (M.B.), .444; Kerr (M.B.), .409; Hughes (M.B.), .400; Coffey (D.R.), .391; Donnelly (D.R.), .384; Newstead (M.B.), .375; Clifton (D.S.H.E.), .375; R. Byrne (D.S.H.E.), .363; Ramsey (D.S.H.E.), .363; Ramsey (D.S.H.E.), .357; Winnpenny (D.S.H.E.), .355.

The league standing for the first half of the schedule:

	Won	Lost	P.C.
Grinnells	5	1	.833
Dom. Radiator	4	2	.666
xMorrison Brass ...	1	4	.200
xD.S.H.E.	1	4	.200

x—Played one tie game.

Sanitary Engineer

A Step Forward in Efficiency

VICTORY RADIATORS

An improvement in engineering and design.

The Victory Radiator is made with two flat, hollow castings, one for the top and the other for the bottom, with tubes inserted in them. One tube is within the other. In this way, water is caused to circulate through the

headers and between the two tubes. This is a series of double tubes; 8 in the smallest castings, up to 54 in the larger ones. This adds the outside surface radiation of the larger tube, and the inside surface radiation of the smaller tube, to that of the top and bottom headers. So Victory Radiators

SAVE ON

Coal, Shipping and Handling Weight, Cost of Installation and Fittings. Further investigation proves them still more efficient. Steel tubing is thinner and gives better radiation. The air circulation is better. The radiators occupy a minimum of space. They are artistic in appearance.

Since there is only $\frac{1}{8}$ as much water in Victory Radiators, it is quickly heated, and stimulates circulation of the water, making radiators hotter and radiating more heat. A smaller furnace can be used to heat the lesser quantity of water. Write for the remainder of the advantages.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Heat by the Shortest Route

The "PILOT" Superior Pipeless Furnace

To the Dealer :-

The Pilot Superior is the leading Pipeless furnace on the market. It was conceived before other pipeless furnaces were made in Canada and our pioneer experience in this field enables us to place in the hands of the trade the most efficient and economical heating apparatus built.

Note the red arrows shown in the illustration which describe the features of this furnace. Dealers are making handsome profits handling the Pilot Superior. It is easy to sell. One installation sells another and good businesses are being built through them all over Canada.

Quality

is an essential in the upbuilding of any business with permanence. Quality is one of the three legs of the Tripod of Business. This Tripod is as necessary to the stable support of business as is the Famous Tripod of Life—the heart, lungs and brain—to human existence.

Efficiency

represents the second leg of the business tripod. Without efficiency there can be no success, because efficiency signifies a satisfactory relation between the result obtained and the effort invested. We burn so much coal to obtain a certain horsepower in steam. We invest a given sum of money in business; if the business is efficient it produces a satisfactory return.

Service

is the positive complement of Quality and Efficiency, without which they could no more stand alone than could a three-legged stool with one leg lacking. The amount of our service to society at large is practically the measure of our receipts from the world—especially in business.

In Which Booster Binx Tells You How to Weigh Smoke

Of course, you remember our dear friend, Sir Walter Raleigh, and how he threw his cloak down to be walked on every time Queen Elizabeth forgot her rubbers.

It seems, when he wasn't doing the keep-your-feet-dry-Lizzie-stunt, he was forever doing something that everybody said couldn't be done. One Wednesday evening just before prayer meeting, he declared he could weigh smoke. Of course such a statement kicked up a lot of dust, and one old fellow even went so far as to say that Walt's spark plugs were not working.

However, Sir Walter took a pair of scales and carefully weighed out an ounce of tobacco,

which he smoked with deliberation and in high glee. After which he as painstakingly weighed the ashes. Subtracting what the ashes weighed from the weight of the tobacco, he sure enough had the weight of the smoke.

Well sir, taking a leaf from Sir Walter's book we did about the same thing with the Burnham and the coal it burned.

Only we went a step further and also measured the amount of heat. The figures are very, very discouraging to the coal men; but mighty cheering to pocketbooks that have been punched flat by profiteers.

Next time we meet my talk is going to be Pot Luck, changed to a Lucky Pot.

The Heart of ANTHES

An Opportunity

This essential for rural homes is a worthy work. The need for Sewage Disposal Plants is too well-known to require comment. The need, in fact, is so great that you can install numbers of them by merely making farmers and other rural dwellers, understand how little is really necessary to give them all the comforts of a city home. A well appointed bathroom and convenient sinks, laundry tubs, etc. for the kitchen are at once made possible for the home owner. You have opened up a number of profitable opportunities for installations for yourself as soon as you instal an Anthes Syphon.

Anthes Syphons are the heart of disposal systems. Made in one piece durable, and operating on natural laws, Anthes gives satisfactory results that reflect credit on every sanitary engineer who installs them, and prove it by permanently increased business.

Retarding Progress of Plumbing Industry

**Easy at Present to Enter the Field—Trade Sold Promiscuously—Credit
Freely Extended—Business Standards Need to be Improved.**

IN general, the public is still unappreciative of the service rendered by Sanitary Engineers, and while much of the ridicule heard greatly exaggerates the facts, there are many operators in the field whose ability is not up to the standard. The public, however, are to blame in many instances for the character of work done, as invariably when anything happens to a house the owner gives the job to the man he thinks will do the work for the smallest sum and the result is that too often trouble occurs again sooner than it would if a first class man had been employed in the beginning.

It is quite evident, nevertheless, that in these days lowest tenders seem to count for all. Character of work and ability to complete a job that will stand up and bring favorable comment later seem to receive little consideration at the time the job is let in many instances.

Unfair Competition

A member of the craft stated to SANITARY ENGINEER a few days ago that it was almost impossible to do good work and compete on price with the "shoe String" plumber. It is very easy at the present time to enter the plumbing field. In many cases the journeyman that gets out of a job simply goes into business for himself. He may be a good workman and have the necessary capital and in such instances all well and good, but in many cases he is short of ability and not financially responsible. Situations of this kind are preventing good sanitary engineers, with business ability, from entering the field and members of the craft in their respective communities should do everything possible to prevent inefficient plumbers from obtaining licenses.

"Collections Must Improve"

Difficulty in securing collection of accounts has seriously inconvenienced many sanitary engineers in the past. There is no reason why sanitary engineers should be money lenders to the public and the credit situation will continue to remain difficult until ways and means are devised that will loosen the purse strings of the public more quickly than has been customary.

Credit

Wholesalers and manufacturers can do much to improve the credit situation by impressing upon the trade the necessity of prompt payments. In many instances wholesalers and manufacturers are too lax in the direction, and the result is reflecting upon the status of the industry. It is a fact that promiscuous extending of credit allows many inefficient operators to drag along and continue to tender for business at figures on which a capable operator doing good work cannot make a fair profit. It seems reasonable that an operator with a well equipped place of business, financially responsible and with a favorable reputation for doing high class work should be protected against unfair competition which retards industry and encourages abuse from the public. If the standard of the industry is to be raised on a par with other profit yielding enterprises business must be secured and handled in a way that will make it more profitable for the operator than it is to-day. More exact methods of keeping track of costs are necessary and new methods of getting business must be pursued.

Bigger Business

There are great opportunities for bigger business in the plumbing field to-day. While it may be said that many lines are oversold, no one can say that the public is oversold with modern plumbing. Thousands of people need sanitary conveniences more than they do other things and a bigger demand can be stimulated for modern sanitary conveniences as in the case of other commodities if Sanitary Engineers will follow the same aggressive selling methods.

Time has come when, if the plumbing business is to prosper as other lines have, operators must go out and show the public why they should have modern sanitary conveniences and influence them to buy the kind of plumbing they should have, not just something that will substitute for the modern and correct thing.

The foregoing points touch briefly upon pertinent needs to improve the status of the plumbing industry. It is urged that Sanitary Engineers, wholesalers, manufacturers and all interested in raising the efficiency of the industry will immediately take concerted action to remove the obstacles that are impeding the progress of the trade.

New Quebec Builders' Association Formed

The Association of Building Industries for the Province of Quebec — Montréal and Quebec Plumbers Elected to Executive

Montreal.—For the purpose of linking up the building industry through the Province of Quebec, and the guarding of the Legislative aspect for same, the Quebec Builders inaugurated their new organization which will be known as the Association of Building Industries for the Province of Quebec at a conference held this week in the Montreal Builders' Exchange.

While the Montreal and Quebec Cities Exchanges have always taken care of their interests, it has been felt that there was need for lining up the smaller towns and obtaining their co-operation whenever the general interests of the industry may come before the Provincial Legislature.

At yesterday's meetings, K. D. Church, president of the Montreal Builders' Exchange, was appointed chairman of the gathering; D. K. Trotter, secretary, was appointed secretary, while those also present were: A. T. Alexander and J. T. Walsh, of the Board of Directors, Montreal Builders' Exchange; E. G. Brous-

seau, president, E. A. Galarneau, vice-president and J. P. Lemieux, director of the Quebec Exchange, and J. T. St. Pierre represented the French Building Contractors of the City of Montreal.

After extending a welcome to the Delegates, Mr. Church outlined the purposes for which the meeting had been convened, showing the need which exists for such an organization, and making special reference to the Mechanics' lien law passed in 1916, the Scaffolding Act of last year, and the Bill which was passed dealing with the heating of public buildings for the Province of Quebec. With regard to these two latter he was not aware that any Builders' organization had been consulted in the matter, the reason probably being that there was no body in existence that could adequately express the views of the various building interests of the Province. The sole object of organizing this new Association at the present time was that it might serve as an official mouthpiece for the construction interests of the

whole Province, so that it might be in a position to give the Provincial Government, and especially the Department of Public Works and Labors, the benefit of their experience.

Appointment of Officers

The following officers of the new Association were elected as follows: K. D. Church, Montreal, president; E. D. Brousseau, Quebec, first vice-president; A. Gratton, Montreal, second vice-president; D. K. Trotter, Montreal and J. P. Lemieux, Quebec, were appointed joint secretaries.

Constitution and by-laws for the new Association were then considered and draft thereof was approved, J. P. Walsh and D. K. Trotter being appointed as a committee to incorporate amendments for the meeting. It was agreed that before being finally approved, the revised draft should be submitted to the Builders' Exchanges of Montreal and Quebec.

The first annual meeting of the Association was decided to be held in Quebec City, the date to be fixed in relation to the opening of the Legislature.

Before the meeting came to a close the hope was expressed that the new Association would have the general effect of stimulating and developing the activities of other branches outside of Montreal and Quebec cities.

CRITICIZES MASTER PLUMBERS' ACTION

J. Bruce Says Most Workmen Brought to Ottawa Under False Pretences—Should Base Fair Wage Clause on Conditions.

J. Bruce, an international officer of the Plumbers' and Steamfitters' Union, addressed the delegates to a meeting in Ottawa of the Allied Trades and Labor Council upon the necessity of strong organization, and the prevailing strike amongst the local members of the craft.

He strongly criticized some of the master plumbers for their action in endeavoring to break the strike by importing into the city members of the National Union from the province of Quebec, and said that although the strike had been in effect eleven weeks, the plumbers' union had not experienced a single desertion from its ranks.

Mr. Bruce stated that most of the National workmen had been brought to Ottawa under false pretenses, had become aware of the fact, and ninety-five per cent. had gone back, so, that the open shop policy of the masters had not so far proved effective. According to his figures, 28 shops in the city have agreed to the wages and conditions demanded by the union, and only ten are holding out for the open shop and reduced wages. He said the plumbers in Ottawa were asking for increases because the rate paid here was ten cents per hour less than the average rates in other cities in Canada, with the possible exception of a few in the west. Then too, the cost of living in Ottawa was higher than anywhere else.

Mr. Bruce criticized the city council and government for refusing to base the fair wage clause upon prevailing conditions, as had been done in the past, and which, he said, could be supported by sworn figures. He pointed out that it was evident that from present conditions that the worker was not responsible for the stagnation in business, as had been claimed by the employers, and voiced the warning that unless work was found for the workless, and a decent standard of living was provided for them, the alternative was revolution.

CATALOGS AND BOOKLETS

"NEW IDEA" PIPELESS FURNACE

One of the recent folders issued by the Hamilton Stove and Heater Company, specially illustrates the "New Idea" pipeless furnace. As the name indicates the feature of this heating apparatus is the fact that no pipes are required, and stacks, cold air returns and similar installations are eliminated. The duplex grate, and the heavy flanged one-piece cast iron fire-pot, are also other points emphasised by the manufacturers. The folder is adequately illustrated showing the special designs and the manner in which the "New Idea" furnace is intended to cover the heating problem of any small building, either store, home or other structure.

COURTRIGHT PASSES

WATERWORKS BY-LAW

Courtright, Ont.—The Municipal Council have passed the necessary by-law for the installation of a water system. The contract was let to the Webster Construction Company, of London. The Western Salt Co., Limited, of this village, will supply the water. Most of the pipe is on the ground and work commenced. This by-law has been hanging fire for a number of years, but finally was put through by the reeve and three councillors.

BROCKVILLE MAY PUMP BY GASOLINE ENGINE

Brockville, Ont.—A proposal endorsed by engineering authorities to reorganize the pumping equipment of the Public Utilities Commission at a cost of approximately \$55,000 and which would result in an estimated annual saving of approximately \$15,000 through lessened coal consumption was brought before the members of the City Council and of other public bodies at a joint meeting of the City Council and other civic bodies.

Engineers of the Hydro-Electric Commission have endorsed the gasoline engine principle and the abandonment of the steam plant which has been in use many years. The matter will be given further consideration before a recommendation is made to the Council by the Public Utilities Commission.

Opening Up New Sources of Business

Plans for Rural Water Supply and Extension of Electric Power Into Rural Districts In Canada Offers Big Field of Potential Business for Plumbers and Heating Engineers — Long List of Farm Requirements When Water System Is Installed.

A display of modern plumbing fixtures arranged by a plumber located near a rural district. This display, a few years ago, would have seemed useless unless appealing to the most up-to-date city trade, but progress has changed things and today the farmer is just as much interested in such high class fixtures as is the city dweller, providing he has the necessary facilities to make use of them. With the extension of water systems and electricity into the farming communities the plumbing and heating engineer may well give some attention to the rural possibilities of his own district.

THERE are some important developments taking place in Canada now which offer splendid prospects of future business for the plumbing trade. In view of the fact that the dearth of new building in recent years has increased the necessity of the plumber looking to new fields for business, it is encouraging to note these developments which will materially increase the field of potential business.

In this issue appears a report of the progress being made in connection with a water supply system in Saskatchewan designed to supply some Saskatchewan cities and provision is also being made for the supplying of water to the dwellers of the rural districts along the way. A similar plan was followed by the municipalities along the line of the Greater Winnipeg Water District. Coming to Eastern Canada we find plans under way for the extension of electric power into the rural districts throughout Ontario.

This is being done on a co-operative basis, the farmers in some cases helping with the work of erecting transmission lines along the various concessions.

These developments are but a few of many contemplated in all parts of Canada and which are designed to raise the living standard of the rural dwellers. With a good supply of clean water under pressure water systems can be installed throughout the districts mentioned and city facilities enjoyed. The extension of electric power to the rural districts not only gives added encouragement to the farmer to have all city conveniences but it paves the way for the installation of plumbing conveniences as it facilitates the pumping of water on the farms.

Here therefore is a big field of prospective trade opening up for the plumber and heating engineer.

The question is frequently raised: Can the farm home be made as comfortable as the home in the city and more pleasant on account of the out-door life? It certainly can. The basis of comfort in the city rests primarily on two things, the city water works and the city electric company, which supply electricity and water in such a way that there is practically no labor involved in having them, and the cost is very reasonable. The only difference between the farm and the city is that the farmer must have his individual plant in each case, instead of being able to combine and co-operate to share the cost. However, on the basis of the results secured, the cost of operating individual plants to supply water and electricity is not at all out of the question. Progressive manufacturers and dealers have realized more this year than ever how absolutely

untouched is the field of supplying city conveniences to the country homes, and this season is particularly opportune because the farmers are able to invest the money.

Sell the Farmer City Conveniences

There is no need of kow-towing to the farmers, or flattering them unnecessarily, or calling them the "Kings of the Earth"; it is merely a matter of common sense for them to get these things. You would not think of renting a house in the city that did not have running water and electricity in it; or if you did you would have to get a very much reduced rent. Why, therefore, expect farmers to live under the same conditions? For farmers are white men, and many of them are relations of ours, who think and act just about the same way we do. Therefore the progressive dealers who are going to get the good business of the future, business on which there is a margin of real profit, are the ones who sell electric lighting plants and water systems.

Paves Way for Future Business

When the plants are in, other sales follow as a natural matter of course. What we are interested in as plumbers and heating men is water systems, for the water works game is very closely allied with the plumbing. When you sell a water system to a farmer it will be a money maker for him, for which reason it will be the foundation of a large number of future sales. After he has the water system, and finds out how convenient running water is he will, of course, want a modern sink in his kitchen to help Mrs. Farmer keep the dishes clean and the kitchen in order. Likewise he will want a heater to supply hot water all over the house, for hot water has also become an essential of modern up-to-date housekeeping. Water heating systems are available which are not expensive to operate. If operated correctly they will supply all the hot water required in a farm home.

Laundry, Bath, Etc., Sure to Follow

With plenty of running water, and hot water in the bargain, a modern up-to-date laundry is a mighty fine thing for the farm home, which makes possible the sale of a complete set of laundry tubs as well as a cellar drain. The next thing is a complete bath room, which would require at least the three pieces, the tub, closet and lavatory, as well as the cabinet and a few accessory fittings. For the farm home especially, the shower bath is a mighty valuable thing, and once the farmer sees the good it will do him he will feel inclined to buy one. It is even possible to interest him in buying the same things for his help. As a matter of fact, the quarters of the help require the attention of the farmer, for his help appreciates the comforts as much as he does. It is getting to be practically impossible to keep help un-

less they are taken care of the way people like to be taken care of in the city.

Hot Water Heating Possible

When a man has plenty of water under pressure in his home he finds it much more convenient to handle a hot water heating plant, and with the plant goes the heat regulator. All these items make a very good volume of business when they are lined up. And these apply only to the comfort of the house.

Pays Liberal Dividends

As for the money making possibilities on the farm itself, they are almost unlimited, for a splendid supply of running water pays liberal dividends to any farmer who has a truck garden or any kind of stock. It is well known that truck farming pays a big dividend according to the acreage and many farmers specialize on this one type of farming. For these who do so, a system of overhead irrigation has been devised, which is also a big money-maker, as it guarantees rain at all times.

Ordinarily we do not think of crop failures from absence of rain, but there are times when rain would be a mighty welcome thing if it only came when it was needed. Therefore, when rain can be supplied at will it means that the crop yields, even though they might not be a failure, would be very greatly increased when the over-head system of irrigation is installed, guaranteeing a plentiful supply of rain at all times. Some farmers have been able to triple and quadruple their ordinary yields under favorable circumstances. In addition the overhead irrigation system protects young plants from frost.

Merely a Good Start

Taking it all in all, selling a water system to a man should be only the start, for when all of the possibilities are added up a good many hundreds of dollars worth of material can be sold, which could not be sold if a man did not have the water system in the first place. Therefore it is a mighty good thing for any plumbing and heating department to put these systems in, because it gives the dealer a chance to go back to the farmer for several years to come, for additional business in that particular line.

Everybody who has made a study of the matter admits that life in the country, as well as the food, is very much better on account of the absence of noise, dust, confusion and high prices. Why then, should the farmer desert such a pleasant home? The simple reason is, we believe, that the life is not pleasant in every respect. Whenever a bunch of city people go camping they put up with the inconvenience of being away from electric lights, bath rooms, hot and cold water at the turn of a tap and other things, because they know that they will not have to stand the inconvenience very long. If home life was as convenient

on the farm as it was in the city, city boys would be interested in the proposition of going into the farming business. At the same time farmers' sons who had the natural inclination to farming would not be so ready to go to the city, take a business course, and get a job keeping books for somebody for \$12.00 a week.

TEST NEW SOUTH

SHORE SEWER PIPES

Montreal—For the purpose of testing a sample of cement piping which is being used in the construction of an intersecting sewer for the joint municipalities of St. Lambert and Longueuil, a party of resident engineers of Montreal went to Longueuil.

The sewer is being erected by the Dominion Lock Joint Co., Ltd., and the Independent Concrete Pipe Co., Ltd., the former being the lessees in Ontario and Quebec for this work under the patents of the Lock Joint Pipe Co., of New Jersey. The sewer, which is expected to be finished this month, will discharge through 400 feet of 48 inch sub-aqueous pipe some distance below Victoria Pier. The test being carried out is to prove the ability of the pipe to withstand the pressure of the load of earth with which it is covered in the trench and also that the joints between pipes will be strong enough. For this purpose piping will be supported and steel billets will be placed on top of it until the weight becomes too heavy to be borne.

SANITARY MEASURES

IN MONTREAL

Montreal—Street cleaning and the removal of garbage is the subject of a report prepared by Aime Cousineau, sanitary engineer of the City Health Department, under the title of "Street Hygiene." In the matter of garbage disposal, Mr. Cousineau points out that the time has almost come when the practice of using such waste to fill up quarries and holes cannot be continued since dwellings, with the spread of the city, are yearly encroaching on the places used as dumping grounds.

In discussing street cleaning, Mr. Cousineau states that from the point of view of sanitation the measures to be taken in the choice of the materials used for the covering or the paving of roadways should have as their principal object to prevent the formation of obnoxious or dangerous dusts, either on account of their mechanical action or on account of the microbes they may spread. Mr. Cousineau recommends the adoption of a standard garbage receptacle made of metal, easy to clean and provided with a cover, which would eliminate many inconveniences from the point of view of hygiene as well as from that of cleanliness.

Pattern For Tapering Spiral Pipe

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

IN making tapering spiral pipes, the spiral is laid out by means of section M and N. The height of spiral A-B is made equal to two diameters of large base. This pitch of spiral can be made anything desired or required. The center line is divided in twice the spaces met with in M or N. By drawing lines as shown we develop the intersection for sketching the spiral lines through. Now to lay out the pattern, it would be the quickest and easiest to treat the fitting as a common taper and develop the spiral in it. This is then cut out, and the pattern is finished. But in this case we develop the spiral by triangulation. Observe the taper 13-13' shows the slope per rise of each

space. By dropping lines to base 1-13 and sweeping them around to the radial lines of N, we develop the plan view of spiral line in elevation. Now by picking these spaces as 2-4-6-8-10, etc., from plan, and set them as 2'-4'-6'-8', etc., along base line 2'-14', and from 13' or half revolution as 2'-2'' as the height, we draw slant line 2'-14' as the girth along spiral edge. By erecting lines, as 4'-4''; 6'-6''; 8'-8'', etc., we have the true girth spaces as 2'-4'-6'-8'', etc. Our next point is to develop the true lengths. The slant line 13-3'-5'-7'-9'-11'-13' represents the true lengths for all solid lines. But the dotted connecting lines as 2-3; 4-5; 6-7; 8-9, etc., from plan are set as

x-4, 6-8-10, etc., in diagram of true lengths. Then by raising a space each time, as 3-5-7-9, etc., we have the true lengths for dotted lines. To set out the pattern draw a line as 2-3 equal to arc 1-3 from N, next pick girth 2'-4'' and from 2 strike arc 4 in pattern. Then pick height 13-3' from elevation and using 3 in pattern as center, cross arc in point 4. Next pick girth space 4'-6'' and set as 4-6 in pattern. Also transfer space 3-5 from N and set arcs in pattern as 5 and 6. Pick true length 4-5 and using 3 in pattern as center, cross arcs in point 6. Then pick line 13-5' and cross arcs at 5. Repeat this process until as much of the pattern is developed as desired. Laps for riveting must be allowed extra.

DECEPTION IN TENDERING

A NOVEL means of deception which has affected heating and ventilating contractors in some sections and which should be watched for carefully, is that of the firm which poses as heating and ventilating engineers and contractors and offers to lay out the heating plans for an architect free of charge in consideration of his using a certain type of apparatus which they manufacture. In the specifications, which are also prepared by them, certain standard devices of national reputation are named, but are never used because the firm is always either the manufacturer or the agent for similar devices of an inferior quality.

Such plans with specifications are given out to numerous heating and ventilating contractors who spend time securing data and prices on which to base estimates. Then when the architect learns how much higher is the cost of the specified apparatus than that manufactured by the designing engineers they proceed to offer their own devices which they make or control, on which they are able, due to inferior quality, to quote a figure very much less than that submitted by the other contractors.

The specifications are carefully framed so that substitution is made easy. For example one such specification reads: "Furnish and install cast-iron or metal made by the company." In this case the outside bidders do not make anything but cast iron articles so they quote on a cast-iron device. As result the designing engineer's bid on a sheet-metal device is easily put over.

On being asked why it did not specify its own materials in the first place, the concern making the layout replied that it would not do on ethical grounds and would not look well to the architect. In the event that the architect insists on the use of standard material the next move of the designing engineers is to go to the owner direct and represent to him that they have shown the architect where they could effect a substantial saving. This argument generally wins the contract. Such practices are only being followed in very limited number of cases but they are being done at the expense of bona fide manufacturers, contractors, architects and owners.

CONFLICTING OPINION

THERE are two distinctive reports, appearing this issue, which give evidence of conflicting opinion among plumbing and heating engineers in regard to the wage question and its effect upon a resumption of building activity through ultimate lowering of costs. Engineers in one Western city have accepted wage reductions on an agreement from the master plumbers which provides for a reduction in price to the consumer of twice the amount of the reduction to the men. On the other hand plumbers in an eastern city have declined to accept a decrease of ten cents an hour suggested for all the trades interested in building as result of a recent conference held to discuss ways and means of stimulating building activity.

There may be much to be said on both sides of the question, and at the conference the workmen raised many points such as the fact that previous cuts in costs had not stimulated activity, that the financial interests were holding out for exorbitant rates on money loaned for building, that building materials had not declined as much as they should and that contractors, building supply men and manufacturers were not taking any decreased remuneration from their business while expecting the workman to do so.

There is a big problem to be met, and it is quite evident that the old suspicion entertained by the workmen of other branches of their trade still exists to a large degree. At the conference the manufacturers and supply men laid their cards on the table and asked for the cooperation of labor. The Minister of Labor quoted figures backing the statement of manufacturers and supply men that their prices had been much decreased in recent months whereas labor costs have practically remained stationary. On the other hand labor contends that any reduction would lower their standard of living. The latter effect is not to be desired, but it is plainly evident that all branches of the trade will have to get together in a better spirit of cooperation than has heretofore been evident, and everyone will have to bear their fair share of the shaking out process. The plan followed by certain master plumbers' organizations of setting a production schedule has increased production and thereby been a factor in lowering plumbing costs. An extension of this plan coupled with the readjustment of wages to declines in the cost of living will result in lower costs without any lowering of the standard of living. It is then up to the supply men and contractors to forsake any agreements which have unduly boosted prices and allow of estimates being made which will be favorable enough to encourage construction.

BRIEFS

Bathtubs have been placed on the list of luxuries for special taxation in Germany, it being held that those rich enough to have bathtubs are able to pay more taxes. Reports like this give some encouragement to Canadians who have thought we were over-taxed. Sanitation is a thing to be encouraged not retarded by taxation.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

CONTRACTS AWARDED

Moncton, N.B.—Thos. Johnston Co. Ltd. have been awarded contract for vapor heating and installation of two 70 h.p. Robb boilers at Harkins Academy, Newcastle, N. B. Contract price about \$8000.

Also contract for Trane system of vapor heating in office and store building for L. T. Joudry, Campbellton, N.B., contract price about \$4000.

Also contract for plumbing and vapor heating in Mother Home, St. Martha's Convent, Antigonish, N. S. Contract price about \$16,000.

WESTERN ONTARIO NEWS

H. G. Huht, 633 Emery street, London, Ont., wants prices on heating, plumbing and electrical work in connection with new \$4000 residence.

Allan King, 566 English street, London, wants prices on hot air heating, plumbing and electrical work for new \$4000 residence.

William Vickers, R. R. No. 3, Wiarton, Ont., wants prices on heating and plumbing in connection with new \$5000 dwelling to be erected.

Hugh Whaley, Leamington, Ont., wants prices on heating, plumbing and electrical work in connection with new \$5000 residence.

In connection with the new sewage construction work at London, Ont., the council has awarded contract for electrically operated pumps to the Northern Foundry and Machine Co., of Sault Ste. Marie, and the general contract for force main to the J. H. McKnight Construction Co., of Toronto. The Francis Hankin Co., of Montreal, was awarded contract for Venturi meter.

The Erie Amusement Co., B. F. Hon-singer, St. Thomas, Ont., president, plans to erect a 200 room hotel at Port Stanley. Plans will be prepared.

The ratepayers of Tilbury, Ont., have carried a by-law to raise \$30,000 for waterworks extensions and plan in the spring to proceed with new sewers.

Plans are being prepared at Goderich, Ont., for a new chlorination plant and filtration plant to cost \$70,000.

WATERWORKS, SEWERAGE, ETC.
Point Grey, B.C.—Municipality of Point Grey will construct sewers at cost of \$75,000.

Brandon, Man.—Fowler & Young, Winnipeg, have general contract for construction of watermain costing \$22,-270 for Prov. Gov't., Dept. Pub. Works.

East Kildonan, Man.—Municipality awarded following contracts: Sewers, at \$23,000, Thos. Jackson & Sons; sewers and watermain, at \$20,000, Eng. Battershill; cast iron pipe, at \$12,000, Canada Iron Foundries.

CONTRACTS AWARDED

Hamilton, Ont.—Plumbing and heating contracts for alterations to school costing \$12,000 for Separate School Bd., are awarded Stanton & Mitchell, 173 York St.

Toronto—Additional contracts for erection of theatre costing \$150,000 for Standard Theatres, Ltd., are: heating, W. H. Mies, 188 Dupont St.; roofing and sheet metal, Toronto Sheet Metal works, 36 D'Arcy St.

Hamilton, Ont.—Plumbing contracts for residence costing \$15,000 for Frank Goldblatt, 75 Robert St., are awarded to Bloom & Britton, 121 James St. S.

Montreal—Additional contracts for school costing \$250,000 for R. C. School Bd., Durocher St., are: plumbing and heating, T. O'Connell, 183 Ottawa St.

Sydney, N.S.—Plumbing and heating contracts for store and apts. costing \$10,000 for Hudson & McEachren, Prince St., are awarded to J. W. Rudderham, Victoria Rd.

Moose Jaw, Sask.—General contract at \$21,947 for erection of school for Pub. School Bd. is awarded to P. W. Graham, New Union Station, Moose Jaw. Electrical, plumbing and heating contracts are awarded to Alexander & Baird, 43 Fairford East.

Toronto—Additional contracts for three stores and apts. costing \$67,000 for M. L. Coldoff, 415 Markham St.; are: plumbing, Chas. Davies, 51 Sellers Ave.; heating, Peerless Furnace Co., 548 College St.

Winnipeg—Plumbing and heating contracts for residence costing \$15,000 for J. W. Parker, 473 Beresford Ave., are awarded to Keller & Whitfield.

Toronto—Plumbing and heating contracts for residence costing \$15,000 for G. F. Cudmore, 5 Oakmount Rd., are awarded to A. J. Wise Heating & Plumbing Co. Ltd., Vaughan Rd.

Toronto—Plumbing contract for two duplex residences for Paul Von Szelski, 6 Indian Valley Cres., is awarded to Howard Plumbing & Hardware Co., 21 Howland Ave.

Ottawa—General contract for alterations to stores for bank costing \$60,000 for Bank of Toronto is awarded to A. Garvoek, Regent Theatre Bldg. Additional contracts are: heating and plumbing, W. G. Edge Ltd., Banfl St.

Ottawa—Contracts for plumbing and heating for garage costing \$10,000 for Col. P. Edwards, Stewart St., are awarded to McKinley & Northwood, 56 Rideau St.

Toronto—Plumbing contract at \$11,-889 for Fern Ave. School for Bd. of Education is awarded to Purdy Mansell Ltd., 63 Albert St.

Ottawa, Ont.—Plumbing and heating contracts for alterations to residence costing \$10,000 for J. B. Duford, 54 Rideau St., are awarded to McKinley & Northwood, 56 Rideau St.

Toronto—Heating and plumbing contracts at \$28,690 for Dufferin School are awarded to Purdy Mansell Ltd., 63 Albert St.

Montreal—Plumbing contracts for residence costing \$20,000 for L. Wisintainer, 2141 Jeanne Mance, are awarded Z. Cusson, 1256 St. Lawrence Blvd.

Minto, Man.—C. W. Hall, Brandon, Man., has general contract erecting Memorial Hall costing \$13,000 for Town. Plumbing and heating contracts are awarded to Heating & Plumbing Co., Ltd., Brandon.

Montreal, Que.—Plumbing and heating contracts for pathological bldg. costing \$460,000 for McGill University, Sherbrooke St. W., are awarded to W. G. Edge Ltd., 116 Craig St. W.

APPRECIATES CONVENTION REPORT IN FRENCH

The following letter has been received by Sanitary Engineer from H. Lemieux, Secretary of the Builders' Exchange, Quebec:—

Sanitary Engineer,
Toronto.

We have received copies of July 1st issue of Sanitary Engineer in which you published the formation of the new Quebec Provincial Society and the address of Mr. E. G. Brousseau in French.

We must thank you very much for same and assure you that the report having been published in French has been greatly appreciated by everyone concerned.

(Signed) H. LEMIEUX,

Secretary Builders' Exchange,
Quebec.

PORT HOPE

The Smile On Your Wife's Face

It is a happy thought to any man that while he is busy in store, office or factory the little woman at home is able to perform her household duties without that unnecessary labor which robs so many others of their health, their looks and their cheerfulness.

A combination porcelain enameled sink and laundry tray of the best type—such as a "Port Hope"—helps largely to ensure such satisfactory conditions.

News From Here and There---Continued From Page 19

WESTERN ONTARIO NEWS

Dr. Lloyd Moffatt, Dundas and Waterloo Sts., London, Ont., wants prices on hot air heating, complete modern plumbing and individual electric lighting system for \$15,000 country home to be built at Varna, Ont.

A. E. Shortt, 1200 York St., London, Ont., wants prices on hot air heating, plumbing and electrical work for new \$3500 dwelling.

Williams & Roberts, Tecumseh Ave., London, Ont., have been awarded contract for heating and plumbing for new \$9000 residence for J. B. Hay.

The council at Wheatley, Ont. plans to submit a by-law to the ratepayers shortly to raise \$35,000 for a new continuation school.

Plans are to be prepared at Wallaceburg, Ont. for a new high school to cost \$50,000. Rev. M. C. Tait secretary of school board.

Noble and Rich, of London, Ont. were awarded contract for the heating and plumbing in connection with new \$65,000 hospital at Chatham, Ont.

The ratepayers of Tilbury, Ont. have passed a by-law to provide \$30,000 for extensions to the watermains. Plans prepared by Town engineer Heidler will be presented to the Provincial Board of Health for approval and tenders will be called early in August.

The Wright Teale Plumbing Co., of London have been awarded plumbing and heating work in connection with new \$9000 residence being erected for John Putherbough.

BUSINESS CHANGES

Amherstburg, Ont.—Raymond Ryan has purchased the plumbing and heating business formerly conducted by Ryan & Co.

STANDARDIZED PLUMBING WILL HELP SOLVE

HOUSING PROBLEM

Fireproof homes, built to last, and standardization of plumbing supplies and builders' hardware were given as partial solutions of the housing problem by Dr. J. W. Stratton, director of the National Bureau of Standards at Washington, in an address to the New York Building Congress. Dr. Stratton said the greatest waste of housing was caused by fire, and this had an unquestionable effect on the shortage of homes.

"Recently I returned from a trip abroad, where I inspected the homes being erected there and which have been erected in the past for the laboring classes," he said. "Those houses are of fireproof construction and are built to last. The construction which has been going on in this country has been almost entirely of wood. Such houses will disappear in a few years."

The New York Building Congress, a branch of the National Building Congress, has been in process of formation for several months. Engineers, architects, builders and plumbers are its members.

WATERWORKS PLAN

RECOMMENDED

Islington, Ont.—The much debated Long Branch waterworks scheme furnished material for another heated discussion before the Etobicoke Township Council. After a lively two-hour period, the Council passed a resolution recommending that plans and specifications be prepared and laid before the Provincial Board of Health. This represents the first step in the undertaking. The Board of Health has to be approached for sanction to put an intake pipe out into the lake.

PRAISES WOODSTOCK

DISPOSAL PLANT

Woodstock, Ont.—Provincial Engineer Dallyn, of the Provincial Board of Health, of Toronto, met members of the city council and the Board of Health. The meeting was called to deal with the solution of the nuisance which has been created through the emanation from the sewage disposal plant, of most offensive odors, during the past few weeks. A lengthy discussion took place, in which not only the sewage disposal plant, but also the city garbage dumps, came in for much consideration. Engineer Dallyn addressed the gathering at some length concerning the sewage disposal plant. Nothing of a definite nature was done, since the engineer assured the meeting that his inspection of the plant caused him to believe that all difficulties, and conditions causing the stench which has been so strenuously objected to, are now practically at an end. He said that the plant is a good one and quite capable of handling the city's sewage satisfactorily. The location is satisfactory, and there is no reason why the repairs to the plant having been made, there should be any further trouble of a serious nature.

SASKATOON PLUMBERS'

STRIKE IS OFF

Saskatoon, Sask.—Officials of Local 264 of the United Association of Plumbers and Steam-Fitters have affixed their signatures to the agreement submitted by the Saskatoon Society of Sanitary and Heating Engineers on May 1. This action officially put an end to the strike that has existed since the agreement was presented to the workers and rejected. The relations between the proprietors and men in Saskatoon have for years been unusually amicable and pleasant, and the entente cordiale has not been particularly disturbed during the period of the strike.

The cleavage originated in the cities south, and the members of the Saskatoon local went out on instructions from their provincial body. The employers in this city did not, therefore, consider it as a personal difference, and no bitterness was engendered.

They were no less firm, however, in insisting that their trade must make its

contribution to the general reduction in building costs, and the cost of minor repairs as well. They felt that the men were most ill-advised in going to the length of a strike to uphold higher costs, when the general trend is downward and public sentiment impatient of all attempts to hold up the cost of living.

As evidence of their sincerity in this contention the agreement submitted to the men called for a reduction in price to the consumer of twice the amount of the reduction to the men, bringing down the cost to the householder to \$1.25 per hour.

NEW BENDING SPRING

Messrs. W. H. Cunningham and Hill Limited are putting on the market a new style Bending Spring for which the makers claim many advantages as follows:

It is made from special flat faced oil tempered steel wire which makes possible a smooth bend without wrinkling the pipe.

The edges of the wire are slightly depressed below the surface, so as to facilitate withdrawal from bends.

A simple arrangement is provided by which the spring cannot be stretched so far as to injure it in pulling out.

The Spring is so designed that by slightly twisting the handle to the left it contracts and is easily removed from the pipe.

NEW FIRMS

Indian Head—T. L. Never has commenced the plumbing business.

TORONTO PLUMBERS DO NOT WANT LOWER SCALE

Toronto—Plumbers and steamfitters refused at their meeting in the Labor Temple to accept a wage reduction of 10 cents an hour, as was proposed recently by a conference of the interests of the building trades industry.

PLAN \$300,000 OF

SANITARY SEWERS

London, Ont.—Plans for a \$300,000 system of sanitary sewers for the London industrial area have just been completed. The sewers will not only serve the Pine Lawn district, it is stated, but will drain the whole Ealing district and London's industrial area.

Debentures will have to be issued for at least \$225,000 of the proposed improvement, and this matter will probably be put to a vote of the people at the next municipal election, which will be held on December 5.

The proposed development, it is pointed out, will be one of the final links in the chain of industrial area development that has been worked towards for some years past.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

ANOTHER heavy table of price recessions on commodities and supplies affecting the plumbing and steamfitting trades again features the current markets. Quotations on Portland cement are lowered, and a readjustment of discounts to a lower level on stoves and furnaces is of particular interest at this season. Corrugated sheet prices have been again reduced on all gauges, while a revision is also announced on seamless boiler tubes. Other price recessions include bath and basin fixtures, and a further change in discounts on standard

and removable disc radiator valves. Bar iron and steel, and black and galvanized sheets are generally reflecting easier tones, and in some cases reduced quotations.

A further revision has been recorded in the discount quotations on standard upright and wall radiators, this change being in the nature of an increase as the price reverts to the level existing before the previous change. Discounts on other radiators and on water and steam boilers are maintained at the recent levels.

MONTREAL

MONTREAL, August 3.—Many important changes are recorded in the markets of plumbing supplies, the feature being in the line of an advance. Radiators, through a change in discounts, are advanced in price, quotations being raised to levels quoted before the decline of July 2nd. The feature decline is on bar irons and steels, most lines are reduced 15 cents, however, common bar iron underwent a second reduction of the same amount and is now 30 cents per 100 pounds cheaper. Reflecting from the easier tone of iron and steel products generally, is the lowering of black and galvanized sheets in some quarters, and an adjustment of boiler tube prices. Solders are quoted one cent lower in bars, wire solder is reduced 1½ cents.

There has been no improvement in conditions prevailing on enamelled ware, distributors of these lines report the market is still very unsettled. This condition also prevails on compression goods and range boilers, although prices on the latter were considered below productive costs when the new list of prices were given a few weeks ago. Ingot metals are reported irregular, tin and copper again showing easier.

New Pipe List Brings Little Improvement

Montreal—

The new list No. 52 issued on wrought iron and steel pipe, makes the fifth change in quotations on piping since the beginning of the year. Each new set of prices has shown a lowering, the tendency of which is not altered at present. Iron and steel products generally have been recorded with an easier tendency in the past few weeks, but there seemed to be an uncertainty as to whether piping would be included in the lower levels quoted. However, this commodity responded sooner than many other lines.

Little, if any improvement, is evidenced in the past few weeks on sales, the movement being very sorting and mostly of the smaller sizes. Following is list No. 52, which are net prices, the usual 5 per cent. now being cancelled:

Price List No. 52

Price Competition Still Exists On Enamelled Ware

Montreal—

There seems to be no improvement in price in the local market conditions on enamelled ware generally. While discounts quoted are 20 and 10 per cent. off list lower prices are given from practically all quarters. One large jobber stated to Sanitary Engineer that conditions in enamelled ware have not been on a stable basis for some time past; but rather than hopes of recovery being realized the situation developed from week to week more unsteady.

A revival of business activity would undoubtedly assist towards a more settled market but it now required closer co-operation of all interested in the trade to return conditions to a sound steady basis. A slight increase in the volume of orders lends a little more hopeful outlook, but sales are still below expectations, in most quarters.

Little Improvement In Closet Sales

Montreal—

Sales in closet outfits and fixtures are still small, but with some improvement noted in the past two weeks. As in the case of enamelled ware in general, market conditions are far from settled, notwithstanding current prices were reduced 10 per cent. last month.

Price Competition Also Touches Compression Goods

Montreal—

Discounts on the different lines of valves and bibbs are nominally unchanged but a rather unsettled feeling is still existent among the jobbing houses, with the result that lower figures are quoted on different lines. Current sales are small and numerous, but leaving the volume of business below expectations.

Sorting Movement of Fittings

Montreal—

No further revision is recorded on the price of the different kinds of pipe fittings since the changes announced on nipples and couplings shown in the new wrought pipe list two weeks ago. There is little or no change to record in the movement of fittings, sales being small and of a general sorting character. Following are present discounts:—

Fittings—

Cast iron fittings.....	20 p.c.
Bushings, cast.....	30 p.c.
Bushings, malleable.....	30 p.c.
Flanges.....	27½ p.c.
Plugs.....	22½ p.c.
Flange Unions.....	20 p.c.
Malleable Unions.....	40 p.c.
Dart Unions, black.....	29 p.c.
“ galvanized.....	8 p.c.
Nipples ½ to 4 in. close and short.....	45 p.c.
“ long.....	55 p.c.
Nipples Running Thread.....	25 p.c.
“ 4½ to 8 in close and short.....	35 p.c.
“ long.....	45 p.c.
Couplings 4in and under.....	25 p.c.
“ 4½in and larger.....	5 p.c.

Pound Goods—

Class B.....	0 20	0 28
Class C.....	0 13	0 20
Add 10 per cent.		

Boiler Prices Unsteady

Montreal—

With the list of prices on all sizes of range boilers unchanged, much the same condition prevails on these as on enamelled ware in plumbing supplies. A marked reduction was recorded some weeks ago, when it was anticipated a steady market would follow, as the new prices were considered very low. Such has not been the case, however, and at present a quotation of \$7.50, and even lower, is given on the 30 gallon standard boiler, this being the prominent selling size. Sales are fair, being small but of fair volume.

Satisfactory Movement of Eave-trough

Prices and discounts remain unchanged in eave-trough, conductor pipe and elbows, with sales continuing in good volume although a slight falling off is not-

ed from the movement in the earlier weeks of this month and in June. This is said to be a reflection from the farming trade who are now busily engaged, and a resumption of activity is expected in the fall months.

Adjustment in Boiler Tube Prices

Montreal—

Boiler tube quotations are now adjusted, with lower levels on all sizes of the seamless tubes, while on the lapweld the prices are slightly advanced with the exception of the 3 inch. This size being also reduced. The trend of boiler tube prices has been downward, in line with other iron and steel products, and the reductions now recorded follow the lowering of other lines in the past two weeks. New prices are as follows:—

Boiler Tubes—	Seamless	Lapweld
1 inch.....	25.00	
1¼ inch.....	26.00	
1½ inch.....	25.00	
1¾ inch.....	28.25	27.00
2 inch.....	27.80	23.00
2¼ inch.....	31.35	26.00
2½ inch.....	39.65	28.00
3 inch.....	46.80	33.00
3½ inch.....	60.35	41.00
4 inch.....	81.00	51.75

Soil Pipe Prices Hold

Montreal—

The volume of sales on soil pipe and fittings is recorded as seasonable and quite satisfactory, orders being small but numerous. No change is made in quotations, although many other lines of iron and steel have responded with lower prices to the general easier tone. Following are unchanged discounts:—

Soil Pipe— (Medium and Extra heavy)
2, 3 15 p.c.; 5 and 6-inch, 20 per cent
8 inch, add 5 p.c. to list

discount
4-inch 25 p.c discount.

Fittings—

2 to 6 inch fittings 40 per cent. discount.
8-inch, net.

Bar Iron Reduced to \$3.40 Base

Montreal—

Following the announcement of reduced prices from the Southern mills, iron and steel bars are now quoted at lower levels. Reports from the Pittsburgh mills were to the effect that the base price on plates, structural shapes and bars would be \$2.00 a ton less bringing the new quotation of \$1.90. This was immediately reflected on the local market when practically all lines were lowered approximately 15 cents per 100 pounds.

Common bar iron immediately followed with a further decline of 15 cents bringing present prices down to \$3.40 base. This latter reduction is more in the nature of a local adjustment among some jobbing houses, while others again are maintaining previous level of \$3.55.

Local distributors state that business is quiet with little change from previous weeks. Buyers are not encouraged by the recent unsettled conditions, thus stocks are low, ample for present demand only. Following are the new local quotations:—

Common bar iron, 100 pounds..	3.40
Refined iron.....	5.05
Iron finish machinery steel.....	3.60

Mild Steel....	3.55
Single reeled machinery steel.....	5.50
Band steel.....	3.55
Spring steel.....	6.00
Sleighshoe steel.....	3.55
Tire steel.....	3.75
Toe calk steel.....	4.45
Harrow tooth steel.....	3.70
Mining tooth steel, per lb.....	0 23
Black Diamond tool and cast steel	
per lb.....	0 23

Cotton Waste Prices Unchanged

Montreal—

Quotations on the different qualities of cotton waste and wipers are holding unchanged, with satisfactory sales reported for the present season of the year

Radiator Prices Are Increased

Montreal—

Through a change in discounts, radiation prices are advanced, effective July 25th. Upright radiators are now less 53 per cent for hot water, 54 per cent for steam, and wall radiators are less 50 per cent, a change of three points being made in all three quotations.

This is the second adjustment of prices on radiation this month, on July 5th a reduction having been made. However the new discounts bring prices to the levels formerly quoted. Boilers remain at reduction on above date. Following are discounts now being quoted:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount, 53 per cent for hot water and 54 per cent. for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50 per cent.

Boilers—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 60 per cent off list.

Square or sectional hot water or steam boilers, 15 in., 10 per cent.

For Ontario Government trimmings, 5 per cent.

Square or sectional water boilers 19-in to 36-in., 10 per cent off list.

Square or sectional steam boilers, 19 in. to 36 in., 10 per cent. Ontario Government trimmings, 5 per cent.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Steady Sales of Corrugated Sheets

Montreal—

Although not as fast as in June and the earlier part of this month, the movement of corrugated sheets is fair and steady. Quotations are held unchanged, the following list and discount being maintained:

CORRUGATED SHEETS

	Per 100 sq. ft.
No. 28 gauge	8 50
No. 26 gauge	9 25
No. 24 gauge.....	15 00
No. 22 gauge	16 00
No. 20 gauge	18 00
No. 18 gauge	24 00
Less 7½ p. c	
Lighter than 24 gauge and wider than 27 inch 75c. a square extra.	

Revision in Solder Prices

Montreal—

Quotations on all solders are reduced, bar solders to the extent of one cent per pound, wire solder, one and one-half cents. Metals, chief in the manufacture of this product, show no improvement on the primary markets, and tin is again reported easier after having recovered somewhat last week. Other lines of lead products are holding in price, although weak in tone. Following are local prices: Lead pipe, per 100 lbs. 12 50 Lead waste, per 100 lbs. 13 50 NOTE.—Lead pipe is subject to a discount of 10 p.c.

Lead traps and bends	10 p.c. off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs, sq. ft., lb.	0 10¾
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼c lb. extra and cut sheets to size ¾c lb. extra	
Solder, guaranteed, lb.	0 27
Do., strictly, lb.	0 25
Do., Commercial, lb.	0 22
Do., wiping, lb.	0 23
Do., wire, lb.	0 35
Do., wiping, lb.	0 25¾
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

Narrower Range on Sheets

Montreal—

Galvanized sheets of the U. S. standard, and black sheets are now quoted with a narrower range, prices being lowered with jobbing houses that were formerly maintaining the higher levels. Sheets generally have had an easier tone in the past few weeks, and the reduction of the southern mills has now reflected to an extent on the local market, although some distributors have not yet lowered their prices since the announcement from the U. S. mills.

Business in sheets has now taken on the summer dullness, with little improvement expected until the later summer or early Fall months. Following are local quotations:

Bright Tin Plates—

20x28 X 100 lb. basis.	18.00 box
20x28 IC 112s.	18.50
20x28 IX 112s.	20.50
20x28 IXX 56s.	11.75
20x28 IXXX 56s.	12.50

Terne Plates—

20x28 IC 112s.	17.50 box
------------------------	-----------

Canada Plates—

Dull

18x24 X 52s.	7 25 box
18x24 X 60s.	7.35
18x24 X 75s.	7.45

Irregularity Continues In Ingots

Montreal—

Ingot metals continue somewhat irregular, tin and copper being a little easier again, while others hold at previous quotations. The slight firming that was noted on lead during recent weeks is not so evident this week, although the market on this metal can hardly be stated as weaker.

TIN.—After recovering somewhat last week over the previous declining period of two weeks, tin is again showing easier with local price declining one half cent. The market remains quiet with local price quoted at 34½ cents.

COPPER—This metal continues weak with little export buying, and domestic consumption very light. Local prices are unchanged at 17½ cents for electro, 17¼ for casting, but revisions would not be surprising in the very near future.

SPELTER.—East St. Louis has gained a little now being quoted at \$4.25, but business in this metal is very quiet with ample production to meet the small current demand. Local price unchanged at 7½ cents.

LEAD—The quiet period continues on lead in the U. S. A., with very little

change reported in the London market. The local demand for this metal is better than on other metals and a steady market prevails with quotation remaining at 6¾ cents.

ANTIMONY—There is yet no improvement in this metal and notwithstanding low prices production is still at a fair rate. Chinese is quoted at 7½ cents, high grade English 8½ cents.

ALUMINUM—Aluminum is held at easier quotation of last week with practically no change in market conditions. Local price 30 cents.

TORONTO

TORONTO, August 3.—Numerous price revisions in a downward direction continue to hold the centre of interest in current markets. Another fairly substantial list of changes includes quotations on bath and basin fixtures, Portland cement, stoves and furnaces, corrugated sheets, seamless boiler tubes, also standard and removable disc radiator valves, while a trend toward lower price levels has developed on galvanized sheets.

Radiator discounts are again changed, this being in the nature of an increase in price, the quotation reverting to the level which was in effect before the last revision. The lower list on range boilers still nominally prevails, with the revised prices on closet fixtures holding unchanged. The market on enamelled ware, however, is showing signs of unsettlement, with a readjustment in quotations being looked for in the near future.

Price Declines on Bath and Basin Fixtures

Toronto—

A reduction is announced this week in the quotations on nickel plated brass bath and basin fixtures; the new price on the 3-8 inch size being \$2.10 per pair. This is a reduction of 25 cents on the previous level.

Cement Prices Lowered On Barrels, 25 cents

Toronto—

A reduction in prices on portland cement of 25 cents per barrel now generally prevails. This revision falls into line with the recent efforts of various branches of industry, more or less directly interested in the building trades, to reduce wherever possible the cost of materials used in construction work of all kinds. Previous to the present decline, cement had been selling at very similar levels as prevailed last year, and this desire to bring all building costs and contributory price elements down to the lowest possible minimum, is attributed as primarily responsible for the announcement of lower quotations on cement.

Materials, including roofing and some lines of builders' hardware, have registered declines within recent weeks. Whether further price cuts will follow is considered problematical, as the effort to stimulate demand for building materials and simultaneously reduce the cost for such products, is under certain limitations. The labor cost is a vital factor, but with lower prices on cement now generally in effect, the revision is expected to act as a partial incentive to future construction activity.

Following are the revised local cement quotations:

Cement—

Car load lots, per br.	\$ 4.05
Less car lots, per brl.	5.20
Discount, 10 cents per barrel	
Single bags	\$ 1.45
Extra cartage charge of \$1.50 per load on less than 30 bag lots.	

Readjustment In Discounts On Stoves and Furnaces

Toronto—

Revisions in quotations on stoves and furnaces have now been announced by certain manufacturers. These discount changes approximately amount to reductions varying from 2½ to 10 per cent, as the decision now means a straight even discount rate of 5 per cent applying all the year round. This readjustment is variable on the different lines, the previous average scale of discounts being as follows:—June, 7½ per cent; July, 5 per cent; August, 2½ per cent; and September, normal.

This reduction is calculated to facilitate the principle of buying in smaller quantities, according to current requirements. Orders of this nature now generally prevail, and it is reported that the volume of bookings for stoves and furnaces has been somewhat disappointing. With the change now in effect, it is manifest that a more steady flow of orders should develop through the fall period.

The future degree of business in this direction is generally largely dependent upon the season's crop results. With a normal yield estimated throughout the Western Provinces, the stove trade is expected to be more or less stimulated thereby, but no marked degree of improvement is looked for until after the harvest returns are assured.

Corrugated Now Reduced in Price**Toronto—**

Following the lower quotations recently announced on the heavier gauges of corrugated sheets reductions are now evident in the lighter sizes also. The extent of the decline is practically \$1.00 per one hundred square feet on both the 28 and 26 gauges. Prices on the other sizes are maintained at the new levels effective two weeks ago. This revision completes another new list of quotations on corrugated sheets, and is in line with the recessions noted in the cost of many other classes of building materials. Market conditions for corrugated sheets at the present time, are reported not very strong. Dealers are of the opinion in some quarters that the new levels will have a tendency to stimulate current sales. On the other hand, the disappointing volume of building activity has served to deaden the future outlook. The revised prices are as follows:

Corrugated Sheets—	Per 100 Sq. Ft.
No. 28 gauge	7 55
No. 26 gauge	8 25
No. 24 gauge	11 50
No. 22 gauge	14 00
No. 20 gauge	15 75
No. 18 gauge	21 00
Less 7½ p.c.	

Seamless Boiler Tube Prices Revised Downward**Toronto—**

A lower range of prices has now developed on seamless boiler tubes, the new quotations showing a reduction on the larger sizes from 2 in. up to 4 inch. The smaller sizes remain unchanged in price at the present time. It is pointed out, however, that all prices on seamless boiler tubes are more or less nominal at this time, depending upon the degree of competition evident on local markets. No change is yet recorded in quotations on lapweld tubes, such a condition hinging upon future price announcements from the Pittsburg steel mills. Following are the revised local prices:

BOILER TUBES	Seamless	Lapweld
1 inch	\$26 00	\$
1¼ inch	27 25	
1½ inch	26 25	
1¾ inch	29 75	25 00
2 inch	28 00	22 00
2¼ inch	32 00	25 00
2½ inch	40 00	27 00
3 inch	44 00	35 00
3½ inch	60 00	40 00
4 inch	75 00	50 25

Further Discount Revisions On Radiator Valves**Toronto—**

Discount revisions are again announced on standard and removable disc radiator valves. This is the third price decline noted on these products since June; the discount being changed a few weeks ago to 30 and 42 per cent respectively. Last week these figures were advanced to 50 per cent on both grades, and this has been still further revised to 58 per cent.

Prices on other compression goods remain practically unchanged, with very little improvement in current business having been recorded. Trade is reported just fair, with some prospects of fall building activity reflecting a brighter outlook. Following are the prevailing quotations:

Compression work, standard.....	37%
Fuller work, standard.....	30%
Bath cocks, compression.....	29%
Do., Fuller.....	25%
Flatway stop and waste cocks, standard	40%
Roundway stop and waste cocks, standard	34%
Brass steam cocks, standard.....	10%
Globe, angle and check valves, standard	5%
J. M. T.	20%
J. M. T. C.	25%
J. M. T. Gate Valves.....	15%
Gate or straightway.....	16-10%
Jenkins Globe.....	10-10%
Radiator valves, standard.....	58%
Do., removable disc	58%
Emco J. D. Valves.....	20%
Emco Check Valves.....	20%
Webber Gate Valves.....	20%

Basin Cocks

No. 1 and 1, Fuller pattern.....	30%
Quick opening No. 3633.....	37%

Radiator Discounts Again Changed**Toronto—**

A further revision in radiator discounts has now been announced which reverses quotations to the level which existed previous to the last price change just four weeks ago. The present discount list therefore is in the nature of an increase in the prevailing prices on standard radiators, as the quotation off list on these two items has again been lowered to 55 per cent for water, and 54 per cent for steam. This is a four point recession in the discount rate applying to these products.

Wall radiator figures show a similar change, the discount being again reverted to 50 per cent.

Quotations on Hospital sizes are maintained at previous levels, while the discounts on water and steam boilers, both round and square, are unchanged from the new prices recently announced.

Business is reported as having picked up slightly, but whether this condition has been due to price changes or to an improvement in the markets generally, is hard to determine. It is noticeable that this constitutes the third price revision on radiators during the last two months, and current quotations are said to be fluctuating more or less from day to day. The following, however, are the official nominal quotations:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in. \$1; 32 in. \$1.10; 30 in. \$1.15;
26 in. \$1.20; 23 in. \$1.26; 22 in. \$1.30;
20 in. \$1.36; 18 in. \$1.40; 16 in. \$1.50;
14 in. \$1.55; 13 in. \$1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 53 per cent for water and 54 per cent for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent for water and 49 per cent for steam.

Discounts on 1-column hospital size, water 30 per cent; steam 31 per cent.

Wall Radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 50 per cent.

BOILERS—**Water:**

Round.....	60% off list
Square.....	10% off list

Steam:

Round.....	15% off list
Square.....	5% off list

Revised Closet Prices Hold**Toronto—**

Revised quotations on closet outfits recently announced, still remain unchanged. Whether this condition will hold for any length of time is stated as problematical, due to the general unsettled tone of the markets on this class of supplies.

Readjustment Looked For In**Quotations On Wares****Toronto—**

While there is little new to report as regards the current volume of sales in enamelled ware, yet it is evident that market conditions are showing signs of unsettlement. The prevailing official discount of 20 and 10 per cent has been rendered purely a nominal figure, price shading in jobbing circles have recently developed. This has led to the feeling in the trade that prices are due for a readjustment in the near future. It has been stated that should this develop, a more satisfactory market would again prevail. Following are the present nominal quotations:

Stove Pipe Wire Quotations**Toronto—**

In the new quotations on stove pipe wire, announced in the last issue of Sanitary Engineer, the current reduction of 25 cents was not made. The correct prices, which should have appeared, are as follows:

No. 18 ga.....	\$8.75 per cwt.
No. 19.....	9.25 per cwt.

Soil Pipe Revisions Hold**Toronto—**

Recent revisions in the discounts on soil pipe and fittings correspond to price deflation evident in quotations on most tubular goods. The new price levels are being well maintained, and in some circles a slight increase in the current volume of business is recorded. This is, however, not enough to show whether conditions have improved generally, but the opinion is expressed that if the recent efforts to stimulate activity in the building industry eventually has the desired results in boosting construction during the late summer and fall periods, such a situation would be reflected in the market tone on soil pipe and fittings. Up to the present, however, the degree of home building is not so marked as earlier predictions anticipated. Following are the revised quotations:

Soil Pipe

2 and 3 in., 25%

4 in., 30%

5 and 6 inch, 30%

8 inch, net.

Fittings

2 to 6 inch fittings, 40-10%

8 inch fittings, net list.

Prices On Sheets and Plates Vary To Lower Scale**Toronto—**

While the customary midsummer dullness still covers the market for sheets and plates, there is a larger volume of inquiry noted. Although no marked improvement has been recorded in current business, yet orders have recently been

Put Your Problems Up To Mueller Experts

Mueller makes a variety of Reducing and Regulating Valves for water, steam, gas, air, oil and ammonia—a style to meet every demand—but different conditions require different types of valves.

To insure satisfactory service each valve must be (1) the right kind, (2) the right size, (3) properly assembled (4) properly protected.

Mueller Regulators and Strainers.

meet the requirements—and when installed under our direction, are fully warranted and will give satisfactory service.

The Mueller corps of experts will gladly solve your special problems without charge—and will send you complete information regarding Mueller Reducing and Regulating Valves and Strainers upon request.

Styles A-5040 and A-5010 illustrated above.

H. MUELLER MFG. CO., LIMITED, SARNIA, ONT.

Water, Plumbing and Gas Brass Goods and Tools.

American Factory at Decatur, Ill., U. S. A.

Mueller Metals Co., Pt. Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; Die Castings in White Metal and Aluminum; also Screw Machined Products.

of a much wider range of distribution, with purchases still being small.

Conditions on annealed plates and black sheets remain practically unchanged with the recent price revisions holding fairly well. But in the case of galvanized sheets, a wider range in quotations has now developed, due to aggressive competition among dealers. Prices now vary among the jobbing houses, and in one quarter the lowest figures shown on galvanized sheets in the appended tables, are 25 cents higher on all gauges than the new reduced level quoted by this distributor. The decrease is not included in the attached list, however, as this decline is apparently not yet general. The list shown contains the average prices compiled from a varying range of dealers' quotations.

Reports from the U. S. steel markets indicate the prevalence of similar conditions existing there. Plates and structural shapes are said to have been offered by Belgian and German mill at Atlantic ports, with even duty paid, at prices ranging below the American official list. These European offers, however, have failed to develop any business in U. S. territory, principally because of the addition freight charges to inland points and also due to the fact that American producers and manufacturers are already lowering prices in order to maintain their present markets. This drive for business is said to have brought about deeper cuts in quotations on black and galvanized sheets. Whether the local tendency to shade prices is a direct reflection of the southern temperament in this direction, and whether the majority of local distributors will probably follow suit, is considered as hinging upon the strength or otherwise, of future markets. It is generally felt, however, that buyers of steel, especially plates and sheets, are not particularly well satisfied with the current price situation. Several supposedly authentic predictions have been made to the effect that the recent decreases were not the "final" declines, and purchasers are evidently disposed to look ahead for the "next" reduction. Conditions seem so unsettled, however, that distributors hesitate to express any opinion as regards future prices. It is admitted that those who purchase now, buy because they cannot wait, and in most cases very prompt delivery is assured.

An extra is now charged on galvanized sheets, 10 $\frac{3}{4}$ oz., and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is from 20c to 30c per 100 pounds. Other gauges show no change for different widths.

Prices shown are full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

Lower Levels Still Evident In Range Boiler Prices

Toronto—

In spite of the frequent indications that a new list on range boiler prices would be announced in the very near future, the lower quotations have now remained in effect for practically two months. Last week the change to slightly higher prices on range boilers was reported as imminent, manufacturers claiming that the existing levels contained no margin of profit for them. Dealers and jobbers however, have shown no strong desire to

stock up at these prevailing quotations, and prices are therefore, nominally unchanged as follows:

RANGE BOILERS

	Standard	Ex-heavy
30 gallon	\$ 8 75	\$11 50
35 gallon	9 50	13 80
40 gallon	13 80	16 50
52 gallon	20 40	25 20
66 gallon.....	28 08	34 80
82 gallon	36 00	47 40

Solder Quotations Maintained

Toronto—

Fluctuations recently in evidence on the primary lead and zinc markets are quoted as too erratic and not of sufficient volume to immediately reflect on local prices. Quotations on lead and zinc products, therefore, are being maintained at previous levels. Prices on solder continue to remain at the lower levels recently announced. Little improvement in market conditions has been recorded.

Rumors Of Price War Noted In U. S. Steel Markets

Toronto—

According to reports received from U. S. Steel circles, rumors are now circulating the southern markets that a further reduction in steel prices is likely to be announced by certain Independent mills within the near future. Any such decline, however, is not expected to be as large as the revisions made early in July, but the efforts of various producers in seeking a price stabilization is stated as practically responsible for such anticipations.

Price shading has been general, even with the new official list in effect, and further decreases are dependent upon the extent to which this practice prevails. The Bethlehem Steel Company were the first in the field with an official announcement of lower prices which brought quotations down to levels which had nominally been in effect for several weeks. Similar conditions are now said to again predominate, but whether a new lower base price will be forthcoming is contingent upon the severity of existing competition.

The policy of the U. S. Steel Corporation has been to establish price reductions wherever they are formally announced and thus meet competition. Whether this will be adhered to cannot be ascertained. Similarly, it is said, that no denial of this report is officially obtainable.

The price war among the larger steel makers has become so marked during July that the markets are considered as almost unsettled as they were before the last price announcement. The result of this condition is that the confidence of buying consumers in future prospects has been practically destroyed.

Discounts Hold On Pipe Fittings

Toronto—

The revised quotations effective last week on wrought nipples and couplings, do not seem to have had any noticeable effect on the general market situation. Pipe fittings are still showing a fair movement, and these conditions are expected to govern the trade generally, unless a marked stimulus in building activ-

ity should reflect a spirited demand for these products

Lower Range Noted On Bar Iron and Steel Prices

Toronto—

The current steel situation continues to evoke considerable trade interest. While the recent price revisions still nominally apply on small orders, yet a range in quotations has generally developed through keen competition to secure more satisfactory purchases. Extensive inquiry seems to be the rule, with only a slight percentage improvement in market conditions, indicating that prices are now made more particularly to fit the quantity and conditions of each order. For instance, bar iron base is quoted in certain quarters at \$3.50, which is a 25 cent reduction on the lower figure recorded the week previous. The base price on angle iron also shows a range of 15 cents in the list derived from the various dealers.

It is frankly admitted, however, that future hopes of settlement in steel prices, primarily rests upon the extent of corresponding future revisions in freight rates and in wages. While labor is now showing a tendency to accept readjustments to a lower scale, yet no corresponding decline is evident in transportation charges. And with both the jobbing foundries and manufacturing consumers anticipating further price reductions owing to the present unusual condition of the steel markets, the temptation to meet offers half-way is the result. The opinion has been expressed that recent cuts in steel quotations are not the last that are likely to develop, and the spread of this viewpoint has been partly responsible for the failure of such price lowering to stabilize the markets. Another dealer stated that present price-cutting is in the nature of anticipating to a certain extent, future declines in freight and labor costs, which, if realized, will have a consequent vital bearing upon mill production costs.

What the markets primarily need, however, is a marked increase in demand, and this does not show signs of developing at the present time. The gradual liquidation of stocks, coupled with an improvement in the consumption of steel, are the prescribed tonics. A more optimistic viewpoint is permeating the trade that business might pick-up within the next few months; while one jobber expressed the opinion that the bottom of the steel depression has been reached and the turn to betterment now made.

Available markets for steel, give little support. The machinery business is reported dull, while railroad circles are doubtful prospects. Trading, as at present constituted, is for specifications absolutely required at once. The southern steel centres report that orders for future delivery are noticeably few, and this is taken to mean that consumers have been frightened off by the competition among Independent mills and the Steel Corporation, and many have decided to wait until prices and conditions are more settled. Rumors of such price wars give rise to the predictions that even lower figures are likely to prevail. But it is considered the plan in some producing quarters to reach a level where the various quotations can generally be looked upon as more or less permanent; while

on the other hand, the concessions are said to have occurred in isolated cases where makers must secure some orders to keep their plant organizations intact. Apparently, the entire situation is more a question of consumers requirements, than of prices.

The list shown below therefore, contains the average price, with the range embracing various dealers' quotations:

IRON AND STEEL—

Mild Steel bars, base.....	\$3.50 to \$3.75
Mild steel bands 3-16" base	4.00 to 4.25
Bar iron, base.....	3.50 to 3.75
Angle iron, base.....	3.60 to 3.75
Horseshoe iron.....	4.10
Tire Steel.....	4.70 to 5.95
Spring steel.....	9.50 to 11.50
Crucible cast sheet steel	30.00 to 35.00
Mining drill steel.....	20.00 to 23.00
Cast tool steel, medium.....	20.00
Cast tool steel high grade	30.00 to 36.00
Sleigh shoe steel.....	4.10 to 4.50
Norway iron.....	15.00
Toe caulk iron.....	5.40 to 6.40
Hoop steel.....	4.75 to 5.00

Scrap Markets Apathetic

Toronto—

Consuming interest in scrap and waste materials has not registered any improvement. Demand is showing signs of falling even further away, if such a condition is possible, with trading still being dull. Present purchasing is generally along the lines of necessary requirements, which are few

Big Drop In Ingot Prices Compared With Last Year

Toronto.

A comparison of ingot metal prices of the present markets with the quotations which existed this time last year, brings to light an interesting situation. It is noted that copper, antimony and aluminum prices have registered declines of approximately 50 per cent since July 1920, while quotations on other metals including tin, lead, and spelter have been practically cut in half. The marked decrease in general manufacturing activity the consequent lack of demand, heavy stocks of scrap materials, and surplus supplies of certain ingots in the hands of both manufacturing plants, and rolling mills, are attributed as the primary reasons causing this effect.

COPPER—Copper continues to be extremely dull. The recent price concessions offered by U.S. producers, instead of stimulating sales, or serving to tone up the market has had the effect of making prospective buyers postpone purchases in the hope that quotations may thus be forced still lower. So far, however, there have been no indications of any additional recessions in prevailing prices. The local quotations also remain at 17½ cents.

TIN—An easier tone is recorded in the tin markets generally, but local quotations remain unchanged at the range recorded recently, namely: 37 to 38 cents

Reports from southern centres indicate that a better buying movement has been noted, but that has been chiefly confined to speculative interests and dealers, consumers showing practically no interest in offerings.

LEAD—Slightly unsettled conditions have appeared in lead circles. This is chiefly the easier tone which is noted on

the primary markets, and attributed to competitive business efforts on the part of American interests. The current demand is stated as being fairly persistent although no intensive activity is either looked for or recorded. Local quotations are maintained at \$6.75.

SPELTER—The price of this metal has again touched low levels on the southern ingot markets, but this condition is primarily caused by the efforts of small producers to dispose of current outputs in order to prevent, if possible, any addition to the present accumulation of supplies. As a consequence of this situation, it is said that large producers have withdrawn from the market but their absence

has failed to impart any strength to prevailing tone, since quantities offered are sufficient to cover present demand. The price of \$7.00 still prevails locally.

ANTIMONY—There is no improvement to record. Supplies are large, while demand is still light. Reports from the south indicate that price shading has been rumored, but quotations generally are unchanged, the local figures remaining at 8 to 10 cents.

ALUMINUM—The recent cut in values evident on outside markets, shows signs of being reflected in local prices. The dull period prevails, and nominally quotations remain at 30 cents.

WINNIPEG

WINNIPEG, August 3.—Wrought iron pipe, soil pipe and fittings, wrought iron nipples and couplings, and boiler stands, supply the current market changes in the nature of price recessions. Quotations on other primary products generally remain unchanged, with a quieter period in trading now noticeable, and the development of future business improvement depending upon the degree of activity in the building trades during the fall period.

Prices On Wrought Iron Pipe Revised Lower

Winnipeg—

A new list No. 52 has been issued on wrought iron pipe and prices are somewhat lower. Below is given list No. 52, effective July 11th:

BLACK PIPE f. o. b.

Price Reductions Noted On Soil Pipe and Fittings

Winnipeg—

Reductions are announced in quotations on soil pipe and fittings. The new revised prices follow:

Soil Pipe—

- 2 and 3 inch, 20% off
- 4 inch, 30% off
- 5 and 6 inch, 25% off
- 8 inch, 10% adv.

Fittings—

- 2 and 3 inch, 40% off
- 4, 5 and 6 inch, 45% off
- 8 inch, 10% adv..

Wrought Couplings Reduced

Winnipeg—

Lower prices are quoted this week for wrought iron couplings and are as follows:

- 1/2 to 4", 20% off
- 4 1/2" and larger, net list.

Prices On Wrot Iron Nipples Also Lowered

Winnipeg—

The prices are also lower on wrought iron nipples and the following quotations now prevail:—

Close or Short—

- 4" and smaller 40% off
- 4 1/2" and larger, 30% off.

Long—

- 4" and smaller, 50% off
- 4 1/2 inch and larger, 40% off.

Quotations On Boiler Stands Reduced

Winnipeg—

Prices are lower on boiler stands and are quoted as follows:

12 inch	\$ 2.43
13 inch	2.56
14 inch	2.64
16 inch	2.84
18 inch	3.24
20 inch	3.74
22 inch	4.05
24 inch	4.45

Jewel Pipeless Furnace

The leader in the Pipeless Furnace field because, it has, first, been correctly designed in principle for perfect circulation by gravity; secondly, because the splendid design has been strongly backed up by the use of selected materials and the best of workmanship under expert supervision.

We honestly believe no better pipeless furnace can be produced, and doubt if it could easily be equalled.

If you are interested in giving your clients installations that will make friends and future business for you, investigate the Jewel Pipeless Furnace.

If you attend the Canadian National Exhibition at Toronto, we extend a cordial invitation to you to visit our exhibit in the Stove Building.

VULCAN

Pure Air Furnace

We want you to know about this furnace; it will be good for your business. You can install Vulcan Pure Air Furnaces very profitably. We want you to know the details and what's in it for you. Write us today. Just put on a post card, "Vulcan Pure Air Furnace" with your name and address, address it and mail it to us. These reliable furnaces are economical, easy to operate, have a greater radiating service, and the heavy metal makes them very durable. Read what impartial users have to say for them:

London, Feb. 11th, 1921

Gentlemen:—

I have used the Vulcan Pure Air Furnace for several years. I find it economical on fuel, easy to operate, and as it has a greater radiating surface than any other in its class. I have been well pleased with the results. I can recommend its use to any. I believe it to be durable on account of the heavy metal in its construction.

DR. COPELAND.

London, Feb. 11th, 1921

Gentlemen:—

I wish to express my opinion of the Vulcan Pure Air Furnace. After five years' experience with it in my thirteen-room house, I can truthfully state it to be the most economical, durable and all round satisfactory furnace of its class made.

MR. C. H. SUMMER,
R. R. No. 8.

London, Feb. 10th, 1921

Gentlemen:—

I have been using the Vulcan Pure Air Furnace for the past five years. Have had thorough satisfaction in heating a twelve-room house in which I live. Have found this furnace very economical on fuel according to the amount of fuel consumed by other furnaces not doing the amount of work that this Vulcan does. I recommend this Vulcan Furnace to its full extent for economy, satisfaction and durability.

Victory Radiators

SAVE ON

Coal, Cost of Installation, Shipping and Handling, Weight and Fittings

They are superior in design and arrangement; artistic in appearance. Steel tubing is thinner and more effective in radiation so that advantages in air circulation are gained. There are two flat, hollow castings, forming a top and bottom part, with tubes in-

serted—double tubes, one within the other. The water circulates between the two tubes and through the headers. They require less water to be heated, permitting a smaller furnace, and consequent fuel saving.

Write to-day, asking for literature which will make clear the large number of advantages in Victory Radiators.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Rivets Mean Strength

In a paper read by Harry Brearley, Esq., before the British Iron and Steel Institute, May 5 and 6, it is stated,—

"The idea that a Weld could ever be perfect is quite illusory."

Insurance companies will not insure tanks or boilers under high pressure unless riveted.

Safety First

Specify Riveted Range Boilers

Toronto Hardware Manufacturing Co., Limited

True Economy Stack Heater

The Stack Gas Water Heater will heat water in one minute.

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated.

Take notice of the small size and large number of coils; this means quick heat. The numerous small pipes will naturally heat water quicker than one big pipe because of the greater heating surface offered.

More hot water with smaller consumption of gas—that's true economy.

PERFECTO

OIL REGULATED

Flush Valves

PerfectO Oil Regulated Flush Valve in combination with syphon jet, side inlet bowl—a style most suitable for dwellings, apartment-houses, office buildings, etc.

This High-Grade Fixture Now Made in Canada

EVERYONE interested in up-to-date, high-grade sanitary equipment will be pleased to learn that the fitting, formerly known as the Brook's Oil Regulated Flush Valve, is now being made in Canada under the name of the PerfectO Oil Regulated Flush Valve. This valve differs from the old type of flush valve in that its action is regulated by oil, with all vital working parts immersed in oil. This means that the by-pass cannot become clogged by mud, sand or any foreign substance and insures absolute freedom from trouble and repairs. The PerfectO Oil Regulated Flush Valve is recognized as the most modern, efficient and economical type of equipment—made to stand more than the usual amount of wear and tear. The same care and accuracy exercised in the making of all PerfectO lines, guarantee the perfect construction of PerfectO Oil Regulated Flush Valves. Write for full particulars. Our introductory catalogue is now ready and will be sent free upon request.

TINKER TOM'S TALKS.

Copper-Bearing Galvanized Sheets

It is generally conceded that an addition of copper adds life to sheets when serving under extra-corrosive conditions.

We are in position to furnish PREMIER GALVANIZED STEEL SHEETS with COPPER CONTENT at a slight extra, and all our product of

Galvanized Toncan Metal Sheets
has this copper added to the pure iron.

All Canadian jobbers can quote you much reduced prices on our Galvanized Sheets.

Quality

is an essential in the upbuilding of any business with permanence. Quality is one of the three legs of the Tripod of Business. This Tripod is as necessary to the stable support of business as is the Famous Tripod of Life—the heart, lungs and brain—to human existence.

Efficiency

represents the second leg of the business tripod. Without efficiency there can be no success, because efficiency signifies a satisfactory relation between the result obtained and the effort invested. We burn so much coal to obtain a certain horsepower in steam. We invest a given sum of money in business; if the business is efficient it produces a satisfactory return.

Service

is the positive complement of Quality and Efficiency, without which they could no more stand alone than could a three-legged stool with one leg lacking. The amount of our service to society at large is practically the measure of our receipts from the world—especially in business.

Steam and Return Mains

Just as the right of way of a railroad is carefully selected to avoid obstacles, yet pass in close proximity, for economy's sake, of the district to be served, so should the steam main be so run as to avoid obstacles that would require changing its course. A grade of 1-2" fall in ten feet is sufficient to carry off the condensate and not interfere with the flow of the steam to the various risers. The return main should start as near the ceiling as possible and run in same direction with the steam main, but with more grade. Since the return mains are considerably smaller than the steam main, and it is of first importance to provide for the free escape of air, a grade of 1" fall in ten feet should be made in returns.

The steam and return mains should run so that spring connections between mains and risers would be about five feet in length or less.

Care should be exercised to avoid fittings that are not tapped true, and omit the use of bent pipe. A piece of bent pipe, causing a pocket for the accumulation of water, will seriously affect circulation, due to the restricted area of the pipe. It requires increased pressure on boiler to compensate for such defects, and the full benefits of economy and satisfaction cannot be derived from Dunham Heating if such defects mar the installation.

*This is the third of a series of talks on steam heating, appearing monthly in Sanitary Engineer.

You will find all very interesting and of help in your daily work.

Sink Faucets

EASY ANSWERS TO PLUMBERS QUESTIONNAIRE

A1002

A1000

Q. What is the difference between your faucet and other makes?

A. The Quatern Faucet differs from other makes in that **ALL of the wearing parts are easily removable and renewable**. These are contained in one Standardized Interchangeable Working Unit which fits into and operates perfectly in every faucet bearing the Quatern name.

Q. Do you guarantee your faucets not to leak?

A. No, any faucet which receives friction from running water, the brunt of the pressure, and the constant handling and operation by a variety of people, will leak some time or other. The Quatern is so constructed as to **make repairing easy and cheap**.

Q. Well, if yours leak, too, why are they better than other makes?

A. Because when a faucet leaks, **the water eventually cuts across the seat, makes the leak greater and destroys the seat**. In the ordinary faucet the seat is part of the body, so the faucet itself becomes useless. In the Quatern, **when the seat is destroyed a new seat may be put in, making the faucet as good as new in operation**.

Q. How do your faucets stand up under high pressures?

A. As well as any make on the market, **better than any other quick compression type**. This is due to the combination of high pressure and vibration in buildings tending to open quick compression types which close **AGAINST** the pressure. Quatern closes quickly, but **WITH** the pressure, thus eliminating trouble.

Downward Tendency in Plumbing Supplies

Easier tendency in Primary Steel Markets Reflected in Soil Pipe and Fittings, Sheets, Plates etc.—Bathroom Fixtures, Building materials, Radiators, Boilers, Seamless Boiler Tubes Compression Work etc., Figure in Declines

THE prevailing price tendency on numerous plumbing and steam-fitting materials is undoubtedly in a downward direction. Easier tones have recently been noted on the primary steel markets, and this trend has been reflected with lower quotations on bar iron and steel, and more particularly on annealed plates and galvanized sheets. In conjunction with these changes are the recent revisions in corrugated sheets, the lower quotations on soil pipe and fittings, and the revised pipe list.

The spread of the reduced price movement has also touched various building materials such as cement, bath and basin fixtures, valves and cocks, radiators, boilers and seamless boiler tubes. The more recent changes in this connection include such articles as Canada plates, solders and sheet lead while the easier tendency is also noted in copper and brass sheeting with future price developments looked for on many sanitary lines such as closet fixtures, enamelled baths and sinks and compression work generally.

Current price reductions have extended to range boilers, where quotations on the standard 30 gallon size have again been shaded. Simultaneously lower prices have been announced on boiler stands and cast iron specialties, including bell traps and sink couplings. Scrap metal prices continue to sag, and in many instances have now reached new low levels, which are the more noticeable when compared with the higher range attained during the war-period inflation. Quotations in general have already declined in a more or less substantial degree from the pinnacle of prices reached during recent years and the apparent downward revision is confronted with the obstacles of lower replacement costs and the liquidation of high-priced stocks.

Price-cutting, which in turn brought about the official announcements of lower prices on steel and steel products, has now carried quotations on the primary markets to a stage where there is said to be little or practically no profit for producers in selling at the present levels. The industry in general has

therefore reached the point when stabilization of prices is looked for, and this factor is expected to develop with the revival of a normal demand for steel during the fall trade period. At present quotations on ingot metals have sunk to the lowest mark generally recorded during the last six or seven years. Prices on copper, tin and aluminum, have again receded but the attractiveness of prevailing price recessions is a factor which is calculated to ease the markets from the depression and apathy apparent during recent months.

Condition of Building Activity

Although the total volume of construction work this summer is estimated as below the optimistic expectations which prevailed early in the season, the revival in building activity during the months of July and August has undoubtedly stimulated the movement in materials of this class. This condition particularly applies to the erection of homes, a phase to which heating and sanitary engineers as well as plumbers and steam-fitters have paid a marked degree of concentrated attention this season owing to the apparent limitations to construction work of a more extensive nature.

The recent easier prices announced on stoves and furnaces, coupled with the earlier revisions in quotations on conductor pipe, elbows and eaves-trough, are all contributory factors serving to stimulate current activity in small building. The opinion has been expressed that a concentrated effort in this direction earlier in the season would have attracted a heavier building program. It has, however, been pointed out that price lowering up to the present has been principally based upon the various reductions in raw material costs and that labor charges and freight rates are still vital contributory factors tending to restrain the further decline in the cost of production. It is therefore, anticipated that future concessions in these elements remain the deciding features of the price movement generally and that comparative declines in both transportation and labor costs are essential to the introduction of further price revisions upon a scale of importance to the trade.

Little Satisfaction For Tinsmiths

Contradictory Rulings Being Given as to Status of Tinsmiths for Taxation—Local Collectors Giving Their Own Interpretation Leads to Much Confusion—Conference at Ottawa Productive of No Definite Action.

Despite the definite rulings made from time to time by officials of the Department of Customs and Inland Revenue as to the status for taxation of tinsmiths, further complications have arisen which make it impossible for the tinsmith to know just what his responsibility is.

This matter was dealt with by Sanitary Engineer at the time it was proposed to tax tinsmiths as manufacturers rather than as retailers, and as result of strenuous protest, George W. Taylor, Assistant Deputy Minister of Customs and Inland Revenue gave a definite ruling to the representative in Ottawa, as follows; "If the work he is doing is being done for the consumer, regardless of what he is making or assembling; then I say most emphatically he is a retailer and cannot be classed as a manufacturer."

Subsequently a test case was arranged in the Ottawa courts to test the validity of classing as a manufacturer a merchant who assembles or does special order work for customers. It was decided by the presiding judge that merchants such as tinsmiths who do repair work and make up eavestrough etc. could not be classed as manufacturers. On the strength of this case, merchants were recommended not to take out manufacturers' licenses despite the rulings of local Collectors. Then in view of the fact that some local Collectors harassed some dealers with their own rulings, endeavoring to make a distinction between sheet metal workers and tinsmiths, the case was again brought to the attention of Ottawa authorities. This time it was stated that local Collectors' rulings were not necessarily final, that appeal could be made to the Ottawa authorities, and that if the merchant was satisfied that he was doing a strictly retail business, that he should write the words "Abandoned" upon the papers sent to him, and return them to the Department, when the case would be brought to the attention of the Department at Ottawa and final ruling given as already outlined.

Conference at Ottawa

A conference was subsequently held between representatives of the tinsmiths and other retail trades classed as manufacturers and officials of the Department of Customs and Inland Revenue, at Ottawa. Unfortunately no definite action was taken to establish the responsibilities of tinsmiths for taxation at this conference and tinsmiths are just as much at sea as ever before. The point is that various head officials of the Department at Ottawa have made different rulings and local Collectors throughout the country seem to be relying upon their own rulings. The result is that tin-

smiths in some parts of the country are operating under manufacturers' licenses and collecting sales tax and tinsmiths in other parts are operating as retailers without any such license and not collecting any such tax. It is evidently a matter of the local Collector's interpretation of the law.

The only backing which tinsmiths have in declining to take out such license where it is presumed to be required by local Collectors, is the fact that two test cases in the courts have established that tinsmiths and other such retail trades are not manufacturers. Evidently therefore if a tinsmith declined to take out such license and action in the courts was brought on, he would probably win the case on the ground of the previous judgment providing circumstances were similar. But he would have to pay court costs for defending the action.

The Retail Merchants Association is advising its members to decline to take out manufacturers' license and state they are willing to fight any other merchants' cases in the courts if necessary.

Evidence of the contrary rulings being given by officials of the same department at Ottawa is found in the experience of a Brantford, Ont. tinsmith who has recently been informed by some official of the Department at Ottawa who writes a letter and then rubber-stamps the signature of R. R. Farrow, Commissioner of Customs & Excise, that he is a manufacturer. Significantly the letter so informing this tinsmith written on July 15th, 1921, is in direct contradiction to a letter written from the same Department and with the same rubber stamp signature, but bearing different signature initials of the writer, written on June 28th previous. The stages of this case will be traced herewith.

This tinsmith took out a manufacturers' license, as prescribed, this license having expired on March 31, 1921, he then declined to take out license for the succeeding year on the basis of advice given by Sanitary Engineer. He thereupon received letter from the local collector of customs and excise quoting a paragraph from a letter from the Department addressed to a firm doing a similar business. This letter was as follows:—"I am advised to the effect that you manufacture sheet metal work and also that you produce goods for contractors. In consideration of the above, your business cannot be considered as exclusively retail and same must therefore be operated under a sales tax license and sales tax collected accordingly." On the basis of this letter the collector in Brantford stated that he considered it necessary for this tinsmith to take out manufacturers' license. There-

upon he wrote to George W. Taylor Ass't. Deputy Minister of Inland Revenue, Ottawa, quoting the interview with that official which appeared in Sanitary Engineer and mentioning the result of the test case and quoting the definition of a manufacturer as laid down in that case, namely, "one who manufactures articles for sale, to be sold again by a retailer or a jobber." He pointed out that on this basis he was doing a strictly retail business as orders were accepted directly from the consumer.

Replying to this letter came the following letter signed with the rubber stamp signature of R. R. Farrow, Commissioner of Customs & Excise, but apparently dictated by someone else. It reads:—

"You are informed that the status of tinsmiths, selling exclusively by retail, goods made to the order of each individual customer, has been established as being that of "retailers" and not subject to payment of Sales Tax on their sales. The Collector of Customs & Excise at Brantford is being instructed in this regard and you will please communicate with him."

A Radical Change

However this ruling was radically changed in a subsequent letter sent from the same department and signed similarly except for different initials of the party dictating the letter. It read:—

"With further reference to the question of your status for purposes of sales tax, you are informed that as the result of an investigation of your business, it has been decided that you are not entitled to classification as retailers. It will therefore be necessary that your business should be operated under a sales tax license and that you should make payment of sales tax to the Department."

Discussing the matter with Sanitary Engineer, this tinsmith pointed out that the only investigation conducted in the meantime had been a brief telephone call from the collector in Brantford and that no new information concerning his business had been secured as result.

In answer to his last letter he wrote at length to G. W. Taylor, Ottawa, explaining complete details concerning his business, as follows:—

"I wish to advise the only investigation my business received was a telephone call from the local customs department asking if I made eavestrough, furnace pipe and furnace casings. I advised that I did so.

"I am enclosing two sample contracts of the class of work we do, and I will ask that you refer to your letter of June 28th in which you advise the status of tinsmiths as being retailers. Your re-

(continued on page 23.)

Plumbing Equipment at Fall Fairs

Progress of Plumbing and Heating Engineers Toward Merchandising Status Can Be Aided by Exhibits at Fall Fairs—Showing Prospects What the Complete Bathroom Equipment Looks Like—Water Under Pressure for People from Rural Districts.

An effective arrangement of plumbing goods for the Fall Fair is to arrange the various pieces of equipment around the walls of a low partition as shown herewith. Several different types of basins, closets etc., are shown with other minor accessories shown attached to the wall. The booth was finished in spotless white, except the floor, and it served to emphasize the sanitary features pointed out by the representatives of the firm.

With the gradual progress of the plumbing trade toward a level on which its operators become merchandisers, the annual Fall Fairs held throughout the country become of more importance as an opportunity for soliciting business in plumbing and heating equipment. Those plumbing and heating engineers in Canada who are adopting this attitude and arranging their shops as attractive showrooms which people will be glad to visit, and wherein various lines are displayed for public investigation, are benefitting to a great extent. Following out the same plan the Fall Fair presents a unique opportunity to put such equipment before the visitors to the exhibition, at a time when they are in a receptive mood and anxious to see what is new.

For the plumber located in rural districts the Fall Fair presents a good opportunity for displaying water systems, an effective exhibit being arranged showing water under pressure running through the home and the barns.

Many such Fairs are now under way and will be continuing until into October so that they present a good opportunity for showing heating equipment and for soliciting plumbing business prior to the opening of the winter season.

Necessary for Sanitation

In planning an exhibit the best results will be attained by emphasizing the value of plumbing installations from the standpoint of a necessity for sanitary reasons, rather than something which will be merely to provide more joy and convenience. Plumbing fixtures are no longer a luxury and there is no excuse why they should not be in use in practically every home in the country. Every effort should therefore be aided to educate people to the importance of sanitary plumbing accommodations.

In this connection the chief value of the Fair lies in the opportunity presented for showing how the various pieces of equipment look when actually installed. Sample bathroom outfits, for instance, are always effective in attracting favor-

able attention. It will generally be found that such an exhibit will prove highly educational to the visitors to the Fair, and if done on a generous scale by plumbers throughout the country the effect should be very great. The great value of good impressions is generally recognized, and as first impressions are lasting it is necessary for the exhibit to have an attractive and interesting arrangement.

Complete Equipment

A bathroom can be shown to good advantage, completely equipped with shower, wash basin, soap holders and other accessories. A sanitary drinking fountain with a water supply outfit supplying water always attracts those located in the rural districts, and the providing of drinking water brings many interested persons into the booth. Representatives of the firm should be constantly on hand to receive visitors and explain the merits of the various equipment and showing by means of statistics just what such equipment means in the life of the community.

Making Study of Pipe Corrosion

Investigation Shows Soil Chemicals May Be Responsible for Supposed Electrolytic Damage in Winnipeg to Water Mains—Advanced Corrosion of Cast Iron Pipes Less Than Eight Years Laid—Also Affects Concrete Pipes.

Much damage has been caused to water mains in the City of Winnipeg recently, and corrosion noted in cast iron water pipes which have been laid for less than eight years. It has been held by some experts that the corrosion was due to electrolytic damage, but this attitude is not held by other authorities. Some efforts were made to secure details of the matter.

T. H. Hooper, operating superintendent of the waterworks system, when questioned, stated that all he was concerned in was the repair to the mains. That damage had been done to the extent of several thousand dollars was certain, but what that damage was caused by he would have to leave to the experts to say. He might have his own personal opinion, but it was for the experts to decide the cause of the damage. Referring to the fact that water mains were similarly damaged in other cities, Mr. Hooper said he believed Winnipeg was further advanced in the study of the matter than any other place. What were problems to them had gone into the A. B. C. class locally.

F. A. Cambride, city electrician, also refused to make any definite pronouncement on the matter because it was being dealt with by a special committee. But a quite different aspect has been created by the visit paid to the grounds of the Selkirk mental hospital, by a party of professional chemists and engineers from Winnipeg. They made a personal inspection of a six-inch water main, about 100 feet of which had been recently exposed in the course of excavating for the pipe tunnel between the new hospital and the boiler house. The party consisted of the following: A Blackie, city chemist, Winnipeg; A. G. Phillips, assistant to Mr. Blackie; W. Aldridge, assistant city engineer of Winnipeg; T. H. Hooper, superintendent of water department, Winnipeg; Professor J. N. Finlayson, head of the civil engineering department of the University of Manitoba; Douglas McLean, C. E., chief engineer, Manitoba drainage commission; Dr. C. B. Clevenger, professor of agricultural chemistry, Manitoba Agricultural college; E. L. C. Forster, chemist, Dominion government department of health; G. W. Rogers, city engineer, municipality of St. James; Dr. J. W. Shipley, assistant professor of chemistry, University of Manitoba, and W. Nelson Smith, M. E., consulting electrical engineer, Winnipeg Electric Railway company.

As the water supply system of the hospital is secured from wells drilled on the property to a depth of 250 to 300 feet, and the piping system is entirely

separated from the Selkirk water supply, and as the hospital is more than half a mile from the western outskirts of the town, and not less than 1¼ miles from the northern extremity of the Selkirk trolley line, it was said to be quite outside any possible path of stray current from the electric railway. The only electric current on the property is a 60-cycle alternating current for lighting, and the United States Bureau of Standards, it was pointed out, had proved by exhaustive and long-continued experiment, that it was impossible for an electric current of this character to cause destructive electrolytic action on buried metal structures.

Corrosion of Pipes

The pipes examined, although they had not been laid for more than eight years, were shown to be affected by some corrosion of the cast iron, well advanced in many spots. Several members of the party dug the products of the corrosion out with their pocket knives to a depth of one-sixteenth to one-eighth of an inch, not only near the joints but in the middle of the pipe.

The progress of corrosion was observed in its various stages, and the corroded metal in the pits eaten into the pipes was similar in appearance to the products of corrosion observed on damaged water pipes in Winnipeg. All such damage, wherever it had happened in the city, it was stated, had always been attributed solely to electrolysis from stray currents leaking from the electric railway tracks.

The soil on and near the pipe was examined and found to compare very closely, in general appearance and composition, with the soils in which the Winnipeg water pipes are buried, many samples of which from various parts of Winnipeg and adjoining municipalities, have been examined during the past year both by Mr. Blackie and Dr. Shipley.

The presence of soluble salt crystals in considerable quantity was also observed by all the party on clay freshly excavated from new trenches in the street in front of the hospital. The similarity of this clay and its salt content, to the clay and its contained salts as met with all over Winnipeg and vicinity was remarked upon by all present.

This water pipe had thus been imbedded in earth containing salts that are known to be chemically active, and further, by reason of its location, had been entirely free from access of stray direct current, which can only dissolve the metal where it leaves a buried pipe to enter the surrounding earth. Stray-current electrolysis was, therefore, admitted by all the party to be impossible under the circumstances.

Chemical Activity

The only inference that could be drawn from the facts noticed by the party was that the observed corrosion could only have been caused by the chemical activity of the solutions of the so-called alkaline salts.

It was further pointed out that it had also been recognized for several years past, by practicing civil engineers, and more recently by public authorities and the public generally, that these alkaline salts, the sulphates, chlorides, carbonates and bi-carbonates of magnesium, calcium and sodium, which are widely distributed through the soil of western Canada, are very corrosive to concrete made of Portland cement, no matter how carefully the concrete is mixed and deposited.

Chemical research work started about a year ago under the direction of W. Nelson Smith, M. E., and conducted personally by Dr. J. W. Shipley in the laboratory of the University of Manitoba, has brought to light many facts hitherto unsuspected either by the engineering profession or by the public, respecting the behaviour of commercial cast iron, lead and copper, in contact with neutral solutions of the above so-called alkaline salts. This research is now so far advanced that a definite report on the main outstanding facts will be forthcoming soon.

Pipe corrosion, as observed by the party, of chemists, engineers and specialists, it was urged, thus fairly comes into the same category as the corrosion of concrete, with its accompanying results of collapsed sewers, culverts, piers and foundations. Henceforth, pipe corrosion will receive the attention of professional scientists, as a matter of public concern of equal importance with the corrosion of concrete.

The western professional meeting of the Engineering Institute of Canada will discuss at some length the subject of cement and concrete corrosion. A cement research committee of the institute has recently been formed, composed of the leading civil engineers of the three prairie provinces. The Manitoba representation on this committee is headed by Professor Finlayson.

As nearly all the members of the party who viewed the self-corrosion of the pipe at Selkirk, are members either of the Engineering Institute or of other scientific societies of national scope, the whole subject of the destruction of underground pipes by stray current electrolysis or by self-corrosion, has now been brought to a stage where it can be dealt with upon a new and purely scientific basis, in which all the relevant facts

(continued on page 23.)

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

CHAPTER VI

In all methods of tank treatment of sewage the one great difficulty which requires the Engineer's thought is the disposal of the deposited, suspended matter in the tanks which from time to time accumulate so as to almost fill the tank at the inlet end.

The ordinary settling tank as previously described produces the greatest amount of sludge whilst the septic tank through the length of time it is contained in the tank liquifies and, in some cases, the suspended matter has been reduced 50 per cent. It varies considerably, generally from 20 per cent. to 50 per cent., so that is one of the reasons why the septic tank has gained favour amongst the property owners.

The most modern method is the Imhoff process of handling the sludge proposition which is done in the sludge digestion chamber where all the chemical changes take place during the time same is stored in this chamber. The decomposition of the sludge in this case is accomplished without same coming into contact with the clarified tank effluent and all the gases are given off free into the air by the method previously explained. The sludge in this case can be run off into sludge drying beds and if complete decomposition has taken place there will not be the slightest smell from the drying process which is accomplished in two or three days according to the weather conditions.

In order to calculate the size of sludge beds to take care of the sludge from the tanks, it is usual to allow 350 sq.ft. of surface bed area per thousand population on an entirely separate system, but with a combined system, with street washing and trade waste, 50 per cent. should be added to this area.

The sludge from both the settling and septic tanks during drying and clearing-out operations, give off obnoxious gases until same is spadable.

The following illustrations give the detail of a sludge drying bed or lagoons for both septic, settling and Imhoff installations, and is one way of disposing of the sludge as the sun dries out all the moisture and same is then buried or applied to the land for manurial purposes.

Imhoff tank sludge has no manurial properties whatever and can be used for filling in low lying ground with perfect safety. Septic, and especially settling tank sludge, has good manurial properties and should not be used for filling purposes without great caution.

The sludge from settling tanks is nothing more than concentrated sewage matter which has undergone little or no change, while septicised sewage undergoes considerable change the putrescible matter being liquified leaving the sludge high in carbons.

Sludge contains manurial matter of value but owing to the large percentage of water, it cannot be utilized at a profit and the best way of disposal on land direct is to furrow the land deeply, run the sludge into these deep furrows and return the earth to the furrows as soon as the sludge has partially drained out.

This system is only applicable with small installations and owing to the large amount of land required for such sludge disposal renders its adoption out of the question for large disposal works.

Sludge may be burnt in incinerators, buried, or carried out to sea or large rivers.

In large disposal works the sludge is

treated with chemicals and pressed into cakes and given away to farmers.

Sludge is composed of 90 per cent. liquid and can be pressed into small space, the liquid being again passed through the sedimentation tank for purification.

In two chamber septic tanks it is often either too seldom or too often cleansed out for good working results through lack of knowledge on the part of the attendant, and it should always be borne in mind that so long as the scum on the surface of the liquid in the first chamber is not disturbed by filling or emptying the tank in its ordinary method of working there is no need of cleaning the sludge out at the bottom of the tank oftener than once a year. It is a bad policy to disturb the scum as upon this formation depends the successful working of your septic tank and it should not be disturbed more than is actually required.

DISCUSS SASKATCHEWAN WATER SCHEME

General Plan of Supplying Water to Moose Jaw and Regina—Water for Rural Districts—Wood Piping To Be Used.

Moose Jaw, Sask.—A large and very representative number of citizens and neighboring farmers were present at a meeting to hear the outline of the proposed Saskatchewan River water project. His Worship Mayor Smith occupied the chair, and the addresses were given before an orderly crowd, evidently present to hear both sides of the question. Ex-Mayor S. A. Hamilton was much in evidence with his counter proposals, and was given a fair hearing by the audience. Lieut.-Colonel A. J. McPherson, chairman of the Saskatchewan Water Supply Commission stated that the Commission had inquired fully into the feasibility of the Saskatchewan Water scheme and had found it favorable. The commission had provided for an advisory board consisting of representatives from the cities of Moose Jaw, Regina and the Canadian Pacific and the Canadian National Railways, and the business of all these men was to find out all the information possible concerning the project. As the country districts did not have such men to represent them

a series of meetings were held to find out the opinion of the country districts.

The Main Pipe Line.

The speaker then roughly sketched the line that would be followed by the main pipe line from the outlet at Riverhurst, where the river would be tapped, as far south as Moose Jaw. The commission had considered into the future until the time when the population of the cities should be doubled. This period was estimated as ten years, although the growth of the city could not be accurately judged. If the population were doubled it would mean that 13 million gallons would be taken from the river daily.

Speaking on the question of the distribution of the water in the rural district, a question which was of special interest to the farmers, he pointed out that branch lines would be run off to the districts as they were required and of a size to supply sufficient water, and an additional sum would be charged on the branch lines to make them self supporting.

BRIEFS

A report presented at the farmers' conference in Guelph on water supply in farm-houses showed that in the township of Markham, one of the best in Ontario, 77 per cent. of the farmhouses have no interior water supply at all. The absence of modern conveniences is one of the reasons why young people leave the farm.

UNFAIRNESS TO TINSMITHS

FURTHER evidence that the tax regulations introduced by the present officials at Ottawa are not only difficult for others to understand but are also beyond the comprehension of the officials themselves, is quite evident from the confusion which has been caused by the original classification of tinsmiths and other retailers as manufacturers, for the purpose of taxation. This question has been threshed out on many occasions and what was thought to be a final settlement arrived at, only to crop up again from some new angle.

Elsewhere in this issue the complete procedure of the dealings of a tinsmith of Brantford, Ont., with the Department of Customs and Inland Revenue at Ottawa, is reviewed. This correspondence quotes the rulings which the Ottawa representative of Sanitary Engineer secured direct from Geo. W. Taylor, Ass't. Deputy Minister of Customs and Inland Revenue, and also quotes the findings of the two test cases, which were in favor of retailers and also quotes the actual statement made in a letter signed by R. R. Farrow, Commissioner of Customs and Excise. Yet despite all these assurances, a letter from the same department is received by the tinsmith stating that as result of an investigation conducted in the few days between the letters his status is changed to that of a manufacturer. The investigation consisted of a brief telephone call from the local collector who merely enquired if he made eavestrough, furnace castings, etc. Such information could in no way alter the case as all tinsmiths make such lines.

It is a most unsatisfactory condition when two high officials of the Department contradict each other, and the one contradicts himself in his own correspondence. It is time some definite and logical stand was taken in such matters, applying to all without discrimination.

In an endeavor to arrive at a final and definite ruling which would be thoroughly understood by all members of the Department of Customs and Inland Revenue and which will be in keeping with the logical status of the tinsmith, a conference was called between the Minister of Customs and Inland Revenue and all the heads of departments at Ottawa and representatives of the various retail trades interested. This conference was arranged partly due to the suggestion of Sanitary Engineer for a complete airing of the case but unfortunately tinsmiths are now as much at sea as ever.

PLUMBER AS A MERCHANT

PPOINTING out that the plumber, a much-maligned person in recent years is becoming a large retail merchant in city and country, by realizing the value of selling a variety of goods as well as his service, a recent article in the A. B. P. News shows the possibilities there are for development of plumbing business. It points out that there are about three times as many homes to be equipped with plumbing as there are at present equipped. That 50 p.c. of the homes now equipped with plumbing and heating equipment are bona fide prospects for additional equipment, also that only about one-sixth of the homes which are prospects for heating equipment are now so equipped.

It continues to point out that the usual conception of a plumber has been a cross between a highway robber, a first-class tool-forgetter and a general time-waster and states: Such has been the description furnished by the professional jokesmith that we tend to shudder at the very name of his business. But our respect for a person—like our ideas of respectability—is largely a matter of time and place. Just as respectability depends upon whether one wears a bathing suit upon the beach or in the ball room, so our respect for a plumber depends upon whether we look upon him as a seller or buyer, whether he is in our home or in our salesroom.

Few persons realize how large the plumbing trade has become in recent years or how greatly it has gone into the merchandising business—how the journeyman plumber with his kit is giving way to the plumbing, heating and ventilating contractor with a big plate-glass-front store on Main Street. It goes on to show that a recent investigation among five thousand leading contractors in a certain section of the country purchased in one year plumbing goods and accessories amounting to sixty million dollars; steam and hot water heating equipment, forty million dollars and water supply systems and pumps, a million and a half dollars. This does not include tools and machinery for shop.

The plumber has come to be looked upon as an expert and in recent years he has developed a line of work which takes plumbing out of the class of seasonable work. The next few years are expected to see a big increase in the number and variety of tools and machinery used by plumbing and heating contractors. It is probable that as merchandisers plumbers will come to a realization that a profit on the materials supplied is what he should have and that the labor should not be made a basis for profit,

Pattern For Bucket Lip

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

A considerable while ago Mr. Gustave Enackson of Hammond, Indiana, asked to have patterns developed for a bucket shown in the sketch of this drawing.

The correspondent also asked about establishing a parts miter between lip and body of bucket as line B-C. This we are unable to do unless by series of experiments, or better yet, by copying the line from an old bucket.

Let us assume that B-C is the miter line, which in this case is copied direct from the sketch. Then A-C is drawn on a 45 degree angle, or any angle for that matter, that is found practical.

Now observe that this lip unrolls from

line A-C and when looking into it parallel with this line, the lip will form a semi-circle, as section M.

Describe this section and divide one quarter in equal parts.

From these points in M project lines parallel to A-C, thereby intersecting miter lines A-B and C-B.

To set out the pattern, pick the girth from section M as 1-2-3-4 and set on a line drawn at right angles to A-C as 1-9.

Draw stretchout lines through each of these points and then from each intersection in miter line A-B and C-B project points into stretchout until they meet with lines of similar number.

Through these new intersections sketch the curved outline and the pattern for lip is finished.

To set out the pattern for body of bucket with the miter line B-C developed on it, pick the girth from quarter section N and set off below as 1-5. Draw stretchout lines from each of these points and then from each point in miter B-C drop lines into stretchout of similar number. Through these new intersections sketch a uniform curve and the pattern is finished. Only a quarter pattern is set out in this case as by reversing it the entire layout can be easily made.

Between You and Your Local

Cut No. 504

For Your Kitchen

There is a laundry tray as well as a sink—all in one piece, made of beautiful porcelain enameled ware, lustrous white.

And there is a drain board; also, if you wish, a wringer holder.

A more thoroughly useful sanitary fixture was never put into a kitchen.

Yes, it's a "Port Hope."

Let us show you one. It is representative of our standard of all-around plumbing work.

Your Name and Address Here

1 column x 75 lines

Every day you can call on people who need better plumbing — people that know they need it but have never taken the trouble to find out that you can supply beautiful fixtures at a cost within their means.

Your local newspaper is the servant to do this for you. It is not a hit or miss proposition, everybody reads it —same as you do—and if you tell them something worth while you are sure of attention and consideration.

THE FRE

If you have not already received containing illustrations of these for ordering. Always order by

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

CONTRACTS AWARDED

Sault Ste. Marie, Ont.—General plumbing and heating contracts for technical school costing \$225,000 for High School Bld. are awarded to Mitchell & Cooper, Adams Block.

BUSINESS CHANGES

Halifax, N. S.—Roy Mackay and John Bremner have dissolved partnership, but Jack is still "Carrying On," at the old stand, 76 Harvard street, and finds business fairly bright along his line.

INCORPORATIONS

Sloan Valve Co. Ltd. has been provincially incorporated with capital of \$40,000 and head office in Toronto to manufacture valves, plumbing specialties and metal products.

Wright Bros. Ltd. has been provincially incorporated with head office in Toronto and capital \$40,000 to carry on business of heating engineers and manufacture and deal both wholesale and retail in furnaces, piping, radiators, etc.

PERSONAL

Mr. Wilkes, general manager Cluff Bros., Toronto, has just returned from a leave of absence extending over 16 weeks on account of ill health.

Wm. Watson, plumber, of Moncton, N. B., and President of Moncton Master Plumbers' Association, after an illness of two years is able to be around again. Mr. Watson has been confined to the hospital for some time.

NEW WATER SYSTEM FOR RICHMOND HILL

Richmond Hill, Ont.—By the end of the year a modern waterworks system will be installed in Richmond Hill. The Council has let the contract, and work is to commence immediately. The total cost is estimated at \$92,000. It is to be finished by December 1.

The municipal water supply will be drawn from the Wilson Springs, at the west side of the town. A dam will be built and a storage tank erected to hold four days' supply in case of emergency. A filtration plant is part of the plans. The scheme provides abundance of water for fire protection.

AYLMER TO EXTEND WATER MAINS

Aylmer, Ont.—At a meeting of Council the main discussion was the question of water main extensions. Finally it was decided by motion that water main extensions should be carried out in such a manner as to bring the following streets into the area: Albert street, from Pine street to the river edge; Center street to Tiberius street and Brook street; North street from Dalhousie street to Front street; John street, one block north from Front street to Brock street and Eardley road.

\$90,000 FOR WATER MAIN

As the city of Montreal has entered into negotiations for the supply of water to the city of Verdun, the Director of Public Works has submitted a report to the Administrative Commission recommending that a credit of \$90,000 be voted for the construction of a 24-inch water main for supplying the water to that municipality.

METER WATER SERVICES

Galt, Ont.—Manager Fairchild, of the Public Utilities Commission, called attention in his report to the advisability of metering all services, and the Commission concurred in the suggestion and instructed the Manager to obtain prices on meters with a view to metering all services in the city. At present only about half the services are metered and the Commission feels that the only fair system to all consumers is that of having every service metered; and then the consumer pays for water used.

—O—

SAVED \$10,000 ON WATERWORKS

Sarnia, Ont.—\$10,000 is a conservative estimate of the saving effected in the purchase of waterworks supplies this year when compared with the estimates submitted for the same materials last year. The cut in the cost of the various supplies was announced by Ald. Dagan, chairman of the Waterworks committee, in submitting the recommendations of the committee in regard to the acceptance of tenders as follows:

Acceptance of the tender of J. B. Claw, of Chicago, for 200 tons of water pipe at a price of \$66.40 per ton for 6 inch and \$69.92 a ton for 4 inch also fittings for some at \$159 a ton. On the pipe alone

the cost was \$33.60 a ton less than last year, and the total saving is cited as \$6,700.00. The price includes duty, exchange excise etc.

On the award of the contract for the sale of valves to the Kerr Engine Co., of Walkerville at a price of \$10.86 for 4 inch and \$18.60 for 6 inch, the committee saved approximately \$200 according to the report.

The cost of hydrants was cut \$784 upon acceptance of the bid of the Dominion Steel Products Co., at \$73.33.

The purchase of valve boxes from the Francis Hankin Co., of Montreal at \$8.76 each will save \$350 over last year's figures, the report states.

The Mueller Mfg. Co., were the successful bidders for 5 tons of pig lead at \$125 ton, and on this material approximately \$400 is saved.

WANT INSPECTOR TO

BE PRACTICAL MAN

Edmonton, Alta.—Plumbers working in the city waited as a delegation upon the mayor and Commissioner Yorath and recited a number of complaints against the alleged unsatisfactory condition of plumbing in a number of restaurants and ice cream parlors in the city. Coupled with the complaints was the request that if another sanitary inspector is appointed, as now recommended, the man chosen shall be a man with knowledge of plumbing in order that he may be able to pass judgment upon the fixtures in use.

It was stated, for instance, that there is an ice cream parlor operating in the city where no sewer connection exists, and all the waste is poured in a hole in the floor, forming a pool. In another case, it is alleged that the sewer pipe in a certain cafe is open, and sewer gas escapes into the building.

The commissioners expressed their sympathy with the object of the delegation, and the request for the appointment of a practical man will be handed on to the board of health.

BUILDING STIMULATED

Plumbing and heating engineers who are looking for an improvement in building will be interested to note that building permits to the value of \$13,060,860 were issued throughout Canada during the month of June. This is a slight improvement over the total for the corresponding month of the previous year, when a total of \$12,315,933 was reached. The twenty-seven eastern cities report a gain for the month of \$879,695, with the values standing at \$10,077,620, compared with \$9,197,925 a year ago. A slight decrease in building activity is reported by the fourteen western cities, with totals at \$2,983,240, comparing with \$3,118,008 a year ago.

The fact that the totals for the month show even a slight improvement over the returns for the month of June, 1920, is an encouraging feature, and is an indication of some measure of revival of confidence in the building trades. The total is, however, wholly incommensurate with the building needs of this country, particularly in the matter of homes, and the lack of aggressiveness in the building trades can only be ascribed to the comparatively high costs of construction that still prevail. While there has been moderate adjustment of the cost of building materials, the cost of labor is still a highly important consideration. With labor tenaciously holding out for the peak wages, there is little hope for a revival of building on a broad scale. Not only do labor costs contribute an undue proportion to the cost of building, but there is a certain element of discontent among the workmen over the prospect of lower wages, and both these factors have a tendency to induce the prospective builder to hold over construction wherever possible, until conditions are more settled.

Welsh Canada Plates Available In September

Resumption of trade in welsh Canada plate is announced by importers, and supplies will again be available for fall requirements. This will be welcomed by many merchants who have been unable to procure these plates during war years and the two years following. Canadian distributors also state they have already obtained fair orders throughout the trade, but owing to the advanced prices over the American sheet, they do not anticipate the demand as would be the case if quotations were on a par with the American product. For this reason stocks will be governed to a great extent by the demand shown.

The superior quality of the Welsh plate is said to be well maintained, and first shipments are expected to arrive towards the latter end of the month or early in September, when a limited amount will then be available. Prices will be found in the market quotations.

(continued from page 16.)

MAKING STUDY OF PIPE CORROSION

of engineering, electro-chemistry, and local soil conditions, can be given their proper weight in reaching a fair and just conclusion.

Attention was drawn to concrete corrosion in Transcona, 7 miles from Winnipeg.

A big break in the Transcona main sewer on Nairn road was recently discovered, and repaired. The trouble was caused by the sewer being eaten away with alkali, and about 50 feet is affected.

(continued from page 14.)

LITTLE SATISFACTION FOR TINSMITHS

cent letter is a direct contradiction of this ruling.

"I feel the local collector is giving reports that do not represent the case. I employ from one to two tinsmiths and do the class of work as outlined in samples submitted. I am not desirous of evading any tax my business should rightfully pay, but if your ruling as outlined on July 15th is final then every tinshop in the country is liable to this tax and the advice given by the trade papers to the trade is not correct. Also every custom's tailor, Blacksmith, dressmaker and other sundry lines which are now not taxed are subject to the same tax as the nature of their business is exactly the same."

At time of writing the tinsmith had not received reply to this last letter but a further investigation conducted by Sanitary Engineer in Ottawa, reveals the fact that this question has not been settled yet in a manner satisfactory to all concerned.

ST. JOHN OFFICIALS INVESTIGATE WATER SUPPLY

St. John, N. B.—The intakes of Loch Lomond, Lake Latimer and the other lakes in that vicinity from which the water supply for the eastern section of the city is drawn were visited by Chairman John Kelly, Mrs. Richard Hooper, George Blake and Secretary T. M. Burns of the Board of Health, accompanied by Dr. H. L. Abramson, the board's bacteriologist; Dr. William Warwick, the board's medical health officer; Commissioner Jones of the water and sewerage department, and the superintendent of the water and sewerage department.

The visit was made in order to enable the board to gain a first hand knowledge of the present conditions obtaining at the city's chief source of water supply. The board found that conditions were

fairly good, but were of the opinion that the arrangements for the Robinson Lake inlet could be improved.

The opinion has been expressed that the water may have become infected after it had entered the city's mains, and Commissioner Jones has set crews to work to clean the pipes, especially those on the lower levels. It is said that it would be possible for pollution to arise from small eels which may have made their way into the mains and reached some levels where the water through little use may have become stagnant. In such a place the eels may have matured and died, and thus have caused the pollution in the water.

While the Hon. Mr. Wigmore was commissioner of sewerage considerable attention was given the cleaning of the city mains, with most beneficial results.

OUTSIDE CLOSETS MUST BE INSTALLED

St. Thomas, Ont.—Citizens residing in the sewer zones, who are using outside closets, must install sanitary conveniences at once, or stand liable to prosecution in the police court. A resolution to this effect was passed by the Board of Health, in accordance with the new sanitary by-law passed by the City Council two months ago. The penalty prescribed for those who fail to comply with the ordinance is a fine not exceeding \$50. The names of several persons in the city who live in the vicinity of sewers and who are using outside closets were given to Inspector Shaw with instructions to notify them at once. Dr. Turner and Dr. McKillop, the Medical Health Officer, were particularly desirous that the by-law should be enforced in the interests of public health, declaring the outside closets to be a menace to the same and a splendid method of spreading epidemics. A recommendation was also passed by the Board of Health "that a sewer be constructed under White street on sanitary grounds."

(Continued from Page 17)

DISCUSS SASKATCHEWAN WATER SCHEME

The General Scheme.

The general scheme as outlined by the commission was then touched upon, the main points mentioned being the supply necessary for the next ten years, the intake at the river, with a capacity of 15,000,000 gallons, and the filtration 600 gallons per day. In regard to the piping, he stated that cast iron pipe had been suggested, but its cost made such a scheme almost impossible. The iron would cost some \$14,000,000, while the wood would be in the neighborhood of only \$2,800,000. The interest on the cost of the iron pipe alone would pay for the wood in three and a half years.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

CAST iron specialties, such as sink couplings and bell traps; lead sheets and solders; boiler stands; copper and brass sheets; expansive and auger bits, comprise the basis of another lengthy table of price recessions on plumbing and steam-fitting materials. Further price shading on the standard range boiler again features the current markets, while lower prices are recorded on copper, tin and aluminum ingots. Quotations on various

scrap metals are also revised to a lower basis, while price concessions on Canada plates, closet fixtures, and on black and galvanized sheets are reported from eastern market centres.

Due to recent activity in construction work, building materials and similar plumbing supplies have experienced an improved movement generally, and a more active degree of trading is looked for during the fall period.

MONTREAL

MONTREAL, August 18.—Reduced prices on many lines of plumbing and steam-fitting supplies are again prominent.

The chief decline is perhaps on sheets, when corrugated are now selling at new lower list prices, and a general lowering of other black and galvanized sheets is announced. Canada plates, insofar as the American plates are concerned, will sell for less, while the new prices on Welsh Canada plates are announced. Prominent, too, are revised prices on closets, a general decline being given on outfits which heretofore were selling on an unsteady market. Soil pipe and fittings have lower quotations, also lead sheets and solders. Copper and brass sheets will now cost less. Stoves and furnaces are under an adjustment, and a slight reduction is resulting. While in tools, Clarke's expansive bits and Irwin bits are reduced.

New Prices On Clarke's Expansive Bits

Montreal—

Now lower prices are given on both sizes of Clarke's expansive bits. No. 1 will now cost \$22.00 a dozen and No. 2, \$31.50 a dozen.

Construction Work Demands Cement

Montreal—

A fair steady volume of business is being done in cement, construction work, although not as extensive as last year, still demanding supplies. No further changes are announced in quotations since the revision at the close of last month, and following are local prices.

Cement—

Car Load Lots—

400 to 1000 bag cars.

Per bag, f.o.b. cars 0 98

Per barrel, f.o.b. cars 3 92

Per bag, delivered 1 05

Per barrel, delivered 4 20

Less Car Lots—

Per bag, f.o.b. yard 1 12

Per barrel, f.o.b. yard 4 48

Per bag, delivered 1 22

Per barrel, delivered 4 88

Less 5 per cent.

Rebate of 20 cts. for empty sacks,

Improvement In Enamelled Ware Sales

Montreal—

Sales of enamelled ware are reported as being a little improved during the past two weeks, building construction under way now demanding enamelled fixtures. One jobber stated the recent activity was beyond expectations earlier in the season, and expressed belief that a fair amount of business will be obtained by dealers during the fall months. Little or no improvement has developed in the matter of quotations and a variation still exists among the different distributors. List prices less 35 and 5 per cent. however seems most general.

Sinks, roll rim 18x30 in. 23.00

Sinks, flat rim— .1 only 2 only 3 only

16 x 24..... \$ 7.50 \$ 7.40 \$ 7.30

Less 35½ per cent.

Irwin Auger Bits Plus 5 Per Cent.

Montreal—

Through a change in discounts, Irwin auger bits are reduced in price. They are now quoted at list plus 5 per cent, while the No. 9 set now sells for \$5.30 and No. 12 for \$7.75 net.

Adjustment In Stoves and Furnaces

Montreal—

Prices on all heaters, furnaces, cast iron and steel ranges and cooking stoves show a revision, and all lines are reduced from 3 to 9 per cent. By applying the straight discount of 5 per cent. during June, July, August and September, where formerly the discounts varied in these months, dealers hope to increase future bookings for fall and winter requirements, as up to the present buying has been slack, and warehouses are now filled awaiting the demand.

Closets Sell For Less

Montreal—

Local jobbers have generally reduced their quotations on closet outfits, the standard outfit now selling for \$26.00. This reduction from former levels had been given by a few distributors during the past few weeks, but it was by no means general. As in enamelled ware, sales of closets have shown an improvement recently, due to the demand of building construction. Following are the new prices.

Closet, standard outfit.. .. 26 00

Do., with post hinge seat.. .. 26 75

Do., white vitro, vitreous china

or enameled iron, with wash

down bowl and oak or mahog-

any post hinge seat.. .. 29 75

Do., add for bar hinge	0.25
Do., white vitro, vitreous china, or enameled iron tank, with fittings flush elbow and supplies less seat....	18.50
Less 10 per cent.	

Slower Movement of Wrought Pipe

Montreal—

There is at present a rather slow movement of wrought iron and steel pipe, the demand seemingly to have fallen off in the past two weeks. Jobbing houses, however, do not look upon the present slackness as being unusual as sales during the summer months usually record smaller volume, and it has been noticeable that the movement of piping has been more or less irregular all season. No further change is made in quotations since list number 52 was announced last month.

Dull Tone Continues In Boiler Tubes

Montreal—

Little or no improvement can be reported in the movement of boiler tubes, and the dull tone recently recorded still continues. The adjustment of quotations three weeks ago, when all sizes of the seamless tubes were brought to lower levels, has failed to produce extra buying, and dealers are satisfied that further reductions will not have the desired effect in this regard. Present quotations are the following:

Boiler Tubes—	Seamless	Lapweld
1 inch.....	25.00	
1¼ inch.....	26.00	
1½ inch.....	25.00	
1¾ inch.....	28.25	27.00
2 inch.....	27.80	23.00
2¼ inch.....	31.35	26.00
2½ inch.....	39.65	28.00
3 inch.....	46.80	33.00
3½ inch.....	60.35	41.00
4 inch.....	81.00	51.75

Variation In Valve Quotations

Discounts on the various lines of compression goods are unchanged with the exception of radiator valves, these being lowered in price through a change in discounts. The market on valves and bibbs generally, continues rather unsettled, as in the case of many other plumbing supplies, with the result that there is a variation in quotations among the different dealers. Following are present general discounts:

Compression work, standard	37 p.c.
Fuller work, standard	30 p.c.
Bath cocks, compression	30 p.c.
Basin cocks, Fuller No. 0.....	30 p.c.
Do., Nos. 1 and 2.....	30 p.c.
Flatway stop and waste cocks, standard	40 p.c.
Roundway stop and waste cocks, standard.....	37 p.c.

No. 2 busheling.....	4.00
Boiler plate	8.00
No. 1 machinery cast	20.00

Lead Sheets and Solders Reduced

Montreal—

During the past few weeks two reductions have been made on solder quotations, while lead sheets have also shown lower prices. These declines are said to be in sympathy with lead, and other metals used in their manufacture on the primary market. No other price changes are recorded but practically all other products now have an easier tone. Following are the local current quotations:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50

NOTE.—Lead pipe is subject to a discount of 10 p.c.

Lead traps and bends	10 p.c. off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.....	0 10½
Lead sheets, 3 to 3½ lbs, sq. ft., lb.	0 10¼
Do., 4 to 8 lbs., sq. ft.....	0 09½
Cut sheets ¼ c lb. extra and cut sheets to size ¾ c lb. extra	0 25½

Solder, guaranteed, lb.....	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.....	0 21½
Do., wire, lb.....	0 35
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

General Lowering of Sheet Prices

Montreal—

Sheet quotations are now generally revised to lower levels. Black sheets show a reduction of approximately 50 cents per 100 lbs. on all gauges, also the American standard galvanized sheets. English standards have been reduced \$1.00 per 100 lbs. on both Queens Head and Fleur-de-Lis. American Canada plates are 50 cents per box lower.

The easier tones in the market for sheets can be stated as a reflection from market conditions at the U.S. mills, on practically all iron and steel products, this assisted by the disposition on the part of buyers to still further reduce their stocks. Reports from the Southern Mills are to the effect that while the base price is not changed generally, concessions are still named to obtain orders. In the case of English standard galvanized sheets, American competition is said to be the reason of the price decline.

Black Sheets

10 gauge.....	4.50 to 5.00
12 gauge	4.60 to 5.10
14 gauge	4.75 to 5.25
16 gauge	4.85 to 5.35
18-20 gauge	5.30 to 5.80
22-24 gauge	5.35 to 5.85
26 gauge	5.40 to 5.90
28 gauge	5.50 to 6.00
Sheets 36 in. wide, 20 cents per 100 lbs. extra.	

Canada Plates—

Dull	
18x24 X 52s	6.75 box
18x24 X 60s	6.85
18x24 X 75s	6.95

Welsh Canada Plates—

Polished.	
18x24 X 52s	8.25 box
18x24 X 60s	8.50 box

Galvanized Sheets—

U. S. Standard

20x28 IXX 56s.....	11.75
20x28 IXXX 56s.....	12.50
Terne Plates—	
20x28 IC 112s..	17.50 box

No Change In Prices on Wastes

Montreal—

Cotton wastes and wipers continue to sell at unchanged figures, with a fair amount of business being done. Following the recent easier tone in cotton goods generally, when the last reduction was recorded in these products, the market basis with no present indication of easier prices.

is now said to be on a much steadier

Radiation Holds At Advance

Montreal—

No further change is made in quotations on either radiators or boilers, since the advance two weeks ago. According to one local manufacturer a steadier market may now be looked for on these products and unless some unforeseen situation develops, little change is likely to be made in quotations. When asked as to the recent advance in these lines, which closely followed a previous decline, he stated this decline was by no means warranted and the readjustment was necessarily made when the cost of raw materials and other productive costs were anticipated. Being of the heavier class of goods, freight rates were one of the chief factors that had to be considered, and a change in this direction would

have to be made before any further marked reduction might be looked for.

New Lower List On Corrugated

Montreal—

Corrugated sheets will now cost less, new lower list prices being announced, falling into line with other sheets which are recorded with easier levels. Business in this commodity is reported as quite satisfactory for the season of the year, and although sales are more or less irregular from week to week, the volume is being well maintained. It is expected also that the movement will be fairly brisk during the fall months, as increased activity is generally shown after the quiet summer period. It is also in the later months that smaller buildings are constructed of this material for protection against the winter weather. Following are new list prices and discounts.

Corrugated Sheets—	Per 100 Sq. Ft.
No. 28 gauge	7 75
No. 26 gauge	8 25
No. 24 gauge	11 50
No. 22 gauge	14 00
No. 20 gauge	15 75
No. 18 gauge	21 00
Less 7½ p.c.	

Lighter than 24 gauge and wider than 27 inch, 75c a square extra.

Soil Pipe Lowered In Price

Montreal—

With the exception of the 8-inch, discounts on both soil pipe and fittings have been increased, thus lowering the price on these lines. As in the case of many other plumbing supplies, the local market on both pipe and fittings has been rather unsettled for the past two months, but discounts were not generally changed until this week. Building construction is also having its effect on these, sales are reported as having improved in the past few weeks. Following are the new discounts.

Soil Pipe

2 and 3 in., 25%

4 in., 30%

5 and 6 inch, 30%

8 inch, net.

Fittings

2 to 6 inch fittings, 40-10%

8 inch fittings, net list.

Good Volume of Eavestrough Sales

Montreal—

Although the busy season is now in hand in rural districts, farmers being actively engaged, fair volume of business continues in eavestrough and conductor pipe. The movement of these products has been well maintained since the open weather in the spring months, and increased activity is expected for fall.

Prices and discounts are holding unchanged at 60 per cent. off list on trough and conductor pipe, 55 per cent. off on elbows. However, with an easier tone on galvanized sheets and lower prices prevailing, a change in discount would not be surprising.

Variation In Fitting Quotations

Montreal—

There is no change made in the discount on the various lines of pipe fittings, but the irregularity noticeable in other lines throughout the jobbing houses, is reported as having now reached pipe fittings and quotations are by no means uniform among them. The variation is however in most cases slight, and

in the form of concessions made for quantity buying. A fair amount of activity is reported on the different lines, sales being small but numerous. Following are general local discounts.

Fittings—

Cast iron fittings.....	20 p.c.
Bushings, cast.....	30 p.c.
Bushings, malleable.....	30 p.c.
Flanges.....	27 p.c.
Plugs.....	30 p.c.

Pound Goods—

	Blk.	Galv.
Class B.....	20	0 28
Class C.....	0 13	0 20
Add 10 per cent.		

Copper and Brass Sheets Reduced

Montreal—

With a slight reduction made in outside markets on copper and brass goods local quotations on sheets in both metals now show a decrease. Plain tinned copper sheets are reduced one cent per pound, base; plain 2 cents, and planished and tinned 2 cents. Brass sheets have declined 3 cents a pound. Revised prices are the following:

Copper—

	Base
Rods, per lb.....	0 32
Sheets, plain, 16 oz. and heavier.....	0 32
Sheets, plain tinned, 16 oz. and heavier.....	0 37
Sheets, polished and tinned, 16 oz. and heavier.....	0 40
Tubing, per lb.....	0 36

Brass—

Sheets, per lb.....	0 27
Rods, per lb.....	0 25
Tubing, per lb.....	0 35

Range Boiler List Holds

Montreal—

A new list on range boilers has failed to make its appearance on the local market as yet, notwithstanding manufacturers still claim existing levels are not in accordance with production costs, and higher prices are imminent. On the other hand, even with prevailing figures, jobbers are offering further reduced quotations. For example, the quotations on the 30 gallon boiler was flated at \$8.75, while to-day this boiler can be obtained at \$7.50, this condition offering little encouragement for increased prices. However, it is thought a new list of quotations would stabilize the market, but for the present the following prices are given:

Range Boilers—

	Standard	Ex. heavy
30 gallon.....	7 50	11 25
35 gallon.....	11 25
40 gallon.....	13 50	16 00
52 gallon.....	20 00
66 gallon.....	28 00
82 gallon.....	35 00
100 gallon.....	45 00
120 gallon.....	54 00

Little Change In Bar Iron

No further developments are announced relative to lower prices on plates, structural shapes, bars, etc., at the mills but shading of quotations continues among individual interests to secure orders, and further price declines are reported in some U.S. steel markets.

Locally the prices remain unchanged since the revision a few weeks ago. Jobbers stating that business in iron and steel has dwindled down to a small sorting demand. Following are unchanged quotations:

Common bar iron, 100 lbs.....	3 40
Refined iron.....	5 05
Iron finish machinery steel.....	3 60
Mild Steel.....	3 55
Single reeled machinery steel.....	5 50
Band steel.....	3 55
Spring steel.....	6 00
Sleighshoe steel.....	3 55
Tire steel.....	3 75
Toe calk steel.....	4 45
Harrow tooth steel.....	3 70
Mining tooth steel, per lb.....	0 23
Black Diamond tool and cast steel per lb.....	0 23

NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles 50c. per 100 lbs. extra.

Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Ingot Metals Still Depressed

Ingot metals continue in the midst of a depression, which has been more pronounced since the beginning of July. Market tendencies are dull and practically unchanged with the exception of tin which is again reported easier. Copper is a little steadier after having a weaker tone last week. Other quotations remain unchanged.

TIN—The firmer tone of this metal in London has given way to weakness, this being reflected on the local market with quotations one-half cent lower. Heavy stocks and a light demand denote the condition of tin, with little improvement yet in sight. Local price 34 cents.

COPPER—Price-cutting among producers in the U. S. is not quite so evident, and copper is now reported a little steadier. Local market continues very dull and the demand light. Quotations are unchanged at 17¼ cts. for electro, 17 cts. for casting.

LEAD—Bullish reports and continued strength are the features in the market of this metal. A fairly steady consumption, with stocks none too heavy assist toward a future steady market. Local prices remain unchanged at 6½ cents.

SPELTER—Although an improvement would not be surprising, local conditions are this week practically unchanged on spelter. East St. Louis shows little variation, but fluctuates between \$4.20 and \$4.25 base. Quotation unchanged at 7½ cents.

ANTIMONY—Antimony fails to improve either in price or market tendencies, although quotations are considered at extremely low levels. Chinese is quoted at 7½ cents, high grade English 8½ cents.

ALUMINUM—This metal is held at last week's quotations of 30 cents, with little change in the market. Aluminum has been the dullest metal on the list for some time, and an increased demand will have to be shown before any improvement can be reported.

MUELLER

Ground Key Cocks and Compression Stop, Supply and Drain Cocks

The Cocks illustrated on this page — A-1120, A-1185, A-1128, A-1251, A-1260 and A-1188 (reading down from left to right), represent a few of the many **MUELLER** patterns—each designed to fill a special need to perfection.

MUELLER Plumbing Brass Goods are made from Muellerite—a metal that is 85% pure copper. Muellerite resists corrosion better—can be handled with greater mechanical precision—takes a finer finish and a heavier nickel plating than common brass, which is less than 60% copper.

Once you begin to use **MUELLER** Plumbing Brass Goods, you will quickly recognize their superiority—in the ease with which they can be installed, and in the dependable service they invariably give. Every **MUELLER** Cock is tested to withstand 200 pounds hydraulic pressure without leaking.

Write for detailed description and prices. Mail orders given immediate attention.

in White Metal and Aluminum; also Screw
Machined Products.

TORONTO

TORONTO, August 18.—Price recessions on various plumbing and steam-fitting supplies continue to be a feature of current market reports. Reductions in quotations on solder, boiler stands, bell traps, sink couplings, and easier levels in scrap material prices, comprise another table of important price revisions. Changes are again evident in the ingot metal markets, copper, tin and aluminum being lowered in price. A further recession is generally shown in quotations on the 30-gallon standard range boiler, this condition resulting from competitive price shading.

Lower Quotations On Solder

Toronto—

Solder quotations are again lowered, the extent of the change varying from a half to two cents per pound on the different grades. This is the third revision in prices on solder noted during recent months. The current reductions are contained in the appended lists. Other lead and zinc product prices remain unchanged.

LEAD AND ZINC GOODS

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb. ...	0 13½
Do., over 8 in., list, per lb. ...	0 14½
Lead pipe is subject to a discount of	10 p.c.
Lead traps and bends.....	10 p.c.
Lead sheets, 4 to 6 lbs. sq. ft. in rolls, lb.	0 09½
Cut sheets, ½c to ¾c lb. extra and cut sheets to size 1 ct. lb. extra.	
Solder, wire, per lb.	0 29
Do., strictly, lb.	0 22
Do., commercial, lb.	0 20
Do., guaranteed, lb.	0 24
Do., wiping, lb.	0 20
Zinc sheets, per lb.	0 13

Price Shaded On 30-Gallon Standard Range Boiler

Toronto—

Sentiment among the trade generally as regards the proposed new list in prices on range boilers has now developed a doubting attitude as to the probability of any future changes. No announcement of any revision has been made, and a readjustment in quotations has hung fire for over two months. Even lower prices on the 30-gallon standard size boiler have been noted in some quarters, the average quotation now having been reduced to \$8.50, while \$8.25 each has been quoted for quantity buying. This is practically the only size selling at the present time. Nominal prices follow:

RANGE BOILERS

	Standard	Ex-heavy
30 gallon	\$ 8 50	\$11 50
35 gallon	9 50	13 80
40 gallon	13 80	16 50
52 gallon	20 40	25 20
66 gallon.....	28 08	34 80
82 gallon	36 00	47 40
100 gallon	45 60	56 40
120 gallon	55 20	64 80
144 gallon	78 00	93 00

Lower Prices On Boiler Stands and Cast Iron Specialties

Toronto—

Reductions are now announced in quotations on certain sizes of boiler stands, and other cast iron specialties. The extent of the decline is approximately 5 per cent. Bell traps and sink couplings are also affected by these lower prices.

Scrap Material Prices Sag

Toronto—

Reports of further declines in scrap iron and steel, and also on scrap metals, merely served to further accentuate the apparent dullness of the waste material markets generally. A lower range of quotations has developed on heavy melting steel, stove plate and on heavy copper, while prices on old rubbers are also reduced.

There appears to be some impression that prices will sag even lower on scrap materials, but any future improvement in general business conditions is expected to result in a betterment in the waste markets. Following are dealers nominal average buying prices for fairly large quantities:

WASTE MATERIALS

No. 2 bushelling	\$11 00
Heavy melting steel, gross ton	9 50 10 50
R. Rd. wrought iron, No. 1, gr. ton	11 00 12 00
Scrap pipe, gr. ton	6 00 7 00
Stove plate, net ton.....	11 50 12 00
No. 1 machinery cast, net ton	17 00 18 00
Heavy lead.....	3 75 4 25
Tea lead	2 25 2 50
Red brass	9 00
Yellow brass	6 00 7 00
Light brass	3 75 4 00
Heavy Copper	9 75 10 75
Scrap zinc	3 50 4 00
Old rubbers, boots and shoes	2 25 2 75
Lumberman's rubber boots	1 50 2 00
Auto tires	0 50 1 00
Solid tires	0 75 1 25

Fair Demand For Soil Pipe

Toronto—

Although the total volume of building for the present season is below expectations in this direction, yet a noticeable impetus has been given construction work during July and August. This condition has reflected in a brisker movement of soil pipe and fittings, and the recent revision in discounts has evidently had a similar effect in reviving interest. Current quotations follow:

Soil Pipe

2 and 3 inch, 25%.	
4 inch, 30%	
5 and 6 inch, 30%	
8 inch, net.	

Fittings

2 to 6 inch fittings 40-10%	
8 inch fittings net.	

Tube Sales Confined To Small Sizes

Toronto—

The dull period of trade in steel and steel products has had its effect on the current boiler tube movement. The volume of orders is still said to be disappointing, with the smaller sizes for re-

pair work, being the only favorable feature of an otherwise apathetic market. Prices continue to hold at the recent revisions following:

BOILER TUBES	Seamless	Lapweld
1 inch	\$26 00	\$ 1 10
1¼ inch	27 25	
1½ inch	26 25	
1¾ inch	29 75	25 00
2 inch.....	28 00	22 00
2¼ inch.....	32 00	25 00
2½ inch.....	40 00	27 00
3 inch.....	44 00	35 00
3½ inch.....	60 00	40 00
4 inch.....	75 00	50 25

Enamelledware Prices Hold

Toronto—

Quotations on enamelledware are nominally unchanged from the prevailing lists, and although a tendency towards unsettlement has been recently noted in some quarters, no further revision in either quotations or discounts has, as yet, been announced.

ENAMELLED WARE

20 x 30.....	9 70 9 80 9 90

All above list except lines marked net. Discount 20-10 p.c. off these prices.

Closet Quotations Maintained

Toronto—

The market for closet outfits and closet fixtures has recently shown slight signs of improvement. This condition is attributed by manufacturers and distributors as a reflection of the recent building activity, and with the easier prices recently announced, a seasonable volume of sales is generally looked for. No revision in the following quotations has, as yet, been announced.

Radiator Discounts Hold

Toronto—

There has been a noticeable increase in both orders and inquiries for radiators, according to current indications. The fact that building activity has been more pronounced during August, and that construction is now reaching the stage where the installation of radiators and boilers is of importance, has had a stimulating effect on these products. The revision in discounts recently announced is still being maintained, and with the present movement, dealers state that further changes depend primarily upon lowering of freight rates and other production costs.

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in. \$1; 32 in. \$1.10; 30 in. \$1.15; 26 in. \$1.20; 23 in. \$1.26; 22 in. \$1.30; 20 in. \$1.36; 18 in. \$1.40; 16 in. \$1.50; 14 in. \$1.55; 13 in. \$1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 53 per cent for water and 54 per cent for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent for water and 49 per cent for steam.

Discounts on 1-column hospital size, water 30 per cent; steam 31 per cent.

Wall Radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 50 per cent.

BOILERS—

Water:

Round.....60% off list
Square.....10% off list

Steam:

Round.....15% off list
Square.....5% off list

Easier Tone On Eavestrough

Toronto—

An easier tone has recently been noted in current markets on conductor pipe, eavestrough and elbows. While the present movement in these lines is not quite so brisk as a few weeks back, sales are still reported fair for this season of the year. The activity noted in small building has been reflected in the demand for eavestrough and pipe. Whether further price revision will be announced is stated as depending upon the future trend of cost elements. Prevailing quotations follow:

TROUGH (Ea-C)

O. G. Square Bead and half round.
Size in g'rth:

	Per 100 ft.
8 in.	\$15 90
10-in.	17 70

6 inch, list	29 00
Less 55 per cent.	

Corrugated Sheet Prices Third Lower Than Last Year

Toronto—

Trade in corrugated sheets is reported to have registered a falling off during recent days from the marked volume of activity noted earlier in the season. The recent price revisions complete a reduction of approximately one-third from the high quotations noted during 1920. No further changes have been announced, and the following quotations generally prevail:

CORRUGATED SHEETS

	Per 100 sq. ft.
No. 28 gauge	7 55
No. 26 gauge	8 25
No. 24 gauge	11 50
No. 22 gauge	14 00
No. 20 gauge	15 75
No. 18 gauge	21 00

Less 7½ p. c.
Lighter than 24 gauge and wider than 27 inch 75c. a square extra.

Pipe Sales Irregular

Toronto—

The current movement in pipe is still irregular, and sales have recently fallen off a little. This condition has been generally noticed throughout the present season. Pipe list No. 52 still remains in effect as follows:

Price List No. 52 July 11 1921

Size	Standard Butt-weld Pipe			
	Per 100 feet		Steel Gen. Wrot. Iron

Improved Tone Noted In Brass and Copper Goods

Toronto—

Business in brass and copper goods has recently recorded a slight improvement. A more optimistic viewpoint now prevails as regards the volume of fall trade, and with a revival of interest in the primary markets looked for during September, this condition is expected to reflect a gradual development towards a normal recovery in these products. The prevailing quotations follow:

BRASS

Sheets, base, per lb.	\$ 0 27
Rods, base, per pound	0 27
Tubing, base, per lb.	0 34

COPPER

Do., plain tinned 16-oz. and heavier, lb.	0 40
Do., polished and tinned 16-oz. and heavier, lb.	0 45
Tubing	0 33

Fair Trade In Pipe Fittings

Toronto—

A slight improvement has been recorded in pipe fittings and with the current volume of building activity continuing throughout the fall period, a more satisfactory business is expected to develop. The market tone generally remains unchanged, and with no further price revisions having been announced, the current quotations remain as follows:

Cast iron fittings	20 p.c.
Plugs, cast iron	27½ p.c.

VULCAN

Pure Air Furnace

We want you to know about this furnace; it will be good for your business. You can install Vulcan Pure Air Furnaces very profitably. We want you to know the details and what's in it for you. Write us today. Just put on a post card, "Vulcan Pure Air Furnace" with your name and address, address it and mail it to us. These reliable furnaces are economical, easy to operate, have a greater radiating service, and the heavy metal makes them very durable. Read what impartial users have to say for them:

London, Feb. 11th, 1921

Gentlemen:—

I have used the Vulcan Pure Air Furnace for several years. I find it economical on fuel, easy to operate, and as it has a greater radiating surface than any other in its class. I have been well pleased with the results. I can recommend its use to any. I believe it to be durable on account of the heavy metal in its construction.

DR. COPELAND.

London, Feb. 11th, 1921

Gentlemen:—

I wish to express my opinion of the Vulcan Pure Air Furnace. After five years' experience with it in my thirteen-room house, I can truthfully state it to be the most economical, durable and all round satisfactory furnace of its class made.

MR. C. H. SUMMER,
R. R. No. 8.

London, Feb. 10th, 1921

Gentlemen:—

I have been using the Vulcan Pure Air Furnace for the past five years. Have had thorough satisfaction in heating a twelve-room house in which I live. Have found this furnace very economical on fuel according to the amount of fuel consumed by other furnaces not doing the amount of work that this Vulcan does. I recommend this Vulcan Furnace to its full extent for economy, satisfaction and durability.

Look For Stabilization On Bar Iron and Steel Prices**Toronto—**

Reports recently received from southern steel centres indicate that an expectation is developing for prices on the primary markets to be stabilized shortly. This is primarily due to the fact that price shading between the mills has caused quotations to reach a level where, under prevailing conditions, further cutting to even lower standards is practically impossible. It has been stated that current prices contain no margin of profit for the producers, owing to the low ratio of activity in the steel industry generally.

With the present high standards of freight charges coupled with existing labor costs, prices on bar iron and steel are said to be decidedly low. It has been suggested in some quarters that prices on the primary markets might even be cut a little further, but such action is expected to depend upon future declines in freight and labor cost levels; for it is well known that further reductions would entail direct losses to the mills, as they are producing at such a restricted volume of capacity that current operations mean a small output obtained at a high degree of overhead costs.

The lower range of quotations shown on the appended list is now more generally prevalent on local markets, only one or two instances are making any decided effort to maintain the higher levels:

IRON AND STEEL—

Mild Steel bars, base.....	\$3.50 to \$3.75
Mild steel bands 3-16" base	4.00 to 4.25
Bar iron, base.....	3.50 to 3.75
Angle iron, base.....	3.60 to 3.75
Horseshoe iron.....	4.10
Tire Steel.....	4.70 to 5.95
Spring steel.....	9.50 to 11.50
Crucible cast sheet steel	30.00 to 35.00
Mining drill steel.....	20.00 to 23.00
Cast tool steel, medium.....	20.00
Cast tool steel high grade	30.00 to 36.00
Sleigh shoe steel.....	4.10 to 4.50
Norway iron.....	15.00
Toe caulk iron.....	5.40 to 6.40
Hoop steel.....	4.75 to 5.00

Develop Inquiry For Sheet Prices**Toronto—**

Interest in sheets and plates generally has been slightly more pronounced during the past week. This factor has encouraged dealers in some quarters that the future outlook is perceptibly brightening, while others again hold that the price shading activities in warehouse circles, only serves to further becloud future prospects in these markets.

A little increase in the volume of inquiry has been recorded and some report sales are gradually becoming heavier individually. The total orders received, however, cannot be compared with the many requests for prices, indicating that what purchases are being made are still for immediate requirements only, and that while more appreciative of the attractiveness of the prevailing market levels, buyers are maintaining a cautious attitude generally.

Following are the average quotations on fairly large quantities:

Plates—

10 gauge.....	4.75 to 5.00
12 gauge.....	4.80 to 5.05
14 gauge.....	4.85 to 5.10
16 gauge.....	4.95 to 5.20

Black Sheets—

14 gauge.....	5 10 to 5 60
16 gauge.....	5 20 to 5 70
18-20 gauge.....	5 30 to 5 80
22-24 gauge.....	5 35 to 5 85
26 gauge.....	5 40 to 5 90
28 gauge.....	5 50 to 6 00

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 36 in. wide.

GALVANIZED SHEETS—

	Queen's Fleur-Head de-lis	
28 gauge.....	10.00	9.25
26 gauge.....	9.75	9.00
24 gauge.....	9.15	8.60
22 gauge.....	8.80	8.15
18-20 gauge.....	8.10	8.00

Premier and Apollo

10½ oz.....	7 90	8 40
U.S. 28.....	7 50	8 00
U.S. 26.....	7 20	7 70
22 and 24.....	7 05	7 55
18 and 20.....	6 90	7 40
16.....	6 75	7 30
12 and 14.....	6 60	7 20

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charge on galvanized sheets, 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is from 20c to 30c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

WINNIPEG

W INNIPEG, August 18.—Price changes continue to feature the current western markets on plumbing materials generally.

Gavanized band steel, barbed wire, galvanized range boilers, black and galvanized sheets and Canada plates, all show reduced quotations. An advance is recorded in lead product prices, while turpentine and linseed oil quotations remained unchanged.

Band Steel Quotations Reduced**Winnipeg—**

Easier Prices On Ingot Metals**Toronto—**

Owing to the fluctuations in exchange coupled with the continued depression in both southern and foreign markets, quotations on copper have again reached easier levels. The local price has receded to 17 cents, this being a decline of half-cent from the previous quotation.

Similar conditions have governed trading in tin, and the apathy and depression of recent weeks has resulted in a 2-cent concession in prevailing quotations. This change now brings the current local price to 35 cents.

Lead prices remain at \$6.75 and this metal is the only encouraging feature of an otherwise dull ingot situation.

There is little of new interest to record in spelter, and the dull period continues, with the lower quotation of \$7 00 still generally prevailing.

Antimony prices are maintained between 8 to 10 cents, with no new development in either trading or market trend to record.

Local quotations on aluminum have reflected the reductions on the primary ingot markets, and prices are now generally quoted at 28 or 29 cents.

A Step Forward in Efficiency

VICTORY RADIATORS

An improvement in engineering and design.

The Victory Radiator is made with two flat, hollow castings, one for the top and the other for the bottom, with tubes inserted in them. One tube is within the other. In this way, water is caused to circulate through the

headers and between the two tubes. This is a series of double tubes; 8 in the smallest castings, up to 54 in the larger ones. This adds the outside surface radiation of the larger tube, and the inside surface radiation of the smaller tube, to that of the top and bottom headers. So Victory Radiators

SAVE ON

Coal, Shipping and Handling Weight, Cost of Installation and Fittings. Further investigation proves them still more efficient. Steel tubing is thinner and gives better radiation. The air circulation is better. The radiators occupy a minimum of space. They are artistic in appearance.

Since there is only $\frac{1}{8}$ as much water in Victory Radiators, it is quickly heated, and stimulates circulation of the water, making radiators hotter and radiating more heat. A smaller furnace can be used to heat the lesser quantity of water. Write for the remainder of the advantages.

MANUFACTURED AND SOLD BY

Montreal General Tool Company, Limited

2419 NOTRE DAME ST., EAST, MONTREAL

"Toledo" Geared Adjustable Threading Tool,
No. 2½. Capacity 2½ to 6 in. inclusive.
Weight 120 lbs.

JARDINE

Pipe Threading Tools

In these effective tools the dies open out as the tool advances on the thread so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter mouth.

TOLEDO

Pipe Threading Tools

Beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble. They work easily, smoothly, rapidly and accurately. A. B. Jardine and Company, Limited, are the sole makers of "Jardine" Pipe Threading Tools and the sole licensees to make and sell "Toledo" Tools in Canada.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

**Do
Your
Customers
Know That
THE
MARVEL
Storage
Gas
Water Heater**

Leads the world? Show them. Your customers are interested in a gas water heater that heats water in shortest time, with the lowest consumption of gas.

A gas water heater that is easier and quicker to install, pays a generous profit, and makes a neat job. Just the thing to build business in Sanitary Engineering business like yours.

To the plumber's interest—it takes less time, by far, to install a B-M Heater. You have at least seven less connections to make than when installing the ordinary side-arm heater, and your installation is made at a lower cost to the customer through the elimination of the extra pipe, couplings and fittings. A B-M Heater is delivered completely assembled, ready to install.

PILOT PIPELESS FURNACE

Are You Selling This Furnace
The "PILOT"

First in Its Field

The many valuable features of the Pilot Pipeless Furnace are shown by the diagram at the left.

Probably the strongest evidence in favor of the Pilot Pipeless Furnace is the unbiased testimony of impartial third parties. We have printed many letters from these people who have become satisfied customers. Here is one more:

Hanover, Ont., March, 30th, 1921.

The Hall Zryd Foundry Co., Ltd.,
Hespeler, Ont.

Dear Sirs:

We had a Pilot Superior Pipeless Furnace installed by Mr. Geo. Rahn in our store and are glad to say it is giving the very best of satisfaction.

Previous to installing furnace we heated our store with a Quebec Heater and must say we are using less fuel now than before.

Our cellar is cool which makes it very convenient to keep vegetables etc. while our store is evenly heated, this being remarkable owing to our door being open quite often daily.

We believe this heating to be the best for store purposes.

PERFECTO

OIL REGULATED

Flush Valves

Now made in Canada by Galt
Brass Company, Limited, under
their liberal 5-Year Guarantee.

Protected From Corrosion and Dirt

FLUSH VALVES as a rule have only one source of trouble—the water. And Oil-regulation positively avoids that.

The PerfectO Valve operates in oil—the water does not come in contact with the controlling parts. There is no possibility of corrosion or liming to impair the action of the valve; no danger of dirt clogging the small by-pass which governs the duration of the flush. The PerfectO operating parts are immersed in fine oil, and are entirely apart from the water. This insures smooth action—constantly uniform—and years of service without attention or repairs.

Illustrated Catalogue

See how the PerfectO looks in combination with various types of bowl and read full particulars in our NEW CATALOGUE. Yours for the asking.

TINKER TOM'S TALKS.

Tinker Tom Talk No. 323

GOOD STUFF

I wish you could see these sheet metal elbows, tees and pipes made up by G. C. Hunter, Tinsmith, Hamilton.

Excellent workmanship and beautiful stock, (Premier of course).

Here's a tip for a timely ad. for you Mr. Tinsmith—There's lots of fall work in sight and with reduced prices for the sheets your profit will be good.

TINKER TOM.

Sanitation Increases Average Span of Life

Etc.

COLUMBUS Aug. 31.—The average life of man has lengthened four years in the last quarter century despite the crime wave, war, automobile and other hazards.

"Within another generation the allotted threescore years and ten will be a thing of the past," Dr. George W. Hoagland said basing his claims on mortality statistics of the American Insurance Union of which he is secretary.

"Improvements brought about in sanitation the nationwide anti-spitting fight and other steps have contributed toward man's longevity," Dr. Hoagland said. "Severe epidemics of typhoid and malaria which formerly took such a huge toll of life no longer are known."

It is your duty to help along the good work.

Piping Connections to Radiators

*This is the fourth of a series of talks on steam heating, appearing monthly in Sanitary Engineer.

You will find all very interesting and of help in your daily work.

The control valve connection at the top of hot water type radiators, provides free and orderly admission of the steam. This steam without perceptible pressure behind it, floats across the radiator, displacing the air and as the air settles to the bottom of the radiator it is freely vented into the return piping through the Dunham Radiator Trap. The trap automatically prevents the waste of any steam from the radiator.

The Dunham Trap is usually located at the opposite end from the supply connection, but on radiators of standard floor type, not over forty inches long, it may be located at the same end as the steam supply, and the air will vent from the radiator equally as well as by the first method. The advantage of making valve and trap connections at top and bottom same end of radiator, is the simplifying of the roughing in of the job.

Since steam at low pressure is used, the burrs at the ends of all pipes should be removed so as to give full effective area in the pipes supplying the radiators—otherwise the pipes may not handle the amount of steam they should to supply the radiator.

Another very important point in installation is the grade of SPRING CONNECTIONS. These should have very liberal grade so that expansion of riser or settling of building will not create a pocket in the pipe where condensate will collect. Any such pockets destroy free and even circulation and necessitate the raising of pressure on the boiler to force the water out of such pockets. This operation is always accompanied with the objectionable hammering in pipes.

When roughing in a job, fasten your spring connections into proper position so that mechanics of other trades will not disturb them. This is of vital importance where spring connections are concealed and applies to both steam supply and return pipes.

Every Gas Burning Home a Prospect

Bath Water must be heated in some way or other time and again, week in and week out, year in and year out for every member of the family. Heating bath water has been accomplished in various ways,—tea-kettles, pots, pans, and whatnot; but the home with the

HUMPHREY Instantaneous Bath Water Heater

SUPPLIES Bath Water piping hot, without a moment to wait. Just light a match, ignite the pilot, turn on water and gas, and instantly your bath is on the way. The water is instantly heated as it flows, in any quantity you want. The sale of the HUMPHREY INSTANTANEOUS BATH WATER HEATER opens up a wonderful market.

Every home wants one of them, and their sale is profitable for you.

Made in two sizes,

No. 8—2½ gallons per minute.

No. 6—3 gallons per minute.

The HUMPHREY SHOWER BATH WATER HEATER makes it possible to take either a tub or shower bath. Comes completely equipped with overhead shower, already for installation.

Get prices and catalog, and ask for names of distributors in your territory.

The HUMPHREY line of Gas Water Heaters is very complete,—making it possible to secure your entire demand on one account.

For Sale Two Stories And a Basement

By Booster Binx

Just the day before you and I had that talk about folks not knowing the things they know, I saw the above "For Sale" sign hanging in a Newark shop window. At once popped into my mind that that sign exactly described a Burnham.

The basement—the ash pit.
The first story—the combustion chamber.

The second story—the fire travel.
The for sale—well isn't that what we make Burnham for!

Knowing just how curious most you fellows are, I just hunted up some photographs showing the interior of the basement and both stories.
Sure you can keep them till I come again.

And by the way, next time I come, want to tell you what two tools and two men, did to one boiler.

B

The ceiling of the basement is a hot one. Besides, the plaster is loose. Luckily only half of it drops down at a time. There's always a safety hall because the ceiling shakes $\frac{1}{2}$ at a time.

1

My, my! but the second story is a sweltering place. You go bumping around against the side and even jump up and hit the ceiling a time or two before you find the stairs up into the second story.

2

But the minute you get up-stairs and look for a place to sit down; something or somebody keeps you running up one hall and down the other, until before you know it, you are out on the sleeping porch and jumping up in the air and floating off in the clouds like you were a natural born fairy.

For fifteen years we have put all the progress of science, engineering and shop practice into Sovereign Hot Water Boilers. To-day they stand supreme.

On ordinary boilers we offer: the largest first sections, individual clean out doors, deeply corrugated fire pot, clinker-proof grate bars, damper attachment on boiler, correctly "staggered" sections. Sovereign Hot Water Boilers will burn hard or soft coal.

Taylor-Forbes

Canadian Sectional Steam and Hot Water Boilers

Here is shown the 1921 pattern of Taylor-Forbes Canadian Steam Boiler.

Heating Engineers will at once observe that this is a highly efficient boiler. The design, the many special features visible in the illustration, and the general effect of up-to-dateness will commend it to thoughtful heating engineers.

We recommend that you specify Taylor-Forbes boilers, because, in service, they will reflect credit on your judgment, and bring you future business. They assure complete satisfaction in use.

ANTHES SYPHONS

Anthes Syphons mean something to Canadian Sanitary Engineers. Would you like 711,681 new prospects for the installation of water-closets, bath-tubs, wash-basins, range boilers, sinks and so forth? There are 711,681 farms in Canada according to Canadian government figures. Of these 683,214 have outside toilets.

These homes become definite prospects for all the business we have named when you have installed a sewage disposal system. Your success depends on the efficiency of the system you install. Anthes Syphons are the very heart and soul of successful sewage disposal plants. Our Bulletin No. 2 will help you.

Blue Prints and Specifications furnished.

Anthes Syphons operate according to purely natural laws. There are no moving parts to stick or cause trouble. They are seamless and made in one piece. Their construction makes them very easy and simple to install.

We also make superior cast iron Soil Pipe and Fittings. When you specify, specify Anthes Soil Pipe and Fittings.

Write for Bulletin No. 2, it will pay you.

BANNER

Pipeless Furnace

The BANNER PIPELESS FURNACE is an assured fact. It is not a make-believe or a makeshift for a furnace. It will heat a house comfortably all over with the minimum amount of coal and attention. Thousands of Banner Pipeless Furnaces are actually in operation throughout Canada. They were thoroughly tried during the past two winters. We have a booklet of testimonials gathered from all parts of the country, that we will be pleased to send you, undisputed facts regarding the efficiency and economy of "The Banner Pipeless Furnace".

We guarantee it and stay right behind the installer. We don't claim that we can heat every house satisfactorily, with the Pipeless, but where the Pipeless is not recommended we can fill the bill with our regular Banner Pipe Furnace.

Write for literature and book of testimonials and let us tell you more about this wonderful heating plant.

We want agents in many places.

*Our new furnace catalog
information for the installer
for your copy.*

The Galt Stove & GALT

NER

Pipe Furnace

With a Banner Furnace installed as the heart of the system, there is no form of heating that can compare with warm air heating for economy and efficiency.

Warm air heating provides an ideal thorough method of ventilation and heating. No other system will respond so quickly to the fire heating up a cold house in from one-half to one-sixth the time required by any other system.

Heating Engineers agree that the most efficient method of heating the average home is by warm air and it costs only about one-fourth as much as to install a hot-water or steam heating system.

The Banner Furnace represents the most satisfactory and efficient warm air system you can install.

*With a lot of useful in-
ready, be sure and send*

The Plumbing Trade Outlook

Emphasis Laid Upon Quality in Plumbing Installations
—Value of Suggestions in Increasing Sale of Plumbing
and Heating Equipment Illustrated—Many Good Op-
portunities Presented for Developing New Trade.

DISCUSSING the outlook in the plumbing and heating trades with a number of manufacturers, jobbers, etc., Sanitary Engineer has secured some data which will undoubtedly be helpful to operators engaged in this industry.

A thought emphasized by Wm. G. Harris, Jr., Vice-President, The Canada Metal Co., Ltd., Toronto, is that in the present business situation the word "Quality" cannot be emphasized too strongly.

"Of late, by being in personal contact with Plumbers, it appears that there is a class which is making it very hard for some members of the trade in good standing," continued Mr. Harris. "The very name 'Sanitary Engineer' carries with it a meaning that cannot be expressed in few words. When we consult a Sanitary Engineer, we consult him with the idea of, first, having a sanitary job; second, of having it a good engineering job; and, unfortunately, in some districts to-day we are finding men who are inclined to install plumbing material that is put in with the idea of cheapness instead of lasting qualities. Therefore, in keeping with the high name of the trade, high quality goods should be the key note of selling. Let the cheap thrown-together stuff stay where it was made. It is not necessarily the highest priced material that would be the best, but there is always a medium in which you can get lasting quality at fair price, and as a manufacturer, feel that though at times you and we lose business through a price, in the end feel that the man installing the lower grade material is doing himself the greater injury.

Courtesy and Service

"So let the Big Thought "QUALITY" for the Plumbing be not only for to-day's business, but for the good name of the business in the future. We are all aware that our business cannot be built solidly unless capital, coupled with courtesy and service goes out with each sale made, therefore, for the Sanitary Engineers of good standing it would be advisable not to let price over-ride QUALITY, but insist on their customers installing high grade materials. The Cheap John's day comes and goes very rapidly, you can count them, but go back and see the firms of long and old standing and you will see that quality has put them where they are.

Talk "QUALITY" and SELL GOODS.

Need to Hustle

"Rosy, optimistic analysis of business conditions is what we all like to hear. We hardly ever want to know the worst," said A. J. Dickey, Vice-President and General Manager C. Dunham Co., Toronto, recently. "Business assumed a temporary improvement in the Heating Trade, we believe, but we fear that it will be only temporary, except in the case

of the Contractor who is hustling and has a staff of workers with him that help him whole-heartedly to secure the work.

"This co-operation on the part of the helpers may mean longer hours of work, more painstaking work, less pay per month, or per hour, but it is the only way that healthy conditions can be established that will support good healthy business some time in the future."

Gradual Improvement

"We are pleased to be able to tell you that we have found business gradually picking up, dating from the first of the year," said G. A. Walker, H. Mueller Mfg. Co. Ltd., Sarnia, Ont.

"It is our idea that in the past few months many people who had building in mind have reached in a large number of cases the conclusion that building materials are not due for much of a drop. This conclusion is shown by the fact that prior to two or three months ago a considerable number of houses which were to have been built in the summer were held up. Now, however, this does not seem to be the case and building operations are getting well along.

"Contracts are being quite freely let and we look for better business in the plumbing line than has been enjoyed heretofore in 1921.

Suggestion Sales

"We have started a small campaign of propaganda about 'Suggestion Sales' which ideas might prove of considerable benefit if we could make the plumber realize that following out this method he could readily produce more business. We mean by this, when a plumber has the job for installing plumbing in a certain house, he can by suggesting to the owner, have two or three sill cocks placed on various sides of the house to eliminate the necessity for long rolls of rubber hose. The plumber could sell Laundry Tubs if he would take the trouble to talk to the woman of the house. A Shower Bath giving a nice margin of profit, would be ordered in many cases if brought to the attention of the owner and its advantages outlined.

"Many retail salesmen figure that more than half of their sales are what might be called "Suggestion Sales." This course of action could also be followed by the plumber with excellent results.

"One of the letters by this firm dealing with Suggestion Sales is as follows:—

"Most of our friends in the plumbing business whom we have interviewed, candidly admit that they have not given the sales end of their business much thought, but have devoted almost their entire time to the mechanical part and to the figuring of jobs, etc. This leads us to suggest to you the possibility of a very material increase in your business

through an effort on your part to sell plumbing fixtures which are not usually installed, to your customer. For illustration—induce him to install sill cocks on each side of the house, for sprinkling, etc., instead of buying so much rubber hose. Of course, if you sell hose, you won't see the advantage in this, but if you don't, you will of course be interested in getting the customer to buy what you do sell and install.

"I wonder if you realize that half the sales made in stores are what are termed 'Suggestion Sales.' We know from experience that this same thing can be done in the plumbing business and furthermore the class of goods that you will sell by suggestion usually gives you a greater profit than ordinary goods will. In other words, there is a rich field for the sale of Specialties in the plumbing business.

"You will be able to sell Shower Baths, in many homes where they were not originally planned, and every time you do this you will win the good will of your customer, for there is really nothing more appreciated in a home than a Shower Bath. It saves a great deal of time, is very invigorating and more sanitary by far than a tub. It is enjoyed equally by men, women and children. A Shower can be easily installed directly over the ordinary bath tub, but of course a Shower-Stall is preferable and requires very little additional space in the bath room.

"Many men who enjoy Shower Baths in Golf Clubs, Gymnasiums, Y.M.C.A.'s would undoubtedly have one installed in their home if they knew how easily it could be put in and how moderate the price is. A word to any man who is building a home will bring an order, in four cases out of five.

"One plumber that we knew of was anxious to see how much extra goods he could sell that were not really asked for. He suggested a few specialties on each job as he went along and the extra profit from these goods on which there is a large gain, netted him a sum of money in a few years sufficient to put him on Easy street. After all, that's what each one of us is looking forward to and when we apply little ideas that help us along, the extra dollars that come rolling in as a result will sure encourage us to get our share of "Suggestion Sales."

Evidence of considerable deflation in galvanized sheets in the past year, is given in the following statement made by A. T. Enlow, President Dominion Sheet Metal Corporation Ltd., Hamilton, Ont.:-

"Ordinarily the present decline in iron would have reached its minimum and a buying movement would already have occurred, but apparently in this instance such is not the case. Necessity apparently knows no law and any prediction as to what iron and steel products might do within the next three to six months, would have to be based on the extent of some seller's necessity, or the height of his folly.

Big Deflation in Galvanized Sheets

"We do know however, that to-day Galvanized Sheets are selling wholesale at just half the price ruling one year ago, which certainly is more than a moderate amount of deflation and should stimulate the use of Galvanized Sheets very considerably.

"We have all along recommended that the jobbing trade depends to a very considerable extent on manufacturers' stock, whether it be galvanized sheets or other articles, but this does not absolve the jobber from carrying a moderate amount sufficient to do spot business, and we believe the same holds good for the immediate future.

"Labor, which in the end is the biggest component of all products, has not yet taken its full portion of deflation through reduced wages, but rather through reduced work, and when the situation changes and the reverse is true, then conditions in manufacturing and general trade activities will certainly improve.

"It is just as true a maxim to-day that the business man who does not deflate, gets no business, as the proven fact that the workman who asks for old-time high wages, gets no work, hence the importance of everyone coming to a lower basis as rapidly as possible."

A manufacturer of enamel-ware, stoves, etc., states that manufacturers in this line feel they have done their full share to anticipate reduction of prices, in order to overcome this cause of the consumer deferring purchasing, and they feel the bottom has been reached. It is stated that these manufacturers feel they can confidently make an investment in the knowledge that no further reduction is likely to take place this year. Stocks in the hands of retailers are said to be light, which condition is expected to continue until purchasers become more confident.

Ingot and Sheet Metals

Stating that ingot metals have reached a state of equilibrium, G. T. Pepall, M. & L. Samuel, Benjamin & Co., Toronto, points out some interesting facts concerning ingot and sheet metals. "We believe that Ingot metals have reached a state of equilibrium and do not anticipate any further radical decline in prices," said Mr. Pepall. "In regard to Sheet Metals, it is quite possible that the same conditions apply. At the present time the real citizen is the one who saves money, and in the case of the retailer, wholesaler and manufacturer, here again business will be on a sound basis when all of these classes achieve and maintain liquid assets."

"The financial situation is complicated, and bids fair to remain complicated for some time to come, so that it behooves every one to strive to strengthen his own position."

Publishing Under Strike Conditions

Since the issue of June 15, Sanitary Engineer has been published under strike conditions. The printers and allied trades demanded a decrease of 4 hours working time per week and an increase of 15 per cent. in wages. Such demands are obviously ridiculous under present circumstances, and upon the publishers failing to comply with such requirements the printers were ordered by the headquarters of the International Typographical Union in Indianapolis, Indiana, U.S.A., to go on strike, and so the strike is on.

Under such circumstances Sanitary Engineer is doing its utmost to provide its readers with as complete a service as possible. The regular features including news, trade suggestions, market reports, etc., are being continued as usual.

Tiled Display Brings Good Results

Initial Outlay Involves a Goodly Sum, But Owner is Confident it Will Pay for Itself in Twelve Months. Can be Converted Into a Kitchen or Laundry Room, Displaying Wares Applicable to Each.

An outlay of \$500 was necessary in order to give this permanent window arrangement the effect shown, but it has proved a big business puller for F. J. Hogan, plumber and tinsmith, Montreal, as outlined in the accompanying article. The floor and the wall for four feet from the floor are both tiled and the balance of the walls and ceiling finished in a glossy white. The fixtures and accessories were installed as carefully as they would be on a permanent job. The setting can frequently be changed to show a kitchen, laundry, etc.

AN outlay of between four and five hundred dollars seems a considerable sum for a window display, but according to F. J. Hogan, 280 Centre Street, Montreal, it will pay for itself inside of twelve months in his locality.

Mr. Hogan has an active plumbing and tinsmith establishment in his business and one of his display windows is constantly devoted to plumbing wares. Considering the plumbing contract work a very important end of his business, and firmly believing that by further advertising he could develop a much more extensive trade, a neat,

clean and attractive window display is used to assist along these lines. Showing a bathroom, complete in every detail is the idea. With this plan in mind a commencement was made by having a tile floor covering the floor of the window on a level with the inside store. By closing in the window by a wooden partition the walls were formed, the inside of which were tiled up about four feet all around, the rest of the way to the ceiling being finished in a high gloss white enamel. The ceiling underwent the same coatings, thus a pure white appearance was gained from top to bottom. The installing of bath

tub, basin and closet was undertaken with as much care and precision as would have been the case in a private home, each placed in a most convenient position with taps, bibbs and traps perfectly placed.

Illuminated at Night.

The smaller fixtures, including the medicine chest, glass towel roller, glass tray, tumbler holder and toilet paper holder were screw nailed to their proper place, and to complete the arrangement the display is illuminated at night by a dome fixture at the ceiling, and a side wall fixture, common to most bathrooms.

"The initial outlay involved approximately \$500.00," said Mr. Hogan to SANITARY ENGINEER, "but I firmly believe that in twelve months it will have paid for itself. Passers-by have found it an attractive showing of our wares and I am safe in saying we have made sales we would not have otherwise have obtained."

Converted Into Kitchen or Laundry Room.

"The tiling forms a permanent background for displays of all enamelled ware, and we are now contemplating a change. By removing the fixtures now on display and placing a combination sink and laundry tub, gas stove, refrigerator, etc., we can convert it into a complete kitchen arrangement, thus offering a display of our enamelled ware, aluminum ware and other kitchen utensils," continued Mr. Hogan.

By again changing the fixtures to laundry tubs, washing machine, wringer and clothes basket, the laundry room

is shown, each display featuring many lines from the stock.

"I have been in business fourteen years and have found that unless we are willing to lay out a reasonable sum for advertising, and proper displays, we cannot hope to get bigger results. Goods must be displayed, more so today than ever before if we want larger sales," he said.

Hardware and Plumbing Dovetails.

Mr. Hogan has found that a hardware stock and plumbing shop work well together. Being in a locality where a large factory trade is to be had, the outside plumbing work in the factories enables them to get in touch with a good many of the employees. This is assisted by the repair man in the shop who mends the pots, pans and utensils for the households of these men. While repair work of this nature very often brings little or no profit, it brings the housewife to the store and this is half the battle.

Plans to Extend.

Work will be commenced this year on an extension to the workshop. While present premises permit of a good sized work bench and space for tin shop tools, Mr. Hogan believes a spacious shop is necessary for the men to work with results. This will also furnish more storage for the products they make. For example, five thousand stove pipes are usually sold by this store in the Fall. At present these are rolled in bundles, but if storage permitted they could be completed and ready for sale. This could be done in the summer months, when the workmen have an hour or so of a slack period.

One thing that has always been told the workmen in this store is a saying that when carried out has undoubtedly helped to obtain the standing that is now enjoyed. It is this: "You do the work and I will do the collecting, but if it is a poor job I cannot collect."

The Average Tinsmith is a Retailer

Definite ruling at last forthcoming from Ottawa settling controversial point—
Tinsmith who makes articles for special order and not for re-sale is a retailer
—Sales tax applies only to goods manufactured for re-sale.

THE continued protests which have been made in regard to the classing of tinsmiths in the category of manufacturers for purposes of taxation, have at last brought some results in the form of a definite ruling given by the Deputy Minister of Customs to local Collectors throughout the country, which clearly sets forth that the product of the tin-shop which is made for special order for customers and not for re-sale, cannot be subject to sales tax and the tinsmith ordered to take out a manufacturer's license.

The course of the proceedings have been outlined fully in past issues of Sanitary Engineer, showing how officials at Ottawa refused to give any definite ruling and how local Collectors were apparently left to give their own interpretation. This naturally resulted in much confusion because certain Collectors held that tinsmiths were not so liable, while others held that tinsmiths were manufacturers, and threatened to prosecute.

Becoming Increasingly Difficult

Owing to the fact that two test cases had been won in the courts in favor of the retailers, the tinsmiths were advised by Sanitary Engineer, and the Retail Merchants' Association, to pay no attention to the rulings of local Collectors to the effect that they were classed as manufacturers. While this attitude was taken by many merchants, yet it was becoming increasingly difficult for some of them to hold out without prosecution by local Collectors, which would have entailed the paying of court costs for defending the case. Therefore the ruling now forthcoming from Ottawa comes at a time when it will definitely settle in the minds of tinsmiths and Collectors just what their responsibility is.

It is evident from the nature of the ruling that the Department was unable to make a definite application of any one rule to all tinsmiths and sheet metal workers, due to the fact that some undoubtedly manufacture certain articles for re-sale. Therefore the present ruling which differentiates as to the tax, on the basis of whether the article is made

for re-sale or for special order work for consumers, is a fair way of overcoming the difficulty.

The statement of the Deputy Minister of Customs and Inland Revenue provides that traders dealing both wholesale and retail can keep separate accounts so that their business can come under different categories of the sales tax involving different rates of taxation. It points out that "in the case of a firm selling exclusively by retail and making goods to the order of a customer exclusively, the sales tax is not applicable."

"If a firm is selling exclusively by retail and manufactures goods to the order of each individual customer and also manufactures goods for stock, it is held that the sales tax is applicable in respect of goods manufactured for stock only.

Where Sales Tax Applies

"If a firm is selling partially by retail but doing a business also with the trade, the sales tax is applicable in respect of their entire business, providing however that the accounts of the wholesale or manufacturing branch may be segregated from the retail branch.

"The department will hold retailers responsible for the payment of the sales tax under the conditions above defined as respects all sales on and after May 10, 1921."

It is evident from the above ruling that the difficulty is being overcome by allowing separate books to be kept covering articles manufactured for re-sale and articles made up on special order for customers, and sales tax, is collected only on the former. To the hardware merchants and tinsmiths who have postponed taking out manufacturers' licenses they will now know where they stand, and those who hold such licenses can probably be released from any further responsibility by following the advice formerly given, and write the word "Abandoned" across the papers and return them to the Collector.

SANITARY PLUMBING

Plumbers sell sanitation. Homes have sanitation or they do not---there is no half-way mark---and civilization cannot progress rapidly unless there is complete sanitation in every household. Thousands of homes are now healthy, happy, and livable thru the promotion of sanitation by good plumbing.

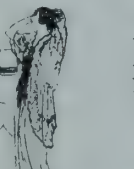

Yet there are abundant opportunities where Sanitary Equipment is badly needed. Our business is to fill that need. A word from you and we will be ready to serve you.

PLUMBING

At this time of year, when the weather is so uncertain, it is a good idea to have your plumbing system checked over by a professional plumber. This will ensure that your system is in good working order and that you will not have any trouble when the weather turns cold. A professional plumber will also be able to advise you on the best way to winterize your system.

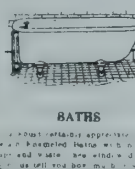

PEDESTAL BASINS

A beautiful, modern pedestal basin with a white enamel finish. It is made of heavy porcelain and is very durable. It is also very easy to clean and is a great addition to any bathroom.

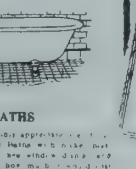

BATHS

A beautiful, modern bathtub with a white enamel finish. It is made of heavy porcelain and is very durable. It is also very easy to clean and is a great addition to any bathroom.

CLOSETS

A beautiful, modern closet with a white enamel finish. It is made of heavy porcelain and is very durable. It is also very easy to clean and is a great addition to any bathroom.

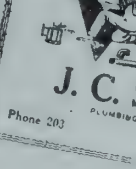

BATHROOM FIXTURES

A beautiful, modern bathroom fixture with a white enamel finish. It is made of heavy porcelain and is very durable. It is also very easy to clean and is a great addition to any bathroom.

INLAIN LINOLEUMS

A beautiful, modern inlaid linoleum with a white enamel finish. It is made of heavy porcelain and is very durable. It is also very easy to clean and is a great addition to any bathroom.

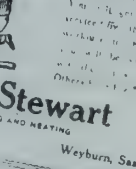

SINKS

A beautiful, modern sink with a white enamel finish. It is made of heavy porcelain and is very durable. It is also very easy to clean and is a great addition to any bathroom.

ELECTRIC WATER HEATER

A beautiful, modern electric water heater with a white enamel finish. It is made of heavy porcelain and is very durable. It is also very easy to clean and is a great addition to any bathroom.

WHAT TO DO when you have a problem with your furnace. You can call J. C. Stewart, a professional plumber and heating expert, who will be able to advise you on the best way to solve your problem. He will also be able to service your furnace and make any necessary repairs.

Now is the Time To Get Your Furnace

and when you buy one get a good one

The Empire King

has been on the market for 20 years and always given satisfaction. You'll get our prices right, our service the best, and everything to your liking. Let us give you an estimate on your new furnace.

We are experts on all Furnace Work, Repairs, Plumbing, etc.

Herbert Kiem

Plumbing and Tinsmithing
87 King St. East
Phone 375W

SOME samples of recent local advertising done by plumbing and heating engineers in various parts of Canada, are shown herewith as samples of copy which may prove helpful to others who are framing their advertising copy for Fall requirements. Many lines lend themselves admirably to advertising treatment during the Fall and Winter months and with the use of some illustrations and preferably working in reference to some local current happenings, some effective copy can be arranged.

The ad illustrated, as used by McKinnon, Kamloops, B.C., is headed "Get the Furnace Ready Now" and an illustration is used showing a tinsmith at work. It continues "For next winter's needs, by having the pipes repaired and put in shape, the damper adjusted and perhaps renewed, the body of the furnace patched or otherwise cared for. Our tinning and sheet metal work insures you a perfect working furnace for the next cold spell. We specialize on heating systems."

Sanitary Plumbing.

Emphasizing the importance of sanitary plumbing and helping to drive home one of the most important arguments which the plumber has at his disposal, the ad by Port Colborne Supply Co., Port Colborne, Ont., under the above heading states: "Plumbers sell sanitation. Homes have sanitation or they do not—there is no half-way mark—and civilization cannot progress rapidly unless there is complete sanitation in every household. Thousands of homes are now healthy, happy and livable through the promotion of sani-

tation by good plumbing. Yet there are abundant opportunities where sanitary equipment is badly needed. Our business is to fill that need. A word from you and we will be ready to serve you."

Importance of Good Plumbing.

Further dealing with the importance of good plumbing in the home the ad by Ingram & Davey Ltd., St. Thomas, Ont., states: "Good plumbing is one of the most important features about a house and should receive careful attention at the hands of the owner at the time the architect is making the plans or in an old house you have purchased. It does not pay to install cheap plumbing because there is no one feature in the construction of a house that will be as unsatisfactory—both as to the fixtures and the workmanship. On the other hand, there is nothing which will appeal so strongly to the fastidious and careful housewife and be so great a source of enjoyment as modern high grade plumbing that we can offer you. Our fixtures and workmanship are guaranteed. Let us give you an estimate on your plumbing today."

Continuing by giving an underline concerning the various fixtures illustrated, this ad in dealing with pedestal basins says: "A beautiful porcelain enamelled pedestal basin with slab, oval bowl with rear outlet and apron all in one piece on porcelain enamelled pedestal, nickel plated water fittings with china handles and indexes and china indexed knob on waste would do wonders in fixing up your bathroom or installing in your new home. In window display, and come

in and ask us all about our model bathroom.

Electric Water Heater.

Dealing with an electric water heater the ad stated: "Just think what a convenience of only turning a button in the morning ad in a few minutes have enough hot water for a shave and a bath. Come in and let us tell you all about this water heater." Dealing with baths the ad says: "See window display and then let us tell you how much it would cost to have a bathroom like it in your home." Closets, bathroom fixtures, sink and drain boards, linoleums, sinks, basins, etc., are all dealt with and illustrated.

This firm has found that linking up their advertising effort with the window displays on the same line has brought considerable business and many promising enquiries. It is merely another proof of the value of concerted effort and bringing the most influence to bear at the right point.

A brief ad by J. C. Stewart, Weyburn, Sask., shows an illustration of a plumber at work and states: "What to do, when you have trouble with your plumbing. Just telephone—You will get prompt service by the best workmen in the city. You will be satisfied with the way we work. Others have been."

An illustrated ad dealing with a furnace is used by Herbert Klem, Kitchener, Ont., headed: "Now is the time to get your furnace," continuing, "and when you buy one get a good one." The features of the particular furnace handled are then outlined, the ad closing with an invitation to allow the firm to give an estimate on any work required.

Some Helpful Pointers.

Some pointers for writing effective Fall advertising copy are given as follows:

The first essential of a good advertisement is that it should attract favorable attention. To win the attention of your readers is, of course, necessary.

To win attention your advertisement must be so placed that it will come within easy reach of the greatest possible number of the class of people you are appealing to. But it is not enough to win attention, it must be favorable attention. Circus tactics will quickly collect a crowd, but won't sell goods to people you want to reach permanently.

In this connection that class of advertising is to be condemned which attracts attention through misleading headlines.

Having established the general principle of the need of attracting favorable attention, let us come down to the concrete question of ways and means. Suppose you want to put a small advertisement in a crowded newspaper page. How can you make it stand out?

Making the Ad Prominent.

First of all, study the appearance of the page on which it is likely to appear. Have the advertisements a crowded appearance? Are they jammed to the borders with type? Then, to quote an eighteenth century dramatist who must have known something about advertising, let "a neat rivulet of type meander through a wide meadow of margin." Make your message brief, set it in the centre of your space, and ask the printer to leave lots of white (blank space) around it. Your advertisement will then stand out, through the principle of contrast.

Borders, display type, (head line type), and illustrations play a large part in winning favorable attention. Very ornamental borders distract attention from the inside of the advertisement, though they can often be used to advantage when in keeping with their subject, the advertising of say jewelry, lace or flowers.

Heavy, black borders should also be used with care. A safe rule to follow in using heavy borders is to have ample white space inside them and around your message.

A great many effects can be obtained by combining borders in various ways. Every composing room has plain rule borders varying in width from 1-72 to 12-72 of an inch, and accordingly named one point, two point, four point, six point and twelve point rules. The 12 pt. rule would have a very heavy, bold appearance, and 1 pt. would be about as the rule that separates columns of reading matter.

By using a 2 pt. rule inside of a six pt. rule you get one of the best all-purpose borders possible. And many ornamental borders are strengthened by putting a light face rule inside them.

Even a single rule can be used in various ways to win attention. One of the best of these variations is to have the six point rule at the top and bottom cross the ones at the sides about one third of an inch below the corners, instead of touching their ends. This has the effect of throwing white space out around the advertisement in a very effective way.

Display type is another important element in winning attention. The head line of the advertisement, which is always set in display type, is perhaps the most vital part of your advertisement—it is the door to your store and can be made to repel or attract visitors.

If your head line is set in capital letters, or in certain kinds of Italic type, it will not be as readable as it should be in every case. Better put it in small and large letters.

A Common Error.

But the most serious mistake most merchants make in their advertising, at least in this department, is to have their space plastered with their name to such an extent that nothing else is noticeable. Now honestly, you must admit that people are not very much interested in your store as a store. What they are interested in is what you have to sell. And if they can't hear that because you are shouting your name at them, small wonder if you sell your name and lose it, while you still keep your goods.

It is a pretty safe practice to keep your name till the end of the advertisement, and then to have it set in type that will be half as strong in its effect as the type used in your headline.

"A picture is worth a thousand words—if the picture is right," said Arthur Brisbane. Illustrations nearly always improve the attention-winning possibilities of an advertisement and more merchants should use them. Whenever you place an order for goods that you intend to advertise later, ask the manufacturer if he can supply you with newspaper cuts. Many of them have them in stock for this purpose, others will be glad to have them made for you.

The shape of an advertisement also plays a part in helping to win or lose attention. There is an excellent rule to follow in this connection, if you remember that it is not only for the average case and admits of exceptions.

This rule is best expressed arithmetically. Taking the number of columns wide your advertisement is for the numerator, and its depth for the denominator, the fraction should work itself out to about one third. Applying the rule, if your advertisement is three columns wide, it should be about nine inches deep, because three over nine reduces to one third. Careful observation has shown that an advertisement of this shape generally is the most prominent. Where, however, the space used is only six inches in all, it seems to have a better chance to be read if put in single column form.

Heating and Ventilating

Many Heating Problems Discussed

Address to Warm Air Furnace and Supply Association Deals With Heating Problems From Some Interesting Angles—High Cost of Fuel Has Created More Interest in Equipment—Many Chimneys Defective—Other Faults in Construction.

H EATING the home is a subject of which the public knows very little. The entire heating fraternity is deserving of some censure for its lack of interest in placing before the public essential information pertaining to heating, although in a measure it cannot be too severely criticized, for in the past the public in general has cared very little what it cost to heat the home provided it could keep fairly comfortable on any fuel consumption during severe cold or blizzards," said a recent speaker addressing a convention of warm air furnace and supply men.

"A ton or two more or less of coal was of little consequence. But there is a difference to-day and if coal prices remain high for a few years, we will find a greater interest shown in reducing the cost of heating, and a demand for more uniform temperature as well.

Difference Between a Home and a House

"There is a considerable difference between a home and a house. Ever think of that?

"A house is a structure having four or more outside walls and erected at the lowest possible cost without consideration for durability or comfort, much less permanency, and often dolled up to appear a thing of beauty, while an 'honest-to-goodness' home is not only substantially and carefully erected, but every detail for comfort, economy and durability is given careful consideration. Too often the heating is reserved for consideration until after everything else has been provided for. The best investment a home builder can make is to employ the highest class architect procurable.

Where Installers Err.

"The greatest number of buildings erected to-day are houses, not homes. This statement is particularly true where large housing projects are concerned. I doubt very much if 10 per cent of all of the residence buildings erected to-day can be called homes, for in the majority of cases dollars and cents is the first consideration. Whether it be walls, floors, chimneys, metal work, plumbing or heating, not one extra sack of cement or even one extra brick is allowed.

"By these statements I do not wish to seem to advocate waste, but I can show you rows of houses where the heating contractor had to add metal extensions to the chimneys (a most in-artistic sight) in order to produce draft before he could get settlement on the jobs, and all because the brick contractors did not extend the chimneys above the ridge of the roofs. He, however, claims that he extended the flues to the height shown on the building plans. The furnace installers erred in not checking the flues before connecting the heaters, and demanding suitable ones.

Malpractice in Residence Construction.

"I often feel like getting a soap-box and standing on the street corners and warning the public against the malpractice of residence construction in particular, although much can be said about other structures, such as schools, churches, etc.

"Often a contract is let for the erection of 50 or 60 houses and regardless of how they are located or in which direction they face, the heating installation in each case is identical, and I am sure you will agree with me that a difference in installation should exist, everyone knowing full well that the sides having greatest exposure should be protected to the greatest possible extent.

Obstacles to Economic Heating.

"Some of the outstanding obstacles to economic and comfortable heating are character of construction, chimneys, restrictions regarding heating installations caused by ignorance on the part of the designer or owner. One startling fact is that 60 per cent of all buildings leak like sieves, making the heating problem exceedingly difficult.

"This statement can be verified beyond any doubt. Leaks everywhere from basement to attic, requiring in many cases two to three times as much fuel as a well-constructed properly tight building of the same size, account for one building requiring much more heat than another of similar construction. The excess fuel consumption represents a great waste and a financial loss. I call these structures cyclone

buildings, for I believe it is possible to fly a kite in some of them.

Unsatisfactory Building Design.

"One of our eminent heating engineers, and in fact, a professor in one of our colleges, stated a few years ago that he was satisfied that 75 per cent of the residences in the country costing \$5,000 or less, are unsatisfactorily heated, and that the failures are not so much from lack of ability on the part of the heating contractor as on account of unsatisfactory building design and construction.

"Many houses are in a great measure individually constructed and naturally receive better attention, but with all things considered, much improvement from a heating standpoint can be made on the majority of the structures, namely, the stoppage of all air currents or counter currents between joists and studdings. The space above upper ceilings and in attics where air leakages are a tremendous drain on heating systems.

Air Leakages Around Doors and Windows.

"Leakages around doors and windows are also a factor of loss that is beyond comprehension to the average layman and air leakages around basement windows and sills deserve special attention as well.

"The construction of the building walls has had little consideration in the past from a heating standpoint and in cases of unsatisfactory heating, the heater and system have been condemned, when as a matter of fact, an apparatus two sizes larger would not have produced the desired results due to lack of proper design.

Fifty Per Cent of Chimneys Are Defective.

"These facts, coupled with the thousands of poorly constructed and improperly designed chimneys, make the satisfactory heating of the home a problem well worth careful attention, both on the part of the contractor and the owner.

"Just imagine what condition chimneys are in when it has been proved be-

Sanitary Inspectors More Important Than Doctors

Statement of Mayor of Ottawa at Ninth Annual Convention of Canadian Sanitary Association — Change Name to Sanitary Inspectors' Association of Canada—Winnipeg Next Convention City—G. O. S. Laflamme, Chief Sanitary Inspector of Ottawa, Elected President for 1921-22.

OTTAWA, Ont.:—George O. S. Laflamme, for twenty-one years chief sanitary inspector of Ottawa, was elected president of the Canadian Sanitary Association at the concluding session of the ninth annual convention in Ottawa September 6, 7, and 8. This honor was conferred on Mr. Laflamme in recognition of the splendid efforts he has been making to build up the eastern membership.

Outstanding features of the convention were: 1, the decision to change the name to the Sanitary Inspectors' Association of Canada; 2, the delivery of a number of exceptionally interesting and instructive addresses; 3, a statement by the Mayor of Ottawa that sanitary inspectors who did their work well were worth more to the city than were the doctors; 4, an appeal by the medical health officer of Ottawa for the adoption of more effective disinfection methods; 5, the selection of Winnipeg as the next convention city.

It was a successful conference. Everything went along just like clock work from start to finish and at the end the officers expressed great delight and satisfaction. The weather man was kind, with the result that the visitors, many of whom had never been in the capital before were afforded ample opportunity to get about and see the many beautiful sights that Ottawa is noted for. George Laflamme and a competent committee had the local arrangements in hand, and they saw to it that there was not a dull moment during the three days. On two separate occasions automobile tours were taken around the city, and the entertainment part of the program was suitably capped with a sumptuous banquet in the Russell hotel on Thursday evening.

New Officers.

The officers for the ensuing year are: President, G. O. S. Laflamme, Ottawa; vice presidents: Quebec, Dr. J. A. Beland, of Shawinigan Falls; Ontario, A. J. Bolus, of Fort William; Manitoba, H. G. Trigg, of Winnipeg; Saskatchewan, W. K. F. Durrant, of Moose Jaw; Alberta, J. J. Dunn, of Calgary; British Columbia, H. S. Sturgess, of Vancouver.

Secretary-Treasurer Alex. Officer, of Winnipeg, re-elected.

Executive Council: F. C. Austin, T. J. Booth, A. Barclay and C. Hargrave, all of Winnipeg. The council includes the president and each of the vice presidents.

Auditors: F. Hudson and J. Sheppard, both of Winnipeg.

Hon. Walter Rollo, minister of health in Ontario, was chosen as vice patron, and the following were chosen as honorary members: Dr. McCullough, medical health officer of Ontario; Dr. C. A. Hodgetts, director general St. John Ambulance Association; Dr. T. A. Lomer, medical health officer, Ottawa; Dr. J. A. Amyot, deputy minister of

health of the federal department; Dr. R. H. Parent, M.H.O., of Eastview, Ont. J. S. Nelson, M.H.O. of Westboro, Ont., and Dr. Robert Law, former M.H.O. of Ottawa.

New Members in East.

This was the first convention held in Eastern Canada, but it was not the last. The western members, the majority of them honest Scotsmen, who mean a thing when they say it, stated most emphatically that they liked Ottawa, and better still liked the eastern members and wanted to come back here in the near future. While the bulk of the membership lies in the west, great

Health. These were appropriately replied to by the president who remarked on the cleanliness of Ottawa. He explained that the reasons why there were not many delegates was that quite a few municipalities had not seen fit to grant their sanitary inspectors permission to attend. However, he felt this was a state of affairs that would soon be gotten over, as these municipalities would soon recognize the value of sending their inspectors to a convention where they could acquire knowledge that would be of considerable benefit to the whole people.

Activity in the West.

In his later address to the delegates, the president reviewed the history of the association, and said that while the membership had not shown any increase this year, there was no reason to be discouraged. The organization in the west had been gotten well under way, and he hoped to see a lot of activity in that direction in the east from now on. In this connection, he paid high tribute to Mr. Laflamme of Ottawa, for the work he had been doing in trying to line up the eastern membership. "The bulk of the membership of course is in the west at present," he said, "but there is no reason why the balance should not be on the side of the east before very long, and in that event it would be only the right thing that the headquarters of the association should be in the east, in Toronto, or some other eastern city. We have no desire to hog things in the west."

The address included worthy reference to the outstanding qualities of the secretary, Alex. Officer of Winnipeg. "He is a secretary in a million," said the president, "and he has the work of the association so much at heart that he can never stop thinking about it."

The president urged the formation of associations in each province, and branches in each municipality. "There are a lot of things these branches could do for themselves," he said, "in fact as our association grows, this course will be absolutely necessary. At present it is impossible to get all our members together at one convention, and I doubt if we will ever be able to achieve that purpose. Then with regard to the holding of conventions, I think the best plan is to hold them alternately in the east, Central Canada and the West."

In further reference to the formation of local branches, the president cautioned against trying to do too much at the start. He also advised making the meetings the free and easy kind, where no one would feel backward about venturing opinions and making suggestions.

Raising Status of Sanitary Inspectors.

In briefly outlining the benefits of the association, Mr. Brown said one of the principal arguments in favor of

GEORGE O. S. LAFLAMME.
of Ottawa, Ont., elected President of the Sanitary Inspectors' Association of Canada, at the annual convention just concluded at Ottawa.

strides are being made in the direction of securing new members in the east, and it was hinted by the western members themselves that it might not be long before it would be not only wise but necessary to change the headquarters from Winnipeg to Toronto or some other eastern city.

The conference opened at 10 o'clock Tuesday morning in the council chamber of the City Hall, with the president, E. C. Brown, of Winnipeg, in the chair. Addresses of welcome were delivered by Mayor Plant on behalf of the city, William Joynt on behalf of Nepean township, and Dr. D.A. Whitton on behalf of the local Board of

DELEGATES TO 9TH CONVENTION SANITARY INSPECTORS' ASSOCIATION OF CANADA.

Some of the delegates to the convention of this association, just concluded at Ottawa, Ont. The four in the centre of the front row are, from left to right, George O. S. Laflamme, President, Mrs. J. C. Henington, Lady Superintendent Victorian Order of Nurses, Frank H. Plant, Mayor of Ottawa who addressed the gathering, and B. C. Brown, retiring President.

it was that it had been instrumental in raising the status of the sanitary inspector, especially in the west, where he was now looked upon as a real asset to the municipality.

Following the president's remarks, there was a short address by Alex. White of North Bay, senior sanitary inspector of the Ontario Department of Health, who said he was hopeful that the ministry of health would yet arrange for a practical course of hygiene for its inspectors in some university, something similar to the course arranged for public health nurses.

Referring to the efforts of Mr. Laflamme of Ottawa, to build up the eastern membership, the speaker said the sending of letters around the country was all very well, but he thought the further step of going direct to the city councils, should be taken. "We should go right before them and tell them why their inspectors should be members of our association, and attend our conventions," he said. He further stated that while there were at present five provincial sanitary inspectors in Ontario at present, he was willing to bet there would be double that number before very long.

The secretary, Alex. Officer, spoke of the work in the west and said great strides had been made in Alberta and Saskatchewan, but as yet very little organization work had been done in

British Columbia. Personally, he was keen on doing all the public health work he could. He had tried to measure up to a high standard, but had not been successful in accomplishing all he wanted to along that line. Speaking of the status of the sanitary inspector he said: "We in Winnipeg trust our inspectors implicitly. Unfortunately there have been cross roads between health officials and sanitary inspectors, but we who are studying these questions know there are a good many things the sanitary inspector can do that the M.H.O. cannot do. If we can only get the M. H.O.'s in each municipality to realize that we are out to make the department he is head of, a success, then we will be getting somewhere."

At the afternoon session on Tuesday there was an address on "Disinfection" by Dr. T. A. Lomer, medical health officer of Ottawa, and an address on "The Administration of the Meat and Canned Foods Acts," by Dr. Robert Byrne, chief inspector, department of agriculture. Following these, the delegates were taken on a delightful automobile drive around the city.

"The Transmission of Communicable Diseases," was the subject of an address delivered in the evening by Dr. J. A. Amyot, deputy minister of health, in which he advocated bacteriological methods for the control of infection. He emphasized the necessity of sanitary in-

spectors and other health workers preaching the gospel of cleanliness as disease prevention. Flies, he pointed out, were great disease carriers and therefore people should be constantly warned of the danger of allowing them in their houses and other places.

Wednesday's Sessions.

Wednesday was given over mostly to the hearing of addresses and another drive around the city in the afternoon. In the evening there was a banquet in the Russell hotel, a report of which appears elsewhere. Mr. Naulon Cauchon of Ottawa, was down on the program for an address on "Town Planning," but he was obliged to leave the city hurriedly Tuesday morning and therefore could not attend. However, four other interesting and instructive addresses were given, one by Dr. C. A. Hodgetts, Director General of St. John Ambulance Association, on "The Place of a Sanitary Inspector in the Present Health Campaign"; one by Dr. J. S. Nelson, M.H.O. of Westboro, Ont., on "The Duties of a Sanitary Inspector in a Rural District"; one by Dr. R. H. Parent, M.H.O., of Eastview, Ont., on "Tuberculosis," and another by Alex. White, senior sanitary inspector of Ontario, on "The Production of Pure Milk."

To Admit Plumbing Inspectors.

The conference came to an end shortly after noon on Thursday, the

principal business of the final session being the election of officers, and the decision to change the name of the association. This was brought about by the almost unanimous opinion that the former name was too broad. The desire was to keep the membership limited strictly to sanitary inspectors for the time being, and hence the name: The Sanitary Inspectors' Association of Canada. The question was raised by one delegate as to whether it was the intention to admit plumbing inspectors into membership. The president said he understood there was no objection, and other members stated they were quite in favor of having the plumbing in-

spectors in, as their work was of an absolutely sanitary nature.

Before the next meeting place was decided upon, the secretary read a letter from Mayor Parnell of Winnipeg in which he very cordially invited the association to meet there in 1922. "Anything we can do for your association will be done as a pleasure, rather than a duty," the mayor wrote. The decision to meet in Winnipeg was unanimous.

The concluding remarks were made by the secretary, Alex. Officer, who thanked the delegates for his re-election and said: "You could probably get a more able secretary, but I will wager that you could not get a more anxious one."

The delegates were: E.C. Brown, president, Winnipeg; Alex. Officer, secretary, Winnipeg; A. Mitchell, Regina; W. C. Millar, Fort William; Alex. Barclay, Winnipeg; Thomas W. Reid, Regina; W. S. McKee, Sudbury; John Richardson, North Bay; James Taylor, Sault Ste. Marie; Alex. White, North Bay; W. T. Sherriff, Ottawa; A. J. Bolus, Fort William; Dr. J. A. Beland, Shawinigan Falls, Que.; R. Manion, of Eastview, Ont., and the following members of the Ottawa health department sanitary staff: G.O.S. Laflamme, chief inspector and newly elected president, Samuel Fee, Victor G. Joyce, P. G. Stewart, Thomas Keiley and J. Audette.

Plumbing Inspector May Join Sanitary Association

Request Made for Amalgamation With Sanitary Inspectors' Association of Canada.

OTTAWA, Ont.—The annual report of the executive committee of the Sanitary Inspectors' Association of Canada showed that as far as membership was concerned, the association was just about holding its own. At the end of June, 1920, there were 76 members and 28 associate members, making a total of 104, as compared with 89 members and 14 associate members, or 103 altogether this year. Manitoba reported a decrease of seven, and in explanation of this the committee reported that in 1919 the association received into membership a number of returned men who qualified in one of the training schools for positions as sanitary inspectors. As most of them failed to get into positions in public health work, they obtained other employment and dropped out of membership. The report further stated:

"We are pleased to note that the membership in Ontario is gradually increasing. This is a very hopeful sign and we trust that the new members will be encouraged by others joining in their own province.

"The last annual meeting remitted us the matter of incorporation. We have not been able to do anything as the expense involved is at present prohibitive. We would recommend that this matter be held over until we have a larger membership and sufficient funds to put it through.

Plumbing Inspectors May Join.

"A communication was received from the Plumbing and Drainage Inspectors' Association of Ontario, enquiring as to the possibility of amalgamation with us. We replied that we were willing to consider the matter favorably. We have to report that the matter has not proceeded any further. We believe that amalgamation would be of mutual advantage to both organizations.

"We have pleasure in reporting that Messrs. Cowie, E.H. Fleetwood, W. A. Leggett, W. Pearson and W. Pillidge, all of Calgary, and C. E. Sutton, of Moose Jaw, Sask., were successful in obtaining the certificate of the Royal Sanitary Institute. They were accordingly raised to full membership.

"We would once more recommend that the members in every large centre get together as often as possible, especially during the winter months. Addresses, papers and discussions, or even the mere introduction of live public health subjects is sure to be of benefit to all. In conclusion, we desire to thank the branch presidents, branch secretaries and others who have helped to extend our usefulness during the year.

Report for Ontario.

Reporting briefly for Ontario, G. O. S. Laflamme, chief sanitary inspector for Ottawa, said he had tried during the year to interest a number of inspectors in the east, but so far without much result. The membership was yet too small to justify holding a branch meeting, but he was hopeful the annual convention would be the means of increasing the membership in this branch.

Sanitary Inspectors' Place in Health Campaign

Working in Conjunction With Local Boards of Health Sanitary Inspectors Can Achieve Much Good—Plumbing Inspector Should be Practical Plumber.

SPEAKING on the subject, "The Place of the Sanitary Inspector in the Present Health Campaign," Dr. C. A. Hodgetts, Director General of the St. John Ambulance Association, stated that Canada was as much alive to health questions as any other country in the world. He thought there was much opportunity for valuable work, but if it was to be successfully performed it would have to be done in the main by provincial authorities. Also the local inspectors must discharge their duties by direct contact with the people in their homes. He disapproved of representatives of various organizations attempting to make house inspections without authority from the local health officer and said: "I believe there were thousands of people who

would open their doors to fully qualified sanitary inspectors or health workers, who are very much prejudiced against allowing women and other representatives of organization to butt into their private affairs."

"The sanitary inspector has come to be recognized as an asset," said the speaker. "A few years ago, sanitary inspectors were appointed for political reasons, instead of for their ability, but that state of affairs has passed. I know something of the difficulties the sanitary inspectors are up against, as I acted as M.H.O. in Ottawa during a typhoid epidemic, and was constantly in touch with the sanitary staff.

Work With Health Boards.

"My opinion is that the principal

Continued on Page 37

Manitoba.

Alex. Barclay of Winnipeg, reported for Manitoba, stating that arrangements had been made for holding one meeting each month during the coming winter. He then outlined the proceedings of meetings held last year and said the officers were out to build the membership up again to what it was in 1919.

Saskatchewan.

The report for Saskatchewan was presented by William K. F. Durrant, in which he regretted that he had not been successful in getting a provincial convention this year. He placed a lot of value on meetings and hoped that the members would endeavor to get together as much as possible during the coming winter.

British Columbia.

The report for British Columbia, as written by H. S. Sturgess, vice president of the B.C. branch and read by the secretary, failed to show an increase in membership. He stated that with 23 inspectors within a radius of only a few miles, the branch had good reason to hope that with concerted efforts there would be quite a large membership in the province in a few years.

The secretary had not received any report for Alberta.

Duties of Rural Sanitary Engineers

Activity of Provincial Boards of Health Has Helped Educate People to Importance of Sanitary Measures—Special Course of Training for Inspectors—Should be Capable of Inspecting Various Local Industrial Plants, Homes, etc.

Paper read by Dr. Nelson before annual convention of Canadian Sanitary Association in Ottawa, Ont.

DR. NELSON'S paper on "The Duties of a Sanitary Inspector in a Rural District," was listened to by delegates to the Canadian Sanitary Association convention with a great deal of interest, and not a few of the delegates took note of some of the salient features. He said in part:

"Sanitary inspectors constitute one of the most important parts of the modern system of public health administration. It is a somewhat difficult task to describe the duties of these officers. In the past, those of the sanitary inspectors who represent the smaller towns and municipalities, can readily accord to their brother workers in the larger centres a more useful and active service than they claim for themselves. Various reasons are obvious. In city and town life the daily press has had access to nearly every house. This has been a great means of spreading education. Whole time sanitary inspectors have better opportunities for educating their public. Lectures and instruction to the public school children have been resorted to at regular intervals. The periodical advice from our board of health of the province, has been easier to disseminate, and therefore better absorbed in the larger fields. However, methods are changing. The activity of our provincial board of health has been so wholesome and practical, that the fountain source of our information deserves much credit. I believe it already holds the united respect and faithful fealty of all our sanitary inspectors both rural and urban.

Influence of Daily Press.

"There is scarcely a resident in the better districts but who receives at least one daily paper. The result is that the rural public is quite liable to get ahead of the sanitary inspector if he is not an enthusiast. The people living in the country are wiser than we sometimes think.

"I say, continue always to educate the public where most good will follow. To do this I believe our sanitary inspectors even in the country should be very carefully selected. It is true that in the past this has not been done. The constable, the truant officer or someone else who has really served his usefulness has, on too many occasions been chosen to fill this important and responsible position. I will admit that there are some rural municipalities

where one or more duties may be put upon the sanitary inspector and not diminish his service as such, but on the other hand there are many rural municipalities where such combined duties interfere greatly with the important duties of sanitation and inspection. I believe the chief cause of this lies at the door of the municipal governing board, who give the matter very little thought, or consider the sanitary duties of very little importance.

Inspectors Should be Trained.

"I would even go further and say that I believe our sanitary inspectors in the rural municipalities should have some previous training. Why cannot the provincial boards arrange a short course of training even were it only for a month, in which these men would glean a working knowledge of their duties and would therefore be better qualified to do a great amount of the work which now falls upon the shoulders of the rural medical officer of health. The Provincial Health Act of each province outlines in the rough, the duties of the sanitary inspector, but in the country districts he has not a working knowledge of the many duties which must necessarily come under his notice. He can keep a vigilant watch over all the streets, lanes, premises, etc., but can he inspect a slaughter house? If he does not know the proper regulations governing a slaughter house, how can he detect any defects?

"He should be able to inspect dairies, cheese factories, creameries, and industrial buildings. He should be able to advise caretakers of churches, schools

and assembly halls as to cleanliness, and the best methods of ventilation. He should be able to detect an improperly constructed well, and its possible source of contamination, and give instruction for remedying the same. He should have a working knowledge of meat and food supplies. He must warn all grocers and provision merchants whose premises invite flies. He must watch homes which are overcrowded. His duties are almost legion. There are numberless things to be done in public health work that a sanitary inspector under proper guidance can do equally as well as a medical man.

"Embodiment of Public Health Act."

"The public health work of the sanitary inspector has become almost a specialty and that specialty cannot under ordinary circumstances, be carried on successfully as a minor occupation. To enumerate all the duties that fall to the lot of the sanitary inspector would set forth a lengthy tale. He is, in a word, the embodiment of the Public Health Act, and the regulations thereunder. All that concerns the health of the public comes under his notice and is his business.

"In conclusion let me repeat that I believe even the rural sanitary inspector should be educated and trained for his position, for unless he is qualified for his task, his work, in whatever direction it may take him, will be of small value. In addition, I believe the sanitary inspector should be as little restricted as possible, as regards his activity."

SANITARY INSPECTORS' PLACE—Continued from Page 36

place for suggestions on sanitary matters to come from is the provincial board of health. That is the place to pull the strings.

"The sanitary inspector must realize that his work is of the greatest importance and that there are higher, better and more ennobling duties for him to perform in health work as time goes on. He is the successful sanitary inspector who has the tact and good judgment to discharge his duties in the face of opposition. And there is bound to be a lot of opposition as there are so many people of a suspicious nature in the world. The successful man will not attempt to force his way into the homes or show his authority, but will resort to reason.

Plumber is Needed.

"The inspector who looks after the

plumbing work requires to be a man who knows the plumbing business thoroughly—a man who has graduated with high honors.

"The routine of your duties must be followed out from day to day, but there are special duties such as enquiring into housing conditions, sewage, etc., which should attract the attention of the earnest and enthusiastic sanitary inspector. You gentlemen are virtually the eyes of your health officer. Your reports should always be made out so that the health officer can read them and thoroughly understand them. This requires a large amount of study and a certain amount of education. I would advocate the holding of classes for sanitary inspectors in the larger municipalities.

Sanitary Engineer

Plumber and Steamfitter of Canada

BRIEFS

A PUBLIC health official was brought to a realization of the importance of having an expert plumber as an adviser in connection with city sanitation problems only after the death of a member of his family due to defective plumbing in the home. It is much to be regretted that precautions were not taken earlier and the tragedy avoided, but it may do much to save other lives in future for hereafter a competent plumber is to be a member of the local Board of Health in that city.

THE PLUMBER'S PART.

SOME helpful pointers are contained in this issue, the application of which to the business of the plumbing and heating operators, should bring valuable results. Interviews with manufacturers and wholesalers show that a definite improvement in the plumbing trade outlook is noted, which should help Fall business considerably. One of the important points emphasized is that of quality in plumbing installations. It is certain that if the sanitary engineer is to retain his prestige in that official capacity and all that it entails, he must see that shoddy equipment is eliminated in order that the installations will give full service.

There is no question but that harder work and possibly longer hours will be necessary for the plumbing and heating operator to hold his own in view of prevailing conditions, but in the final analysis it will be found that business secured by such effort will provide a good increase over normal business when the latter is also returned.

A good point for the craft to keep in mind is the placing of the plumbing and heating business upon a merchandising basis. This will call for the application of much effort to increase the use of plumbing and heating equipment, including "suggestion sales" such as are outlined in this issue. The points outlined will give some good leads which can be followed up to advantage, and there are many other good leads to be secured in every district.

VICTORY FOR TINSMITHS.

A VICTORY for the tinsmith is evident in the final ruling handed down by the Deputy Minister of Customs and Inland Revenue which makes a distinction between work done by a tinsmith and thereby settles the question as to whether or not he is liable to a manufacturers' license and compelled to collect sales tax on his product. The distinction is that the sales tax is to be collected only on goods manufactured for stock and not on goods made to the order of individual customers. Separate accounts are to be kept for the various departments of the business showing clearly whether goods are produced for re-sale or for special order.

This point has caused a great deal of controversy for some time and strenuous objection has been taken by the trade. Sanitary Engineer has had a hand in helping to secure action by setting forth the unfair conditions which the ruling brought about. This objection was taken through the paper and by personal representations to officials at Ottawa.

PROGRESS OF SANITATION.

IN connection with the progress which has been made in the plumbing and heating industry in recent years, it is interesting to look back and review the trend of thought which has led up to the general acceptance of the principles of sanitation which now form such an important part of our existence. There is the story for instance of the sensation created in the United States in December, 1842, when Adam Thompson put in his house in Cincinnati the first bath tub. Physicians said it would cause rheumatism and inflammation of the lungs; letters appeared in the newspapers protesting against a snobbish inclination to imitate the degenerate aristocracy of Europe. The Common Council of Philadelphia almost passed an ordinance forbidding bathing in winter. Virginia put a tax of \$30 per year on every bath tub and a plumber who invented a zinc tub could not obtain a patent. But all attempts to check the beneficent reform were in vain. Thompson, it is true, got the idea from England, but he converted the Spartan tub into a luxury, making his bath long enough to recline in and equipping it with running hot and cold water.

Philosophers have, from time to time since the foregoing event, written at length of the universal desire of those on the American continent for comfort and material well-being. Inventors on this continent have been continually at work upon devices for saving labor and for making the home sanitary. The result of their effort is that plumbing and heating engineers are today provided with the equipment which is so necessary in every household and building. Plumbing and heating engineers are the exponents of a principle which has been proved throughout the ages and which will yet stand much publicity. With the equipment perfected it remains for much effort to be expended to bring property owners to a realization of the vital importance of having the utmost sanitary protection.

Pattern of Furnace Boot

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the
David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

LAYOUT for pattern of furnace boot is as follows:
First draw the side elevation, making the off-set B-7 or A-1 any desired angle or length you wish. Then draw sections M-N.
Section M is for the wall stack and is made to suit the standard size pipe used, while section N is used for the leader pipe and diameter is made to suit.
Observe both bases as A-B and 1-7 form parallel lines, so that no miter is

developed.
Divide the section N in any number of equal points and square lines to the base 1-7, which gives points 2-3-4, etc. By drawing lines to the corners A and B, you thereby divide the elevation into triangles.
To set out the true lengths, we draw a right angle as H-T-i. Make H-T equal to the half of the width of wall stack or in this case, equal to A-C of section M.

Now pick the lines from elevation as A-1; A-2; A-3; A-4; also B-4; B-5, etc., and set on horizontal line T-1.
From each of these points, erect lines to equal those half sectional lines in M. This gives points 2-3-4-5-6 in true lengths. Draw lines to the point H and you have the true lengths.
To set the patterns, draw a line as A'-A equal to twice the length A-C of M. Now pick true lengths H-1 and

Plumbers Participate in "Gala Week"

Special Demonstration Arranged by Merchants in a Section of Toronto to Stimulate Local Buying—Plumbing Displays in Floats and Windows Arouse Much Interest and Bring Good List of Prospects for Future Work.

"GALA Week" was recently held by the business men of Danforth Avenue, Toronto, the idea being to encourage buying in the district. The merchants on this three-mile stretch of business street, located on the outskirts of the city, have been affected to some extent by the too frequent tendency of local people to shop down town, and the recent demonstration, which is only one of a number already held and others planned for the future, helped to achieve the object of demonstrating that buying could be done in the district to equally good advantage from the standpoint of prices and other advantages were enumerated.

Undoubtedly the conditions existing in this district are similar to those prevailing in sections of other cities and in towns located near to a large city. The steps taken by the merchants in connection with the Danforth Community Sale will therefore be of interest to plumbing and heating engineers and others planning means to combat this tendency.

Investigation proved the fact that many of the inhabitants of the Danforth district dealt with downtown firms because of the habit which they had developed when living in closer to the down-town section. With the natural growth of the city they have moved to the outlying districts, but they find it hard to break away from the original connections. In other words, they have not been taught the advantages of giving support to local interests.

The Problem to be Faced.

At the present time steps are being taken to somewhat curtail purchases of Canadians of goods required to be brought in from abroad, in the interests of Canadian industry. The same problem on a smaller scale faces the district merchant in a large city or the town merchant located near the large city. The customers of both stores want to patronize the outside merchant, though their convenience is often served by the local merchant who is deserving of their whole support. Merchants have come to realize that there is no use bemoaning this tendency, that the only thing to do is to adopt means of overcoming it and educating their customers in the right direction. Hence the decision of the Danforth merchants to put on a demonstration of what local merchants could provide and the prices they could offer.

For the information of other merchants planning similar demonstrations, and judging from the enquiries recently received, there are quite a number interested in the question of Community Sales, full details will be given here-with.

Placing Responsibility.

The Business Men's Association, representing all branches of retail trade in the district held their meeting, and decided to hold the affair. Committees were subsequently formed to deal with the various branches of trade represented and a chairman of each com-

mittee appointed, his duty being to stir up as much enthusiasm among his branch of trade as possible. One of the first important steps was to make sure that no hawkers and peddlers would be allowed on the street to take advantage of the merchants' efforts at assembling a crowd. Another step which should be taken at this stage is to see that automobiles are kept off the street when the big parade is in progress, difficulty having been experienced in connection with the demonstration, due to sight-seers' automobiles being allowed on the street. Protection in both of these matters can be secured from the local police department.

Other matters dealt with in the preliminary arrangements were to do certain advertising in the city newspapers and the local newspapers, this advertising being paid for by the association. Posters for stores and stickers to be applied to parcels were provided fully a week in advance, in order to be sure that everyone would know what was coming.

Arrangements were also made to have banners strung across the street at various intervals, announcing the dates of the demonstration. Merchants were encouraged to give the affair all possible publicity, to arrange unique stunts to attract attention, and to do everything in their power to show the buying public why they should deal at local stores.

The Gala Week started on a Saturday evening and the street was fittingly decorated for the occasion. Special sales were in progress in most stores with windows dressed effectively. Community dances and other frolics were provided at various places on the street and in tents on vacant lots along the way.

The Big Parade.

On Tuesday evening the big parade of floats representing the retail stores, was held. This proved a very popular affair, there being a continuous procession for well over two miles long, some merchants having as many as three or four floats. Prizes had been provided for both the floats and the window displays, judges being selected from among the wholesalers and manufacturers' trade and daily newspaper men.

Prizes were donated by wholesalers and manufacturers for the best window displays and floats.

The parade itself was assembled in three sections. The eastern group commenced the parade, moving towards the west, the centre group having been assembled on a side street, falling in behind the eastern group as it passed them and the western group falling in at the rear when the parade had passed the western extremity. The whole parade thereupon reversed and proceeded down the full length of the Avenue with all sections complete. The western and eastern groups returned when the eastern extremity had been reached.

Souvenirs on Parade.

Marshals were appointed in charge of each group in the parade, with the officials of the association leading. The

floats were gaily arranged to exhibit some particular phase of the trades represented, and a great deal of time and money was spent by some merchants in this manner. Souvenirs of all kinds were thrown to the crowds which lined the avenue as the parade proceeded. Bands were placed at intervals through the parade, and helped encourage the spirit which is so necessary in an affair of this kind. A crowd of people estimated at 25,000, from the district, assembled, and many expressed surprise at the wide range and quality of products which were available right near home. Vehicles in the parade are said to have numbered 1,200. The parade commenced at 7 p.m.

The whole avenue presented a brilliant kaleidoscopic effect, with brightly illuminated stores, flying flags, sidewalks crowded with summery-attired humanity, and the parade a colorful streak, winding through it all.

Moving pictures were taken of the parade by theatres located on the avenue, there were shown for some days after the parade was held and helped to preserve the good effects of the affair as well as to show it to those who were unable to view it originally.

From the standpoint of the plumbing and heating trade, much interest was taken in the event, windows being trimmed for the occasion, special demonstrations and contests being put on and much time spent in arranging attractive floats.

Complete bathroom sets in a model room were arranged by some plumbers on motor trucks and men employed to assemble and disassemble the equipment while the parade was in progress. Other accessories and equipment sold by the plumbing and heating firms was also demonstrated in the parade and special window displays arranged by the many plumbers located along this avenue. Considerable interest in local merchants was said to have been stimulated by the affair.

Continued from Page 39

using A and A' as centres, strike and cross arcs in point 1.

Then pick the girths space as 1-2 on the circle of N and using the new point 1 in pattern as centre, strike small arc 2.

Then pick true length H-2 and using A as centre, cross arcs in point 2.

Next strike small arc 3 and cross this with line H-3. Repeat this with point 4.

After this pick the line A-B of elevation and using A in pattern as centre, strike arcs as at B. Then pick true length H-4 and using point 4 in pattern as centre, cross arcs in point B. After this repeat the triangling method until points 7-C are established. We should say that 7-C of pattern is equal to B-7 of elevation. Laps for joining collars must be allowed extra.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

FIG. 41 shows plan, cross and longitudinal section of an earthen constructed sludge bed, suitable for treating the sludge from an Imhoff tank installation. The earthen slopes are constructed at a slope of $1\frac{1}{2}$ to 1 and either sodded or seeded. The sludge pipe from the tank should be laid at a grade of 1 in 25 and discharged through a valve chamber onto a concreted apron constructed at the highest elevation of the bed so as not to disturb the broken slag on discharging.

The bed is well under-drained by means of a 3 in. open jointed tile drain, laid at ten feet centres, discharging into a 6 in. or 4 in. jointed vitrified main tile sewer connected to the main effluent pipe which discharges into the nearest water course.

The bottom of the bed should be of hard soil (preferably clay) excavated to the required inclinations for giving the necessary fall on the drains. On this about 1 in. to 3 in. of coarse broken slag is spread over the whole area with a $\frac{3}{4}$ in. covering of sand, which requires renewing from time to time. The sludge is discharged on the top of this bed and allowed to dry out, then removed where required for filling-in purposes—it now being quite harmless and free from odour.

A longitudinal section of a plain undrained bed or lagoon is shown, where the sludge is run direct onto the earthen bottom and allowed to dry out by climatic conditions and removed from time to time. This form of bed in time becomes a nuisance and should be well sprinkled with chloride of lime from time to time.

WATERWORKS EXTENSIONS IN OTTAWA.

In order to safeguard the city of Ottawa's water service, the Board of Control has recommended to the city council that application be made for special legislation to authorize the issue of debentures to the amount of \$135,000 to construct a duplicate 51 inch pipe from Wellington street to the Queen street pumping station.

A.F. MacCallum, commissioner of works, reported to the board of control that it was essential. In fact, in his annual report for 1919 he stated that this would have to be done within two years: At present there are two 51 inch pipes from the Lemieux Island pumping station to the east end of Wellington street viaduct and from there to Bronson Avenue, one 51 inch pipe connecting with the distributing system. In

the event of an accident making necessary the closing of this single pipe it would cut off the Lemieux Island station. At present the Queen Street station is used in such an emergency. This station is served by an under-water pipe and the commissioner states that in a year or so this pipe will have reached the end of its usefulness. To use it then would be to draw in the polluted water from the bay. The commissioner recommends that a second 51 inch pipe be constructed from the Wellington St. viaduct to the Queen street pumping station and there connected to the pump and also the city distributing system.

The estimated cost of the work is \$122,000, but to allow for emergencies, the board will ask for authority to raise \$135,000. The special legislation could not be secured before February, but everything could be in readiness for a start early in the spring.

TO BUILD SEWERS.

Sewering of the new Lake Shore road, requested by the Harbor Commission, was approved by the Board of Control, Toronto. A by-law will be introduced at the first regular meeting of council. The cost of the sewer will be \$300,000.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Montreal.—Hickey & Aubut, plumbers have dissolved partnership.

Oakburn, Man.—J. H. Rankin, tinsmith, has discontinued business.

Drumheller, Alta.—The firms of Dignan and Riley, Plumber and Tinsmiths, has been dissolved. Mr. Riley has sold his interest to Mr. Dignan who will carry on the business in the basement of the new Loretto Block. Mr. Riley has left Drumheller for Oregon.

Moncton, N.B.—The branch plumbing business of Thos. Johnston Co., of Sunmerville, P.E.I., has recently been re-organized and is now known as Johnston Co. Ltd. F. A. Johnston, pres.; H. L. Callbeck, vice pres.; A. D. Leger, sec.

F. C. Johnston is a son of the former owner, Thos. Johnston.

Bradley & Walsh recently acquired the plumbing business formerly conducted by H. P. Marquis in Campbellton, N. B. They report twenty new stores and houses being erected there and are getting their share of local work.

NEW FIRMS.

Indian Head, Sask.—In a recent issue of Sanitary Engineer the name of T. E. Niven, was misquoted in connection with his commencing plumbing, heating and general tinsmithing business at Indian Head.

FIRE LOSS.

Montreal.—D. Benoit, engaged in the plumbing business in Montreal, has suffered some loss to his business through a recent fire.

INCORPORATIONS.

Ontario Potteries Ltd. has been incorporated in Ontario with head office in Bowmanville, Ont. and capital of \$100,000 to manufacture tile, sewer pipe etc.

Northern Plumbing Supply Co. Ltd., has been incorporated in Ontario with head office in Toronto and capital of \$75,000 to carry on a wholesale business in plumbing supplies.

OBITUARY

Fergus, Ont.—Matthew McClanahan, plumbing and tinsmithing, died recently.

OPENING SHOWROOM.

St. John, N. B.—R. D. Harrington, plumber, formerly at Sidney street. St. John, N. B., recently bought a building at 5 Dorchester street and is re-modelling it for an up-to-date showroom, and with work shop in rear.

BUSINESS FAIR IN BATHURST, N.B.

Even though business is almost at a standstill in the lumber industry, on which Bathurst, N.B., depends, the trade claim there are at least, a dozen new homes being erected there. Plumbers report business as fair.

PLUMBING WORK ACTIVE.

St. Andrews, N.B.—A. Dobson, plumber, reports business particularly good. A water system has been installed in the town at a cost of \$100,000 and all householders are anxious to have connections with their homes. Grant and Co., St. John, have had charge of the street work. Mr. Dobson has eight men employed and could use others if available.

PLUMBER SEVERELY INJURED

Peterboro.—As a result of a fall from a scaffolding to the cement floor nine feet below. Wm. Arthurs, a steam-fitter employed by W. R. Turner, recently suffered serious injury. He was wrapping steam pipes in one of the new buildings at the Canadian General Electric plant and is believed to have become dizzy and lost his balance. He sustained a fractured skull.

NOW MAKING PLUMBERS' OAKUM.

The Acme Waste Mfg. Co., Toronto, is now manufacturing plumbers' and marine oakum. This firm claims to be the only firm in Canada making this product.

PLUMBER SUFFERS INJURY

A. D. Leger, secretary of Johnston Co., Ltd., plumbers, Moncton, N. B., recently suffered a most painful accident when a plumber's furnace he was using exploded. He was severely burned about the face and arms. He was confined to a hospital for three weeks and is now able to be around. It will be several weeks yet before he can resume work.

COMPLETE ARRANGEMENTS FOR MONTREAL'S NEW HOTEL.

Montreal.—Final arrangements were completed for the construction of one of the largest, if not the largest, building enterprises in the history of Montreal, when at a meeting of the directors of the Mount Royal Hotel Company the contract was formally let for the new \$9,000,000 hotel to Thompson-Starrett Co., New York.

The inception of a project of such magnitude at this time, providing work for thousands of builders and others employed in fashioning construction materials and interior equipment, and in-

volving the expenditure of millions of dollars within the space of a year, is expected to have a stimulating effect upon general business conditions, building operations and real estate value.

The construction company guarantee the completion of the building, ready for opening, by October 1st, 1922.

BUSINESS ACTIVE IN MONCTON, N. B., SAYS PLUMBER

E. T. LeBlanc, plumber, Moncton, N.B., in conversation with Sanitary Engineer, stated there was enough work in this city to keep all busy.

This city is said to be doing as much building as any place in Canada for its size. In addition to 40 houses recently erected, tenders are being asked for work to be done on the two new fraternal halls, viz., Knights of Pythias and Orange. Each will cost in the neighborhood of one hundred thousand dollars. The Orange Hall will have five stores on the street front, three apartments and lodge and banquet hall.

Mr. LeBlanc said there was at least twenty per cent. more work in July than in June.

This good condition is perhaps due to the fact that Moncton is now the eastern head office of the Canadian National Railways.

Moncton boasts a local organization of the Domestic Sanitary and Heating Association, which sets a fair scale of prices and also makes arrangement with the wholesalers that they will sell only to the trade; no contractors or individuals being sold. In this way the plumber can get a fair price for his work. Unfortunately, a couple of members, said to be unable to stand prosperity, left the association and started cutting their prices. The loyal members claim these merchants will put themselves out of business before spring, through their action.

Letters to the Editor

APPRECIATES SHEET METAL COURSE.

Editor Sanitary Engineer:

Your course on sheet metal drafting has been a great help to me at times and I hope it will be the same for other tradesmen.

Thos. Emsly Niven, Indian Head, Sask.

LIKES SANITARY ENGINEER

"I like Sanitary Engineer very much and always read it thoroughly. I prefer it to American publications," is the statement of N. M. Mackie, Westmount, P. Q.

WESTERN ONTARIO NEWS

W. G. Murray, Dominion Savings Building, London, Ont., is preparing plans for a new \$25,000 church for the Methodist congregation at Centralia, Ont., and wants prices immediately on heating and electric lighting.

Prices are wanted immediately on hot air heating and plumbing for new \$10,000 school for S. S. No. 22 Westminster Tp. R. B. Stewart, St. James Park P. O., London, Ont., chairman of building committee.

A. McMillan, Lakeside, Ont., is preparing plans for ten new summer homes to be erected for tourists, and wants prices on plumbing and electrical equipment.

Plans are being prepared by the Salvation Army at London, Ont., for a new Children's Home, and six special cottages. Adj. Martin is in charge of the work and wants prices on heating, plumbing and electrical work.

John Glenn, 31 Blackfriars St., London, Ont., wants prices on heating and plumbing for new \$5,500 bungalow.

The Wright Teale Co., London, Ont., have been awarded plumbing and heating in connection with new \$12,000 duplex for Mrs. G. Powell.

Contracts have been awarded and excavating is in progress at both London and Hamilton for new \$55,000 warehouses for Crane Limited.

H. Langford, 361 Talbot St., London, is preparing plans for new \$9,000 residence and wants prices on heating, plumbing and electrical work.

Alf. Gibbons, London, Ont., has been awarded contract for heating and plumbing for new \$7,000 residence for R. G. Blakie.

J. Willis, 565 Richmond Street, is preparing plans for new \$10,000 residence and wants prices on heating, on plumbing and on electrical work.

Buchanan and Foster, of Leamington, have been awarded the plumbing and heating contracts in connection with the new high school at Kingsville, Ont.

Miss L. Milne, daughter of Alex Milne, sanitary engineer, London, Ont., won a prize in the ladies' swimming contests at the recent big aquatic meet held at London.

John Abbott, Lucan, Ont., wants prices on hot air heating, plumbing, and electrical work for new residence to cost \$5,500, in London, Ontario.

W.W. Scott, 25 Elmwood Ave, London, wants prices on plumbing and heating for new \$4,500 residence on which work is starting.

Wm. Lankin, 7 Edna Street, London, wants prices on hot air heating, plumbing, and electrical work for new \$4,000 residence.

William Millar, 145 Barker Street, London, Ont., has commenced the erection of three new dwellings to cost \$12,000, and wants prices on heating and plumbing.

City Engineer Harry Brazier, City Hall, London, is preparing plans for three new siphon lines to cost \$15,000, in connection with sewage improvements and wants prices on 8 inch and 12 inch cast iron piping.

Tenders will be received until September 7 for heating, plumbing, and electrical work in connection with new \$15,000 parsonage for the Methodist congregation at Strathroy, Ontario, John Downham, chairman of the Building Committee.

Good Baseball in Plumbers' League

Dominion Radiator Co. and Society of D.S. and H.E. in Close Race—Grinnells Won First Series—James Morrison Brass Team Has Had Hard Pull.

THE TORONTO Plumbing and Heating Supplies Baseball League are now on the last lap of their second series, and three out of the four teams are staging a merry old argument for the honors. Grinnells won the first series, and do not need to worry as much as the other two teams, Dominion Radiator and the D.S. Heating Engineers, as they are already sure of a place in the play-off. D. S. H. E. have one more game to play with Grinnells, while Dominion Radiator also have one to play with the winners of the first series. It looks at present as though it will be between the Engineers and the Radiator boys for the top rung of the ladder, and either team will give the Grinnell hustlers a bitter argument for the league championship, which will be decided in two out of three games.

We must not forget the fourth team, James Morrison Brass, who, although out of the honors for this year, are sure deserving of a great deal of credit for sticking to the ship in spite of their low standing, and had the satisfaction of upsetting the dope in the second series by handling Grinnells a 9-7 trouncing. They could rightly be called the luckless wonders, as they lost some tough old games by the one and two-run margin after being out in front.

City Engineer Brien is preparing plans and a bylaw will be submitted to the ratepayers in January for a new public comfort station at Windsor, Ont. to cost \$20,000.

William Perrin, Blenheim, Ontario, wants prices on hot air heating, plumbing and electrical work in connection with new \$7,000 residence.

Thomas Jacklin, Blenheim, Ontario, is preparing plans for new \$5,000 home and wants prices on hot air heating, plumbing, and electrical work.

Hadley McDonald, Ruthven, Ontario, is preparing plans for new \$10,000 residence and wants prices on heating, plumbing and electrical work.

IMPORTANT JUDICIAL DECISION

An important decision was rendered in the Hull, Que., courts a few days ago by Recorder Desjardins, in the case of Hector Buron and Adrien Bastien, who accused Josephat and Valmore Lamarche with using intimidation towards them during the course of the recent strike of the International Plumbers' Union in this district.

Recorder Desjardins found the accused guilty and fined them \$5 and costs each, with the alternative of fifteen days in jail.

The case was one where Buron and Bastien, two members of the National Catholic Union, were at work on the construction of a school in Hull, when

Grinnells do not appear to be as smooth a working team since they lost the "peppery" Cosgrave behind the bat, but Manager Cannon claims they will be on top at the finish. They are an outfit that battle all the time and can come through in the pinches.

Swing, of Dominion Radiator, shapes up like one of the best players in the league. He is now doing the receiving and is holding Gillen up in good form. And he is a regular bear with the old war club. He fits in well in the smooth-working team play of the Radiator Makers.

The D.S.H.E. team are one great band of sluggers and make life miserable for the opposing pitchers, as they are liable to break out any old time.

The batting leader is Mortimer, of the Morrison Brass, with the grand average of .473 for seven games. The rest who have played in six games or more to date are as follows: A. Byrne, D.S. H.E., .458; Radke, D.R., .450; R. Byrne, D.S.H.E., .439; Swing, D.R., .408; E. Byrne, D.S.H.E., .400; Ramsey, D. S. H.E., .392; Hughes, M.B., .379; Kerr, M.B., .379; North, D.R., .367; Spellman, D.R., .364; Abbott, D.S.H.E., .355; W. Menzies, D.S.H.E., .350; Coffey, D.R., .350; Griffiths, D.S., .324; Cannon, Gr., .322; Porter, M.B., .312; Bentley, D.R., .303.

they were approached by the Lamarche brothers, members of the International Union, who by the use of threats endeavoured to induce them to quit the job and join their organization.

In rendering judgment, Recorder Desjardins held that the right of every laboring man to work at whatever trade he chose, or without a union affiliation must be respected. "Those members of labor unions who desire to go on strike have that privilege," said the recorder, "but they must not be allowed to interfere with those who desire to continue at work, and who are the best judges of what is desirable for the interests of themselves and their families."

WITHOUT COMMUNITY HEAT

Chatham, Ont.—The business section of the city is facing a serious problem owing to the announcement made by the Chatham Steam Heating Co. that operations would be suspended for the coming winter. Abnormal fuel conditions is the reason of the company's action.

Practically all the business places along King street are heated by the central system, many of the blocks that have been built in recent years not being equipped with chimneys.

There will have to be some hustling done in the next few months if the various blocks are to be equipped with heating apparatus before the winter sets in.

Master Plumbers Complain

Montreal Plumbers Claim Business Tax is Unfair, Journeymen Who Leave Employers Obtain Business Without Being Taxed. Delegation from Master Plumbers' Association Will Lay Case Before Aldermen in October.

Montreal.—D. A. Bethune, president, H. Lauigeur, vice-president, and W. J. Graham of the Master Plumbers Association composed a delegation that waited on and discussed with some of the heads of the City Hall the question of the present By-law, as it deals with contracts in general, regarding the business tax. This committee was formed at a recent meeting of the Association to deal with the matter.

The contractors in question, speaking for their Association and contractors in other building lines, claim that the manner in which the business tax is levied upon them and not against others competing with them, constitutes an injustice.

It was pointed out that it is a matter of common occurrence for a journeyman plumber or a journeyman electrician, or a man of another trade to leave his employment with a contractor, perhaps because there is no work for him, and to take little contracts on his own behalf. Some of these contracts are one man jobs; in other cases the journeyman plumber in question joins one or

two others of his fellows and gets business. The grievance is that in such cases these odd contractors, who come and go and often have no offices, pay no business tax to the city, whereas the contractor who is in the business all the year round has his office, pays rent for a business place and business taxes as a consequence.

How to obviate this so-called unfair competition is a matter in which no definite solution has been arrived at, and it is admitted that the problem is one which is hard to solve because of the fact that these small odd-time contractors often have no offices, doing their business from their residences, and do not stay in business for a long time.

It was suggested to the delegation which went to the City Hall that they should draw up some suggestions to submit to the new council for the purpose of having an amendment introduced in the Business Tax By-law. The Committee will continue its work and endeavour to lay a concrete plan before the City Council in October.

SANITATION INCREASES AVERAGE SPAN OF LIFE

The average life of man has lengthened four years in the last quarter century, despite the crime wave, war, automobile and other hazards.

"Within another generation the allotted threescore years and ten will be a thing of the past," Dr. George W. Hoagland said, basing his claims on mortality statistics of the American Insurance Union, of which he is secretary.

"Improvements brought about in sanitation, the nationwide anti-spitting fight and other steps have contributed toward man's longevity," Dr. Hoagland said. "Severe epidemics of typhoid and malaria which formerly took such a huge toll of life, no longer are known."

TYPHOID OUTBREAK TRACED TO PRIVATE WATER SUPPLY

London, Ont. —The recent outbreak of typhoid fever at the Ontario Hospital for the Insane has been traced, Dr. Robinson, the superintendent, states, to the private water supply of the institution, which uses its own artesian wells system, surface water having got into the wells during heavy storms. As a result only city water is now being used at the hospital.

MONTREAL'S NEW PUMP HOUSE.

Montreal.—Adding to the improvements, on which the City of Montreal is spending millions of dollars in order to provide at all times the population of this city with an adequate and even abundant supply of water, the contract

for the new half million dollar pump house has been awarded. The new structure will be the future low level pumping station in Point St. Charles.

The Director of Public Works states that work will be started in a week, that all the foundations would be laid this year, and that the steel work would be begun this fall, and that the work would go on during the winter thus affording considerable employment to the workers of Montreal. In accepting the tender, the Administrative Commission stipulated that the contracting company employ, as far as possible, Montreal labor, and, conditions being equal, preference be given to Montreal firms in the purchase of material.

The Director of Public Works further remarked that three new electric pumps, each having a daily capacity of 30,000,000 gallons, would be installed in the new building, and that the two other electric pumps now in use at the present pump station, each of 30,000,000 gallons capacity, would be transferred to the new building. There would also be accommodation for a sixth pump of the same capacity, which would be installed later.

The average water consumption in Montreal is about 75,000,000 gallons per day, by which it may be seen that the new pumping plant will supply Montreal with water for some time to come. It is the intention of the city authorities, however, to retain the present steam pump plant as a reserve.

TENDERS WANTED

Tenders are being asked for new St. Peters school 250,000 and Newman St. school 140,000. St. John, N. B.

TO INVESTIGATE WATER SOURCES

London, Ont.—London has decided to have an exhaustive investigation made of possible sources of spring water supply in and around the city, and a number of experts who have been engaged by the Public Utilities Commission are now here making preparations to go ahead with the work. The investigation is not to cost more than \$3,000, test holes to be sunk in various places at a cost of \$2 per foot. If water is struck the experts will sink wells, and these the city will not be bound to take over unless a flow of 500,000 gallons per day is developed. It is also the intention to sink large wells from 24 to 36 inches in diameter, capable of a flow of from 8,000,000 to 10,000,000 gallons per day. Unless a proper supply of spring water can be shown which will meet the city's needs for some years to come, London will shortly be compelled to go to the lake for water for practically all purposes.

DID NOT WANT REINFORCED CONCRETE PIPES.

Ottawa, Ont.—Philanthropy defeated its own ends when the Ottawa Board of Control, a few days ago, decided finally how a sewer on Waverley street was to be built—a question that vexed many meetings of both the Board and the City Council since the first proposal was made several weeks ago. J. R. Douglas, a local contractor, came to the Board of Control with the offer of a \$15,000 gift to the city charity department if he was awarded a contract at \$70,000 for constructing the sewer; this being the figure arrived at for the work by the city. Because Mr. Douglas refused to use the pipe specified by Commissioner of Works Macallum, the offer was rejected. The pipe item, incidentally, amounted to about a third of the whole job.

Mr. Douglas offered to put up an accepted check for \$15,000 in "as many minutes" as he stated. However, as the debate proceeded it became evident that Mr. Douglas while willing to build a sewer, was not willing to follow the specifications laid down by the city engineering department. He wanted concrete pipe, reinforced by wire, and the trench laid with brick, which he claimed would make a better sewer than the city had planned, while the commissioner of works referred contemptuously to Mr. Douglas' reinforcement plans as "chicken wire". The result was, Mr. Douglas left the board meeting declaring it was evident the board did not want to give him the contract, while the members of the board declared that Mr. Douglas would not accept the city's conditions, and agreement was therefore impossible.

After Mr. Douglas left, the contract for the pipe for the new sewer was let to the Dominion Lock Joint Pipe Company for 36 inch pipe at \$4.85 a length and 42 inch pipe at \$6.03 a length, the total pipe cost being about \$18,000, or \$2,000 less than the city estimate. The pipe, which is of reinforced concrete, will be made in Ottawa.

Mr. Macallum later explained that pipe such as Mr. Douglas proposed to use was not put down more than 10 or 12 feet under ground, whereas the Waverly street sewer will go as deep as 39 feet in places.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

ANOTHER lengthy list of price changes features the market on plumbing and steam-fittings supplies. Among the decline in quotations are class A malleable pipe fittings, standard globe, angle and check valves, standard roundaway stop and waste cocks, stove pipe, copper and brass goods, dull Canada plates, pipe cutters, bar iron and steel, sheets and plates, eavestrough and conductor pipe, Irwin car and auger bits, and certain makes of files. Further reductions are also shown on scrap material prices, while the ingot markets remain dull, with a noticeable lack of active interest.

MONTREAL

MONTREAL, September 7.—Reductions in prices of plumbing supplies continue to hold interest in the market. Many important lines are now reduced, although two changes in the nature of an advance are made. Featuring, are the lower prices on eavestrough and conductor pipe, iron and steel, sheets in general and soil pipe. Eavestrough and conductor pipe are now quoted less 60 and 10 per cent., the extra 10 per cent. being added to the discount. The different kinds of iron and steel bars are practically all reduced 15 cents per 100 lbs., while the discounts on both soil pipe and fittings have been increased. The reduction on sheets includes black, galvanized and dull Canada plates. Copper and brass rods, sheets and tubes have new lower prices. Pipe cutters also show a decline in price, and closet seat hinges are now quoted at \$2.40 per dozen.

The discount on enamelled ware has been revised to 20 and 10 per cent. off list, with most jobbing houses, bringing prices a little higher, and malleable fittings are revised to higher quotations.

Ingot metals have improved somewhat and business among jobbers and distributors is now reported as showing a little more activity, lending an encouraging outlook to fall business.

COPPER AND BRASS GOODS REDUCED

Montreal.

Quotations on both brass and copper sheets, rods and tubing are now slightly lower. In brass, sheets and rods are reduced 2 cents per lb., and tubing shows a decline of 3 cents. Copper rods, sheets and tubing are each lowered 2 cents per lb. This is said to be the result of the easier tone of the ingot metals which now show a decided improvement. Following are new prices:

BRASS—	
Sheets, base	0 25
Rods, base ½ to 1 in., round	0 23
Tubing, seamless, base	0 32

COPPER—	
Casting ingot, see weekly report	
Rods, ½ to 2 in.	0 30
Soft sheets, plain, 16 oz. heavier lb.	0 30
Plain tinned, 16 oz. and heavier, lb.	0 37
Polished and tinned, 16 oz., heavier, lb.	0 42
Tubing, lb.	0 34

Above prices are full sheets and bars. Cut sheets and bars are 5c per lb. higher.

A REDUCTION IN PIPE CUTTERS.

Montreal.

A reduction of approximately 10 per cent. is made in the quotations of both Barnes and Saunders pipe cutters. Barnes is quoted at 35 per cent. off list, Saunders at 20 per cent. off.

IRON AND STEEL PRICES LOWERED

Montreal.

Practically all lines of bar iron and steel are reduced to the extent of 15 cents per 100 lbs., bringing the base price of common bar iron down to \$3.25.

The trend of the steel market continues on a gradual decline; gradual because the reductions in the past two instances have not been of such a marked character as was given out in

Easier price levels on the primary steel markets have been reflected in a gradual lowering of quotations throughout steel and steel products generally.

Due to active trading in raw cotton, a firm undertone has developed in the cotton waste markets. The boiler tube business shows signs of reviving, sales being slightly more numerous, and the increase in inquiries denoting more seasonable interest. Prevailing quotations on range boilers remain unchanged, and it is now inferred that the existing levels may hold for some time. The radiator business is recorded as good, while a steady volume of sales is also given on soil pipe and fittings.

former months. This would indicate that prices are now fairly well down to bottom when present day productive costs are considered, and prices now quoted leave little profit for producers at the mills. The present reduction is, according to one local dealer, the result of the again unsteady situation at the mills where another series of price-cutting is in evidence, and he is of the opinion that any further recessions will be the outcome of the continuation of this price shading. Further marked reductions are improbable because the producers of pig iron claim they are placing their output at little or no profit. Freight rates are also one of the chief factors in steel production and if these are lowered, as anticipated, the question next arises: Will the producers of pig iron still be willing to sell at to-day's prices in the case of any developments here, or will they then demand increased figures covering the amount of freight reduction? This is just one phase that would indicate a steady market insofar as the mills are concerned, and taken altogether there seems little chance of any drastic price changes until the cost of production is lowered.

A more hopeful outlook is now felt locally among the iron and steel jobbers, and a fair amount of Fall business is anticipated. More enquiries are made, and each week brings with it reason for a fairly optimistic viewpoint for the remaining months of the year. Following are revised quotations:

Common bar iron, 100 lbs.	3 25
Refined iron	4 00
Iron finish machinery steel	3 45
Mild steel	3 40
Single reeled machinery steel	5 25
Band steel	3 40
Spring steel	6 00
Sleighshoe steel	3 40
Tire steel	3 60
Toe calk steel	4 30
Harrow tooth steel	3 55
Mining tooth steel, per lb.	0 23

Continued from Page 45] 8

Black Diamond tool and cast steel, lb. 0 23
 NOTE.—Refined iron is approximately \$1.50
 per 100 pounds over base, but fluctuates
 owing to unsettled market.
 Band steel in scroll bundles, 50c per 100 lbs.
 extra.
 Flats, iron and steel, 3-16 and thinner, 50c
 per 100 lbs. extra.

CLOSET SEAT HINGES \$2.40 DOZEN Montreal.

A reduction has been made in the
 price of closet seat hinges, and they
 are now quoted at \$2.40 a dozen.

A BETTER TONE IN LEAD PRODUCTS

Montreal.

With quotations on solders and other
 lines of lead products holding at de-
 clines in prices of two weeks ago, prices
 are now stated to be at a level that
 warrants no further reduction until la-
 bor and freight rates show a reduction.
 The recent declines have been in sym-
 pathy with the metals on the primary
 markets, which in practically all in-
 stances have been very weak with little
 interest shown. These are now at very
 low quotations and below pre-war levels
 on some metals-chief in the manufacture
 of the finished products. The tone of
 these metals is reported as having im-
 proved somewhat in the past week and
 the betterment looked for has indica-
 tions of developing. If so, it will in all
 probability reflect immediately on the
 finished market, and this is the chief
 reason why manufacturers anticipate a
 steady market, and firm enough to with-
 stand the easier tones which have arisen
 through a lack of demand. Following
 are the unchanged quotations:

Lead pipe, per 100 lbs. 12 50
 Lead waste, per 100 lbs. 13 50
 of 10%.

NOTE.—Lead pipe is subject to a discount
 Lead traps and bends 10% off.
 Lead wool, lb. 0 13½
 Lead sheets, 2½ lbs. 0 10½
 Lead sheets, 3 to 3½ lbs. sq. ft. lb. 0 10¼
 Do., 4 to 8 lbs. sq. ft. 0 09½
 Cut sheets, ¼c lb. extra and cut sheets to
 size ¾c lb. extra.
 Solder, guaranteed, lb. 0 25½
 Do., strictly, lb. 0 23½
 Do., commercial, lb. 0 20½
 Do., wiping, lb., 0 21½
 Do., wire, lb. 0 35
 Zinc, sheets, casks 0 11½
 Do., broken lots 0 12

NEW DISCOUNTS ON SOIL PIPE. Montreal.

Through the increasing of discounts
 on both soil pipe and fittings, lower
 prices are effective. The 2 and 3 inch
 pipe now sells at less 35 per cent., and 4,
 5 and 6 inch less 40 per cent. The 8
 inch pipe and fittings remain at net
 prices while from 2 to 6 inch fittings
 are changed to 50 per cent. off list
 prices. Following are the new quota-
 tions:

SOIL PIPE—
 2 and 3 inch 35%
 4 inch 40%
 5 and 6 inch 40%
 8 inch Net
 FITTINGS—
 2 to 6 inch 50%
 8 inch Net

MALLEABLE FITTING PRICES ARE INCREASED.

Montreal.

A revision has been made in the
 prices of malleable fittings in the nature
 of an advance. Malleable bushings and
 plugs are now quoted at 25 per cent.
 off list, formerly selling at less 30 per
 cent. In the pound goods, prices on

the three classes all show an advance
 and are now quoted net where former-
 ly the 10 per cent. was added. There
 is a steady volume of business being
 done in fittings, the varied kinds mov-
 ing in small but numerous orders. Fol-
 lowing are new prices and discounts:

PIPE FITTINGS—

Cast iron fittings	20%
Plugs, cast iron	27½%
Do., solid	10%
Do., countersunk	net
Bushings	25%
Unions, ¼ in. to 2 in.	40%
Do., 8 in., 2½ to 4 in.	40%
Flanged Unions	20%
Dart Unions, blk. ¼ to 2 in.	29%
Do., ½ in., 2½ to 4 in.	14%
Do., galvd., add to black	30%
Nipples, blk., and galvd., ½ to 4 in. close and short	45%
Do., 4½ in. and larger	35%
Do., long, ½ in. to 4 in.	65%
Do., 4½ in. and larger	45%
Do., running thread	25%
Couplings, 4 in. and under	25%

MALLEABLE FITTINGS—

	Black Galvanized
Class A	0 58 0 72
Class B	0 24 0 34
Class C	0 16 0 24

RANGE BOILERS A LITTLE STEADIER.

Montreal.

It now seems altogether likely that
 range boilers will settle down with the
 \$7.50 quotation on the 30 gallon
 standard boiler, notwithstanding \$8.75
 was the price accompanying other quo-
 tations on the list which are unchanged
 and experiencing a fairly steady mar-
 ket. The lower price on the 30 gallon
 size was first given through the result
 of price shading, while other manufac-
 turers and jobbers maintained the high-
 er price, but \$7.50 is now general, seem-
 ingly having supplanted the former high-
 er quotation. Limited sales are made,
 although a slight improvement is not-
 ed in the past two weeks. Following
 are net prices on the various sizes:

	Black Galv.	Standard	Ex.-heavy
30 gallon	7 50	11 25	11 25
35 gallon	11 25		
40 gallon	13 50	16 00	
52 gallon	20 00		
66 gallon	28 00		
82 gallon	35 00		
100 gallon	45 00		
120 gallon	54 00		

NO INTEREST IN SCRAP MARKET Montreal.

Although the prices on scrap metals
 are at a low level in general, they have
 failed to locate any increased activities.
 Dealers were satisfied that further re-
 ductions would not act as a stimulus,
 and business conditions in general will
 have to improve before much interest
 will be taken in waste materials. It is
 noticed that a little more hopeful tone
 is prevailing in the iron and steel mar-
 kets, but whether this will reflect on
 the scrap end is held in doubt at present,
 although this should bring about an
 improvement. Nominal quotations are
 the following.

Waste Materials

Automobile tires	0.75
Rubber shoes	0.02½
Yellow brass	0.05
Red brass	0.08½
Light brass	0.04
Scrap zinc	0.03 to 0.03½
Lead, heavy	0.04
Lead, tea	0.02½

Light copper	0.07½
Heavy copper	0.10½
Wrought iron, R. Rd. No. 1 per gr. ton	10.50
Malleable scrap (ton)	10.50
Pipe scrap (ton)	7.00
Heavy melting steel	7.50 to 8.00
No. 2 busheling	4.00
Boiler plate	8.00
No. 1 machinery cast	20.00

FAIR SALES OF VALVES AND BIBBS Montreal.

Current sales in the various lines of
 compression goods are fair, with no
 change made in the discount. Valves
 and bibbs have enjoyed a fair amount
 of business all through the summer
 months although orders were strictly of
 a sorting nature. With the approach
 of the later months of this year a good
 volume of business should continue,
 with prices expected to show little
 change. Present discounts are the fol-
 lowing:

Compression work, standard	37%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, stan- dard	40%
Roundway stop and waste cocks, stan- dard	37%
Brass steam cocks, standard	10%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, stan- dard	20%
Gate or straightway	16-18%
Jenkins Globe	10-16%
Jenkins gate valves	10%
Emco Globe Valves	20%
Emco Check Valves	20%

MORE ENQUIRIES FOR BOILER TUBES.

Montreal.

With quotations on the various sizes
 of both seamless and lapweld boiler
 tubes remaining at previous levels, little
 change can be reported in the move-
 ment. As in other lines of the heavier
 iron and steel products, boiler tubes
 have recorded slow sales during the
 summer months, and the demand has
 only been for small work and repairs.
 A little brighter outlook now comes to
 light however, with an increased num-
 ber of inquiries coming to hand, but
 whether these will develop into sales re-
 mains to be seen. Unchanged quota-
 tions are following:

Boiler Tubes—	Seamless	Lapweld
1 inch	25.00	
1¼ inch	26.00	
1½ inch	25.00	
1¾ inch	28.25	27.00
2 inch	27.80	23.00
2¼ inch	31.35	26.00
2½ inch	39.65	28.00
3 inch	46.80	33.00
3½ inch	60.35	41.00
4 inch	81.00	51.75

CORRUGATED SHEETS REMAIN AT DECLINE.

Montreal.

List prices and discounts on corruga-
 ted sheet head remain at the decline of
 a few weeks ago. The present prices
 are considered reasonably low, but with
 a rather unsettled feeling among the
 jobbing circles locally, the outcome
 might take the form of even lower prices
 in the hope of stabilizing the market,
 while on the other hand present quo-
 tations are well down to the galvanized
 sheet prices and a steadier market is
 looked for on these. List prices and
 discounts are as follows:

Continued on Page 48

Made in Canada for Canadians

At the Sarnia factory **MUELLER** is now producing a complete line of Water, Plumbing and Gas Brass Goods of tested quality and proved efficiency — at exceedingly interesting prices.

To meet the requirements of the Canadian market **MUELLER** now offers the latest improved construction in Flush Valves No. A-3375.

MUELLER Imperial Flush Valves

are fully warranted to stand every reasonable test—are impervious to corrosion—have the well known **MUELLER** precision of manufacture—and can be depended upon to give absolute and lasting satisfaction.

The lever moves with the slightest touch—but cannot be held open to waste water. Specify No. A-3375 when ordering, or write for description and prices. Mail orders given prompt attention.

**LOWER PRICES ON STOVE PIPES.
Montreal.**

New lower prices are given on the locked stove pipes, the reduction covering both the 6 inch and 7 inch pipes. The 6 inch is now quoted at \$14.00 per 100, 7 inch \$15.00 per hundred.

**ENAMELLED WARE DISCOUNT
CHANGED.****Montreal.**

Local conditions surrounding enamelled ware is gradually showing improvement, and the market is a little more stabilized insofar as the jobbers and distributors' resale prices are concerned. As a result the discount is returned to 20 and 10 per cent. off list, bringing the net price a little higher than was previously quoted.

This will be welcomed by dealers, as former prices left no profits for them and while the market still leaves room for further improvement this is a step in the right direction. Following are list prices with the new discount:

Closet, standard outfit	26.00
Do., with post hinge seat	26.75
Do., white vitro, vitreous china or enamelled iron, with wash-down bowl and oak or mahogany post hinge seat	29.75
Do., add for reversible trap bowl	1.25
Do., add for siphon jet bowl	7.00
Do., for ¾ in. valve on supply pipe	1.50
Do., deduct for supply pipe	0.80
Do., deduct for floor flange	0.60
Do., wash down bowl, less spud	11.50
Do., reversible trap bowl, less spud	12.75
Do., siphon jet bowl, less spud	19.00
Do., "Richelieu" bowl	10.50
Do., extra for spud	0.60
Do., oak, or oak-vitro tank, with fittings less seat	16.50
Do., wood strip seat and cover	3.75
Do., post hinge seat and cover	4.75
Do., add for bar hinge	0.25
Do., white vitro, vitreous china, or enamelled iron tank, with fittings, flush elbow and supplies, less seat	18.50

SOME SHEETS AGAIN LOWERED IN PRICE.**Montreal.**

As in the case of other steel products, the sheet market has now taken on a little more hopeful aspect. It was anticipated that Fall would bring more activity, and this has been realized to a degree, through the receipt of more enquiries. A noticeable increase in shipments of sheets to merchants for furnace and stove pipe work has been evident in the past two weeks, although sales are not yet up to normal. This is accounted for however in dealers not placing their orders beforehand for their fall and early winter requirements. There is room for a great improvement but the situation is becoming more encouraging from a sales point of view.

A revision to lower levels has been made in the prices of all sheets with the exception of Terne plates and Welsh Canada plates. Black sheets show an approximate reduction of 60 cents per 100 pounds, U.S. standard galvanized sheets from 40 to 50 cents while the English standard have a decline of 50 cents on all gauges. Bright tin plates are also slightly reduced. Following are the revised prices:

BLACK SHEETS—

10 gauge	4 40	4 65
12 gauge	4 50	4 75
14 gauge	4 60	4 85
16 gauge	4 70	4 95
18-20 gauge	4 95	5 20
22-24 gauge	5 10	5 35
26 gauge	5 15	5 40
28 gauge	5 25	5 50
Sheets 36 in. wide, 20c per 100 lbs. extra.		

GALVANIZED SHEETS—**U. S. Standard—**

10½ oz.	7 25	7 75
28 gauge	6 85	7 35

CLOSET PRICES UNCHANGED.**Montreal.**

Closet prices continue unchanged, with sales showing a slight improvement, building construction now demanding supplies. With increased activities, prices should hold fairly firm as closets are now selling at reasonable low figures and the last reduction is said to have been made in the hope of bringing about an increased volume of business. While there is no definite indication of revisions either way at present following are present quotations:

Sinks, roll rim—

18x30 in.	23 00
-----------	-------

Sinks, flat rim—

	1 only	2 only	3 only
16x24	\$ 7 50	\$ 7 40	\$ 7 30

18x24" Apron F154 or P3845 or P3847	23 60
18x21" Apron F169 or P4205	17 60
17x19" Roll Rim, F241 or P4345	12 60
Less 20-10%.	

IRREGULAR SALES OF RADIATORS**Montreal.**

The movement of radiators and boilers is said to be of a spasmodic nature, and in the past two weeks sales are not as large as the few weeks' previous. This falling off is however only considered temporary and a fair amount of Fall business is anticipated, as a good amount of construction work now under way will still require supplies before the cold weather sets in. Prices and discounts remain unchanged as follows:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot. 45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53 per cent for hot water and 54 per cent. for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50 per cent.

Boilers—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 60 per cent. off list.

Square or sectional hot water or steam boilers, 15 in., 10 per cent.

For Ontario Government trimmings, 5 per cent.

Square or sectional water boilers 19-in to 36 in., 10 per cent. off list.

Square or sectional steam boilers, 19 in. to 36 in., 10 per cent. Ontario Government trimmings, 5 per cent.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b., Toronto, Montreal, Guelph, Hamilton, St. Catharines or Bramford.

WASTE PRICES HOLD.**Montreal.**

A steady market seems to have settled on cotton wastes, prices having continued without change since early in July, and with very little indication at present of further revision, notwithstanding other lines of cotton goods have undergone price declines. A steady volume of business continues, and although not as heavy as in past years, it is said to be quite satisfactory. Unchanged quotations are as follows:

NO CHANGE IN WROUGHT PIPE.**Montreal.**

The July revision in the quotations on wrought iron and steel pipe still holds list No. 52 being the selling basis. Jobbing houses report the movement of piping as irregular, but quite satisfactory. Outside dealers' stocks have been kept at the low ebb during the summer months and the buying has been purely of a sorting character, but with the approach of the fall months a fairly steady movement should be experienced. There is no indication of the approach of a further revision at present, which is quite different from conditions earlier in the year when new lists were issued quite regularly. Following is list No. 52.

EAVESTROUGH PRICES REDUCED.**Montreal.**

Eavestrough and conductor pipe will now cost less, a reduction having been made in both lines last week. The discount off list prices on both the trough and pipe is now 60 and 10 per cent., the extra 10 per cent. having been added. Conductor elbows remain unchanged at the discount of 55 per cent. off list. A temporary falling off in sales

INGOTS DISPLAY FIRMER TENDENCIES.**Montreal.**

Ingot metals in general are firmer with advances in prices in some instances, while on others a much more hopeful outlook is promised. The metals in the ingot stage have been in a listless state for some time past, with little interest shown, therefore the improvement is welcome.

TIN.—London advanced quite sharply in the earlier part of the week and

the market at present looks strong, although whether this will continue is uncertain at the moment. The tin plate situation appears to be somewhat better which should result, to a degree, in larger consumption of the ingot metal. Quotation advanced to 35 cents.

COPPER.—The tone of this metal is better both in New York and London and producers are firmer in their ideas. It is not easy to buy for forward delivery as sellers are asking a higher premium. Local market is somewhat firmer at 17½ cents for electro, 17 cts. for casting.

LEAD.—This metal is rather firm at present, especially in London where higher prices are expected. The American market is also firmer and prices advanced 10 points since last week. It is reported however that one of the largest smelters in Australia is resuming operations on a somewhat lessened scale which may tend to keep the market down. Local price 6½ cents.

SPELTER.—There is little change in the American situation although it is now impossible to buy under \$4.20 for spot and \$4.30 for last quarter. The English market is firmer but considerable uncertainty still exists over the situation in Germany. Price is unchanged at 7¼ cents.

ANTIMONY.—There is a firmer tone to the market as far as offerings from China are concerned, but little change in the situation either locally or in New York. Chinese is offered at 7½ cents, high grade English 8½ cents.

ALUMINUM.—Aluminum is the only metal that fails to show an improvement and the market remains dull and unchanged. Quotation continues at 30 cents.

TORONTO MARKETS

TORONTO, September 7.—Many important items among plumbing and steam-fitting supplies, now register further revision in prices.

Lower quotations are given on standard Globe, Angle and Check valves, also on standard round way stop and waste cocks. Class A malleable pipe fittings are reduced in price, both black and galvanized. Stove pipe prices are lowered on the 6 and 7 inch sizes, while revised discounts are also given on eavestrough and conductor pipe, which change means lower prices for the fall period where these products are required. Lower ranges have developed in the various local quotations on bar iron and steel, and easier price levels are also noted on sheets and plates, an average reduction of fifty cents being shown.

Revised discounts on certain makes of files bring prices on these tools to a reduced scale, and a similar change is recorded on Irwin auger and car bits. Further price lowerings are now shown in the waste material markets, while lack of active interest in ingot metals is still apparent. On the other hand, the cotton waste markets are firmer; with the boiler tube business entering on the stage where revival is looked for, as sales are more numerous and inquiries denote more seasonable interest. Electric ranges are proving popular this season, and a slight increase is reported in the fall movement of stoves and furnaces. There is a steady volume of sales for soil pipe and fittings, with a fair trade noted in corrugated sheets. A better movement is recorded in brass and copper goods, while the current pipe demand is considered fair, with list No. 52 still in effect.

REVISED DISCOUNTS ON FILES**Toronto.**

Revised discounts are now shown on various makes of files, which change brings prices on these products to a lower basis. The new quotations are enumerated on the current market pages.

STOVE PIPE PRICES LOWERED**Toronto.**

Reduced prices are announced on stove pipes. The new quotations on the 6-inch size is given as \$14.00 per hundred, and the price of the 7-inch pipe is now \$15.00.

IRWIN BIT PRICES AGAIN LOWER Toronto.

The discounts on Irwin car and auger bits have again been revised, thus making easier quotations on these products. Irwin auger bits are now quoted at list plus 5 per cent., and car bits are shown at 5 per cent. off.

COTTON WASTE MARKETS FIRMER Toronto.

Dealers report that the tone of the cotton markets has recently shown some improvement, and this situation has reflected in a firming up on waste prices. The quotations on both white and colored cotton wastes, which recently came into effect, are being well maintained, no further price revisions having been recorded. It is stated that few, if any, changes are now expected, as market conditions are generally reported fair, with some signs of a more optimistic attitude developing in the trade. The unchanged quotations follow:

QUOTATIONS ON MALLEABLE FITTINGS SHOW SLIGHT CHANGE**Toronto.**

Class A. malleable pipe fittings, both black and galvanized are reduced in price this week. A 2-cent reduction is announced on black, with a decline of 3 cents in the quotation on galvanized. No revision has been made on B and C class fittings. Recent changes in the discounts on wrought iron nipples and couplings are still maintained, and following are the current prices:

ELECTRIC RANGES POPULAR**Toronto.**

Manufacturers and distributors of electric ranges report that there is a

Continued on Page 52

Why Not

install lighter and more efficient

Radiation ?

Victory Radiators

(a)

An improvement in engineering and design.

The Victory Radiator is made with two flat, hollow castings, one for the top and the other for the bottom, with tubes inserted in them. One tube is within the other. In this way, water is caused to circulate through the

(b)

headers and between the two tubes. This is a series of double tubes; 8 in the smallest castings, up to 54 in the larger ones. This adds the outside surface radiation of the larger tube, and the inside surface radiation of the smaller tube, to that of the top and bottom headers.

(c)

Save On

Coal, Shipping and Handling Weight, Cost of Installation and Fittings. Further investigation proves them still more efficient. Steel tubing is thinner and gives better radiation. The air circulation is better. The radiators occupy a minimum of space. They are artistic in appearance.

Since there is only $\frac{1}{8}$ as much water in Victory Radiators, it is quickly heated, and stimulates circulation of the water, making radiators hotter and radiating more heat. A smaller furnace can be used to heat the lesser quantity of water. Write for the remainder of the advantages.

Montreal General Tool Co., Ltd.

12419 Notre Dame St. East - Montreal

Continued from Page 50

decided increase in the popularity of this type of kitchen range. This movement generally applies to all sizes, from the smaller electric stove for kitchenettes, to the larger complete ranges for family use.

LOWER RANGE IN QUOTATIONS ON SHEETS AND PLATES

Toronto.

Easier prices all through the list on sheets and plates are noticeable this week. The extent of the decline varies on the different grades, being around 25 cents lower on blue annealed; with a fifty cent drop in prices on black and English galvanized; to the general revision in quotations on the Premier and Apollo grades.

The wide differential between the prices quoted by various dealers is again very evident, the lower quotations being announced in some cases, while others maintain prices at the higher levels shown. The following table therefore is an average list of the figures appearing on the local markets, and in most cases for fairly large purchases.

BLUE ANNEALED—

10 gauge, base	4 50
12 gauge	4 55
14 gauge	4 60
16 gauge	4 65

BLACK—

18-20 gauge	4 80	5 30
22-24 gauge	4 85	5 35
26 gauge	4 90	5 40
28 gauge	5 00	5 50

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 36 in. wide.

GALVANIZED—

	Queen's Head	Fleur-de-lis.
10 gauge	9 50	8 75
26 gauge	9 25	8 50
24 gauge	8 65	8 10
22 gauge	8 30	7 65
18 and 20 gauge	7 60	7 50

Premier and Apollo.

10% oz.	7 00	8 00
U.S. 28, base	6 60	7 60

FURTHER REDUCTIONS SHOWN IN WASTE MATERIAL PRICES

Toronto.

A number of price reductions are again apparent in the waste material markets this week. Iron and steel scrap quotations have shown a downward trend, while quotations on copper and brass grades are similarly lowered. Prices on heavy lead and scrap zinc are also easier, and the lack of outlet for

boots and shoes and scrap rubber, has been reflected in further price reductions.

Following are the average of dealers' nominal buying prices for large quantities:

WASTE MATERIALS—

WASTE MATERIALS—		
No. 2 busheling	11 00
Heavy melting steel, gross ton	9 50	11 00
R. Rd. wrought iron, No. 1, gr. ton	10 25	11 25

Lumberman's rubber boots	1 25	1 75
Auto tires	0 50	1 00
Solid tires	0 75	1 00

LOWER QUOTATIONS ON GLOBE, ANGLE AND CHECK VALVES

Toronto.

Further revisions in discounts have now been announced on certain classes of compression work. Substantial reduction in quotations are given on standard globe, angle and check valves, while other price changes are also shown on roundaway stop and waste cocks, standard, and on J. M. T. gate valves.

VALVES—

Compression work, standard	37%
Fuller work, standard	30%
Bath cocks, compression	29 1/2%
Do., Fuller	25%

Basin Cocks—	
No. 1 and 1, Fuller pattern	30%
Quick opening No. 3633	37%

EASIER PRICES ON IRON AND STEEL

Toronto.

Lower ranges in the various local quotations are now recorded. This trend toward price reduction is a reflection of the recent changes in the primary steel markets, and is also attributed in some quarters to the habit of making the quotation to suit the prospective order. The bar iron base is now 25 cents lower in some instances, and similar conditions prevail in the current prices on hoop steel. Cast tool steel, medium, also shows a reduction of 1 1/2 cents per lb. The variation between the prices quoted by the different dealers is still noticeable, which has been the case since the unsettlement and depression in the steel industry became evident. Following are the revised quotations:

IRON AND STEEL—

Mild steel bars, base	3 25	3 50
Mild steel bands, 3-16 in. base	3 75	4 00
Bar iron, base	3 25	3 50
Angle iron, base	3 35	3 60
Horseshoe iron	4 10	
Tire steel	4 70	5 95
Spring steel	9 50	11 50
Crucible cast sheet steel	30 00	35 00
Mining drill steel	20 00	23 00
Cast tool steel, medium	18 50	
Cast tool steel, high grade	30 00	36 00
Sleigh shoe steel	4 10	4 50
Norway iron	15 00	
Toe caulk iron	5 40	6 40
Hoop steel	4 50	4 75

REVISE DISCOUNTS ON EAVES-TROUGH AND CONDUCTOR PIPE

Toronto.

Prices on eavestrough, ridge roll and valley, and also on conductor pipe have been lowered, through the addition of another 10 per cent. to the discount quotations. The price on conductor elbows remains unchanged at 55 per cent. off list.

The current movement of these products is still characterized as fair by local distributors, and a slight improvement in the total volume of sales is looked for in some quarters during the fall period. Following are the revised quotations:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth:

	Per 100 ft.
8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50
Less 60-10 per cent.	

PIPE (CONDUCTOR)—

Plain, round or corrugated.

BOILER TUBE BUSINESS REVIVING

Toronto.

With the boiler tube season now actually at hand, business in these products is reported to be picking up. Especially during the past week have sales been slightly more numerous, and distributors take this factor as an indication of the trend towards future seasonable activity. No revisions in quotations on boiler tubes:

BOILER TUBES—

	Seamless.	Lapweld.
1 inch	26 00	
1 1/4 inch	27 25	
1 1/2 inch	26 25	
1 3/4 inch	29 75	25 00
2 inch	29 00	22 00
2 1/4 inch	32 00	25 00
2 1/2 inch	40 00	27 00
3 inch	44 00	35 00
3 1/2 inch	60 00	40 00
4 inch	75 00	50 25

SOLDER: REVISIONS MAINTAINED

Toronto.

Prices on lead and zinc goods remain unchanged this week with the recent revisions in solder quotations being well maintained. No marked change has been recorded in market conditions, with a fair movement in these products reported for this season of the year. Following are current quotations:

LEAD AND ZINC GOODS—

Lead, pipe, list, per lb.	\$ 0 12 1/2
Lead, waste pipe, list, per lb.	0 18 1/2
Do., over 8 in., list, per lb.	0 14 1/2
Lead pipe is subject to a discount of 10%.

McDougall House Service Pumps

A New Canadian Line

McDougalls have again been the pionéers in developing a new line which will no doubt be much appreciated by the trade. Since Hydro power is being more widely used all over Ontario it was necessary that a complete pumping outfit be made in Canada as is shown by the above cut. We are in a position to supply pneumatic tanks and fittings so that you may order all the necessary equipment from one source to complete a pumping job that we guarantee will equal any similar article on the market.

Enquiries for prices and further particulars will be given prompt attention.

The R. McDougall Co., Limited
GALT, CANADA

Continued from Page 52

STEADY VOLUME OF SALES FOR SOIL PIPE AND FITTINGS**Toronto.**

A fairly steady volume of sales for soil pipe and fittings is generally reported and while the market situation is not yet normal, a much healthier tone is recorded than at this time last season. Prices are being well maintained, and little revision is looked for by local manufacturers and distributors of these products. Following are current quotations:

SOIL PIPE—

2 and 3 inch	25%
4 inch	30%
5 and 6 inch	30%
8 inch	net

FITTINGS—

2 to 6 inch fittings	40-10%
8 inch fittings	net

RADIATOR BUSINESS IS GOOD**Toronto.**

"Business is good" is the current report received from dealers in radiators and boilers. Construction activity has now reached that stage where the various buildings are practically ready for the installation of radiators, and coupled with this situation is the steady increase in the volume of homes and other structures being erected during the fall period. No change in price is evident, the revised discounts of a few weeks ago still being maintained. Following are current quotations:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot. 38 in. \$1; 32 in. \$1.10; 30 in. \$1.15; 26 in. \$1.20; 23 in. \$1.26; 22 in. \$1.30; 20 in. \$1.36; 18 in. \$1.40; 16 in. \$1.50; 14 in. \$1.55; 13 in. \$1.60.

Discounts on 2, 3, 4, and 5-column standard sizes, 53 per cent. for water and 54 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent. for water and 49 per cent. for steam.

Discounts on 1-column hospital size water 30 per cent.; steam 31 per cent.

Wall Radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 50 per cent.

BOILERS—

Water:	
Round	60% off list
Square	10% off list
Steam:	
Round	15% off list
Square	5% off list

FAIR VOLUME OF TRADE IN CORRUGATED SHEETS**Toronto.**

No marked change is reported on corrugated sheets, both prices and market conditions holding at previous levels. Current business is stated as just fair, but with the fall season and the recent easier price levels, an average volume of trade is generally looked for. Unchanged quotations follow:

	Per 100 sq. ft.
No. 28 gauge	\$ 7 55
No. 26 gauge	8 25
No. 24 gauge	11 50
No. 22 gauge	14 00
No. 20 gauge	15 75
No. 18 gauge	21 00
Less 7½%.	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

FAIR VOLUME OF SALES IN CLOSET OUTFITS**Toronto.**

A seasonable volume of sales for closet fixtures and outfits is now generally reported, with dealers quoting current business as fair. A slight improve-

ment was mainly anticipated, chiefly owing to recent price reductions combined with late summer and fall building activity. Quotations are being maintained as follows:

CLOSETS—

Closet, standard outfit oak	\$26 00
Do., with post hinge seat	26 75
Do., mahogany vitro or Pussyfoot with mahogany post hinge seat and cover	29 00
Do., vitreous china with oak or mahogany post hinge seat and cover	29 75
Do., white, vitro or Pussyfoot with mahogany post hinge seat and cover	29 75
Do., white, vitro or Pussyfoot with oak post hinge seat and cover	29 50
Do., enamelled iron tank with oak or mahogany post hinge seat and cover	29 50
Do., add for reversible trap bowl	1 25
Do., add for syphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl less spud	11 57
Do., reversible trap bowl less spud	12 75
Do., syphon jet-bowl less spud	19 00
Do., "Richlieu" bowl	10 50
Do., oak, oak-vitro or pussyfoot tank with fittings less seat	16 50
Do., white, vitro, pussyfoot, vitreous china or enamelled iron tank with fittings, flush elbow and supplies	18 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 40

CURRENT PIPE MOVEMENT CONSIDERED FAIR**Toronto.**

Considering current trade conditions and the present season of the year, the prevailing demand for standard pipe is stated as fair. The irregular movement in piping which has been somewhat apparent throughout the year, is still evident, with dealers being careful in ordering for sorting stocks, and immediate requirements only. Sales in the smaller sizes indicate prevailing activity in house building. List No. 52 follows:

PRICE LIST NO. 52.**STANDARD BUTTWELD PIPE S-C.**

Size—	Steel		Wrot. Iron.	
	Blk.	Galv.	Blk.	Galv.

QUOTATIONS ON RANGE BOILERS REMAIN UNCHANGED**Toronto.**

No further revision has yet appeared in quotations on range boilers, and the current nominal list is now being generally accepted as likely to hold for some time. This is, however, problematical, for it is noticed that the price of \$9.00

for the 30-gallon standard boiler is looked upon as the prevailing level in some quarters, and quotations lower than that are said to be in the nature of shading in order to induce quantity buying. On the other hand, the price of \$8.50 appeared recently, and the lower level of \$8.25 has been reported. The opinion has been expressed that further price cutting contains no benefit for distributors or manufacturers at the present production costs, and the following are the nominal quotations:

RANGE BOILERS—

	Standard	Ex-heavy
30 gallon	\$ 8 50	\$11 50
35 gallon	9 50	13 50
40 gallon	13 80	16 50
52 gallon	20 40	25 20
66 gallon	28 80	34 80
82 gallon	36 00	47 40
100 gallon	45 60	56 40
120 gallon	55 20	64 80
114 gallon	78 00	93 00

SLIGHT INCREASE NOTED IN FALL STOVE MOVEMENT**Toronto.**

An increase in the number of orders for furnaces is now reported, and while the movement is much later this year, the development of improved sales gives a more optimistic outlook in the trade generally. The arrival of cold evenings has brought about the realization of the needs in this direction, while fall bookings for stoves and furnaces have been encouraged through the recent revision in quotations, and the abolition of the diminishing discount scale.

ENAMELLED WARE QUOTATIONS ARE NOMINALLY UNCHANGED**Toronto.**

With current quotations on enamelled ware remaining nominally unchanged, a slight improvement in the volume of sales is reported in certain quarters. This condition is attributed by dealers as a reflection of the recent late summer building activity, a feature which is also expected to be prevalent during the fall trade period. Prices and discounts are therefore generally unchanged at the following levels:

ENAMELLED WARE—

Enamelled Iron Baths, 3" roll rim	
4 ft. 6 in. 5 ft.	\$ 51 40
Do., 5½ feet	57 10
All Steel Enamel Bath, 4, 4½ or 5 ft. net	16 25
Do., do., 5½ ft. net	17 50
Lavatories—	
17x10" Apron F139 or P40445	15 30
18x24" Apron F154, P3845 or P3847	23 60
Sinks, Roll Rim, 16x24 in.	18 10
Do., 18x30 in.	23 00
Do., 20x30 in.	24 70
18x21" Apron F169 or P4205	17 60
18x21" Roll Rim, F197, F199 or P4655-6	15 40
17x19" Roll Rim, F241 or P4345 ..	12 60
Sinks, Flat Rim—	
3 only 2 only 1 only	
16x24	\$7 60 \$7 70 \$7 80
18x30	8 50 8 60 8 70
20x30	9 70 9 80 9 90
All above list except lines marked net.	
Discount 20-10 p.c. off these prices.	

REDUCTION IN PRICES ON COPPER AND BRASS**Toronto—**

A fairly substantial reduction in the current prices on copper and brass goods is reported under contemplation by local dealers. The exact extent of the decline, or just what the new prices will be was not available at the time of going to press. It is noted, however, that other markets have recently shown a decrease of around 2 cents per pound on sheets, rods and tubing.

Continued from Page 54

INGOT MARKETS REMAIN DULL
Toronto.

The ingot markets generally lack interest, and the dullness previously noted is still evident in certain quarters. Prices on metals have generally been maintained this week, with little revision in either conditions or quotations to record.

COPPER.—Fluctuations in copper prices continue to be apparent on both British and American markets. While some domestic business is reported by U. S. producers at the lower levels, quotations on foreign orders remain nominally unchanged. On the local markets, sales have been few, and nothing of an outstanding nature has recently developed. Quotations also remain unchanged at 17c.

TIN.—Considerable weakness has been registered on the English tin markets, but the rise in exchange has offset this trend to some extent. It is noted that futures are again lower on the southern primary markets, and while some factors are of the opinion that the current depression in tin has about run its course, others again hold the view that until certain weak holders have been able to liquidate their stocks, there is little probability for an advance in prices. The local quotations continue to be around 35c.

LEAD.—The market tone is easier and the volume of business coming in is smaller, according to current reports from primary sources. On the other hand, the firm tone is still apparent in the London lead markets, and coupled with the recent gain in sterling exchange, this situation may serve to again firm up southern quotations. The local price on lead remains at \$6.75.

SPELTER.—Consumers are still buying sparingly and on a hand-to-mouth basis. The volume of sales has not been very large, and even inquiries have usually been only for small quantities. The price of \$7.00 remains unchanged locally.

ANTIMONY.—This market is dull and unchanged. Antimony prices are meeting with little favor, and the quotations generally remain unchanged. Local prices vary from 8 to 10c, as usual.

ALUMINUM.—The market is again quiet and unchanged at previous price levels. Automobile interests in the United States are reported to have purchased fairly large quantities of aluminum at a figure well below the average American price, but the market generally lacks interest. Local quotations on aluminum vary from 28 to 29 cents.

WINNIPEG

WINNIPEG, September 5.—One of the most noticeable of current price changes on plumbing and steam-fitting supplies, is the revised list on wrought iron piping. This change brings prices to a slightly higher level on some sizes. Revision in other quotations however, are in a downward direction, including lower prices on eavestrough, conductor pipe and elbows. There has been a slight reduction in corrugated sheet iron quotations, while prices on wrought iron washers are also reduced. Stove pipe wire will now cost less, while lower prices on coiled spring and plain galvanized wires are in effect.

Other primary sanitary materials such as pipe fittings, compression work, range boilers, enamelledware, closet fixtures, radiators, and similar products, maintain previous price levels. Business in the majority of these lines is reported much more brisk during the past two weeks, and a fair volume of fall business is generally anticipated throughout the trade.

WIRE QUOTATIONS REDUCED**Winnipeg.**

Prices are now lower on coiled spring wire, and also on plain galvanized wire. Following are the prevailing quotations:

COILED SPRING WIRE—

No. 9, \$5.65; No. 12, \$5.85.

PLAIN GALVANIZED—

No. 9, \$5.60; Winnipeg; Fort William, \$4.95. No. 12, \$5.80, Winnipeg; \$5.15, Fort William.

SLIGHT REDUCTION IN CORRUGATED.**Winnipeg.**

The price has dropped slightly on corrugated iron. Following are the new prices recorded this week:

CORRUGATED IRON—**Galvanized—**

28 ga. \$ 7 88

26 ga. 8 56

Painted—

28 ga. 6 53

26 ga. 7 43

REDUCED QUOTATIONS SHOWN ON WROUGHT IRON WASHERS.**Winnipeg.**

Reduced prices are recorded this week on wrought iron washers and are as follows:

WASHERS, Wrought Iron—

Case Lots Less

3-16 \$ 12 70 \$ 13 20

3-16 11 26 11 76

STOVE PIPE WIRE WILL NOW COST LESS**Winnipeg.**

Prices on stove pipe wire are included among the current market revisions. The new quotations are; No. 18, \$9.05 per cwt. No. 19, \$9.55.

Continued on Page 58

Stop! Look! Listen!

This is not a danger sign at a Railway Crossing, but a point in your business where it will pay to hesitate for a moment.

On Contract and Jobbing Work you can control your cost on heavy materials but how often does the labor cost work out to your satisfaction? The time used on the final clean-up is probably excessive. Possibly extra trips are necessary for a few Washers or on account of leaks.

Don't blame the men for extra trips and other troubles. Confine your purchases of Bath and Basin Supplies, Adjustable Traps, Rubber Goods, etc.—to an organization that specializes in the "Chicken Feed" of Sanitary and Heating installations. You will sure be Dollars ahead.

It will pay you to put in a reasonable stock now of N.P. Adjustable Traps and Supplies, Vent Tees, Threaded Collars, S.J. Nuts, Sink Bolts, Closet Screws, Flange Bolts, Hangers, Floor and Ceiling Plates, Bibb and Union Washers, Syphon Rings, Tank Balls, Boiler Repair Plugs, Tool and Fire Pot repairs, but why attempt a complete list. We have what you want, so just mail your list to-day.

SOLVING TORONTO'S WATER SUPPLY PROBLEM

Duplicate waterworks system with the intake off Scarborough is the solution of water supply problem, Works Commissioner Harris reiterated when asked about the recommendations of the Canadian Fire Underwriters' Association. The report recommends a third intake, but the commissioner was inclined to think this of itself would be of little value. On some of the recommendations, as published recently, Mr. Harris would not comment, on others he pointed out that these had been recommended, but the Council did not feel warranted in making the expenditure and had struck the items out of the estimates.

The commissioner is now working on a new estimate of the proposed new duplicate waterworks system, the construction of which he has been urging for some years. The original estimate of the cost, made before the war, was \$6,000,000. While this cost would have been doubled in 1920, there has since been a slight falling off in the price of material and wages of labor.

Asked concerning a proposal that a pipe line be built to bring water from Georgian Bay, a distance of about seventy miles, he expressed his entire disapproval of the scheme. It has been pointed out in its favor that a supply of pure water could be secured in this way at less cost than a duplicate waterworks system. Los Angeles, it is argued, secures its water supply from a distance of 294 miles by gravitation, and the original cost of the pipe line there was \$22,000,000.

The commissioner stated that it would be foolish to go 70 miles to get water when it was available right at the front door of the city. The water in Georgian Bay would have to be filtered as well as that from Lake Ontario, and the filtration process would nullify the pressure and the water would have to be pumped here in any event. Another reason against the idea was that there is a division in the watershed between Toronto and Georgian Bay and the water would have to be forced over the elevation.

Mr. Harris was equally opposed to the Lake Simcoe source, stating that the water there was impure and warm in the summer and that the quantity required would likely affect the levels, and thus bring the city into conflict with the Dominion Government.

Heating the Home

(Continued from Page 31)

beyond any question that 55 per cent are defective in one way or another, and to remedy these faults would mean not only greater comfort and satisfaction, but the saving of very large amounts of money in economy. It's the worst enemy the heating contractor has to contend

with. A few of the defects are; lack of height, too small for the size of the heater attached thereto, cracks in the joints, acute offsets and poorly fitted smoke-pipe connections.

Urges Ample Heater Capacity.

"Next in consideration is the heating apparatus and its installation. I doubt if 10 per cent of the buyers of heating apparatus really know and understand what they are getting. The heater is only a generator of heat and while it is essential to install one of ample capacity and proper design, it plays only a small part so far as the comfort obtained therefrom is concerned.

"It is seldom that two installations should be made identically the same. If the building is severely exposed, very careful consideration should be given regarding the locating of the registers, cold air returns, or radiators. If only one or two sides are much exposed, another condition exists and so on, job after job, until we find the home surrounded with every advantage, so far as protection from severe winter blasts is concerned.

"In such case often, the heating apparatus is designed ideally but, being surrounded by trees and taller buildings, the flue will not develop sufficient draft to allow the apparatus to function properly. There are hundreds of such in existence to-day and the owners are wondering what is wrong.

Proper Location of Registers.

"In the installation of heating apparatus, little attention is given to the location of radiators, stacks or registers. A matter of convenience enters largely into the same. Often the housewife will insist upon having the heating unit placed in a most impractical location in order to suit the arrangement of the furniture, and frequently these units are located by the heating contractors and designers for convenience and economy in installation, rather than in locations more fitting with the room to be heated. There are as many steam and hot water radiators improperly located as warm and cold air registers.

"One example is the locating of a steam or hot water radiator or cold air return alongside of a stairway in the hall, in which case the cold air flowing down the stairway must make a complete turn to get to the radiator or return. The proper location, without a doubt, is directly opposite the foot of the stairway, and in such case the air will flow to the radiator or return air duct without resistance. This arrangement will cause better and more rapid circulation.

"I have now come to the essential features so far as the installation of a warm air heating system is concerned. These features I want to tell the world about. These features are the ones that the heating contractor and installer need checking up on, and one of these days this information is going to be spread broadcast, even if it is necessary to take up a connection to do it.

Insufficient Cold Air Supply.

"Eighty-five per cent of the warm air heating installations lack from 20 per cent to 75 per cent of as much cold air supply as the system requires to fill all of the warm air pipes.

"This lack of air supply is often caused through ignorance on the part of the installer or a motive on his part to reduce costs. Tests have proved, however, that the air supply on the average installation should be at least 20 per cent in excess of the warm air volume taken off in order to overcome friction in the cold air ducts. There are thousands of installations that could be made to give excellent results if the ducts were enlarged or more ducts added.

Leaks in Cold Air Return Pipes and Ducts.

"The warm air heating conditions in the home to-day are that 65 per cent of the cold air return pipes and ducts leak very badly, causing a great strain upon the heaters. Through this excessive leakage, proper circulation can not be obtained from the rooms above.

"Consequently, with 85 per cent of the warm air installations lacking sufficient air supply, and 65 per cent leaking badly is it any wonder that the full benefit of the heating apparatus is not obtained? Is it any wonder that basements become excessively warm? Is it any wonder that thousands of owners are dissatisfied and thousands of tons of coal are wasted? Can you blame an idealist for wanting to awaken the public to a realization of these facts?

Stop the Dust and Dirt.

"Another big factor that the furnace installer needs checking up on is the dust and dirt. Any heating system is bound to cause some dust from the dust being carried through the air, caused by disturbances from one cause or another while the air in the rooms is being circulated, but something must be done to stop the dust and dirt and smoke from the basement from being drawn into the rooms. Insist that the openings around stacks be stopped off, which will overcome one of the greatest complaints against warm air heating.

Educate the Public.

"Nearly every furnace manufacturer's catalogue contains information pertaining to furnace installation, but nevertheless, this information is not sufficient, for in many cases the public is not given the opportunity to read what manufacturers have to tell and further, in many cases, the public does not realize what the essential features are for satisfactory heating. Therefore, some means must and should be devised to bring these features to public attention. Says Warm Air Heating System Is Best.

"After thirty years of supervising and installing almost every method of heating, I am satisfied that warm air is the best method of heating the home, and if I were building a row of homes warm air would be installed in every one of them in preference to any other method."

PRESTO

Automatic ---- Saves Gas
No Special Motor Required
No Cumbersome Tank Needed

Can Be Used With Any Gas System

This is a remarkably efficient heater for profitable installation; a product of much more than passing interest to the hardwareman and plumber.

It is automatic and requires no match, no special motor, nor a cumbersome tank. As shown in the illustration, it makes a neat, compact installation, economical of space and ready for instant service at any time.

It will please your clients and build business and good-will. Write now, while you think of it, for full particulars.

The Presto Manufacturing Company

340 Amherst Street

Montreal

The Modern

There is complete strength in the electric weld. It constitutes a complete union of the metal, like a blacksmith's weld, but stronger. It is the modern scientific method and has been proven and tested over and over again until now it is used for such responsible work as steel bridges, ship building, locomotive building, mending broken pump bodies subjected to high pressures, and was even used to weld the broken crank shaft of the great steamer "Imperator" developing enormous horsepower. The Electric Weld is safe and sure.

The Canadian John

Grand Trunk Railway and Hill

Range Boiler

We realize that Plumbers should not be called upon to lose their time when replacing a defective range boiler, therefore we have arranged to pay the sum of \$2.00 in case an Electric Weld Range Boiler should ever have to be replaced, as well as provide a new boiler.

Installations of Electric Weld Range Boilers are advertisements for you. Constant good service and reliability cause you to be remembered favorably by your client and first in mind for his contemplated work. Electric Weld Range Boilers are modern boilers, good for modern business.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Rivets Mean Strength

In a paper read by Harry Brearley, Esq., before the British Iron and Steel Institute, May 5 and 6: it is stated,—

"The idea that a Weld could ever be perfect is quite illusory."

Insurance companies will not insure tanks or boilers under high pressure unless riveted.

Safety First

Specify Riveted Range Boilers.

**Saves
Tearing
Up the
House
and
Lawns**

Desolvo is the modern way. It gains goodwill for you by clearing clogged or frozen pipes easily, quickly, in a common-sense way. The old method of tearing up floors, lawns, shrubbery and flowerbeds until the point of trouble was reached, could not help but leave a feeling of resentment in the customers who were so served.

It saves you money and time on your job to serve customers quickly and agreeably by using Desolvo.

Choose the Right Tool

You can't expect a cheap, inefficient wrench to hold and turn rusted pipe or fittings. It's bound to slip or break.

Williams' Stillson Wrench is dependable; it is made for heavy duty. Drop-forged from special steel, carefully hardened and tempered, its sturdy strength is proof against the knocks and strains of hard service. The tough teeth retain their sharpness; they "bite" instantly, yet release readily.

For grip, power and endurance, choose Williams' Stillson. Wood and Steel Handle patterns—eight sizes, 6 to 48 inches.

Gives You Reliable Information

In six years the *Audit Bureau of Circulations* has solved the perplexing problem of circulation statements. By a systematic analysis of distribution and methods, this organization is able to supply just the data an advertiser needs. The darkness is dispelled and the bright light of verified facts takes its place. Space buyers no longer find it necessary to grope in the dark.

There are no dark spots in Hardware and Metal's circulation. Our records are audited by the Audit Bureau of Circulations.

All MacLean Publishing Co's papers (sixteen) are members of the Audit Bureau of Circulations.

Practically all good buyers of Plumbing and Heating supplies in Canada are readers of Sanitary Engineer, Plumber and Steamfitter of Canada.

The Final Achievement

PERFECTO

OIL REGULATED

FLUSH VALVES

SECTIONAL VIEW

A FLUSH VALVE is a piece of machinery—a finely adjusted piece of machinery at that. Yet in the ordinary water-regulated flush valve, the working parts are operated **by water**, and are constantly immersed in water. Imagine the effect this would have on any other delicate mechanism. You know that all machinery is kept operating in a **bath of oil** wherever possible, and that if the parts could be **entirely** surrounded by oil the machinery would be practically everlasting.

That is just what we have done with the PerfectO Oil-Regulated Flush Valve—kept its vital working parts completely and constantly immersed in oil. The action of the valve is operated by oil. Sand and other impurities cannot clog the by-pass. The valve works perfectly with the very minimum of friction. The flow of water can be easily and quickly regulated. Corrosion, grit and other troubles are absolutely impossible with a PerfectO Oil-Regulated Flush Valve. It is the final achievement in the manufacture of flushing valves—a high-grade fixture in every respect and one that will give a lifetime of service.

Our illustrated catalogue shows many popular types of PerfectO Oil-Regulated Flush Valves for various installations. Write now for your copy.

Plain Talk to the Canadian Plumbing Trade

The Creation of Knockers and Boosters

IN the beginning when the Creator had made all the good creatures in the world, the Spirit of Evil brooded mightily and he introduced into the minds and hearts of insects, reptiles, beasts and men the seeds of jealousy and ill-will. When this evil work had become manifest in many deeds of hate by living creatures against each other, the Devil gathered all the worst thoughts of all these creatures, caused them to take man's shape, clothed him with suspicion, shod him with envy, gave him a yellow streak for a backbone, and christened him

"A Knocker"

This product was so fearful to contemplate that the All-Wise Creator decided to make something to counteract it; so he took a sunbeam, the heart of a child, the sense of beauty in flowers, fields and the Great Outdoors, formed them into the shape of an upright man, clothed him in civic pride, girded him with equality and justice, armed him with mercy, righteousness and good will, and named him

"A Booster"

Ever since these two were created, man has had the privilege of choosing his own associates. — (Michigan Tradesman).

Capacities 1,000 to 10,000 sq. ft.

SPENCER
MAGAZINE
FEED
BOILERS

BURN
LOW
PRICED
FUEL

MADE IN CANADA

HOUSE SIZE

Some of the Reasons—

- 1st.—Every Owner of a Spencer Self-Feeding Boiler saves from THREE to FIVE Dollars on every ton of coal required to heat his premises, and is DELIGHTED with the constant service he receives from the Boiler with so little attention.
- 2nd.—This small-sized No. 1 buckwheat coal which the Spencer burns successfully, is always available. The only other known types of boilers that will burn this extremely low priced fuel are the mechanically-equipped boilers, and many factories are now equipping their boilers to burn coal in a powdered condition. Of course the Spencer will successfully burn fuel in the larger sizes.
- 3rd.—The magazine of the Spencer holds a 24-hour supply of fuel. The fuel feeds at a tempered condition in thin fires over the arched grates in exact proportion as the fuel is consumed, thus eliminating waste and allowing perfect control of firing conditions.
- 4th.—Spencer Boilers are known to maintain temperatures for a period of 48 hours in the coldest weather without attention.

THOUSANDS of Spencer Boilers are now in operation in various parts of Canada and the United States. We can refer you to almost every known type of

building where Spencers are successfully operating. We Manufacture in Canada the Spencer Cast Iron Sectional type of Boilers in ten different sizes ranging in capacity from 600 square feet to 3,600 square feet, and the Spencer for steam is of fire and water-tube steel construction, ranging in capacity from 1,000 to 10,000 square feet, there being twenty sizes. Let us co-operate with you on the sales in your district. There is a SPENCER for every heating requirement.

Extensive Revision in Current Prices

Plumbing and Heating Lines Undergo Considerable Price Revisions—Need for Close Study of Markets Emphasized—Building Construction Activity Increased by Lower Costs—Lower Replacement Values Affecting Prices of Manufactured Products

THE vital importance to all dealers in plumbing and steam fitting supplies of following very closely the various market reports, is once again accentuated by the numerous revisions in prices and discounts covering an extensive variety of lines included in the current quotations given on these supplies.

There have undoubtedly occurred more changes during recent months, than for a considerable period; and the present revisions constitute one of the most significant list of price readjustments among a number of such important occurrences. The new prices now given on materials which are of interest to the plumbing and steam-fitting trades—and as listed individually on the market pages of this issue of *Sanitary Engineer*—form a marked step in market history.

Not only is there the primary importance of prevailing price changes to consider, but the direct connection that exists between such downward revisions and the current volume of business, cannot be over-estimated. The matter of price is of paramount interest at all times, since it closely affects all phases of the trade, from the manufacturer to the consumer. Therefore, the revised quotations on these commodities have recently assumed an exceptional degree of importance, chiefly owing to the different changes which have developed during the readjustment period.

Wrought Iron Products

The marked downward revision in wrought iron products attracts special attention. A new pipe list, No. 53, has now been issued, bringing quotations on the smaller sizes approximately 7½ per cent lower, while at the same time giving a 10 per cent reduction on the larger sizes of piping. Wrought iron nipples and couplings are similarly reduced in conjunction, while the discount on wrought iron washers is changed in a like manner. Another substantial decline in the list on corrugated sheets is recorded, this change bringing these quotations on a more proportionate scale with the levels prevailing on flat galvanized. There is also a new list of quotations on range boilers, showing slight increases in the 30 and 35-gallon sizes, while giving easier prices on larger models. According to jobbing circles, it is hoped that this revision will minimize the unsettlement that has recently been apparent in these markets.

New lower prices are given on Canada plates, also on charcoal tin and terne plates. Quotations on brass and copper sheets, tubing and rods, record an average decrease of 2 cents per lb. The wire nail base price has again been reduced; while lower quotations are noted on iron rivets and burrs; stove bolts; nail, sledge, striking and machinist hammers; standard compression work; compression bath cocks; standard flat way stop and waste cocks; quick opening basin cocks; malleable fittings; cement, in bags; scrap brass; Victor

hack saw blades, and Trimo wrenches. Revised quotations are also given on closet combinations, bowls and tanks.

While prices may not be changed, information concerning other markets discloses varying stages of readjustment. The moderate expansion in steel consumption has created a better outlook for the future in this industry. Some American mills have increased prices on black and galvanized sheets; while a firm undertone has developed in cotton wastes, chiefly owing to conditions in the raw material markets, and recent gains in prices on manufactured cotton goods. Lead has also registered a gain in strength; but although the general depression is still evident in ingot, reports indicate that the belief is spreading these metals have now reached the bottom of trade stagnation. The size of the prospective order evidently governs the prevailing prices on boiler tubes. The scrap material markets generally remain in a sluggish condition.

Cement sales have improved, with the lower prices undoubtedly encouraging Fall construction work. Conductor pipe and eavestrough shows a satisfactory improvement; while business in enamelled ware is reported good. An improved volume of trade has been noted during the month of September in stoves and ranges; the furnace business being boosted by many houses being erected during the summer, for which heating apparatus is now required.

During recent months, the trend of prices has reflected, in a more or less accurate manner, the extent of market activity in these products. The steady, although necessarily slow return to business activity, is being developed principally among those industries which have already experienced more or less drastic reductions in prices; while in lines that are not yet fully liquidated, readjustment is still necessary.

Building Activity Increased

This condition has been illustrated in many seasonable lines; materials chiefly utilized in construction offer one of the outstanding examples in this direction. The comparatively low ratio of new buildings being erected during the early summer, was such as to cause surprise in many quarters, and in some cases high prices were cited as one of the factors at present retarding the natural progress of the building industry. Many of these supplies have since experienced price reductions of a fairly substantial nature—which are supplemented by the list of changes quoted above—and as a result not only has the volume of building been increased, but the activity in such products has registered a corresponding improvement.

With few exceptions, the development of lower price levels, has been followed with a brisker movement in the different products and an improved volume of sales. This applies chiefly to lines where it is generally felt that the price declines

(Continued on page 14)

Tackling Apprenticeship Problems

Large Gathering of Plumbers Decides Apprentices Must Be Interested When Young and Then Trained in Thoroughly Efficient Manner—Demand for Skilled Workers Exceeds the Supply—Good Opportunities for Skilled Men

APPRENTICESHIP is one of the problems facing plumbers' organizations in almost all parts of America and anything in the way of a solution will be read with interest. Certain methods of dealing with this subject were recently outlined at a large gathering of plumbers in Ohio. These methods are described herewith.

The demand for skilled workers exceeds the supply. The way to secure plumbers is to train them. The only way to train them is to catch them young and give them what they need and what the plumbing trade requires of them.

The new form of apprenticeship includes academic training and usually covers a narrow range of practical work. It differs from the old system in that it does require a long period of apprenticeship.

"Schools alone almost always fail to turn out skilled and practical workmen. Masters in the plumbing trade cannot teach the theory of their work nearly so well as the school instructors. Both theory and practice in plumbing are best learned from instructors when the two are given together.

"If the plumbing trade fails to attract apprentices, it fails to hold its place in our economic system. The apprentice system for plumbers today is a failure.

"Probably the reason it is impossible to get recruits for apprenticeship in the trade today is because it is impossible, as at one time, to drag a boy into the game simply because he knew no better and his father did not know what to make of him and thought learning a trade, any old trade suited the old man, that would keep the boy out of mischief.

Plumbing Education Neglected

"Our modern educational program is to give a child the best foundation for his life work in the brief span allotted under the law for schooling purposes. The plastic youth in gaining this foundation is given mathematics, mechanical drawing, a touch of design, an inkling of mechanics, a taste of carpentry, and the fundamentals of a thousand and one trades and professions that make up the fabrics of economic and social democracy. The plumbing industry fails to get its quota from these elementary schools because the trade is not presented to the youth in the proper manner.

"The first thing master plumbers will have to do is to sell the trade to the school boy. Education has become so universal that unless the trade is sold to the youth there will be no prospects. Can you imagine a school boy deciding to

learn plumbing when the professions of medicine, law, engineering, commercial management, and other attractive and more remunerative chances are offered? Can you imagine the plumbing trade competing with the Government which blazons on billboards from coast to coast that "You learn while you earn and travel, if you join the navy?" No, the master plumber must devise ways and means of presenting the most attractive phases of the plumbing business to the youth. The trade must be advertised and sold. These are the changes that must be made before securing material for a crop of modern plumbers.

"The competition of other trades must be overcome and even after this, there is another stumbling block which must be removed, surmounted, or destroyed before an adequate labor supply can be assured. Recruits for apprentices in the plumbing trade today are limited by the unions. Organized labor in its endeavor to control the trades labor market has operated on the theory that the fewer the journeymen, the steadier the employment, the greater the demand for men, and the less difficulty in securing high wage scales. Not satisfied to let the law of supply and demand control the plumbing market, the unions create artificial and unnatural conditions in spite of the fact that by so doing they defeat their own aims and purposes.

"As a means of solving the apprentice problem, the master plumbers must conduct a campaign of education among the journeymen plumbers. All possible pressure must be brought to bear to show these men that additions to the union ranks are not sufficient to take care of increasing building activities. Working with the journeymen and through public

schools the third and final phase of apprentice training is approached, and in this connection an outline of what has already been done will be briefly sketched.

Schools Aided Financially

"The Federal Vocational Training Act provides that all schools and classes reimbursed under it shall be carried out under the supervision and control of state boards for vocational training. For 1917 and 1918, \$2,307,460.44 was available, of which 75 per cent was expended by the various states. In 1920, \$3,054,919.01 was allotted. In 1919 and 1920 Ohio received \$152,428.90 from the federal funds. A like amount was available last year from Ohio funds and was turned over to the various state schools and universities supplementing the federal money.

In 1919 and 1920, twenty-one plumbing schools in the United States received federal aid, eleven were evening, four were part time and six were all day.

The government in granting this wonderful opportunity has provided for teacher training and last year 325 men and 31 women accepted federal aid in preparing themselves to teach.

"Ohio employs a full time trade and industrial educational director. The plans for the coming year contemplate spreading industrial education over a large area.

"The old and present apprenticeship system is obsolete, its essence remains, but the system does not meet the demand for proper industrial education. Industrial schools do not furnish everything in the way of vocational training but the two systems, vocational education and apprenticeship should do so, so that the necessary skilled mechanics can be secured for the plumbing trade."

UNIONISM vs MANAGEMENT

One of the wisest proposals which has yet come from the Typographical Union has just been made—the organization of a Printing Company composed of members of the Typographical Union now on strike. All other Unionists now on strike or dissatisfied with the attitude of their employers might try the same plan.

In this way the printers will be able to test their theory that the public will pay from thirty-six to forty per cent more for their printing. This is the real basis of the present strike.

The MacLean Company, and the large number of men and women who joined this organization after the Union members refused to work on the war scales, believe they understand the business situation better than the professional leaders of the Union. They believe that if an attempt had been made to increase the cost of printing from thirty-five to forty per cent., the public would go on strike and hundreds of printers would be thrown out of employment.

In manufacturing it is the selling not the producing end that has the hardest job.

Developing the Water System Field

No Longer are Progressive Plumbing and Heating Engineers
Classed as "Workmen"—Plumbers Becoming Real Merchants—
How Running Water Can Be of Direct Service to the Farmer—
Securing Live List of Water System Prospects

The plumber whose showroom is depicted herewith has many good prospects for water supply systems in the rural districts nearby. He believes the best way to get the farmer interested is to develop in him a desire for the convenience of the many fixtures shown in this display and then bring him to the showroom and let him see the pump in working order, supplying the necessary water to operate the various fixtures. In this arrangement are seen laundry tubs, closets, bathtubs, basins and many of the minor fixtures which complete an attractive and desirable bathroom equipment.

"PLUMBERS should be real merchants in their trade, rather than considered as mere workmen," said H. I. Fields of the Duro Pump Manufacturing Co., in an address given at a recent gathering of dealers in sanitary fixtures, plumbing supplies and similar branches of industry.

The extensive field for future water system installation in rural districts, was emphasized by Mr. Fields, who also pointed out the increasing popularity and rapid spread of farm hydro-power lines, a sequence which has aroused the keen desire of large numbers of agricultural workers for the convenient comforts of the city home. Antiquated methods of getting water, methods which really belonged to ancient days, were compared by means of illustrated slides with the up-to-date pumping systems now being installed in many farms and villages. "In locating upon the land, the farmer has always been faced with the problem of adequate water supply, but there has also been apparent the diffi-

culties of obtaining same, and this matter is of primary importance to the busy farmer no matter what the scale of his operations."

"There is no longer any need for the farmer to spend his time and energy drawing water at the well," said Mr. Fields. The modern method supplies water for the greenhouse man, the conservatory and landscape gardener, for the dairy farmer, or the numerous needs of the barn. "There are special occasions where hard water conditions locally offer big openings for deep well pumping outfits, and many industrial and commercial applications have used this individual system to advantage."

Field For Rural Plumbers

The big field for rural plumbers and similar dealers in small country towns lies in rural schools, country estates, institution buildings, as well as the more frequent farmhouse.

Business opportunities were not alone confined to the sale of the original pump-

ing outfit, as the speaker referred to the various ways and means whereby water, now made easily accessible for the farmer, can be of direct service. Baths and toilets, wash basins and sinks, with many pipe lines and fittings, provide innumerable openings for the progressive dealer in sanitary and plumbing installation.

According to Mr. Fields, the manufacturers are now vitally interested in helping the dealer to create more business, and to this end are willing to offer ideas and suggestions as to how the retailer can take full advantage of the increasing openings in this direction.

Advance strides have been made in the direction of progress by certain phases of the plumbing industry, when the old-time plumber—considered merely a workman—was compared with the present dealer in sanitary fixtures, with attractive stores and business-like displays.

Various styles of window sales-helps were described by Mr. Fields. Miniature

farm houses, with an open side showing the interior water fittings, which are connected up with a demonstrator pump offers a unique attraction. The principle of running water in the window display is one of the main features, and a similar adaptation showing a barn with cattle and horse stalls with drinking troughs and other similar conveniences, conveys to the onlooker the idea of perfection in advanced farming industry in its many branches.

Another window picture of a modern kitchen with a washing machine in action, and running water in the sink, is a sure attention-arrester, although the idea is not entirely new. And the same chance for selling the idea, is offered through the display of a modern bathroom, with its many comforts and advantages over the usual farm outhouse. Signs or cards drawing direct attention to these many features, complete the "silent" salesman.

Securing Prospect List

The story was told of one progressive rural dealer who offered to freely give away one pump on a certain date, to one of the many registering their names and addresses with him before the set period was completed. The only condition was that all those who registered their names must have a need for the pump, should he or she be the lucky winner. Thus it was easy to see that the list secured were practically all prospects for water system installations, and the resultant sales and profits many times repaid the cost of the one pump given away.

Advertising Letters Help

Linking up local advertising with a personal letter campaign, were also salesmanship methods advocated by Mr. Fields. Useful and practical pointers in display cards or advertising were the many devices and inventions aimed to assist the farmer on the land, while this phase is compared with the minority of those possessing advanced ideas of lessening the monotonous drudgery of "chores", and easing the housewife's work on the farm.

The different processes of pump manufacture, and the various comparative merits of both the tank system and the tankless type installations, were other factors described by the speaker.

Link Up With Sewage Disposal

That the installation of a water system in any country building should be linked up with a sewage disposal, was strongly advocated by Major Anthes, of the Anthes Foundry Co.

"The plumbing industry has both these factors to deal with," declared Major Anthes, "and while the rudimentary comforts of civilization are brought to the farm through the application of scientifically controlled running water, yet adequate sanitation is also very essential."

The subject of sewage disposal is now considered of importance in educational circles, and many inquiries as to problems and difficulties arising in this con-

nection, have been received by the Ontario Agricultural College. Major Anthes pointed out that the buyer must be educated to addressing such inquiries to the trade, for there were many opportunities for improved facilities and future business in these situations.

Major Anthes further advanced the suggestion that individual water installation coupled with the sewage disposal bed, will likely become very popular in districts and localities where trunk lines are too expensive for small towns, owing to the rocky nature of the surrounding land. The conveniences of the properly adjusted septic tank, and the educational efforts being carried on by the manufacturers in order to interest the farmers as a class in this vital problem, were among other matters referred to.

The meeting was held in the general offices of the Empire Brass Manufacturing Co., at Toronto, and presided over by Manager O. L. Robb, who addressed a cordial welcome to the dealers attending.

EXTENSIVE REVISION OF CURRENT PRICES

(Continued from page 11)

have attained the present limit in recessions, and a temporary basis, perhaps followed by slight advances, are next in line. The steel industry supplies a direct illustration of this occurrence, for as prices on iron and steel continually sagged during the summer months, the percentage of production showed a corresponding decline. Price cutting between the various producers to a point where little or no profit for the mills existed in prevailing prices, was a recent feature. Quotations reached a level where further lowering entailed direct sacrifices on the part of producers under existing trade conditions, and it is significant that in conjunction with lower price levels, came a gradual and moderate broadening in the demand for steel.

Lower Replacement Values Affect Prices

It is pointed out by some manufacturers that price reductions recently occurring, have been attained by considering lower replacement values and in the sacrifice of profit percentages. While slow to adopt this policy, yet the total turnover has since registered a more satisfactory volume, because of the stimulating effect which the new price levels had on sales generally; especially in lines where stocks of goods produced when cost ratios were at the peak, have been liquidated.

The further readjustment of prices is, in many cases, retarded by high transportation charges, fuel costs, and in a few instances, wage levels. The maintenance or higher wage schedules are the primary factors behind both the railroad and fuel industries, with their corresponding reflection in production costs.

Reducing overhead expenses, while at the same time increasing individual and collective efficiency, are methods being utilized in production circles to effect

lower quotations. These elements, coupled with the moderate and gradual acceptance of lower wages by vital industries, foster a contributory decline in manufacturing cost levels, thus reducing replacement values and assisting the return of normal activity.

What News papers Say

Excerpts from the newspapers showing their trend of thought concerning sanitary engineering interests.

Excluding Canadian Plumbing Goods

Hamilton, Ont.—Witton & Walsh, architects, employed by the board of education in connection with the construction and installation program planned for the West avenue school, have issued the following statement, apropos of statement published in a local paper alleged to have been made by a local plumber. The critic of the school board is stated to have declared that the specifications shut out Canadian-made products, and that United States goods were to be used instead of Canadian goods, and at much increased cost.

Here is Mr. Witton's statement:

"Canadian-made plumbing fixtures are mainly enameled iron. Only small pieces are made and for these the patterns are few.

"For the West avenue school there are specified 29 water closets, 12 urinals, 2 sinks, 1 stop sink, 2 drinking fountains and 2 lavatories.

"For the first forty-one fixtures even the manufacturer of enameled iron would use vitreous or porcelain ware in his own home; of these 29 are Canadian make and 12 are not made in this country. The two sinks are enameled iron, and the stop sink, drinking fountains and lavatories, a total of five fixtures, are not enameled iron as the prices of this ware have been so advanced that they can be obtained in vitreous or porcelain at about the same cost. As to comparative merits it need only be said that when the latter cost two or three times the former it was used in the best work.

"The plumbing, heating and ventilation as installed in the schools in this city have the merits of being about the cheapest in first cost, the most efficient in service, and least expensive in maintenance of any city in the province."

"Regarding exclusion of goods other than those specified the following is a clause in the specifications: 'Where any particular brand or manufactured article is specified it is to be considered as standard; another brand or make equally as good in the opinion of the architects will be accepted.'

"The heating boilers specified are Canadian make; burn the cheapest kind of coal; create absolutely no smoke nuisance; are water tube type, permitting the raising of steam rapidly; are low in height, permitting of saving in depth of basements; are magazine feed and thus more readily fired; do not require bricking in, and if, in themselves higher in first cost than standard tubular boilers, are not so expensive when the necessary brick setting of the latter type is added to the cost. The saving in fuel alone will pay this first cost in two years' operation.

"No water tube boiler can be purchased for the price of a fire tube, but a water tube boiler is well worth the difference in cost.

"When costly devices, requiring power to operate, are added to standard boilers to permit them to burn more expensive coal without smoke, to say nothing of advantages gained in the cost of the building by shallower basements or other factors enumerated it may be seen where the true economy lies."—Hamilton Spectator.

Pattern For Spiral Chute

By O. W. KOTHE, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

A DRAWING for a special chute has been asked for. Since it is desired to have one and one-half revolutions in 75 inches we will work from one half plan. First draw the half plan of core 8 inches, the width of bottom set off on the same line, any width desired, as shown in plan 1 to 1 ft.—in this case I have used 18 inches to save space.

Using F as center and F, 1 as radius strike outer circle. Next divide into any number of equal spaces, in this case, 12. Draw solid lines from each point toward F until they touch inner circle as shown.

Next divide these spaces into triangles by drawing lines from 1-ft., 2, 2 ft. 3, etc.

for future use. This completes drawing for the plan.

The next step is to obtain the elevation. On any line parallel to 1 13 of plan draw 1 inch G of elevation equal in length to the extreme diameter of chute, and erect lines G, A ft., 1 inch, 13 inch also elevation lines of core, as we are working from one-half plan we must have one-half elevation.

Since we are to make one and one-quarter revolutions in 75 inches, one-half revolution equals 30 inches or 75 inches divided by 5 quarters equals 14 inches to one-quarter revolution or 2 quarters, times 15 inches equals 30 inches equals 30 inches drop one-half revolution.

Since we have divided the plan into 12 spaces it is necessary to divide elevation into 12 spaces as shown.

To obtain outline chute in elevation place Tee square at right angles to 1 13 of plan and cut lines of corresponding number in both inner and outer circle, a line traced from point to point will be outline of chute.

The next step is to obtain pattern for core. In line F, 1° place stretchout using 1 ft., 13 ft., of plan. The height will be one-half revolution. A line drawn A to 1° will be line on which to rivet chute.

As it is desired to have an open top chute the next step is to obtain pattern

PLUMBING AS A SANITARY MEASURE

THE STATEMENT credited to the Mayor of Ottawa at the recent convention of the Sanitary Inspectors' Association of Canada, to the effect that sanitary inspectors are more important than doctors, will doubtless arouse widespread comment. Whether or not such is really the case is open to much discussion. It is a recognized fact that prevention is better than cure and the sanitary inspector has wide powers in preventing unsanitary conditions. On the other hand there may be means of contracting disease which are beyond the control of the sanitary inspector. At any rate once disease of a contagious nature is contracted the doctor becomes a most important factor in preventing an epidemic by effecting a rapid cure of the isolated cases.

One of the most important branches of the sanitary or plumbing inspector's work is the inspection of plumbing installations, and therefore the plumber becomes an important factor in the preservation of healthy conditions throughout the community. The difficulty has always been that his importance in this regard has been underestimated. It is therefore encouraging to note that some progress has recently been made toward bringing the trade to a plane on which its operators will be recognized as important elements in the preservation of sanitary conditions. One of these indications of progress was the favorable attitude of the convention toward allowing plumbing inspectors to join the Sanitary Inspectors' Association of Canada. It was the belief that such an amalgamation would be of mutual advantage to both organizations. Along with the fact that sanitary appropriations are being greatly increased in Ontario and other provinces, these developments should result in much good to the plumbing industry.

MORE EFFICIENCY NEEDED

CREDIT reports from the Canadian Credit Exchange indicate that not more than 3 per cent. of the operators engaged in the plumbing and heating industry in Canada, pay their accounts promptly. This is very significant when it is considered that this large percentage will necessarily include a very large number of old established firms, many of which will have been in business in Canada for fifty years or more. It indicates a negligent attitude toward the recognized principles of business efficiency, a negligence which has been passed on to the new operator entering the field from his more experienced predecessors, and which has secured a firm hold on the great majority of operators.

The end of the road for many firms which follow such negligent methods is business failure. If they are fortunate enough to escape this tragic end they will most certainly be prohibited from securing as large profits as they would have experienced had they adopted efficient business methods.

Prevailing conditions call for the application of the utmost efficiency in business. The inefficient operator who neglects his buying, selling and general conduct of his business will not last long in face of to-day's competition for the reduced volume of trade available. Plumbing operators to-day should study book-keeping methods and plans for promptly collecting outstanding accounts and put these plans into effect. Many of such plans have been outlined in past issues of *Sanitary Engineer* and others are constantly being printed for the information of readers. This valuable data will be useless if it is not applied to the business of every operator who reads it, providing he already has no such plan in operation. It is necessary for the operator to maintain good credit relations with the manufacturers in order that the utmost efficiency might prevail throughout all branches of the industry. If the plumber neglects to collect his accounts when due and he forces the manufacturer or jobber to wait for payment the effect is felt on a broad scale and the pinch will eventually be felt by all concerned.

In this the plumbing and heating operators may not be alone to blame. The manufacturers in many cases allow too much leniency in credit extension. If a stringent policy of credit limitation were exercised by all manufacturers and wholesalers this practice might be discouraged, and it would be a fitting example of what the plumbing and heating operators should practise themselves.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights
—Keep the Entire Series Where It May be Referred to and Studied

FIG. 46 shows a cheap method of constructing a grease trap for collecting the waste from the kitchen sinks. It has been found from experience that grease undergoes very little change by bacterial action in any tank treatment and is very detrimental as it in time collects and chokes up the whole system and therefore should be kept out of the septic tank and tile drains by installing this simple sanitary fitting under the discharge pipe from the sink; the grease collects at the top and can be periodically and easily taken off and buried, thus saving one very grave objectionable feature to the successful working of a small private sewage system.

The trap consists of two large glazed sewer tiles buried in the ground and fed by a two inch iron pipe inlet. The outlet, of 4-inch glazed sewer tile which is connected to the sewage system, must have its inlet well below the surface of the sewage as the grease, being lighter than water, floats on the top and is thus pre-

FIG 46.

vented from entering the outlet.

It is not always possible to design a small sewage installation on the gravitation system entirely and often a low lying portion of the district has to be elevated in order to discharge at a central disposal plant.

The cheapest, best and simplest form of lifting sewage is by means of installing a small pumping station suitably designed and generally located at the lowest elevation of the sewage system.

Pumping stations can either be built above or below ground level, depending upon the outlet level of the main pipe discharging into the receiving well and the class of the property where same is located. In some cases a sewage pumping station situated above ground level in a residential district would depreciate the value of the property, and it is always advisable to construct an underground pumping plant although the first cost would be greater. The general layout of both the above and underground stations is similar in general principle and we will describe and illustrate the more difficult one to construct namely, the one underground.

PATTERN FOR SPIRAL CHUTE

(Continued from page 15)

for outside rim. On line A, X, set off one-half stretchout using spaces 1, 2, 3, etc., of plan and draw lines as shown in drawing C, and from each point in outline of elevation with Tee square cut lines of corresponding number and draw lines as shown (I have used one-quarter stretchout to save space), A, H, and 7, X'.

The next step is to find the true length of dotted lines in plan. As we already know the length of solid lines, draw any lines, as 1°n, 3° at 1°. Erect a line equal in length to one division of elevation at 2° drawing D, make 1°, 3° equal in length to 1' 2 of plan, a line drawn from 2° to 3° will be the true length of dotted line of plan.

To lay out the pattern, proceed as follows: On any line set off the distance 1, 1' of plan using 1' as center and 2° 3' drawing D as radius; strike arc 1', 2, next using I as center and 7, 8, drawing C as radius strike arc 1, 2, then with 2 as center 2, 2' as radius strike arc 2, 2' with 1' as center and 1°, 2° as radius strike arc 1', 2'.

This completes one-twelfth of the desired patterns. Carry out as far as you like. In this case one-eighth pattern has been developed, edges for rivets must be allowed.

Heating and Ventilating

Fan Blast System of Heating and Ventilating

The Method Described is that of Heating the Air and Blowing It Through Pipes with Attachments Similar to Syphons, Which Assist in Mixing the Hot and Cold Air

IN the following an improved heating and ventilating system is described in which air is used as the heating medium; it possesses special features by which it differs from the ordinary fan blast system and by which the disadvantages of the latter are practically eliminated. It may be said that the new fan blast system is not only superior to the present systems of its own kind, but that it may also replace steam and water heating systems in buildings where the fan blast system has hitherto been impractical or too expensive.

lets between their two ends which they exert upon the air of the interior, they may properly be termed "circulating outlets."

Advantages of New Method

From this mixing of hot air with air taken from the interior just prior to the discharge into the interior and from the resulting circulation of air in the interior there results a number of advantages which cannot be obtained either by the present air heating systems or, in fact, by any other of the existing heating systems except at extraordinary expense.

compared to those of a system of the present type.

6. From the fact that the air drawn from the interior into the outlets is taken from the lower part of the zone of occupancy the following advantages result:

7. Heating and renewal of the layers of air close to the floor without overheating the upper layers and without draft to the occupants.

8. The large amount of heat usually necessary for the roof and walls does not pass through the zone of occupancy.

9. Reduction of heat losses through the roof and walls.

10. Draftless circulation of the hot or fresh air through the zone of occupancy and in absolutely positive manner.

11. Existing heating and ventilating systems where inconveniences from drafts, overheating of the upper zones and insufficient heating of the lower zones or poor ventilation of the zone of occupancy are obtaining can be improved by changing the ordinary outlets to circulating outlets, as shown in Figs. 1, 2 and 3.

12. Existing fan blast systems can be increased in their heating capacity by changing the ordinary outlets to circulating outlets.

13. In cooling and ventilating systems, such as are used for theatres, audience halls, school houses, etc., the circulating outlets greatly improve the uniform and draftless distribution of the cool fresh air.

Uniform Temperature in Interior Near Floor and Roof

If we consider a building in which a large part of the heat is lost through the roof and where, therefore, a large quantity of heat must be transferred to the roof surface, we find that this can be accomplished in different ways. The zone near the floor could be heated directly and uniformly either by heating the floor underground or by providing numerous small radiator units throughout the interior in the lower part of the zone of occupancy. In the first case, the initial costs are prohibitive; in the second case it is impracticable to place many small radiator units all over the

Fig. 1.—Course of air with circulating outlets in building of sawtooth construction.

The salient feature of the new fan blast system lies in the outlets which transmit the air to the interior, two typical forms of which are shown in Figs. 1, 2 and 3. In these outlets the hot air draws, by an injector action, air from the interior into a short duct, the ends of which are placed at different levels. The hot air mixes itself with the air drawn from the interior and the mixing is done just prior to the discharge of the mixture into the interior. The air withdrawn from the interior passes, therefore, only through a short duct and need not pass through the conditioning apparatus, the blower fan and the main duct system, as is usually necessary in fan blast heating systems of the present type. On account of the circulating effect of these special out-

With such outlet it is possible:

2. To heat the air coming from the heating apparatus to much higher temperatures than hitherto considered advisable.

2. To reduce the size of the blower fan, heating ducts and air washer (where used) to one half or even less of those of the present systems.

3. To employ air heating systems in buildings, such as office buildings, loft buildings, etc., where hitherto their application has been either not practicable or too expensive.

4. To discharge into the interior large quantities of air the temperature of which can be much lower than that of the air discharged by present systems.

5. To reduce in many cases the first costs and the costs for horse power as

floor. The usual practice is to provide large units of radiators near walls and columns which are creating individual upward currents of hot air and downward currents of cool air, causing large heat losses through the roof and hot zones and cold drafts in the zone of occupancy. In both cases the total quantity of heat needed for the roof which, in the ordinary one-story building, is usually about three times as much as that

It is evident that through the action of the circulating outlets there must result an almost uniform temperature throughout the interior of the room thus heated. The quantity of the air withdrawn from the interior can easily be made so that a change of air takes place in the zone of occupancy every five to ten minutes. If the lower inlet openings are placed near the floor, about 2 feet from the floor level, the suction

by a saw-tooth roof, the roof being constructed of 2-in. wood planking with a $\frac{1}{4}$ -in. felt insulation and a five-ply felt and tar covering. The skylights are of steel and double glazed, the floor has a 9-in. concrete base. The lowest and highest parts of the roof were 12 feet and 23 feet respectively, above the floor level. The air was introduced 9 ft. and withdrawn 2 feet above the floor; the temperature of the heated air was 130 deg. F., that of the air discharged 98 deg. F., and the quantity of the air withdrawn through the outlets was about equal to that of the hot air supplied. When the lower intakes of the outlets were open, the temperature differences at points 3 ft. and 14 ft. above the floor were from 1 deg. to 3 deg. F., with the lower openings closed the differences were from 5 deg. to 8 deg. F.

Larger Quantities of Air Discharged at Lower Temperatures

The heat losses through the roof will be the less the smaller the difference is between the temperature immediately beneath the roof and the outside temperature. The minimum of heat losses will be obtained if the temperature of the air near the roof on the inside is equal to that in the zone of occupancy. It is clear that a further drop of temperature in the upper levels is not desirable as this would cause down drafts of cool air into the zone of occupancy. The upper layers of air should be even somewhat warmer than the lower ones.

Fig. 2.—Course of air in ordinary room with circulating outlets.

needed for the floor and zone of occupancy, passes through the latter and is liable to create locally considerable overheating of the zone.

Another manner of heating the roof is by providing radiators for the roof independently from those needed for the zone of occupancy. This way is wasteful in first cost and usually causes overheating under the roof and consequently large heat losses.

A fourth way finally of heating the roof would be to distribute a large quantity of moderately heated air in the interior, spread out horizontally and evenly as possible. If the air would be distributed above the zone of occupancy and if part of that air could be made to traverse the zone of occupancy and the zone near the floor, then the most economical and the most agreeable system of heating the roof and interior would have been found.

This is exactly what the new system does. The hot air, coming from the heating apparatus, is mixed with a quantity of moderately warm air from the interior, the resulting mixture, the temperature of which is less than 100 deg. F., even in extreme weather, is discharged horizontally, by means of diffusers, so as to cover the entire floor area. The large quantity of air discharged through the outlets, mixes rapidly with air of the interior, thus further reducing its own temperature. The resulting numerous currents of warm air rise slowly to the roof, intercept the currents of cooled air flowing downward, strike the roof at slow velocity and at low temperature, reduce the temperature losses through the roof to a minimum and create in the upper zone of the interior uniform conditions of temperature and air distribution. At the same time, part of the air mixture discharged through the outlets is drawn into the lower openings of the latter and thus forced to pass through and heat the zone of occupancy and particularly the zone near the floor.

from the outlets will draw in at first the layer of air within this zone. Ordinarily, when the system is started this air will be several degrees lower in temperature than the upper layers of air and the outlets will remove at first this cold air near the floor before they will draw on the warmer and lighter air of the upper levels. When the cold air near the floor has been removed, the air from the upper levels will be forced down and a continuous circulation of

Fig. 3.—Course of air in large interiors with circulating outlets.

warm air from the upper to the lower levels of the interior will take place. As the air which is forced down from the upper levels has no possibility of losing any of its heat, it is evident that within a short time after the system has been started the temperatures at the upper and lower levels must be practically uniform.

Theory Borne out in Practice

Actual measurements of temperature in a foundry, in which circulating outlets of the type illustrated in Fig. 1 were installed, have shown the correctness of the above contention. The building covers an area of 170 x 250 feet, is covered

It is interesting to investigate how small a rise of temperature in the heated air is sufficient to make up the loss of heat through a roof and what air quantities are needed. If we take for instance, a 2-in. plank roof with a five-ply tar and felt covering, we find that the heat loss would be 0.25 B. T. U. per square foot of roof per degree difference in temperature per hour. At an inside temperature under the roof of 68 deg. F., and an outside temperature of zero the heat loss per hour would be 17.00 B. T. U. If we now assume a drop in temperature of only 3 deg. F. in the air of the interior through the cooling effect of the roof, then we would

need 312 cu. ft. of air per hour at 68 deg. F. to heat 1 sq. ft. of roof surface. If we take the heat loss through the floor as one third of that through the roof, and if we further assume that one outlet covers a floor area of 1,000 sq. ft., then we find that 6,933 cu. ft. of air at 68 deg. F., would be needed per minute to heat the floor and the roof. The temperature under the roof could then not be higher than 68 deg. F., and the loss of heat through the roof and floor would bring the temperature of the air to 65 deg. F.

In practice it has been impossible hitherto to supply such large quantities of air because it would make the heating apparatus and the duct system much too large and expensive. Assuming in the above instance an outlet velocity of 1,000 ft. per minute, one outlet alone would require a 36-in. pipe and a building of 300 x 200 sq. ft. of floor space would need 418,000 cu. ft. of air per minute for roof and floor alone. In actual present practice the air would be delivered to the building probably at a temperature of 140 deg. F. and the quantity of heated air required would be 18,900 cu. ft. per minute.

Fig. 4 shows the quantity of heated air in the above example decreases as the temperature rises. We find that, while the quantity of air needed at a temperature of 140 deg. F. is 18,900 cu. ft. per minute, it is twice as much at a temperature of 100 deg. F. then it rises rapidly so that at a temperature of 80 deg. F. the air quantity is already about five times, at 68 deg. F. about 25 times that for a temperature of 140 deg. F.

It is, however, not necessary to make the difference between the inside temperature and the temperature of the discharged air as small as 3 deg. F. because the heated air will to a certain extent, depending upon the form of the outlets and the discharge velocity of the hot air, mix with the air of the interior, and, therefore, have its temperature reduced. However, it is plain that the lower the temperature of the discharged air, the closer the ideal conditions, outlined above, will be approached.

With the circulating outlets we can get pretty near to those ideal conditions. If we, for instance, assume that the air be heated to 140 deg. F. and that we draw from the interior about three times the quantity of the heated air, a ratio which can, by proper design of the outlets, be obtained without difficulty, then we deliver the mixed air into the interior at a temperature of 81.8 deg. F. The quantity of mixed air for each outlet in the above example would then be 1,270 cu. ft. per minute that for the entire building 76,200 cu. ft. per minute; the diameter of the individual outlets would be 16 in. Considering that this quantity of air mixes itself again with the air in the room, we can reduce by means of the circulating outlets the temperature under the roof practically to the minimum desirable.

Of course, the circulating outlets will require additional first costs and additional horse power in the blower, but it will be shown later that these are by no means prohibitive and will make the system cheaper if we consider the saving of heat and the additional advantages resulting from the draftless circulating of the air through the zone of occupancy and the uniform heating of the interior.

From the above it is evident that the use of the circulating outlets effects in itself a saving of heat. Furthermore the circulation of air from the upper to the lower levels acts as an almost instantaneous indicator as to the proper quantity of heat necessary for the building under the varying conditions of outside temperature and other influences. If either too much or too little heat is supplied the temperature in the zone of occupancy rises or falls quickly and the

every 17 minutes. When the circulating outlets were put in place they withdrew from the zone between the upper and lower openings about the same quantity of air from the interior as that of the hot air supplied and effected a circulation of air in the zone of occupancy once in every 6 minutes.

Obviating Drafts in Zone of Occupancy

A special feature of the circulating outlets is that their discharging and their recirculating action takes place without causing drafts in the zone of occupancy. In hot air heating and ventilating systems hitherto installed, the common method of discharge into the interior is either to blow the air from outlets which are placed high above the zone of occupancy, downward into the latter with velocities up to 1,400 ft. per minute or else to carry the discharge pipes to within three feet of the floor and to discharge the hot air at low

Fig. 4.—Decrease in quantity of heated air required with rise in temperature in a given case.

supply of heat can be regulated accordingly. This is especially easy in an air heating system where the shutting off or adding to the supply of steam in the heating apparatus makes itself quickly felt in the temperature of the hot air delivered.

As the quantity of air drawn from the interior can be made several times the quantity of the hot air supplied, it follows that a very effective circulation of air can be created in the zone that lies between the intake and the discharge openings of the outlets. This circulation is absolutely positive; if the mixture of air is introduced above the zone of occupancy the greater part, in practice one-half or more of that air, has been withdrawn from the zone of occupancy. For this reason a rapid change of air must take place in that zone. Depending upon the number and location of the outlets the circulation of air can be made more effective than in any other ventilating or heating system on account of the large quantities of air moved. For instance, in the saw tooth building mentioned above. (see Figs. 1 and 4). in which ordinary outlets discharging directly into the zone of occupancy, were replaced by circulating outlets the circulation of air in the interior as originally calculated to take place once in

velocities. With ordinary outlets there is no other way of bringing the heated or fresh air into the zone of occupancy. In both cases hot and cold drafts in the zone of occupancy are unavoidable, no matter how the outlets are arranged or what the velocities are. Moreover the full quantity of heat needed for the building is carried into the zone of occupancy creating there areas that are overheated.

With the circulating outlets these disadvantages of air heating and ventilating systems are avoided. The air is discharged horizontally above the heads of the occupants, and a large quantity of warm air is forced from the upper levels into the zone of occupancy through the circulating action of the outlets at an imperceptible velocity and in absolutely positive manner. Thus large quantities of warm or fresh air are moved through that zone without causing the least discomfort to the occupants. In the saw-tooth building mentioned above (see Figs. 1 and 4), the discharge openings were 9 ft. above the floor, the air was discharged horizontally or even slightly upwards; there was not the slightest feeling of draft in the entire room and every square foot of floor space could be occupied by the workmen without paying any attention to the warm air inlets.

Conducting "A Business Enterprise"

Outline of Some Simple Records That Give The Merchant Information Vital to the Successful Conduct of Retail Business—Growing Disfavor for Merchants Who Neglect Business Records

(From the National Association of Credit Men)

THE merchant should know, and not guess, that the price at which he sells an article, or the price for which he contracts to do work, will cover the—

Exact cost of the article; or the
Exact cost of the material and labor used in the contract;

The proportionate part of the cost of conducting the business which the article or the contract should bear;
With a little for his living; and
Something besides.

He should again know, without simply estimating, whether all his sales or all his contracts at the end of any given period of time equal the first three items as above cited.

If they equal the cost as indicated, then there is no profit.

If they exceed the cost, then a profit is a reality.

No merchant can be easy in mind and fair to his business creditors or bank, or even the business public, who cannot tell whether or not his business enterprise is making a profit.

Are You Making a Profit ?

This can only be done by keeping certain records—commonly known as Books of Account.

Without books of account, a merchant unconsciously goes on the rocks or loses the chance of making his business profitable.

Why should he wait until the time when he finds he cannot pay his bills and hasn't assets enough to meet his liabilities?

Why should he, when certain simple records would give him information any time?

How can he tell what profits the business is making, even though he is meeting his obligations, unless he keeps certain records.

With this straight-from-the-shoulder message to all merchants not keeping records or books of account; and

Believing that they will realize the fact that present conditions will not permit a Business Enterprise to run without such records,

It is our earnest effort to make certain recommendations in the way of a general outline of very simple and easily kept records, which we shall call "books of account."

Our great desire being to render business service and to put sound props under every business enterprise.

Can Books Tell ?

The transactions that go to make up a day's work in any business develop

either a profit or a loss. If a profit, it finds its way into capital or net worth—the net worth is increased. If a loss, the net worth is decreased.

Starting at the very beginning, then, a record of the merchant's investment in the business, his net worth or Capital (as it is termed) is necessary. Such a statement of net worth we will construct right here.

We begin with Assets, which term covers property or accounts of value such as are listed herewith and numbered from 1 to 6. The total of these Assets in dollars and cents, when compared with the total amount of Debts, determines whether a Business Enterprise is able to pay its debts and is therefore what we will call Solvent, or is unable to pay its debts—and is Insolvent. There should be at least \$2 of Assets to every dollar of Debts.

Liabilities are the opposite of Assets (see items numbers 10 to 14), and to play the business game right, the object is to keep the Liabilities less than the Assets. The greater the difference between them, the greater the investment—therefore the success of the business.

ASSETS

1. Cash on hand and in the bank.. \$
2. Merchandise on hand
3. Accounts owing from customers
4. Furniture, fixtures, etc.....
5. Lands and buildings
6. All other items of value not in above classification

Deduct from this

LIABILITIES

Amounts owing for

10. Merchandise
11. Borrowed money
12. Items of expense accumulated and unpaid
13. Lands and buildings (mortgage)
14. All other debts not included in above classification

Total Liabilities

Net Worth, Capital or Investment

So, the first thing that books of account tell us is: What is invested in a business at the beginning.

The next step is to make the investment earn money by the carrying on of business, whatever it may be, for the purpose of making a profit. We can increase our net worth by adding to our income. We add to our income when we make a profit on what we sell. So

a merchant must construct his accounts so that they will show in addition—

1. Income;
2. Expenses;
3. Net profit or Net loss.

Income is what flows into the business, and the word itself suggests something that is moving and not stationary.

Opposite this is expense—the outflow of a business, and this term also suggests things that are in action and not stationary.

To arrive at the net profit or the net loss, it is absolutely necessary to record every transaction; so, we will group the classes of income and group the classes of expense.

INCOME

20. Profit on sales
21. Profit on contracts
22. Interest on bank balances
23. Discount on merchandise purchased
24. Items of income not above classified

Total Income

EXPENSES

30. Rent (fair rate, if owner) .. \$
31. Wages paid (not charged on contracts)
32. Allowed to merchant for his service (at fair rate)
33. Insurance on merchandise, fixtures, etc.
34. Interest on borrowed money.. \$
35. Delivery expenses
36. Taxes of all kinds
37. Fuel and light
38. Charity
39. Bad Accounts
40. General expenses not included in above

Total Expenses

When deducted from Total Income gives Net Profit, or Net Income

This net income, to the penny, will be reflected in Assets and Liabilities. Every penny of profit will either increase the Assets or decrease the Liabilities therefore decreasing the net worth. Every penny of loss will either decrease the Assets or increase the Liabilities, thereby decreasing the net worth.

Any business, no matter in what line of effort or what is the size of its capital, is subject to this principle.

Having explained how books of account—given names divided into four classifications: Assets, Liabilities, Income, Expenses—indicate whether a business is making a profit or a loss, we will now endeavor in a similar fashion

ion to offer some idea of how books of account (of a very simple kind) can be secured by a merchant and kept so he can tell accurately, with the least possible effort, what are the Income and Expenses, the Assets and Liabilities, the Profit or Loss of his business enterprise.

The Books of Account

Having reached in our development of the book-keeping process—or rather of the books of account that are needed in connection with the man's business—the kind of facts to record as to what happens from day to day, month to month, or year to year, we will say.

In Illustration

When the merchant buys merchandise and it is delivered to him, he charges to the business enterprise on the books of account, and credits the person from whom the goods are bought. When the merchandise is sold, credit at cost is given to merchandise, and the profit is credited to profit on sales. When a merchant puts cash capital into the business, he charges cash and credits the investment; and when payments are made for expenses incurred, he credits or reduces his cash and charges the items paid to various accounts involved.

The books of account, therefore, form the connecting links between a merchant and his business enterprise.

The old and customary form of book-keeping is what is known commonly as "Double Entry," involving cash book, cheque book, purchase book, sales book, journal, sales ledger and general ledger. When a merchant is in a position to keep such books, or can afford to hire a book-keeper for the purpose of keeping them, there are none better.

For some enterprises, however,—and it is to these that our present message is addressed—we will retain the idea behind double entry book-keeping, namely, a system of balances, dollar for dollar, on each side of the account; but endeavor to do it with a few simple books of account.

After thinking the matter over with the utmost care, we are recommending principles and methods which any merchant can apply, that can be embodied merely in two books—the Cheque Book, and the Entry Book ruled as a double entry ledger, which will serve the purpose of a ledger and a journal. These two books, with files for bills and other papers, will be sufficient for the business enterprise which we are aiming to reach.

The Entry Book or ledger should be divided into five parts—

- Assets 1st.
- Liabilities 2nd.
- Income 3rd
- Expenses, 4th
- Journal, 5th

The merchant will keep these in mind while we explain the next step in the book-keeping system.

The capital investment is to be determined as already outlined.

Cash on Hand and in Bank (Account No. 1.)

This figure, when obtained, is entered on the left side, or debit side, of the ledger sheet and placed under the asset section of the ledger.

Merchandise on Hand (Account No. 2.)

Take inventory of the stock on hand, that is by putting down each item of stock on a sheet at its cost price, if that cost price is at or below the figure at which the article can be duplicated; or at its exact market value, if the market is less than the price that was originally paid. After taking down all the items of merchandise, then the total is entered on a ledger sheet on the left or debit side, and placed on the asset section of the book.

Accounts Owning From Customers (Account No. 3.)

Each customer's account is by name entered on a separate sheet, and the amount owing and collectible from each placed on the left, or debit side and placed under the asset section of the ledger.

Furniture, Fixtures, Etc. (Account No. 4.)

A fair valuation of these items should be made and the total of them all recorded under this caption on the left side of the ledger sheet, and also placed under asset section.

Land and Buildings (Account No. 5.)

If the merchant owns a store, warehouse, factory, or a plant, improved or unimproved land, a reasonable valuation is placed upon it, and the total thereof is entered on a ledger sheet, left or debit, side, and placed under the asset section of the ledger.

All Other Items of Value Not Classified In Preceding Accounts

These accounts should be itemized and the total entered in this account on the left side of ledger sheet, and placed, like the others, in the asset section of the ledger.

The left side of the ledger is always the debit side, the right side is known as the credit side.

- We debit what we have.
- We credit what we owe.
- We debit our expenses.
- We credit our income.

By entering the items 1 to 6 on the left side, the merchant has charged his gross investment in the business on the books.

We are ready now to take up the second section—the

Liabilities Section

From the gross investment, the liabilities must be deducted as shown to determine the merchant's net investment.

Amount Owning for Merchandise (Account No. 10.)

The total owing by the merchant to each creditor is listed on a separate ledger sheet on the right side, and

Amount Owning for Borrowed Money (Account No. 11.)

The total when accurately determined is listed on a ledger sheet on right side, and placed under liability section of the ledger.

Amount Owning for Items of Expense (Accounts No. 12.)

If, at the time this net worth is being determined, there are any unpaid expense bills, the amount owing to each creditor should be listed on a separate sheet on the right-hand side, and filed under the liability section.

Amount Owning on Land and Buildings (Account No. 13.)

The amount owing, usually in the form of a mortgage, is placed on the ledger sheet, and placed on the right hand side thereof, and also filed under this liability section.

Amounts Owning to All Others Not Included in Accounts 10 to 13 (Account No. 14.)

This account is self-explanatory. If there are any amounts owing, they are to be placed on the right-hand side of the ledger sheet, and filed as liabilities.

Net Worth, Capital, or Net Investment. (Account No. 15.)

There must be one account in the liability section that is headed as above—the difference between all that is listed in the asset section and all that is listed in the liability section. That exact difference constitutes this item, and the amount, when determined, is placed on the right-hand side, or credit side of this account—showing the exact net investment in the business enterprise.

It is a simple matter at this point to prepare a financial statement, as has been outlined, which will give the true financial condition of the merchant.

We will now consider the third section—the

Income

Just as with the assets and liabilities, accounts should be opened in which will be recorded the transactions arising out of the operation of the business.

Profit on Sales (Account No. 20.)

The profit on sales can be easily determined by consulting the inventory, if the goods were inventoried; if purchased since inventory taking, then by consulting the bills. The difference between the price paid and what it is sold for, is the profit on the sale. This profit is credited to this account by entering the sum on

the right side, and placing it in the income section. If the business is such that the items are too numerous and it is possible to take an inventory frequently—then the profit on the sales is determined as follows:

Stock on hand beginning of period	\$
Add stock purchased during period	\$
Deduct inventory end of period	\$

Difference is cost of goods sold	\$
Sales during period	\$
Deduct cost of goods, sold as above	\$
Difference is profit on sales	\$

Profits on Contracts

(Accounts No. 21.)

When a contracting business is carried on, the profit on the contract—which is the difference between the cost of the operation (whether in material, labor or other expenses) and the price charged the customer—is credited on the ledger sheet on the right-hand side, and placed under this income section.

Interest on Bank Balances

(Account No. 22.)

This is the amount which your bank allows for average cash balances. It is placed on a ledger sheet—it is credited on the right-hand side under this section, from your cheque book.

Further Building For Montreal

Montreal.—The Montreal Board of Protestant School Commissioners will build a new school, work to be commenced very shortly. The contract for the new building, which will be located on St. Urban Street, near Rachel Street, has been awarded. The new building shall be ready for June 1st, 1922, so that it will be ready for pupils when the school term commences in September of 1922.

The contract was awarded by the Board to James McGregor & Company, General Contractors, the price being \$366,877. The contract for the plumbing the heating was awarded to the Garth Company, the price being \$84305. The wish was expressed by the board that contractor would endeavor as much as possible to give employment to returned soldiers. Pleasure was also expressed that as the work is to get under way shortly it would mean some alleviation of the unemployment in the district.

AIKINS SANITARY MOIST AIR HEATING SYSTEM

The construction of the Aikins Sanitary Furnace is stated to be a distinct departure from anything attempted in the heating line. Armco iron is used throughout in the construction except for

SOME EFFECTIVE ARGUMENTS FOR PLUMBING

It has long been submitted by recognized authorities on the subject that the rate of infant mortality in a given district is regarded as the most reliable test of the sanitary conditions existing throughout that locality.

Investigations in this connection undertaken by Research Bureaus have established the following facts.

1. That in homes where water is piped into the house, the infant death rate is around 117.6 per thousand.
2. Where the water has to be carried into the house from outside, the infant death rate is around 198.2.
3. That the infant death rate is 72.6 in homes where bath tubs are found. While it is more than double or practically 164.8 where there are no bath tubs.
4. In homes where water closets are installed, the infant death rate is 108.3, and in homes where there are only yard conveniences and no water closets the infant death rate is 169.3.
5. That in homes where city water is available the infant death rate is 132. per thousand and where city water is not available the death rate was 148.4 per thousand.

the doors, frames and smoke collars, which are cast iron. The joints are boiler riveted and therefore gas and dust tight, a result which cannot be obtained where a combination of cast iron and steel is used. The construction of this furnace consists of a steel fire pot, brick lined, and combustion chamber without flues and therefore self-cleaning. The fire burns on a refractory cement bottom eliminating the use of grates. An important feature claimed for this is that it allows the removal of ashes without generating dust, and it also allows the makers to introduce into the lower fire chamber a quantity of water equal in weight to the amount of fuel consumed

daily. The water is regulated by a small pet cock connected to the water service and the action obtained from using the water is that same is gradually absorbed by the ashes and converted into super-heated steam which is composed of oxygen and hydrogen, the oxygen facilitates combustion, and the hydrogen gases convey the heat from the fire to the combustion chamber, the surface of which transmits it to the heating chamber. The construction is adapted, it is claimed, to any kind of fuel, and especially coke. The Aikins Sanitary Furnace will shortly be on the market and is being manufactured by Beeby & Aikins, Ltd., Ottawa, Ont.

Advertising on a Co-operative Basis

How Merchants on a Street That Was Formerly Considered a "Slum" Street in St. John, N.B., Changed It to a Commercial Thoroughfare of Some Importance—Uses Page Advertisement Each Week

ST. JOHN, N. B.—What was formerly a slum street in St. John, N. B., now is rapidly becoming one of the most prominent business thoroughfares in this city.

This wonderful change has been made in less than six months, owing to the aggressiveness of about thirty merchants, who have opened up an advertising campaign, on a co-operative basis, boosting their street by weekly full page advertising in one of the local newspapers. Brussels street, St. John, N. B., six months ago was a rough unpaved thoroughfare, and used only by teams compelled to go down it on busi-

ness, the main traffic following the course of the paved streets. The city is just completing the paving of this street, and the residents, realizing the possibilities of increased traffic, sought to make the citizens forget the old slum street, so petitioned the city council to change the name from Brussels street to Prince Edward street. This change of name has been made, and now the residents are putting the street on the map. Some time ago the citizens of St. John were all made to sit up and take notice by a large flaring full page advertisement, announcing that Prince Edward street was the Hub of the city,

and St. John's new commercial thoroughfare, the Eastern gateway of St. John.

Twenty-six merchants announced that "United we stand for co-operation, enterprise, progress and prosperity. We have faith in our street and our city." The committee in charge of this advertising campaign announce that it is to be carried on for a year, using a full page space each week, paid for by all merchants whose names appear. Buildings are being painted, stores are having new fronts put in, and the whole street is beginning to assume a spic-and-span appearance. Every resident is a booster for his street, and Prince Edward street is the talk of the town.

WILL HAVE WATER WORKS

Richmond Hill, Ont.—Something of a record will be created here when a complete waterworks system, contracts for the construction of which have been let at an aggregate cost of \$88,000, is installed. The plans call for a dam to be built in the creek on the west side of the town, which, when completed will form a storage reservoir of 1,000 feet long by 300 feet wide, containing 8,000,000 gallons of water. For the size of the town this will probably be one of the largest reservoirs in existence.

Following are the contractors: Pump-house, filtration plant, dam and bridge, Reid and Somers, Guelph; steel tank, Canadian Des Moines Co., Chatham; cast iron pipe, National Iron Corporation, Toronto; valves and hydrants, Drummond McCaul, Toronto; filter equipment, General Supply Co., Toronto; pumping machinery, Northern Foundry and Manufacturing Co., Sault Ste. Marie. The consulting engineers are Messrs. James, Proctor and Redfern, Toronto.

The system is expected to be in operation by Christmas.

STOVE INSULATION

Electric stove insulation discs and bricks have been found to be far more satisfactory when made from quartz, where formerly they were made from asbestos and porcelain. According to E. J. Woodburn, of Woodburn's Limited, Montreal, who has recently been experimenting and has now placed the new composition articles on the market, they will not break so readily and have a much greater heat resistance.

Woodburn's Limited have also been appointed sole Canadian representatives for a new electric resistance wire, which is being marketed among leading manufacturers of electrical appliances. Wigam & Co., of Birmingham, are the manufacturers, and claim this was used for years in the British army.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Niagara Falls South, Ont.—Payne & Nesbitt, plumbers, have dissolved partnership, Mr. Payne continuing the business.

Montreal—Cusson & Bigonnesse, plumbers, have dissolved partnership. P. E. Bigonnesse continues alone.

TENDERS WANTED

Tenders will be called for the installation of a heating system in the new live stock arena. For the arena proper the estimated cost is \$95,000, and \$195,000, including the annexes.

DURO PRODUCTS TO BE MADE IN CANADA

It is now announced by the manufacturers that Duro products will shortly be made in Canada. They will be marketed under the name of Empire-Duro. This applies to the most popular sizes and types.

NOVEL MEANS OF ADVERTISING PIPES

With the stove and furnace pipe season near at hand, a rather ingenious method of advertising pipes, made up from galvanized sheets, was employed by G. C. Hunter, Tinsmith, of Hamilton, Ont., who constructed the name PIPES from the use of T's, elbows and straight lengths of galvanized pipe. The letters were about three feet in height and were placed on the sidewalk in front of the shop, resting against the shop window. Many passers-by were impressed with the novel means employed to remind householders that it was time to have the pipes attended to in their homes.

GAS ASSOCIATION CONVENTION

Optimism for the immediate future and a general revival of business activity for the industry is to be the keynote of the third annual convention and exhibition of the American Gas Association, the national organization of the manufactured gas industry, which will be held in the Congress and Auditorium Hotels, Chicago, November 7 to 12.

More than one hundred manufacturers will exhibit their latest gas-burning appliances and the business sessions of the convention will draw an audience of gas men estimated at 1500.

Reports coming into Association headquarters show that when the general business situation improves there will be a tremendous jump in the demand for gas service. The industry is now mak-

ing engineering and financial plans to meet this anticipated demand.

NEW WAGE SCALE

Hamilton, Ont.—The question of plumbers' and steamfitters' wages has between representatives of the employers and journeymen, a wage rate of 85 cents an hour has been set. A special meeting of local No. 61 was held, which was addressed by International Organizer John Bruce, Toronto. After about an hour's discussion the new wage scale which is a reduction of 5 cents an hour was approved. The 85 cents an hour rate, effective August 1, will hold until April 30, 1922.

HEATING COMPANY ASKED TO REMAIN

Chatham.—There is a possibility that the Chatham Steam Heat Company will be induced to remain in business during the coming winter season. A short time ago it was announced that the company intended to go out of business, owing to the fact that they have been losing money at the rates they have been charging for heat and the difficulty they had collecting their bills, owing to the necessarily interrupted service during the extreme cold weather.

At a meeting of the steam heat users, who include most of the business houses on King street, the proposition to take over the plant of the company and run it as a public concern was discarded and it was decided to circulate a petition, asking the company to continue in business and promising a rate which would net a fair profit on their investment. The steam heat users of the city regard this as more economical than the installing of individual furnaces, which in great number of cases would be a very expensive proposition.

WANT SEWERS

Agitation for a sewerage system through the district was supported by a large gathering, and after hot debate, at a meeting of the North Wychwood Ratepayers' Association. C. Cameron, who presided, declared that sanitary sewerage was necessary to put the district on a health basis.

Township Engineer Wynne Roberts outlined the York township comprehensive sewerage scheme, illustrated by lantern slides, explaining the proposed process. He stated that this scheme was probably the most comprehensive in Canada.

PLUMBING AND DRAINAGE

London, Ont.—The condition of the dwellings erected on Pine Lawn and Garfield avenue for the London Housing Commission submitted by Provincial

Housing Inspector E. W. Hammett and Building Inspector A. H. Piper was discussed.

The report points out defects in drains etc.

Mr. McBride, however, maintains that the houses have not yet been taken over by the commission, and that as the inspectors "went over the houses with a microscope" any defects are minor, and can be eliminated at little cost.

The commission did not deal with the reports, but decided to allow Architect McBride sufficient time to prepare a report explaining the alleged defects.

CONTRACTS AWARDED

Contract at \$53,700 for construction of filtration plant for waterworks system costing \$300,000 for Council is awarded to R. T. Smith Construction Co., Ltd., 27 Hillside Ave., Montreal.

London, Ont.—Contract for sewage pumps and electrical equipment for City, which was placed with Northern Foundry & Machine Co., Sault Ste. Marie, Ont. has been cancelled and awarded to the London Concrete Machinery Co., Ltd., Cabell Ave., London.

Ottawa, Ont.—City Council awarded general contract for vitrified clay segment sewer blocks or reinforced concrete pipe to Dominion Locq Joint Pipe Co.

IMPROVE DUNNVILLE WATER WORKS

Dunnville, Ont.—A communication from Dr. J. W. S. McCullough, Chief Officer of Health, set forth that the Provincial Board of Health had approved of the plans of the Public Utilities Commission for the improvement of the waterworks system by extension of the filtration plant and additions to the pumps, at an estimated cost of \$60,000, and for extensions to the distribution system, to cost \$10,000. The Board promised to confirm any by-law that the council may pass to authorize the expenditure of this sum without requiring the sanction of a vote of ratepayers.

O. E. Wilson said that the Utilities Commission had the verbal assurance of the Provincial Board of Health that the town would be compelled to improve system according to the plans that had been approved. But if the Council insisted on the ratepayers being consulted they had two by-laws prepared for submission to them. His idea, however, was that this expense might be saved.

Mayor Shirton announced it as his own view, in which he believed all the members of the council concurred, that they should not assume the responsibility, but that the question should be referred to the ratepayers. He recognized the possibility of the Provincial Board of Health forcing the town to carry out the proposed work.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

PPRICE re-adjustments in plumbing and steam-fitting supplies continue to attract noticeable attention. Many revisions to a lower level are again evident, these current changes covering such products as corrugated sheets; range boilers; Canada, charcoal tin, and terne plates; copper and brass tubing, rods and sheets; iron piping; wire nails; standard compression work; compression bath cocks; standard flat way stop and waste cocks; quick opening basin cocks; wrought couplings and nipples; galvanized shingles and steel ceilings; stove bolts; iron rivets and burrs; hammers; Victor hack saw blades; Trimo wrenches; cement, in bags, and scrap brass.

Price readjustments are quoted in some quarters on enamelled ware, while revisions are also given on closet combinations, tanks and bowls. A

firm undertone continues in the cotton waste markets, but no change in quotations has yet been made. The size and attractiveness of the prospective order evidently governs the current prices on boiler tubes; while the sluggish condition in the scrap material markets still continues. General depression is the prevailing tone in ingot metals, but a more optimistic viewpoint is now developing in production circles that these have reached the bottom of stagnation. Trade activity has commenced to revive with the increasing demand that has recently appeared in several lines, and many reports indicate a marked improvement over the dull summer months, with the Fall period being looked upon as an opportunity for a brisker volume of trade and a corresponding betterment in general business conditions.

MONTREAL MARKETS

MONTREAL, Sept. 26.—Price recessions continue to feature the markets for plumbing and steam-fitting supplies, and a further change in the discount on enamelled ware, also a new lower list on corrugated sheets, are two most prominent changes for this issue. Enamelled ware is now quoted less 30 per cent., and although this brings the net prices to a higher level than was prevailing during the recent series of price shading, it leaves present quotations slightly lower than existing prices before dealers were apparently willing to sell at below replacement costs. Corrugated sheets will now sell for approximately 10 per cent. less through the issuing of the new list. A slight reduction is made in cement prices, in less than car lots, and standard compression goods now have new lower prices. Quotations on iron and steel are now given with a range as some jobbing houses are quoting a slight reduction in practically all lines, while others are maintaining the higher former prices. Trimo wrenches and Victor saw blades are two lines of tools priced lower.

NO FURTHER CHANGE IN SOIL PIPE

Montreal.

There has been no further change in the prices and discounts on soil pipe and fittings since the revision to lower levels two weeks ago through the increasing of discounts. A steady movement is reported among the jobbing houses, although not up to sales of last year at this time. Following are the discounts;

SOIL PIPE	
2 and 3 in.	35 per cent.
4 inch	40 per cent.
5 and 6 inch	40 per cent.
8 inch	Net
FITTINGS	
2 to inch fittings	50 per cent.
8 inch fittings	Net list.

COTTON WASTE PRICES STILL UNCHANGED

Montreal.

Quotations on cotton wastes and wipers remain at unchanged figures notwith-

standing the revisions to higher prices on practically all other cotton products. The market is undoubtedly firm, with higher prices altogether likely at any time, and according to one large jobber, it is surprising a new higher list has not been issued before now.

BOILERS AND RADIATORS FIRMER

Montreal.

No change is made in quotations on either radiators or boilers, but the market is now somewhat firmer. Classed in the heavier lines of iron and steel products, productive costs, such as labor and freight rates would necessarily have to show a reduction before any marked decline in prices on either radiators or boilers, could be announced. On the other hand, this week shows an advance in the United States markets of from 7½ to 10 per cent, and while this has no direct bearing on the Canadian

market, it assists toward a firmer undertone. Following are list prices and discounts;

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53% for hot water and 54% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 0 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 10 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in., 10 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 10 per cent. Ontario Govt. trimmings, net list.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

WROUGHT PIPE AGAIN EASIER

Montreal.

A steady movement continues in wrought iron and steel piping, orders being of a small and sorting character. Sales are said to be somewhat better in the past two weeks and it is thought a good trade will be had during the fall months.

Although there is no indication of lower prices being announced at present, the market is now easier and it is worthy of note that prices at the United States mills show a reduction. Usually it requires some little time before a revision of this nature reflects on the local market, but it would not be surprising if a new list, containing lower prices, is issued in the near future.

SCRAP MARKET SHOWS SLIGHT IMPROVEMENT

Montreal.

With quotations on waste materials nominally changed, there is a slight improvement noticed in the market. Dealers have experienced such a prolonged dull period that they are placing little faith in the small increase of business, and consider it only temporary. However, with a spell of open weather before the winter sets in, there should be a more active trade, coupled with a continuance of more activity in the steel market generally. Following are present nominal quotations:

Automobile tires	0 75
Rubber shoes	0 02½
Yellow brass	0 05
Red brass	0 08½
Light brass	0 04
Scrap zinc	0 03½
Lead, heavy	0 04
Lead, tea	0 02½
Light copper	0 07¾
Heavy copper	0 10½
Wrought iron, R. Rd., No. 1 per gr. ton	10 50
Malleable scrap (ton)	10 50
Pipe scrap (ton)	7 00
Heavy melting steel	7 50
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	20 00

STANDARD COMPRESSION GOODS AT REDUCED PRICES

Montreal.

Certain lines of valves and bibbs, standard compression goods, show a reduction in price through the increasing of discounts. Standard compression work is now quoted less 43 per cent, flatway stop and waste cocks 46 per cent. The market for these goods has been rather unsettled in recent weeks and with the lower prices now given, a settling effect is looked for. Other lines remain unchanged, with the following discounts quoted:

Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	46%
Roundway stop and waste cocks, standard	37%
Brass steam cocks, standard	10%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, standard	20%
Gate or straightway	16/10%
Jenkins Globe	10/10%
Jenkins gate valves	10%
Emco Globe Valves	20%
Emco Check Valves	20%
Sinks, roll rim 18 x 39 in.	\$23 00
Price List No. 53.	Sept. 22, 1921.

TRIMO WRENCHES REDUCED IN PRICE

Montreal.

Through an increase in the discount, Trimo pipe wrenches are lowered in price. They are now quoted at less 42½ per cent.

PRICES ON LEAD GOODS HOLD

Montreal.

All lines of lead and zinc products are unchanged in price with a steady volume of business reported by dealers. With the improvement noted in metals on the primary markets a few weeks ago, the undertone of the finished products was also more promising, but with these metals again falling to easier prices lead goods are not in as healthy a state. Following are present prices;

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 10½
Do., 4 to 8 lbs., sq. ft.	0 09½
Cut sheets ¼ lb. extra and cut sheets to size, ¾ lb. extra.	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.	0 21*
Do., wire, lb.	0 35
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

NO CHANGE IN FITTINGS

Montreal.

Discounts on the various lines of pipe fittings are holding unchanged since the advance in malleable fittings two weeks ago. Sales are still of a small and sorting character but very numerous. Following are the prevailing discounts:

FITTINGS—	
Cast iron fittings	20%
Bushings, cast	30%
Bushings, malleable	25%
Flanges	27%
Plugs	25%
Flange Unions	20%
Maleable Unions	40%
Dart Unions, black	29%
Do., galvanized	8%
Nipples, ¾ to 4" close and short	40%
Do., long	50%
Do., 4½ to 8" close and short	30%
Do., long	40%
Couplings, 4" and under	20%
Do., 4½" and larger	Net list
Pound Goods—	
Class A	Blk. 0 58 Galv. 0 78
Class B	0 24 0 34
Class C	0 16 0 24

CEMENT QUOTATIONS REDUCED IN SMALLER QUANTITIES

Montreal.

Quotations on cement, in less than car lots, show a slight reduction and \$1.09 per bag f.o.b. yard is now quoted, the former price being \$1.12. Car load lots remain unchanged. The feeling existent among the trade that lower cement prices should be given as a stimulus to building operations is slowly becoming realized, the reduction being of a minor nature up to the present. There is a steady volume of business recorded, building requiring a fair amount at this time. Following are the revised quotations:

CEMENT—	
Car load lots—400 to 1,000 bag cars—	
Per bag, f.o.b. cars	\$0 98
Per bag, delivered	1 05
Less car lots—	
Per bag, f.o.b. yard	1 09
Per bag, delivered	1 19
Less 5 per cent.	
Rebate 20 cents for empty sacks.	

SHEET PRICES HOLD AT RECENT REDUCTIONS

Montreal.

Sheet prices are unchanged, the many lines holding at the recent reductions. Black and galvanized sheets still show the range in quotations, covering the variation among the different jobbing houses, and while slight reductions are announced in some quarters they are covered by the following list.

Tin plates, Canada Plates and Terne Plates are moving quite unsatisfactorily at present, the fall requirements in stove and furnace work requiring supplies. Following are the prevailing prices:

BLACK SHEETS		
10 gauge	4 40	4 65
12 gauge	4 50	4 75
14 gauge	4 60	4 85
16 gauge	4 70	4 95
18-20 gauge	4 95	5 20
22-24 gauge	5 10	5 35
26 gauge	5 15	5 40
28 gauge	5 25	5 50
Sheets 3 in. wide, 20 cents per 100 lbs. extra.		

GALVANIZED SHEETS.		
U. S. Standard.		
10½ ounce	7 25	7 75

IRON AND STEEL NOW QUOTED WITH A RANGE

Montreal.

Iron and steel prices are generally reduced in some quarters, while other jobbing houses are maintaining the former higher quotations. The reduction is, however, slight in all cases and principally due to dealers being anxious to further reduce stocks in preparation for any further developments at the mills, although in this connection there is said to be little expected until productive costs are lowered.

Higher grades of steel, such as mining tooth and Black Diamond tool steel, are reduced one cent per pound and are now quoted at 22 cents. Business is only fair, with orders being of a small character. However, with little construction work now under way, much improvement can hardly be expected. Following are prices with the range given:

Common bar iron, 100 lbs.	3 00	3 25
Refined iron	4 00	4 30
Irish finish machinery steel	3 45	
Mild steel	3 00	3 40
Single reeled machinery steel	5 00	5 25
Band steel	3 60	3 40
Spring steel	6 00	
Sleighshoe steel	3 00	3 40
Tire steel	3 00	3 60
Toe calk steel	4 00	4 30
Harrow tooth steel, per lb.	3 55	
Mining both steel per lb.	0 23	
Black Diamond tool and cast steel, per lb.	0 22	

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.
Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

NEW LOWER LIST ON CORRUGATED SHEETS

Montreal.

The new lower prices, stated in recent issues of SANITARY ENGINEER as quite probable, are now announced on corrugated sheets. The reduction is between 10 and 12½ per cent on the different gauges. Plain galvanized sheets have for some time past been selling on an easy market with reductions from time to time quoted, and corrugated sheets have not recorded the same amount of price decline, thus lower prices are announced in keeping with present levels of the plain sheets. It is doubtful whether the new prices will act as a stimulus to trade, but it is believed they will have a settling effect on the market as these sheets have been very unsettled in the past weeks. Following are the revised list prices and discount;

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 50
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	18 50

Less 1½%.
Lighter than 24 gauge and wider than 27 inches,
75c a square extra.

BOILER TUBES SHOW NO CHANGE

Montreal.

With prices on the various sizes of both seamless and lapweld boiler tubes holding unchanged, there seems to be an improvement in the market through inquiries continuing to come to hand. While these have not yet developed to any extent into actual sales, they enable dealers to believe that a fair amount of business will be done during the following fall months, at least an improvement over the quiet summer months. Unchanged prices are as follows;

BOILER TUBES—	Seamless	Lapweld
1 inch	25 00
1¼ inch	26 00
1½ inch	25 00
1¾ inch	28 25	27 00
2 inch	27 80	23 00
2¼ inch	31 35	26 00
2½ inch	39 65	28 00
3 inch	46 80	33 00
3½ inch	0 35	41 00
4 inch	81 00	51 75

COPPER AND BRASS REMAIN AT DECLINE

Montreal.

There is no further announcement of a change in prices of copper or brass sheets, rods or tubing, since the decline in prices two weeks ago. Metals in the primary markets fail to show any improvement, and if this continues, further recessions in these finished products would not be surprising. Following are present prices;

Copper—	Base
Rods, per lb.	0 30
Sheets, plain, 16 oz. and heavier	0 30
Sheets, plain tinned, 16 oz. and heavier	0 37
Sheets, polished and tinned, 1 oz. and heavier	0 42
Tubing, per lb.	0 34
Brass—	
Sheets, per lb.	0 25
Rods, per lb.	0 23
Tubing, per lb.	0 32

VICTOR HACK SAW BLADES HAVE LOWER PRICES

Montreal.

A reduction has been made in the prices of Victor hack saw blades, amounting to between 10 and 12½ per cent. on all lengths.

NO FURTHER CHANGE IN RANGE BOILERS

Montreal.

No change is recorded either in price or market conditions on range boilers. Quotations are held at prices announced some weeks ago by manufacturers with the exception of the 30 gallon boiler which has been reduced generally to \$7.50. Although a revision in present prices was expected some time ago there is little indication of any change at present. Following are present selling prices;

RANGE BOILERS—	Standard	Ex. heavy
30 gallon	7 50	11 25
35 gallon	11 25
40 gallon	13 50	16 00
52 gallon	20 00
66 gallon	28 00
82 gallon	35 00
100 gallon	45 00
120 gallon	54 00

CHANGED DISCOUNT ON ENAMELED WARE

Montreal.

A further change is recorded in the price of enamelled ware when the discount is now 30 per cent off list prices. With this quotation it is believed the market has taken the turn toward a more stable condition, and although this brings the net prices on all lines to a slightly lower level than formerly when 20 and 10 per cent was given, it is thought that quotations will generally settle at this figure. It is apparent that the recent price shading, when resale prices were down to replacement costs, did not act as a stimulant to trade. On the other hand, some dealers are of the firm conviction the effect of the extreme low prices had the opposite effect, and the price settlement now announced at higher quotations will be welcome among the trade. There is a steady movement of the various lines, but sales continue of a small character. Following are list prices and discount;

Sinks, flat rim—	1 only	2 only	3 only
16 x 40	\$ 7 50	\$ 7 40	\$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	51 40
Bath tubs, 5½ feet	57 10
Lavatories—	
17x19 in. Apron F130 or P4045	15 30
18x24 in. Apron F154 or P3845 or P3847	23 60
18x21 in. Apron F169 or P4205	17 60
Less 30 per cent.	

NO CHANGE IN CLOSET PRICES

Montreal.

Net quotations on the different closet outfits remain unchanged, notwithstanding a change in the prices of other enamelled ware. In the case of closets, however, prices did not drop to the same extent as other lines, although present prices are considered very low in comparison with replacement costs. Business is fair, new construction work de-

manding supplies at this time, but there is still room for improvement in this regard. Following are present net prices;

Closet, standard outfit	26 00
Do., with post hinge seat	26 75
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	29 75
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	16 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50

INGOT METALS DO NOT HOLD GAINS

Montreal.

With the exception of spelter, the ingot metals have again settled in a more or less easy state with a slack demand in most cases. Spelter has regained the decline earlier in the week and promises a fairly steady market. While the recent interest shown was only temporary, it may be that the present slackness is not for long standing, and an improvement would not be surprising in some metals.

TIN—Last week's easier tone continued practically all this week. Tin plate manufacturers have eased off in their buying, which caused the flurry of two weeks ago, and at present the market is dull at 34 cents.

COPPER—The copper market is in a rather uncertain state, both buyers and sellers evidently fearing a change and holding off. There is really nothing new to report in the market and prices locally are unchanged at 17½ cents for electro, and 17 cents for casting.

LEAD—The business offering in lead seems to have fallen off to an extent recently, but certain markets are expected to open in the near future that will bring about a decided improvement. Local quotation is unchanged at 6½ cents.

SPELTER—Spelter had a further slight decline early in the week but prices have since stiffened, and this metal looks much better. There is a demand from the galvanized sheet and tube trade and if this continues, higher prices may be looked for. Quotation locally is holding at 7½ cents.

ANTIMONY—The situation on antimony is very little changed. The demand is quiet with price holding unchanged at 7½ cents for Chinese, 8½ cents for high grade English.

ALUMINUM—Quotation of 30 cents still holds on aluminum, with the market continuing dull and unchanged.

TORONTO MARKETS

TORONTO, September 27.—Numerous price reductions on various lines vital to the interest of the plumbing and steam-fitting industry, continue to feature the current market reports. There has been a substantial lowering in quotations on corrugated sheets in all gauges, and a new list of prices on range boilers has been announced in the hope of stabilizing this market. There are also lower prices on Canada, charcoal tin, and terne plates; while easier quotations on copper and brass goods have now developed. The wire nail base is again reduced, and stove bolts, iron rivets and burrs, standard compression work, compression bath cocks, standard flat way stop and waste cocks, quick opening basin cocks, wrought couplings and nipples, galvanized shingles and steel ceilings, are all products showing recent price reductions. A new pipe list No. 53, is now effective on wrought piping, bringing prices to a lower level. Revised quotations are also given on closet combinations, bowls and tanks. There remains a firm undertone to the cotton waste markets, but no price adjustments have been announced. The moderate broadening in steel consumption is mainly looked upon as seasonable, and prices on bar iron and steel, also sheets and plates, remain practically steady. Scrap brass prices have sagged another 25 cents, and the scrap material markets continue in their sluggish condition. The general depression is still evident in ingot metals.

RADIATOR BUSINESS SHOWS CUSTOMARY FALL IMPROVEMENT

Toronto.—The recent improvement in radiator business, while registering a gratifying increase over the dull summer months is stated as not standing any comparison with the volume of trade in these lines last year. A brisker movement in both radiators and boilers, is however, customary during the Fall period, and dealers consider that the ensuing weeks should see no exception to this rule, according to present indications. Both prices and discounts remain unchanged.

WIRE NAIL BASE NOW DOWN TO \$4.00 PER KEG

Toronto.—A further reduction has now been made in the base price of wire nails, the current decline of another 15 cents bringing the local quotation to \$4.00 per keg. This is the second recession in prices on wire nails recorded during the past two weeks, the general situation indicating some unsettlement in market centres.

HACK SAW BLADES LOWER

Toronto.—A 10 per cent. reduction in prices on the Victor line or hack saw blades have been announced by the manufacturers.

GALVANIZED SHINGLES NOW \$9.00 PER SQUARE

Toronto.—Galvanized shingles have been reduced in price and are now selling at \$9.00 per square, according to a recent announcement by the manufacturers. This quotation is subject to the usual discount of 7½ per cent.

REVISED LOWER PRICES GIVEN ON STEEL CEILINGS

Toronto.—Price reductions are also announced by the makers on steel ceilings. These are now listed at \$6.00 per square for standard plates, and \$7.00 per square for miscellaneous plates. The customary discount of 10 per cent. is still maintained.

MODERATE EXPANSION IN STEEL CONSUMPTION

Toronto.—Current reports on bar iron and steel indicate a little better activity, but this improvement is stated as only to be expected at this season of the year. There are dealers who look upon the present volume of inquiries and the resultant slightly higher percentage of orders, as the usual flurry before trade opportunities in this industry are again practically closed by winter's annual dullness.

Signs of a moderate broadening in iron and steel consumption is also reported from southern primary markets. Producers have experienced an improvement in demand, and mills have consequently increased their output. Prices are practically unchanged, however, and this condition is reflected locally, the following table containing a clear indication of the average market quotations on bar iron and steel:

IRON AND STEEL			
Mild steel bars, base	3 25	3 50	
Mild steel bands, 3-16 in. base	3 75	4 00	
Bar iron, base	3 35	3 50	
Angle iron, base	3 25	3 00	
Horseshoe iron	4 10		
Tire steel	4 75	5 90	
Spring steel	9 50	11 50	
Crucible cast sheet steel	30 00	35 00	
Mining drill steel	20 00	23 00	
Cast tool steel, medium		18 50	
Cast tool steel, high grade	30 00	36 00	
Sleigh shoe steel	4 10	4 50	
Norway iron		15 00	
Toe caulk iron	5 40	6 40	
Hoop steel	4 50	4 75	

SUBSTANTIAL DECLINE IN QUOTATIONS ON COR- RUGATED SHEETS

Toronto.

Another drastic downward revision is shown in quotations on galvanized corrugated sheets. The fall market for these products is stated to be somewhat below the average expectations, and when compared with the prevailing prices on flat sheets, the previous list registered a fairly large spread. This has now been changed, and the new level effects all gauges. The current discount remains as heretofore. Following are the new list prices on corrugated sheets:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 50
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	18 50
Less 7½%.	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

LEAD MARKETS REGISTER GAIN IN STRENGTH

Toronto.

While local quotations on lead and zinc goods remain unaltered, at present, it is noticeable that lead is now one of the strongest metals on the primary market centres. The trend of metals chiefly used in the production of solder is also being carefully watched, and upon future gain or loss in this direction rests the possibility of readjustments in solder prices. The prevailing quotations follow:

LEAD AND ZINC GOODS—

Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends, 10 per cent.	
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb	0 09½
Cut sheets, ¼c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 29
Do., commercial, lb.	0 20
Do., strictly, lb.	0 22
Do., guaranteed, lb.	0 24
Do., wiring, lb.	0 20
Zinc sheets, per lb.	0 13

BUSINESS IS GOOD IN ENAMELLED WARE

Toronto.

Business in enamelled ware was quoted as "good" by one local jobber when questioned in this regard by Sanitary Engineer, while another prominent dealer stated that they "had just about as much as they could handle comfortably." While this degree of improvement was not entirely unexpected, it still shows a more satisfactory condition than was the case earlier in the summer. As a result, quotations and discounts have remained unchanged, and although some revisions have been announced on closet outfit prices this readjustment has not yet extended to enamelled ware. Following are the prevailing prices:

ENAMELLED WARE—

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
All Steel Enamel Baths, 4, 4½ or 5 ft., net	\$16 25
Do., do., 5½ ft., net.	17 50

Lavatories—			
17x10" Apron F139 or P4045	15	30	
18x24" Apron F154 or P3845 or P3847..	23	60	
Sinks, Roll Rim, 16x24 in.	18	10	
Do., 18 x 30 in.	23	00	
Do., 20 x 30 in.	24	70	
18x21" Apron F169 or P4205	17	60	
18 x 21" Roll Rim, F197, F199 or P4655-6	15	40	
17 x 19" Roll Rim, F241 or P4345	12	60	
Sinks, Flat Rim—			
16 x 24	1 only	2 only	3 only
18 x 30	\$7 60	\$7 70	\$7 80
20 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90
All above list except lines marked net.			
Discount 20/10% off these prices.			

SIZE OF ORDER GOVERNS BOILER TUBE PRICES

Toronto.

A slight seasonable increase in business is reported by dealers in boiler tubes, this applying particularly to the smaller sizes. The uncertainty as to local market prices still continues, however, the quotation being made to fit the prospective order, wherever possible. Price shading in order to secure business, has been one of the features of the markets in steel products for the past few months. The following is a conservative list of prices quoted by various distributors of boiler tubes:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00
1¼ inch	27 25
1½ inch	26 25
1¾ inch	29 75	25 00
2 inch	28 00	22 00
2¼ inch	32 00	25 00
2½ inch	40 00	27 00
3 inch	44 00	35 00
3½ inch	60 00	40 00
4 inch	75 00	50 25

SCRAP BRASS PRICES SAG ANOTHER 25 CENTS

Toronto.

While the waste markets generally continue in their sluggish condition, hopes for some little improvement are now entertained. A few inquiries are reported to have filtered through, and as a consequence, a little more business has been consummated. In spite of this however, there is no real demand, the current purchases consisting of small lots for immediate needs only. The only change in price this week is another drop of 25 cents in yellow brass.

The following is the average of dealers buying prices for fairly large quantities.

WASTE MATERIALS—		
No. 2 busheling	11	00
Heavy melting steel, gross ton	9 50	10 00
R. Rd. wrought iron, No. 1, gr. ton	10 25	11 25
Scrap pipe, gr., ton	00	7 00
Stove plate, net ton	11 00	12 00
No. 1 machinery cast, net ton	15 00	16 00
Heavy lead	3 75	4 00
Tea lead	2 00	2 50
Red brass	9 00	
Yellow brass	5 00	6 00
Light brass	3 00	3 50
Heavy copper	9 25	10 00
Scrap zinc	3 00	3 50
Old rubbers, boots and shoes	2 00	2 50
Lumberman's rubber boots ..	1 25	1 75
Auto tires	0 50	1 00
Solid tires	0 75	1 25

NEW LIST PRICES ON RANGE BOILERS

Toronto.

The unsettlement that has recently prevailed in the markets on range boilers, has now been minimized to some extent through the announcement of an established uniform price on these products. The revised quotations are

slightly higher on the 30 and 35 gallon sizes, which are the two most popular ranges this season; while some downward revision from the previous list prices is shown on sizes 40 gallon and larger. Following are the new quotations:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$ 8 75	\$11 25
35 gallon	11 25	13 50
40 gallon	13 50	16 00
52 gallon	20 00	24 50
66 gallon	28 00	34 00
82 gallon	35 00	46 50
100 gallon	45 00	55 00
120 gallon	54 00	63 25
144 gallon	78 00

SOME AMERICAN MILLS RAISE PRICES ON SHEETS

Toronto.

The recent announcement by some of the smaller producing mills in the United States of higher quotations on black and galvanized sheets, has naturally attracted a certain amount of interest in local trade circles. Whether this move would indicate that prices on sheets and plates have almost reached bottom, and that this increase is the commencement of the turn in the tide, is yet too early to determine. It is noticeable in this connection that a waiting policy has been generally adopted by other producers.

Local quotations are generally unchanged and the announcement that lower freight rates are withheld pending the final settlement of wage arbitration proceedings, has now produced the feeling that lower prices on sheets and plates cannot be expected from the source of reduced transportation charges for some few months.

BLUE ANNEALED—		
10 gauge, base	4 00	4 50
12 gauge	4 05	4 55
14 gauge	4 10	4 60
16 gauge	4 15	4 65

BLACK—		
18-20 gauge	4 55	5 05
22-24 gauge	4 60	5 10
26 gauge	4 65	5 15
28 gauge	4 75	5 25
Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.		

GALVANIZED—		
	Queen's Head.	Fleur-de-lis.
28 gauge	9 50	8 75
26 gauge	9 25	8 50
24 gauge	8 65	8 10
22 gauge	8 30	7 65
18 and 20 gauge	7 60	7 50
Premier and Apollo—		
10¾ oz.	6 50	7 50
11. S. 28, base	6 10	7 10
11. S. 26	5 80	6 80
22 and 24	5 65	6 65
18 and 20	5 50	6 50
16	5 35	6 35
12 and 14	5 20	6 20

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is from 20c to 30c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

PRICES LOWERED ON CANADA AND TIN PLATES

Toronto.

Extensive reductions in prices on Canada plates now appear on the local market. A revision to a lower price level is also given on charcoal tin plates. Dealers report that there is a fair demand for these products, with a normal degree of activity in furnace and

stove repair work. Following are the revised quotations.

PLATES, CANADA—		Per box
Dull, 60 sheets	5 95
Ordinary, 52 sheets	5 90
PLATES, COKE TIN—		
1X, 20 x 28, 11 2sheets	20 50
1X, 20 x 28, 56 sheets	12 00
PLATES, CHARCOAL TIN —		
1X, 20 x 28, 5 6sheets	14 00
1XX, 20 x 28, 56 sheets	16 00
PLATES, TERNE—		
1C, 14 x 20, 112 sheets	12 00

LOWER QUOTATIONS ON COPPER AND BRASS GOODS

Toronto.

As outlined in the market reports contained in a recent issue of Sanitary Engineer, the reductions on copper and brass goods have now developed. Sheets, rods and tubing, are affected by these current price changes, the extent of which shows an average decline of two cents per pound. Following are the revised price levels:

BRASS—	
Sheets base, per lb.	\$ 0 26
Rods, base, per lb.	0 28
Tubing, base, per lb.	0 32
COPPER—	
Rods, base per lb.	0 30
Soft sheets, plain, 1 oz. and heavier, lb.	0 30
Do., plain tinned 16 oz. and heavier, lb.	0 38
Do., polished and tinned 16 oz. and heavier, lb.	0 43
Tubing	0 31

IRON RIVETS AND BURRS NOW REVISED LOWER

Toronto.

Through a revision in discounts, a 9 per cent decrease in prices on iron rivets and burrs is now effective. This change was made effective from September 10, and the new quotation is 50 per cent off list on 200-lb. kegs. The previous discount was 45 per cent on both the rivets and burrs.

REVISED DISCOUNTS ON STOVE BOLTS

Toronto.

A reduction of approximately 7 per cent has been announced in prices on stove bolts. This is the second lowering in quotations which has taken place in as many months, and as before, this revision is obtained through changes in discounts. The quotation is now 67½ per cent, whereas the former discount was 65 per cent.

QUOTATIONS ON HAMMERS

LOWERED FROM 5 TO 10%

Toronto.

Reductions in the prices on various makes of hammers are announced by the manufacturers Canada Foundries and Forgings Limited. The decline is effective September 20, and covers a 10 per cent. reduction on Diamond G hammers, and a 5 per cent. lowering in prices on the Thousand Island line of hammers. Quotations are also reduced to the extent of 10 per cent. on sledge and striking hammers.

FIRM UNDERTONE IN COTTON WASTES

Toronto.

While cotton waste markets have recently registered a gain in strength owing to the sudden rise in raw cotton prices, fluctuations on the cotton markets have kept the price situation on

Mueller Self-Closing Basin Cocks

The patented construction here shown positively prevents leakage and waste—an item of the utmost importance in all buildings—residences, clubs, hotels and office buildings.

Mueller Self-Closing Faucets are made from superior metal, by skilled workmen, in the foremost brass goods factory, and are guaranteed to give lasting service and thoro satisfaction, at the lowest cost of upkeep.

Made in a variety of patterns, to meet every requirement, these goods have long been recognized as the true standard of excellence—in quality, in efficiency and in economy.

Detailed information and prices on request.

H. MUELLER MFG. CO., LIMITED, SARNIA, ONT.

Water, Plumbing and Gas Brass Goods and Tools.

American Factory at Decatur, Ill., U. S. A.

Branches, New York and San Francisco

Mueller Metals Co., Ft. Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; Die Castings in White Metal and Aluminum; also Screw Machined Products.

cotton wastes a little uncertain. Local dealers, in some cases, are looking for an advance in waste prices, but the increase is not yet applied owing to the stocks on hand. It is noticeable that large manufacturers are not purchasing heavily at the present level of raw cotton, and that stocks of cotton goods have only reflected this inflation in cost of raw materials to a moderate extent. On the basis of higher prices for raw cotton, some revision in quotations on wastes are not considered unlikely, but local prices are at present unchanged, pending the activity of primary markets.

REPORT METALS REACH BOTTOM OF TRADE DEPRESSION

Toronto.

There is still general depression evident in the metal markets. While slight variations in the different metal quotations have taken place from time to time, there still remains almost limitless room for improvement in the direction of stability and strengthened tone to these markets. The general lack of demand and the consequently existing conditions in the trade, has forced many producers to discontinue operations, but in spite of this fact, present stocks are said to be well able to care for prevailing consumption which has shown little or no signs of increasing.

On the other hand, reports of anticipations in respect to betterment in the near future have recently emanated from the U. S. markets, and a slightly firmer undertone in some metals is indicated. Local ingot prices, however, generally remain unchanged at the following levels:

Copper,—17 cents.

Tin,—35 cents.

Lead,—\$6.75.

Spelter,—\$7.00.

Antimony,—8 to 10 cents.

Aluminium,—28 to 29 cents.

PRICE REDUCTIONS STIMULATE TRADE IN BUILDING PAPERS AND ROOFINGS

Toronto.

Manufacturers and distributors of roofings, building papers and similar products state that the current demand for these lines is good. Some dealers are of the opinion that the present movement is better than was expected, and the proportion of fall building has reflected a marked improvement in activity over the previous summer months. The various reductions in prices on these commodities that have been recently announced, has also had a contributory effect towards increased business during the current season.

IMPROVED BUSINESS IN STOVES AND RANGES

Toronto.

Both manufacturers and wholesalers now report a more active movement in stoves and furnaces. As a general rule this is business which appears during the months of July and August, but these two months this season were path-

etically dull from a new business viewpoint. However, dealers now report that the orders are arriving in nice volume, and the various shipping departments are throbbing with renewed activity.

Electric ranges are evidently gaining in popularity this year, if the proportion of sales is any indication, as jobbers state that this style of range is moving well. Furnace work is also showing much improvement, with the spread of more direct knowledge as to installation and effects, both from a theoretical and practical standpoint. Stove and furnace repair work is generally only of a medium character this fall, as much endeavour in this line was undertaken during the past two seasons when repairs were made to ranges, and so on, from the sense of economy. Dealers now feel that a fair proportion of sales are maturing, and evidently hope for an averagely prosperous fall season in stoves ranges and furnaces.

MOVEMENT OF CONDUCTOR PIPE AND EAVESTROUGH SHOWS SOME IMPROVEMENT

Toronto.

The current movement of eavestrough, conductor pipe and conductor elbows is reported to be well up to last year's volume and is generally now more satisfactory. The nature and proportion of fall building activity has been reflected in this improved demand for eavestrough and pipe, while the recent price lowering on these products, is considered to have had a stimulating and encouraging effect towards home improvement and erection. Following are the unchanged discount quotations:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth:

	Per 100 ft.
8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50
Less 60-10 per cent.	

PIPE (CONDUCTOR)—

Plain, round or corrugated.

	Per 100 ft. in 10 ft. lengths.
2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	23 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00
Less 60-10 per cent.	

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 55 per cent.	

CEMENT SALES IMPROVE

Toronto.

The recent improvement in the volume of home building and other seasonable construction work, has been reflected in the demand for concrete. While sales are reported to have recently attained a more active stage, stocks in the hands of cement manufacturers are described as ample. Production of this building commodity has been well up to the average this season, but the lower prices recently announced, have had some effect in stimulating current building activity. Following are the prevailing local quotations on cement:

CEMENT—

Car load lots.	Toronto.
Per barrel	4 00
Less car lots	
Per barrel, f.o.b. yard	4 75
Per barrel, delivered	5 00
Single bags, \$1.25 each; 4 bags to barrel.	
Extr. charge of \$1.50 per load on less than 24 bag lots.	
Rebate of 20 cents for empty sacks.	

REVISED DISCOUNTS ON STANDARD COMPRESSION WORK

Toronto.

Further revisions to lower levels are now given in the discounts on certain lines of compression work. A reduction of approximately 10 per cent is announced on standard compression work, while the discounts are also changed on compression bath cocks, standard flat way stop and waste cocks, and quick opening basin cocks No. 3633.

The present market for these products is stated by various dealers to be fair, but it is not generally considered good, for although a medium volume of trade is recorded, the movement is spasmodic.

Following are the new discounts:—

	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecoaks, stand'd	46
Roundway stop and waste cocks, std.	40
Brass steam cocks, standard	10
Globe angle and check valves, std.	20
Mueller globe, angle and check	20
Mueller composition disc steam valves ..	20
J. M. T. valves	20
J. M. T. C.	25

Gate or straightway	16-10
Jenkins globe	10-10
Radiators valves, standard	58
Do., removable disc	58
Emco, J. D. valves	20
Emco, check valves	20
Webber gate valves	20
Basin cocks—	
No. 1 and 1, Fuller pattern	30
Quick opening No. 3633	43

REVISED QUOTATIONS GIVEN ON CLOSET COMBINATIONS, TANKS AND BOWLS

Toronto.

An increase in the prices on closet combinations, and some reductions in quotations on closet tanks and bowls, constitutes one of the feature price revisions on the current markets. The lower price levels recently existing on the standard combination closet outfits is stated as having been too low when compared with production costs, and any slight unsettlement which may have developed between jobbing houses because of this factor, is expected to be eliminated through the prevailing readjustment.

The movement in these products is described as fair, and following are the revised quotations:

CLOSET COMBINATIONS, low down.	Each.
Closet, standard outfit oak	28 00
Do., with post hinge seat	28 75
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover...	31 00
Do., vitreous china, with oak post hinge seat and cover	31 55
Do., vitreous china, with mahogany post hinge seat and cover	31 75
Do., white Vitro or Pussyfoot, with oak post hinge seat and cover	31 55
Do., white Vitro or Pussyfoot, with mahogany post hinge seat & cover	31 75
Do., enamelled iron tank with oak post hinge seat and cover	31 55
Do., enamelled iron tank with mahogany post hinge seat and cover	31 75

M Brand Pipe Fittings, Screwed or Flanged, Black or Galvanized.

We are equipped to make the general run of malleable and grey iron castings for machinery manufacturers, agricultural implements, automobiles and specialties.

Cast Iron Fittings

stamped with our trade-mark mean fittings made with iron of high tensile strength — proper proportions and correct tappings.

**RECESSED
DRAINAGE
FITTINGS**

Malleable Fittings

of our brand mean fittings made of *Air Furnace Refined Iron*, reamed and tapped to gauge with perfect threads.

A trial of our pipe fittings will prove the quality of service they give.

Oak, oak Vitro or Pussyfoot tank with fittings, less seat	13 10
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 25
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	20 25

CLOSET SEATS—	
Oak wood strip seat and cover	3 70
Oak post hinge seat and cover	4 75
Mahogany finish post hinge seat & cover	5 00

WROUGHT COUPLINGS AND NIPPLES AGAIN REDUCED

In conjunction with the recent change in prices on piping, the quotations on wrought iron nipples and couplings are also revised. The change is in the nature of a reduction, and varies approximately between 7½ and 10 per cent. on the different sizes, five points being added to the discount figures. The recent readjustments on bushings, plugs, and unions, are still maintained, and following are the current quotations on pipe fittings generally:

PIPE FITTINGS—		Per cent.
Cast iron fittings		20
Plugs, cast iron		25
Do., solid		25
Do., countersink		25
Bushings		25
Unions, ¼ in. to 2 in.		40
Do., 8 in., 2¼ to 4 in.		40
Flanged unions		20
Dart unions, blk., ¼ to 2 in.		29
Do., ½ in., 2¼ to 4 in.		14
Do., galvd., add to black		30
Nipples, blk., and galvd. ¼ to 4 in.		
close and short		50
Do., 4½ in. and larger		40
Do., long, ¼ in. to 4 in.		60
Do., 4½ in. and larger		50
Do., running thread		30
Couplings, 4 in. and under		30
Do., 4½ in. and larger		10

MALLEABLE FITTINGS—		Black	Galvanized
Class A		0 58	0 72
Class B		0 22	0 32
Class C		0 14¼	0 22

WINNIPEG MARKETS

WINNIPEG, September 26.—Price changes in plumbing and steam fitting supplies are not as numerous of late, but some revisions have been recorded on various lines of compression work, such as bath cocks, compression bibbs, and stop and waste cocks. A firm tone has developed in cotton waste markets, while some revisions in wrought piping are looked for in some quarters.

The total volume of trade has recorded very little improvement, however, and no marked increase in business is now anticipated prior to next spring.

PIPE MOVEMENT IRREGULAR

Some revising in quotations on wrought piping are looked for in certain quarters.

The movement of piping has been very irregular during the past few months, but has been satisfactory from the jobber's standpoint. Outside dealers' stocks have been kept low during the summer, and the buying has been purely of a sorting character. A fairly steady movement is anticipated, however, in the coming fall period.

NEW PIPE LIST SHOWS 7½ TO 10 PER CENT. PRICE REDUCTION

Toronto.

A new pipe list has now been issued thus superseding No. 52, of July 11. The revised table, No. 53, dates from Sept. 22, and shows a reduction of from 7½ to 10 per cent. in the prices on wrought iron piping. Recent easier market tones in steel products generally, have extended to tubular goods, and the current revision supplies a change in the downward direction, which is said to be based upon some slight reductions in cost levels, coupled with the irregular demands for piping which has been more or less noticeable all through the season. The general movement is more pronounced in the smaller sizes, a factor which is featured indirectly in these prevailing revisions, as a higher percentage of price reduction is given on the larger sizes. Following is the new pipe list:

WROUGHT PIPE—LIST No. 53 Standard Butt Weld Pipe S/C Per 100 feet.					
Size		Steel		Gen. Wrot. Iron	
		Blk.	Galv.	Blk.	Galv.
1¼ in.		\$ 6 00	\$ 8 00

REVISED DISCOUNTS ON COMPRESSION WORK

Winnipeg.

Quotations have been reduced on various lines of compression work. Following are some of the revised discounts and net prices now prevailing on local markets:—

COMPRESSION WORK—

Basin cocksoff list	23 per cent.
Pantry cocksoff list	28 per cent.
Bath cocks, No. 2360, without tail pieces,		
each	5 10
with tail pieces	6 30
Quick pressureoff list	38 per cent.
Compression bibbsoff list	35 per cent.
Compression stopsoff list	35 per cent.
Stop and waste cocksoff list	35 per cent.
Sill cocksoff list	45 per cent.

RANGE BOILER PRICES HOLD

Winnipeg.

Prices remain firm on Range Boilers and the opinion is that they will likely hold for some time at present prices.

Following are the latest quotations:

RANGE BOILERS—

Size.	Price, each.
30 gal.	\$10 00
35 gal.	13 25
40 gal.	16 25
45 gal.	23 45
52 gal.	33 15
66 gal., No. 2360	40 60
82 gal.	62 50
100 gal.	75 00
120 gal.	

COTTON WASTE MARKETS FIRMER

Winnipeg.

The recent improvement in raw cotton markets, and the advanced quotations on manufactured cotton goods, has been reflected in the tendency to firm up prices on cotton wastes.

The prices on both white and colored cotton wastes which recently came into effect are being well maintained, with no further price revisions, as yet, —having been made.

Following are prevailing quotations:

WASTE—

Cream polishing, per lb.	0 24½
White—	
XXX extra, per lb.	0 21
XX grand	0 20
XLGR	0 19
X empire	0 17½
X press	0 16
Colored—	
Fancy	0 17½
Lion	0 16
Standard	0 14½
Popular J.	0 18
Keen	0 11½

Above prices are subject to trade discount.

QUOTATIONS HOLD ON PIPE FITTINGS

Winnipeg.

Although business in pipe fittings is a trifle better it is not up to trade expectations. Prices are still firm and no changes have been announced.

Following are the current quotations:

PIPE FITTINGS—

Cast ironoff list	15 per cent.
Reducersoff list	20 per cent.
Bushingsoff list	20 per cent.
Plugsoff list	20 per cent.
Unions, std.off list	35-5 per cent.
Dart, ¼ to 2 in.off list	29 per cent.
Do., ½, 2* to 4 in.off list	15 per cent.

Malleable fittings.

Class Aoff list	55 per cent.
Class B & Coff list	65 per cent.

Kerr Valves

Give
Character
to Work

They reflect credit on the man who specifies them, the man who installs them, and they give complete satisfaction to the men who use them.

Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face to face dimensions; observe the accessibility of the stuffing box; the strong, generous flanges and the properly spaced bolting.

KERR VALVES ARE GOOD VALVES

JARDINE

Pipe Threading Tools

In these effective tools the dies open out as the tool advances on the thread so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter mouth. Beautifully designed machines in which there are no com-

plicated contrivances to get out of order and make trouble. They work easily, smoothly, rapidly and accurately. A. B. Jardine and Company, Limited, are the sole makers of "Jardine" Pipe Threading Tools and the sole licensees to make and sell "Toledo" Tools in Canada.

When writing advertisers please mention that you saw their advertisement in the *SANITARY ENGINEER*

Good Business

We are now in times when business is to be gotten only by spending plenty of energy and thought in securing it.

The Plumbing and Heating trade, however, has many opportunities for the development of business.

For instance, what do we lack in Canada to-day more than sanitary conveniences, and what is more important to the health of the public than proper sanitation and adequate heating facilities?

It will pay you to follow Sanitary Engineer from now on more closely than ever. Every successful business man must keep his fingers on the pulse of his business.

The editorial contents is replete with ideas for securing business and holding customers and in the advertising pages you will find the products of advertisers who publicly "dare risk on them the honor of their names" in bringing the quality and service of their goods to your attention--watch the advertising pages.

True Economy Stack Heater

The Stack Gas Water Heater will heat water in one minute.

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated.

Take notice of the small size and large number of coils; this means quick heat. The numerous small pipes will naturally heat water quicker than one big pipe because of the greater heating surface offered.

More hot water with smaller consumption of gas—that's true economy.

Victory Radiators

SAVE ON

**Coal, Cost of Installation, Shipping and
Handling, Weight and Fittings**

They are superior in design and arrangement; artistic in appearance. Steel tubing is thinner and more effective in radiation so that advantages in air circulation are gained. There are two flat, hollow castings, forming

a top and bottom part, with tubes inserted—double tubes, one within the other. The water circulates between the two tubes and through the headers. They require less water to be heated, permitting a smaller furnace, and consequent fuel saving.

Write to-day, asking for literature which will make clear the large number of advantages in Victory Radiators.

VULCAN Pure Air Furnace

We want you to know about this furnace; it will be good for your business. You can install Vulcan Pure Air Furnaces very profitably. We want you to know the details and what's in it for you. Write us today. Just put on a post card, "Vulcan Pure Air Furnace" with your name and address, address it and mail it to us. These reliable furnaces are economical, easy to operate, have a greater radiating surface, and the heavy metal makes them very durable. Read what impartial users have to say for them:

London, Feb. 11th, 1921.

Gentlemen:—

I have used the Vulcan Pure Air Furnace for several years. I find it economical on fuel, easy to operate, and as it has a greater radiating surface than any other in its class, I have been well pleased with the results. I can recommend its use to any. I believe it to be durable on account of the heavy metal in its construction.

DR. COPELAND.

London, Feb. 11th, 1921.

Gentlemen:—

I wish to express my opinion of the Vulcan Pure Air Furnace. After five years' experience with it in my thirteen-room house, I can truthfully state it to be the most economical, durable and all round satisfactory furnace of its class made.

MR. C. H. SUMMER.

R. R. No. 8.

London, Feb. 10th, 1921.

Gentlemen:—

I have been using the Vulcan Pure Air Furnace for the past five years. Have had thorough satisfaction in heating a twelve-room house in which I live. Have found this furnace very economical on fuel according to the amount of fuel consumed by other furnaces not doing the amount of work that this Vulcan does. I recommend this Vulcan Furnace to its full extent for economy, satisfaction and durability.

Pilot Superior Pipeless Furnaces

When you specify, or install, Pilot Pipeless Furnaces, you are not only giving your customer good service and a square deal, but building good-will and future business.

Pilot Superior Pipeless Furnaces cost less to install; they do not block up the cellar with a lot of costly pipes; no remodelling of the house is needed, merely one hole cut in the floor.

In this effective, pipeless system, the heated air leaves the central portion of the one large register, circulates through the house, because lighter than cold air, and, having warmed the rooms, cools and returns to the lower levels of the house. There it enters the outer portion of the register into an exterior casing of the furnace. It is then reheated by passing over the hot castings of the furnace. Ask for literature, to-day. This Pipeless Furnace is going to pay you!

Only a VITRO Tank Can Give VITRO Profits and Satisfaction

THE material alone hasn't made the Vitro Tank what it is to the public and the plumbers of Canada. In fact, a lot of the folks who know Vitro as the name of "the high-class tank," don't even know what it's made of.

They expect a square deal from a Vitro Tank, just as the plumber does, because Vitro Tanks have taught them to expect it.

They expect better service—because the Vitro has always given better service. So that Vitro is not only the

name of a material from which a tank is made. It means:

- the quality of that material
- the way that tank is made
- the sort of fittings inside the tank
- the service those fittings give
- the satisfaction the tank brings to the buyer.
- the clear profit it brings to the plumber.

The tank that has made thousands of dollars for Canadian plumbers, and won the confidence of Canadian people is the Vitro—

And the Vitro is made exclusively, in Canada, by

?

Why Do the Best Heating Engineers

INVARIABLY INSTALL

SPENCER?

Self Feeding Boilers

Hot Water—10 sizes
600 to 3,600 sq. ft.

Because—Every Owner of a Spencer Self-Feeding Boiler saves from THREE to FIVE Dollars on every ton of coal required to heat his premises, and is DELIGHTED with the constant service he receives from the Boiler with so little attention.

And—This small-sized No. 1 buckwheat coal which the Spencer burns successfully, is always available. The only other known types of boilers that will burn this extremely low priced fuel are the mechanically-equipped boilers, and many factories are now equipping their boilers to burn coal in a powered condition. Of course the Spencer will successfully burn fuel in the larger sizes.

And—The magazine of the Spencer holds a 24-hour supply of fuel. The fuel feeds at a tempered condition in thin fires over the arched grates in exact proportion as the fuel is consumed, thus eliminating waste and allowing perfect control of firing conditions.

And—Spencer Boilers are known to maintain temperatures for a period of 48 hours in the coldest weather without attention.

THOUSANDS of Spencer Boilers are now in operation in various parts of Canada and the United States. We can refer you to almost every known type of building where Spencers are successfully operating. We Manufacture in Canada the Spencer Cast Iron Sectional type of Boilers in ten different sizes ranging in capacity from 600 square feet to 3,600 square feet, and the Spencer for steam is of fire and Water-tube steel construction, ranging in capacity from 1,000 to 10,000 square feet, there being twenty sizes. Let us co-operate with you on the sales in your district. There is a SPENCER for every heating requirement.

Give us your address—NOW.

"Pot Luck" Changed To Lucky Pot

By Booster Binx

Remember the good old days when round boilers used to be made in one piece above the ash pit.

What fun it was to get them down cellar stairs, even if one did sometimes give you the slip and gave you a couple of weeks off in a hospital ward.

But, best of all, were the good old days that came after that; when fire pots and crown sheets were made in one piece. Then when a pot cracked, you could sell a man half a boiler to repair it.

But heck!—what brutes those boilers were to set up! And a lot of customers got pretty hot under the collar when a pot cracked and your bill came in for the cost of replacement.

Come to think about it, all of us are glad those days of pot-luck are gone, now we have our Lucky Pot. A pot with the crown sheet made in a separate section. Next time we have a chance alone, want to tell you about some **new** thoughts I got from an **old** man.

Dripping and Venting Ends of Steam Mains

Judgment must be exercised in the provision of drips to remove the condensate from the steam mains. On the Dunham Home Heating System this is best accomplished by a wet drip, free from dirt, and taken from the end of the main or at any points where the main has been raised to pass over obstacles. All such drips should be sealed below the waterline of the boiler before they are joined together into a common wet return to the boiler header.

The end of each main or branch main, where wet drip is applied, should have a vent taken off through a No. 1 Dunham Trap, so that all air in the main can be expelled. Otherwise, an air lock in the end of the steam main will cause erratic circulation of steam to the last riser or radiator connection on the circuit.

The discharge from the Dunham Trap venting the end of the steam main should be made into the dry return as illustrated. The air then passes out of the return piping along with the air from the radiators, and in all cases the Dunham Traps close off and prevent the waste of any steam. (The above method cannot be used on a Dunham Vacuum Heating System.)

In some cases it is impracticable to carry wet drips back to the boiler, and then a Dunham Drip Trap installed as shown would handle both air and water of condensation from the main.

* This is the fifth of a series of talks on steam heating, appearing monthly in Sanitary Engineer. You will find all very interesting and of help in your daily work.

Plumbing Replacement Opportunities

Closer Co-operation Between Health Officials and Plumbing and Heating Engineers Develops Much Work for Operators—Much Plumbing and Heating Work Available Due to Recommendations of Health Officials—Heating Standards Recommended—Housing Shortage Has Created Difficult Sanitary Problem—Common Defects in Plumbing and Heating Equipment

UNDER prevailing conditions when the lull in the building trades has made it more than ever necessary for the plumbing and heating operator to look to replacement work in existing buildings, as a means of maintaining activity in his business, it becomes interesting to note that certain influences are at work to encourage the adequate installation of plumbing, heating and ventilating facilities. The following details, supplied to Sanitary Engineer by the City Health Department of the City of Winnipeg, indicates the nature of defects being experienced in plumbing and heating installations, also the extent to which the recommendations of health inspectors concerning installations of plumbing, heating and ventilating equipment, are being acted upon. This is one of the most important phases of progress now being made in connection with sanitation and the adequate solution of heating problems and the details given herewith indicate a line of work in which the local plumbing and heating engineers might well co-operate with health officials, particularly in view of the need for securing all possible replacement work. The following details cover the operations of these health officials for the year ending December 31, 1920, which are just now available for Sanitary Engineer readers.

Owing to preventive measures having been taken in time, the number of frozen plumbing and water pipes was greatly reduced even though the winter of 1920-21 was much more severe than the previous year. The report would seem to indicate that a large number of older houses have been repaired in such a manner as to better protect the fixtures and piping. During the last few years the Department has caused a very large number of the old earth dug-out cellars to be rebuilt or filled in. Such old type cellars are a perpetual source of trouble and are extremely insanitary. There are many tenants who would perpetuate them by rebuilding wooden walls and floors. The Department has refused to eject tenants on account of frozen plumbing at the instance of the owners and has insisted on the plumbing being thawed out and properly protected.

There likely were many vent stacks frozen during the winter which were not reported, in fact many tenants do not even know when the vent stack is frozen. In houses provided with intercepting traps the danger of sewer air entering the house through syphoned traps is not so great, but where there is no house-trap, and it is in such houses that the freezing of vent stacks mostly occurs, the condition is serious. In all new plumbing installations in this city the house-trap is now obligatory.

Of the total of 2,178 plumbing defects reported in the year, 1428 were due to defective or choked drains, sinks, baths, wash basins, W. C.'s or other fittings. The overcrowding of available housing accommodation has made the sanitary equipment

of many houses hopelessly inadequate and not always accessible. Such overcrowding is open to grave objection both on sanitary and other grounds. In many cases of complaint it was on the basis of an inadequate supply of plumbing fixtures. The report recommends that if such houses are to be allowed to remain occupied by more than one family the installation of additional plumbing fixtures should be insisted upon without delay.

Although not many new sewers were constructed during 1920 the report shows a considerable decrease in the number of outside privies, this in spite of the fact that a number of houses were newly constructed on streets without sewers.

In regard to the question of the heating of homes, a plea for a standard of heat warmth is put forth in the report as follows:—"It has been pointed out in previous reports that no standard of warmth in dwellings is required by our building by-law, and that as consequence in years gone by a very large number of houses were built for speculation which are not at all suitable for such a severe climate. These houses are still occupied and cost the occupants a good deal more for fuel every year than is at all desirable. At the present price of fuel the aggregate cost each year is enormous. The coldness of such houses is also a source of much inconvenience and sometimes even downright misery to the unfortunate occupants by reason of frozen plumbing and of much expense to both owners and occupants for plumbing bills. Why not prevent this by providing in the Building By-law for a minimum standard of warmth in construction of all new houses?"

Ninety-three cases of defective furnace and heating apparatus were reported. Many complaints were received of lack of sufficient heat, this arising in many cases through spasmodic and irregular firing due to the fact that caretakers in some cases do not live on the premises. There is no law to regulate the quantity of heat to be supplied.

The report points out that in choosing the fuel more care should be exercised and the area of the grates considered. High ash coals cannot burn satisfactorily on grates with only 30 to 35 per cent. air space without forced draft. If grates were installed with air spaces not less than one-half inch wide the smoke problem in many cases would be easier to handle.

The most common defects in plants where horizontal return tubular boilers are installed is the lack of sufficient draft, inadequate air space in grates, and insufficient combustion space. Preventable heat losses are: loss from radiation; air leaks in boiler setting; tubes not properly cleaned or not attended to regularly. It would be to the interest of owners, especially in the smaller apartments, and buildings, to have an inspection made each year by an expert. The results in many instances would be astonishing and well worth the expense. The need for some

Move Plumbing Repairs in Special Sale

Under Heading "Be Your Own Plumber," the T. J. Minnes & Co., Brantford, Ont., Advertise Small Fittings and Repair Parts with Instructions Governing Installation—Making Specific Appeals In the Ads and Window Displays to Interest the Farmer, Housewife, Property Owner, etc.

A rather novel sale, in so far as the plumbing trade is concerned, was recently arranged by T. J. Minnes & Co., plumbers of Brantford, Ont. This sale took the form of special effort applied to small fittings such as taps, waste pipes, range boilers, etc., on the basis of purchasers being their own plumbers in so far as the installation of such fittings was concerned. In the publicity matter concerning the sale the phrase "Be Your Own Plumber" was prominent.

In discussing the results of the sale with a representative of Sanitary Engineer, Mr. Minnes stated that he had done an enormous amount of business in the lines enumerated and other similar goods. Terms with this firm are all strictly cash. Mr. Minnes admitted that he was a firm believer in cash business and that he is intending to practice it in future to an even greater extent in his business.

Advantage In Cash Trade

Mr. Minnes stated that while he might perhaps have done a bigger volume of

business in this sale, had a credit business been done rather than strictly cash, yet the disadvantages of having accounts on the books with collections rather slow as at present, were thought to outweigh the advantages and the cash business, though of lesser volume, to be more desirable. With collections slow credit accounts are frequently on the books for 90 days and this tying up of the plumber's capital is a serious drawback to the efficient methods needed to conduct business today.

Herewith is shown a group of three ads., recently used by T. J. Minnes & Co. The one entitled "Be Your Own Plumber" was used in connection with the sale already outlined. The ad. states "We will supply you with the best grade of guaranteed plumbing goods and advise you how to install them or how to make necessary repairs to taps, closets, pumps, boilers, waste pipes, etc. See our window display for repair parts. All guaranteed goods best manufacture."

Appealing To The Housewife

Another ad. by this firm dealing with

kitchen equipment states, "A Woman's desire is the convenience and appearance of her kitchen where she spends a great many hours of her time every day. The old kitchen sink is the worry of this room, but why should it be, when you can have, without much expense, a beautiful sink with roll rim and high back fitted with nickel plated faucets. Add for convenience an enamelled iron drain board, or for a little more expense a lovely combination sink and drain boards, as in the appearing illustration. May we give you a price on a new sink for your kitchen?"

The other ad. in the group makes a specialty of farm equipment stating; "The convenience of a city may be yours though living in the country, thanks to the modern home water systems. Nor is this achievement a convenience for rural homes alone, for many water systems are being installed in the city homes taking the place of the old fashioned unsanitary way of pumping the soft water to a tank in the attic.

Thursday - May 5/21

The Convenience of a City

May be yours though living in the country, thanks to the modern Home Water Systems. Nor is this achievement a convenience for rural homes alone, for many water systems are being installed in the city homes taking the place of the old fashioned unsanitary way of pumping the soft water to a tank in the attic.

This little pumping outfit is capable of supplying soft water for the ordinary home; larger systems to water the garden or the stock on the farm. Made for electric gasoline engine, or hand power. Write, 'phone call for further information without obligation to you, for we like to tell about them.

A Woman's Desire!

"Standard" Kitchen Sinks

IS THE convenience and appearance of her kitchen where she spends a great many hours of her time every day. The old kitchen sink is the worry of this room, but why should it be, when you can have, without much expense, a beautiful white sink with roll rim and high back fitted with nickel plated faucets. Add for convenience an enamelled iron drain board, or for a little more expense a lovely combination sink and drain boards, as in the appearing illustration. May we give you a price on a new sink for your kitchen?

The use of varying specific appeals in the plumbing advertisements is an important factor in the advertising of T. J. Minnes & Co., Brantford, Ont. A study of these three ads by this firm will indicate a definite and strong appeal to the farmer, to the housewife, and to the handy man around the house—to those who prefer to instal their own minor plumbing fittings. The idea introduced in the ad headed "Be Your Own Plumber" was to get people to buy repairs for taps, closets, pumps, boilers, waste pipes, etc., and to instal these themselves on the instructions given by this firm.

Small Set of Books for Plumbers

Proper Bookkeeping in the Plumbing and Heating Shop Commences with Small Set of Books for the Small Operator, Allowing Expansion as Business Grows—Valuable Information Based On Findings of National Trade Extension Bureau

IN RESPONSE to several requests for information concerning the establishment of a small set of books for the small plumbing and heating contractors and in view of the existing need for education on efficient business methods to enable the profitable conduct of this line of business under existing conditions, Sanitary Engineer is reproducing a series of articles on this subject, commencing with this issue. For much of the information contained therein Sanitary Engineer is indebted to the U. S. National Trade Extension Bureau which has made a study of accounting needs of the small plumbing and heating contractors in that country, the results of which should prove helpful to Canadian contractors who apply them.

The books and forms covered in these articles are intended only for the contractor doing most of his own work, or employing only one journeyman. Such a business is of a size that enables the proprietor to be in close touch with every detail at all times. For this reason we are eliminating some of the forms used in larger shops. But, as the business grows and the contractor is obliged to get away from detail he should add the other forms from time to time as needed, thereby protecting his business from the leaks that will occur if he does not do this.

Every business, no matter how small, should have a record of the following:

What They Sell.

What They Buy.

Cash received and spent.

Each of these records should be separate from the other, but the information contained in them should be brought together once a month in order that the owner may know how he stands.

The above information is usually carried in the following books:

Day Book.

Journal.

Ledger.

Workman Order Blanks

The T. E. B. "Day Book," instead of being the usual ruled book, is a pad of "Workman Order" blanks, where all information regarding each job can be entered on one sheet. On the top of this pad are two sheets where the order can be entered as soon as received. This entry is merely a memorandum of who gave the order, where the work is to be done and what is to be done. Below these two sheets are fifty order blanks in duplicate, numbered consecutively. One of these sets is to be filled out for every job to be done. The duplicate copies are made by the use of a back of each pad.

Illustration of Workman's Order

The yellow sheet or carbon copy is to be torn out, and taken by the workman. It is perforated for that purpose. On this sheet is to be entered everything in connection with the job. Every article of material taken to the job, each article returned, and every item of expense, in connection with the job.

When the workman has finished the job, he presents the yellow sheet to the customer, showing just how much time has been charged for, what materials have been used, and what other expenses if any, are to be charged. The customer signs this sheet thus approving the charges as noted.

This yellow sheet is then brought to the office, and all information on it is checked up against that shown on the white sheet. At this time, all information on the yellow sheet that is not in evidence on the original white sheet is added to the entries on the white sheet. These white sheets are wire stitched together, and numbered consecutively just like a bound book. Thus you have a regular Day Book, with a separate page for each job, and all information concerning the job is on one sheet. The proper spaces and headings are provided to show the Selling Price and Cost Price of each item. Also to show the total costs and profits.

The Journal and Cash Book is in three sections; one for Sales, one for Purchases, and one for Cash. Using loose leaf sheets as we do, we put these three separate sections or books all under one cover or binder.

SALES JOURNAL

In the first section, or "Sales Journal," you enter each and every sale. This information is taken from the Day Book or white copy of the "Workman order." This is nothing more than a list of all orders showing in a total the information that is given in detail on each order. By this method you are able to tell at any time what your net profits have been for any period.

The "Purchase Journal" is for a record of every purchase you make, whether for Cash or on Credit. The proper columns and headings are provided to show what each purchase is for, and to enable you to tell what amount has been spent for each item of your business.

The "Cash Book" is for a record of all cash received and paid out.

In the same binder with these is a simple form of monthly report or trial balance that will tell you just how you stand every month, and how much money you have made.

In addition to the "Day Book" and the "Journal," you need a "Ledger" in

which to keep a record of what each customer owes, and what you owe each of your creditors. This should be loose-leaf. Both Ledgers are in one binder.

Your set of books then consists of three books: Day Book, Journal and Ledger.

Is this article we show an illustration of the "Workman Order," office copy of this form completely filled out.

The proper method of using the Sales Journal will be discussed, and the "Workman Order" shown, used as an illustration.

The conditions existing in the shop used as an example here are as follows:
Labor Costs \$1.00 per hour
Labor Sells for \$1.70 per hour
Overhead is 30% on Sales.

Material is priced on the 100 List basis.
Material:—As stated the 100% List method is used in pricing, therefore one-half of the total List Price of Material is taken as the cost. This is \$3.28 which is one-half of \$6.55.

Labor:—As stated \$1.00 per hour is being paid, therefore 5½ hours would cost \$5.50.

Overhead:—Our basis is 30% on Sales, 30% of \$17.30 the Selling Price is \$5.19, which is the amount shown for Overhead.

Truck:—We enter as the Cost of this service the amount charged. Our reason for this is to credit our Truck Account with its earnings, and see at the end of the month or year how near our Truck comes to being self-supporting. By doing this we reduce our Overhead percentage without losing any money. Only those who get Truck service are charged with it.

Now a few words as to how we arrived at our selling Price. Reference is made to the chart issued by this Bureau giving suggested discounts from the 100% List. The last right-hand column covers transactions where list price material is under \$10.00. Taking the line marked Class A where the Overhead is 30% we find it necessary to add 11% to the List Price in order to make the suggested profit, and also to take care of the 30% Overhead. To simplify we have reduced the percentage to 10. This gives us a selling price for our Material of \$7.20. To this we add 5½ hours labor at \$1.70 or \$9.35 and 75c for truck service, giving us our Selling Price of \$17.30.

Let us now assume that all our figures are complete on the "Workman Order."

In addition to knowing what our profit is on each job we also want to know what our profits are for each month. For this purpose we need a sheet on which to enter results of each job, and arrive at a total.

This is accomplished with the Sales Journal. Herewith is given a cut of the top of the sheet showing the entry of the job illustrated.

You will note the headings of the various columns correspond to the headings under Cost Recap on the "Workman

Order," and that they are in the same order. This means that entries on the Sales Journal are nothing but copying from the "Workman Orders." For such headings on the "Workman Order" as are not provided with columns there is a Miscellaneous column. This column has space provided in which to write the name of the account.

Your attention is next called to the headings Debit and Credit. These are to indicate which side of the Ledger Account the items or totals of the respective columns are to be posted on. For instance each item in the Customer's Account column is to be entered on the Debit side of the account you have with your customer in the Ledger.

You will note on the entry shown that the totals of the amounts appearing under credit equals the total of the amount appearing under Debit \$17.30. This follows out the first principle of Double Entry Bookkeeping, that in every entry the Debits and Credits must be equal.

When a page of the Sales Journal is filled, foot each column, and test the correctness of your work by seeing that the sum of the Debit column totals equal the sum of the Credit column totals. When all transactions for the month have been entered, add-up each column and apply the same test. Carry forward underneath the month's figures, the totals from the previous month. You then have a statement of your sales for the month and for the year to date.

There are two points in connection with the Sales Journal to which particular attention is directed. The Loss and Gain columns tell you not only your profits for the month but what you have made or lost on each job. This information serves as a guide as to whether or not work is being figured at a reasonable profit. The Overhead column tells you how much you are getting back on this item to offset your expenses. The total of this column for the month should be compared with your expenses. By this means you can tell whether or not the percentage of Overhead you are using is sufficiently high to cover your expenses.

(The article continued in the next issue of Sanitary Engineer will describe the Purchase Journal. In the meantime we urge, most of all, the adoption of the "Workman Order" and the Sales Journal. Many contractors analyze their expenses but few analyze their sales. It is just as important to analyze sales as purchases.

TWO BATHS A WEEK NECESSARY

Everybody ought to bathe at least twice a week in order to be healthy. The Saturday night scrubbing is not enough. This went down in the Government book as an official rule advocated by the United States Bureau of Education, which has started a nation-wide drive for healthier school children and teachers.

PLUMBING "REPLACEMENT" OPPORTUNITY

(Continued from page 13)

such examination is evident from the fact that fuel accounts of some apartment blocks absorb as high as 35 per cent. of the gross revenue. The devices for the economical burning of fuel and prevention of objectionable smoke are as follows:—

Steam jets; special settings by an arrangement of baffles and arches to ensure proper air mixing; down draft furnaces; sprinkling stokers; overfeed stokers; underfeed stokers; travelling chain grates; coking furnaces.

Recommends More Plumbing Fixtures

In the report of the Tenement Inspector mention was made of a number of old tenements vacated and the buildings overhauled and renovated throughout. In these cases the inspector recommended additional plumbing fixtures—a watercloset and sink at least for each family instead of fixtures used in common. More co-operation between officials of the department and apartment owners was reported. Other repairs suggested and carried out included the repairing of subsoil drains to remedy dampness, etc.

Dealing with the trades, manufacturing plants, office buildings, etc., it was stated that employers were found to be increasingly aware of the importance of maintaining proper sanitary conditions in factories and workshops, and readily acted upon the recommendations of inspectors concerning the installation of adequate plumbing, heating and ventilating facilities.

MOVE PLUMBING REPAIRS

(Continued from page 14)

This little pumping outfit is capable of supplying soft water for the ordinary home; larger systems to water the garden or the stock on the farm. Made for electric, gasoline engine or hand power."

Such consistent advertising as this, appealing specifically to various classes of local prospects has been found by this firm to be specially effective. This is particularly the case when followed up with personal effort and the linking up of window displays of the same lines as are advertised.

DRAINAGE FOR 118 HOUSES

Quebec.—The plans for the erection of 118 houses in Limoilou Ward by the Quebec Housing Company on the North Mount property were submitted to the Roads Committee.

The Lairet River runs through the property and some five small bridges will be needed. The company asked the City to build the bridges. The company is prepared to give the City the streets and to set aside a portion of the land for a public park and playground.

After some discussion the City accepted the plans and will install the waterworks, the drainage and the paving when judged necessary, but the company must build the bridges.

Heating and Ventilating

Heating the New Parliament Building

Central Heating Plant Installed Which Heats Nine Buildings—
The Main Steam Pipe Runs Nearly a Mile from Central Station
—Forced Circulation and Indirect Heating

WHEN the citizens of Ottawa first heard that their post office was to be heated during the winter by a heating plant situated nearly one mile away, and that this same plant would also heat the new Parliament Buildings, and several others, there were not lacking those who said it could not be done. Dismal prophecies of failure and money wasted were freely indulged in, but to-day the plant is a complete success, and has saved money instead of wasting it.

The consulting engineer for the plant, M. F. Thomas, of Toronto, and the contractors, W. G. Edge, Ltd., of Ottawa, have been congratulated on the successful carrying out of the scheme, which is a big one. In fact, one cannot help but pay an involuntary tribute to the broad vision of the engineer who conceived the idea and carried out the arrangement with all the infinite details necessary to its successful completion. It is one of the biggest, or possibly the biggest, central heating scheme on the continent of America, and as it stands at present is only half the size it will eventually be, when the additions provided for are made.

Heats Nine Buildings

The power house is situated on the banks of the Ottawa River, at the foot of the cliff, round the top of which winds the famous "Lover's Walk." The cliff was cut away at this spot to admit the building of the power house. The buildings supplied with heat are nine in number, and starting from the plant and going east they are as follows: Department of Soldiers' Civil Re-establishment, Supreme Courts, West Block of Parliament Buildings, the new Parliament Buildings, the old library which was left standing after the fire, the East block of the Parliament Buildings, the Longtin Block on Wellington Street, and the Ottawa Post Office. Some idea of the heat supplied may be gathered from the fact that there are between 13,000,000 and 14,000,000 cubic feet in these buildings. The new building is arranged so that the air can be changed four times every hour.

The length of the tunnel from the boiler room to the post office is prac-

tically one mile, and it contains the main steam pipe, the summer heating line, the hot water circulating pipes, two in number, the steam condensation return, and the air line. These pipes are all arranged on the side of the tunnel, and a clear space left for walking and effecting repairs. The tunnel is about 8 feet high, well lighted and dry.

The Heating Plant

The entrance to the plant is from the top, which is on the street level and about 85 feet above the river bank on which it stands. The ground in front of the power plant is mostly reclaimed. The front wall of the building runs in behind the cliff, which was blasted out to make room for it. At the other end is the wall left rough to accommodate the new addition when it becomes necessary. Four square openings right in the bottom of the wall are in communication with the ash pits and supply air for the fires. They are arranged with

dampers, so that the supply can be regulated in very cold weather, and according to the number of boilers in use. The top of the stack is 175 feet above the top of the boilers, and natural draft is used. On the top of the building a coal weighing scale has been provided, but this has not been in use as yet. The four windows above the square openings are in the boiler room, and the blank wall above them is the outer wall of the concrete coal bunker, which has a capacity of 1,800 tons. This is filled from the top, and at present the coal is all drawn by teams, but eventually a railway siding will be run in so that the gondola cars can unload direct in the bunker. It is quite probable that when the full plant is installed provision may be made for receiving coal by water and elevating it up to the bunker.

One enters the power house by means of a small house erected alongside the scale house, and first of all pass down three flights of iron stairs till the chief

Forced Circulation Heaters, Pumps, and Expansion Tank.

engineer's office is reached. This is a large square space, containing the instrument board and a comfortable desk. On the other side of the partition behind the instrument board are the toilets and shower baths for the plant staff. There is ample room on this landing for the installation of a lighting plant if this should ever be considered. In fact, all through the power plant there is ample space. The means of entrance, and the continual descending of ladders after one gets in the plant, are strongly reminiscent of sea-going days, and we do not recall any plant that is quite so much up and down as this. However, it makes an excellent arrangement, and an elevator is installed to take passengers and freight from the lower floor to the street level. The boiler room can be reached by team or truck by a roadway running round the end of the power house on to the river bank, so there is no difficulty in getting supplies or spare parts to and from the plant. In the chief engineer's office we met the engineer in charge, W. McIninch, who took no end of trouble in showing us around and imparting all the information we could wish for. He has been on the job practically since its inception, and is thoroughly au fait with everything in connection with it. Incidentally he takes great pride in its successful operation, and chuckles with satisfaction as he tells about those who prophesied its utter failure. With Mr. McIninch in the lead we descended some more ladders and started our trip from the proper place, that is the firing floor of the boiler room.

The Boiler Plant

The boiler plant consists of four water tube boilers of 500 horsepower each. They are fitted with stokers, and the grate surface is 92 square feet per boiler, a total at present of 368 square feet. The coal is fed from the overhead bunker into a travelling hopper, which automatically weighs it, a scale on the floor level punching a ticket, which is kept as a record of coal burnt. The ashes are carried along a duct under the floor by a drag conveyor, and at the far end of the building are delivered to a bucket elevator, which delivers them into an overhead bunker, from which they are dumped into the carts. Eventually, of course, there will be a siding here and the ashes will be loaded on to the railway cars direct. Each boiler is fitted with an 8-inch steam pipe, discharging into a 12-inch main header, which delivers the steam to the buildings. This header is carried on rollers on top of the boilers, and the connections to each boiler are made through a U-bend to allow for expansion. The header itself is connected to the main pipe going through the building by a similar bend, and ample provision is thus made for expansion in both directions. Each boiler is fitted with a draught gauge, and the breeching between combustion chamber and stack of each boiler is fitted with a thermo couple, which is connected to a five-point recording pyrometer in the chief engineer's office, so

Another View of Heaters.

that a record can be kept of the stack temperature of any boiler over any period wished. The feed header from the main feed pumps is carried along the top of the boiler, 4 inches diameter, and is reduced to 2 inches at each boiler, while the pipe leading to the second drum is reduced again to 1½ inches diameter.

The feed water is supplied to the boiler through a heater and delivered to the boiler by outside packed pumps 16 x 9 x 20 inches. One of these pumps can be seen in the right hand corner of the illustration showing the pump room, which is on the ground floor, just alongside the boiler room. Between the feed pumps and the heater are installed the vacuum pumps, 10 x 14 x 20, which handle the returns from the steam lines and maintain a vacuum of 10 inches on the return line. It is very creditable to the workmanship on the return pipe lines that a vacuum of 10 inches can be maintained through all the thousands of feet of pipe that go to make up the return lines throughout the buildings. On the left, close to the column, can be seen the steam-driven air compressor, while in front of that machine there is another of the same size motor driven. The compressors are 9 x 8 and the electrically driven machine is belt-driven from a 25 horsepower 220 v. 2-phase induction motor. These compressors supply air at 110 pounds pressure to the buildings, and this is reduced down to the required amount for operating the thermostatic valves, elevator doors, etc., in the various departments. The main steam pipe comes down in a bend from the boiler room, and extends across the pump room ceiling. It goes up on the other side of the pump room to the floors above and the tunnel entrance.

The Forced Circulation System

The new building of the Parliament Buildings is supplied with direct hot water radiation, the water being circulated from the power house. The Commons chamber, Senate chamber and corridors are supplied with indirect heating by means of fans. The forced circulation system is installed on the third floor of the power house, that is the floor just below the street level, and a little below the entrance of the tunnel. There are three heaters installed, which are furnished with exhaust steam from the pumps on the lower floor, but during the past winter one of these has been found quite sufficient to supply the new building. About 50,000 gallons of water are in circulation, and this water is circulated by a turbine driving a centrifugal pump. The heaters are arranged so that they can be supplied by steam through a reducing valve in case of there not being sufficient exhaust steam to supply the necessary heat. The water in the system is under an air cushion of 90 pounds per square inch, which is supplied to the expansion tank which can be seen in the right of the illustration. A meter is installed, which is shown in the other view of the heater room, which records the amount of water flowing through the system at any time, as well as keeping a permanent record. The recording thermometer on the left of the board is provided with a double pen, which records the temperature of the water returning from the building. It is a remarkable fact that in the most severe weather experienced so far the difference in these temperatures has never exceeded 14 degrees. There is another recording thermometer connected to the outside air. The mains carrying the hot water to the building are 12 inches diameter. The

Air Compressors, Feed Heater, Feed Pumps on Lower Floor.

entrance to the tunnel is in the left hand corner of the heater room and cannot be seen in either views here shown.

The Tunnel

From the level of the heater room one mounts a short flight of the iron ladder and then steps directly into the tunnel, which stretches away into what seems a limitless distance. The tunnel follows the course of Victoria Street, the roof of the tunnel being about four feet under the street level, and gradually mounts up towards the eminence on which stands the Parliament Buildings. It then goes under the famous Lover's Walk, and then jumps up a stage into the basement of the new building. Before one reaches here there have been several taps of the main pipe, to supply the various buildings before enumerated, and there are some good examples of pipe bends. On the various lines there are a large number of expansion joints, and these are all the sleeve type. There are 15 of these joints on the steam line and 24 on the hot water line, with five on the return line.

The Air Washing Plant

The indirect heating plant for the Commons chamber, Senate chamber and corridors is in the basement of the new building, and is supplied with steam from the main steam line from the power plant. The fan installation consists of 17 fans, seven of which are on the air supply and ten on the exhaust side. The total heating surface of the heaters is 10,341 square feet and the capacity of the seven supply fans is as follows: 35,000, 20,000, 15,000, 25,000, 20,000, 15,000 and 15,000 cubic feet per minute, the total capacity being 145,000 cubic feet per minute. The air is supplied after passing through air washers and there are seven of these washers. The

fans and washers are installed at each end of the building and the air is carried to the various rooms through galvanized iron ducts. The direct radiation provided in the new building is in all 44,341 square feet.

The illustration taken in the basement of the new building shows the pumps for supplying the air washers in the foreground. These are motor driven. On the left is shown the casing of one of the air washers, one of the fans being seen on the right. The air duct can be seen above, as well as some of the piping. Where this photograph is taken is probably half-way from the power plant to the extreme end of the line.

Future Plans

The plant will be probably doubled in the near future, as the Government are contemplating erecting a number of new office buildings for departmental purposes, all of which will be supplied from the central heating plant. There is ample room to increase the boiler room installation by the addition of four more boilers, and it is proposed that when this is done and the new stack built to care for them, the two stacks will be enclosed in an ornamental stone tower. This would undoubtedly give the whole structure a very pleasing appearance when viewed from the outside. In the pump room there is plenty of room for addition, and judging from the performance of the plant so far there is ample heater installation to care for everything for some time to come.

A Saving Here

While no attempt has been made as yet to obtain economical test data, pending the completion of the job in all particulars, some idea of the benefit obtained from the plant can be given. For

Straw Filters for Sewage Purification

Experimental Work Demonstrates Value of Straw as a Purifying Agent—Details of Trial Installations—Average System of Sewage Disposal Wasteful from Agricultural Viewpoint

By E. H. RICHARDS and M. G. Weeks before Institution of Civil Engineers.

IT IS universally recognized that the systems of sewage disposal in general use among civilized communities are very wasteful from the agricultural point of view. Only a minute fraction of the fertilizing value in waterborne excrement is returned to the soil, and even this small portion is generally confined to insoluble matter or sludge, of low manurial value. The latest process of sewage treatment by activation promises to improve the quality of sewage sludge very considerably, provided that it can be dried economically, but this process seems to do little more than the older methods such as percolating filtration, in the way of recovering the most valuable part of sewage.

On the average, three-fifths of the nitrogen in sewage consists of ammoniacal compounds derived from urine. Owing to the great dilution of the ammonia no practical method has yet been devised for recovering this nitrogen. In efficient purification works most of the ammonia is oxidized to nitrate and flows away as effluent to the sea, while the rest is discharged into the air as nitrogen gas. This applies in varying degree to all purification processes, including activated sludge.

Agricultural bacteriologists and chemists have known for many years that micro-organisms commonly found in the soil are capable of assimilating ammonia and converting it into some insoluble organic form, probably, in part at any rate, as portion of their own bodies.

Recent researches carried out by Hutchinson and Richards at Rothamsted Experimental Station on the fermentive changes of nitrogen and carbon, which are of fundamental importance to agriculture, have indicated a means whereby the highly dilute ammonia of sewage may be recovered and made available as manure.

Laboratory Experiments

The laboratory experiments which led to the construction of the straw filter at Wainfleet were briefly these:—

A dilute solution of ammonium carbonate, of strength equal to a very strong sewage—i.e., 10 parts of nitrogen per 100,000, was passed through a percolating filter of wheat straw at the rate of 250 gallons per cubic yard of straw per day. On the first day 5 per cent of the nitrogen passed on to the filter was removed, the amount increasing steadily up to the twentieth day, when only 1 per cent of the nitrogen in the artificial sewage was found in the effluent, the remaining 99 per cent. remaining in the filter. The filter was then mature and

continued to remove practically all the nitrogen fed to it until the saturation point was reached.

In the case of wheat straw the filter continued to remove nitrogen until 7 parts had been fixed per 1,000 parts of dry straw. On dismantling the filter the straw was found to have retained 86 per cent. of the nitrogen contained in the original ammonia solution. Twenty per cent. of the dry matter in the straw had disappeared in the process of fixation, so that the nitrogen in the final dry matter had been raised to 1.33 per cent.

The effluent was brown colored but non-putrefactive. It contained too much carbonaceous matter in solution to pass the Sewage Commission's test for dissolved oxygen absorption. When the straw filter effluent had run through an ordinary clinker percolating filter, an effluent was obtained that would pass both the standard tests, but was still very brown in color.

The experiment was then repeated with actual sewage from the Harpenden Works. The results were the same as in the first experiment.

When the straw has become saturated with nitrogen it can be removed from the filter, and if stored in heaps will continue to ferment with great improvement in its physical state regarded as a substitute for farm-yard manure.

At this stage of the experiment (May, 1919) Richards and Hutchinson chanced to meet M. C. Weekes, then Chief Engineer to the Board of Agriculture, who was faced with the problem of providing some method of sewage disposal for a huddled camp of 300 navvies to be engaged on the Board's land reclamation scheme on the north-west shore of the Wash. Only urine, cookhouse and ablution shed water would need treatment, but the concentration of the sewage liquor would probably be excessive, and liquors of this nature do not yield readily to treatment on percolating filters.

As the experiments described above had just been completed, the possibilities of a straw filter were discussed and ultimately a scheme on these lines was put into operation.

Straw in Sections

The original experiments had made it clear that clean straw was not active in removing nitrogen, but that it gradually became more so as sewage was passed through it, the best results being obtained after 20 days of treatment. For this reason it was decided that the filter must be in sections and that the straw

must be passed from section to section so that the sewage always met the newest straw first and finished by passing through the most active section. It was also decided that three sections would be sufficient, as this would give one section fully active and another nearly so, when clean straw had to be added. The first intention was to construct three shallow beds arranged in steps but when the details came to be got out, it was found that the head required to give three systems of distribution was too great to make the scheme practicable, and further that there would be considerable labor in working the straw from one bed to the next.

Finally a filter was constructed as follows. An angle-iron frame-work, 20 ft. long, 10 ft. wide and 7 ft. 6 in. high, was fixed over a sloping concrete floor, with two main horizontal members, one 2 ft. passing along each side. On these members 1 in. diameter galvanized iron pipes, 12 ft. long, were laid spaced at 4 in. apart, centre to centre; the length of the pipes allowed them to project 12 inches beyond the frame work at each end to the bed 3 ft. above the upper of the two floors to give a hand-hold for drawing.

Transverse horizontal angle-irons were fixed across the bed above the upper of the two floors so formed, to tie the verticals together and also to carry the distributing troughs. Two V-shaped wooden troughs were laid over the filter, the sides having notches about 12 in. apart with a nail driven under each to act as a drip point.

This type of construction made it very easy to pass the straw from section to section of the filter. When the ripest straw had been raked out from the bottom layer, the attendant would begin at one end and draw out each pipe in turn until the whole of the straw that had been the second layer had fallen on to the concrete floor. He would then replace the pipes and draw those from under the top layer, letting that down in turn. The upper pipes were then replaced and the new straw unloaded from the carts on to them.

No trouble was experienced in pulling out the pipes, as the friction against the wet straw was very slight.

The spacing of the pipes supporting the straw proved to be about right. There was little sagging down between the pipes and the distribution for one layer to the next was quite good as the sewage came through in drops. The distribution from the troughs was very faulty at first, until the attendant got used to

Patterns for Metal Spheres

By O. W. KOTHE, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

RESPONDING to the inquiry of a subscriber who wishes to procure ready made patterns for Metal Spheres, will say that the writer knows of no place where they can be purchased.

Patterns of this kind are of a very simple nature and can be developed in a very few moments for any size met with. To make the treatment clear a drawing is being enclosed, treating both the gore and the zone method.

Fig. 1. shows the gore method, by which the subscriber wanted his patterns. only so the segments are not over 2 inches wide. The writer would say, making spheres by the gore method is not as satisfactory as it should be.

In order to make any kind of a looking job, the segments must be bumped out to conform to the radius of the sphere. This stretches the gores, and makes a difficult job in soldering together. As the gores are soldered "butt edge," expansion and contraction often produces leaks, and that is bad for metal. Then in addition, spheres by this method are very difficult to keep round. The tendency is to finish up in an oblong shape. This is due to the difficulty in butt joining all miters ab-

solutely perfect. The least spread in miter will have its effect on the poles, and that makes for the oblong shape.

With no reflection on the ability of the subscriber—inexperienced mechanics generally always try this method first. As the workman becomes experienced, he adopts the zone method, shown in Fig. 2., which is easier layed out, easier bumped to take the radius of sphere, and is much easier assembled, can be made absolutely round. The lap edges enable secure soldering, and this permits more give and take in adjusting the zones while assembling, and the sphere is decidedly stronger in every way than the gore method.

To lay out the patterns for the gore method in Fig. 1., first describe a circle to the exact diameter the sphere is to be. This can be made any size called for. If you wish your segments to be say 2 inches wide, set dividers to a radius of 1 inch, and space off the quarter circle as 1-9; adjusting the dividers to make the spaces work out equal. Then on each side of point 9 in this case, step off one space on each side; thus giving positions B and C.

By drawing lines to the center A, we have the miter lines for one gore piece.

Now by erecting lines from each point in the quarter circle as 1-2-3-4-5 etc., until they cut the miter lines A-B and A-C as shown. This then makes for us a plan view of the gore with the lines across it as they would appear on the surface of the sphere.

To set out the pattern, set dividers to one of the spaces in the quarter circle as 1-2, seeing so it averages up well, and then step off double the amount of spaces you have in the quarter circle, as on line 1 inch-1 inch. This will be the circumference for one-half of the sphere. Through each of these points in line 1 inch-1 inch, draw vertical stretchout lines and then from each point in the miter lines square over lines until they cut similar numbered lines in the stretchout.

Observe, the idea is to cut off those lines in stretchout to equal in length, those lines in plan of gore. This can also be done by means of a pair of dividers, picking the rises of lines from the center lines. and setting them off in pattern. In this way points 2 inch-3-inch-4 inch etc., in pattern are established. Trace uniform curved lines

Appreciating the Plumber

THOSE engaged in the plumbing industry have often prayed that the day will be hastened when people will realize their true value in modern times and stop looking upon them as a "necessary evil" with special qualifications for loafing on the job and for "padding" bills. Whether or not the average plumber has been too self-conscious in this respect is a question. The situation may not be nearly as bad as painted; true, those who use the plumbers' services have a much greater regard for such operators to-day than in the past, largely the result of educational work initiated by plumbers' organizations and the trade press. At any rate an occasional ray of rosy light filters through the clouds when someone awakes to a true appreciation of the professional value of the sanitary engineer of to-day. One of these so-called rays might be the following article which appeared in a daily newspaper recently:—

"Have you ever thought what kind of a place this city would be to live in if there were no plumbing conveniences in the city's homes? Think of the plagues, of the filth, of the unhappiness which would be sure to accompany such a state!

"Then think of what the ideal city could be, with every home comfortably, completely and beautifully furnished, equipped with every necessary household plumbing convenience, the streets clean, well kept, the city as a whole a sanitary and healthful place for any human being to live in!

"Where between these two extremes does our city stand to-day? There are approximately 83,000 homes in this city. Out of this 83,000 about 5,000 are said to have adequate plumbing facilities!

"This was the startling fact brought out in the recent meetings of the Master Plumbers' Association of this city. Awakened out of a rather long sleep, the association has at last decided to stand up and tell the people of this city just where they stand in the plumbing situation, what can be done and what the Association of Master Plumbers can do and is preparing to do in the way of bettering living conditions in the city."

Education on Cleanliness

THE Bureau of Education of the United States Government, in connection with its nation-wide drive for healthier school children and teachers holds that everyone ought to bathe at least twice a week in order to be healthy. This duty is somewhat less severe than the "bath a day" edict which has gone forth in the trade as a basis of education, but when put forth by a Governmental body it is apt to carry considerable weight, particularly when applied as a means of

education in cleanliness in the schools. This early education along the lines of frequent bathing will be helpful to the plumbing industry as these children grew up for they will have the instincts of cleanliness developed as result of their schooling and the overcrowded housing conditions of to-day, with inadequate sanitary equipment, should thereby be given a definite set-back. Anything the plumbing trade can do to have education along this line commenced in the schools will be of distinct value to the trade of this generation and in years to come.

Plumbing and Heating Equipment Needed

INDICATION of how the recommendations of local health officials can be turned into considerable replacement business in plumbing and heating installations is set forth in details given elsewhere in this issue. These details will be of interest to plumbing and heating operators, particularly at this time when every possible opportunity for business is being exploited to the greatest extent to offset the lack of business due to the limited amount of new building recently done. It is in the interests of all in this industry to follow up such leads for all available business. Unfortunately in some other centres in Canada the officials of the local health boards are not so fully aware of the necessity of adequate plumbing, heating and ventilating facilities as those whose recommendations are outlined herein, but more activity on the part of operators, with a view to pointing out the necessity of having the plumbing and heating trades represented on local boards of health, should help in developing trade with a view to giving adequate sanitary and heating service in all buildings whether houses, apartments, office buildings or industrial plants.

More co-operation and an increasing desire on the part of property owners and employers, to act upon recommendations of health officials, is a pleasing feature of the report. There is no question but that the property owners will be interested in any scheme whereby the earning power of their property can be increased either by providing better sanitary facilities or by cutting present costs of operation due to defective equipment. Thus, for instance it is atrocious to think of apartment owners being compelled to pay 35% of the gross annual revenue of such apartment houses for heating each winter. Such owners will be interested in the recommendations of the heating engineer for repairs and replacements which will cut down that huge outlay. Similarly the plumber can point out how the installation of toilets, sinks and wash basins for each family can be made a paying proposition, along with the renovation of drains, etc., to cut down heavy annual repair bills. The whole matter largely becomes one of education, and the plumbing and heating operator who is looking for means of developing business might well work in co-operation with the local health officials and "cash in" on their recommendations or use such recommendations as the basis of personal effort on other prospects. Thus if some apartment owner is enabled to cut his heating costs from 35 to 20 per cent. of gross revenue through carrying out recommendations to increase the comfort of tenants, the heating operator can carry the message to other apartment owners and have the saving figured out in such a way that the investment would pay annual dividends. The plumber has many opportunities for doing likewise. A study of the problems exposed in the aforementioned report will be helpful to operators in this industry and assist them in developing "replacement business" in plumbing and heating installations.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights
—Keep the Entire Series Where It May be Referred to and Studied

Article No. 40 of Series, Illustrations 70, 80.

Continued from last issue

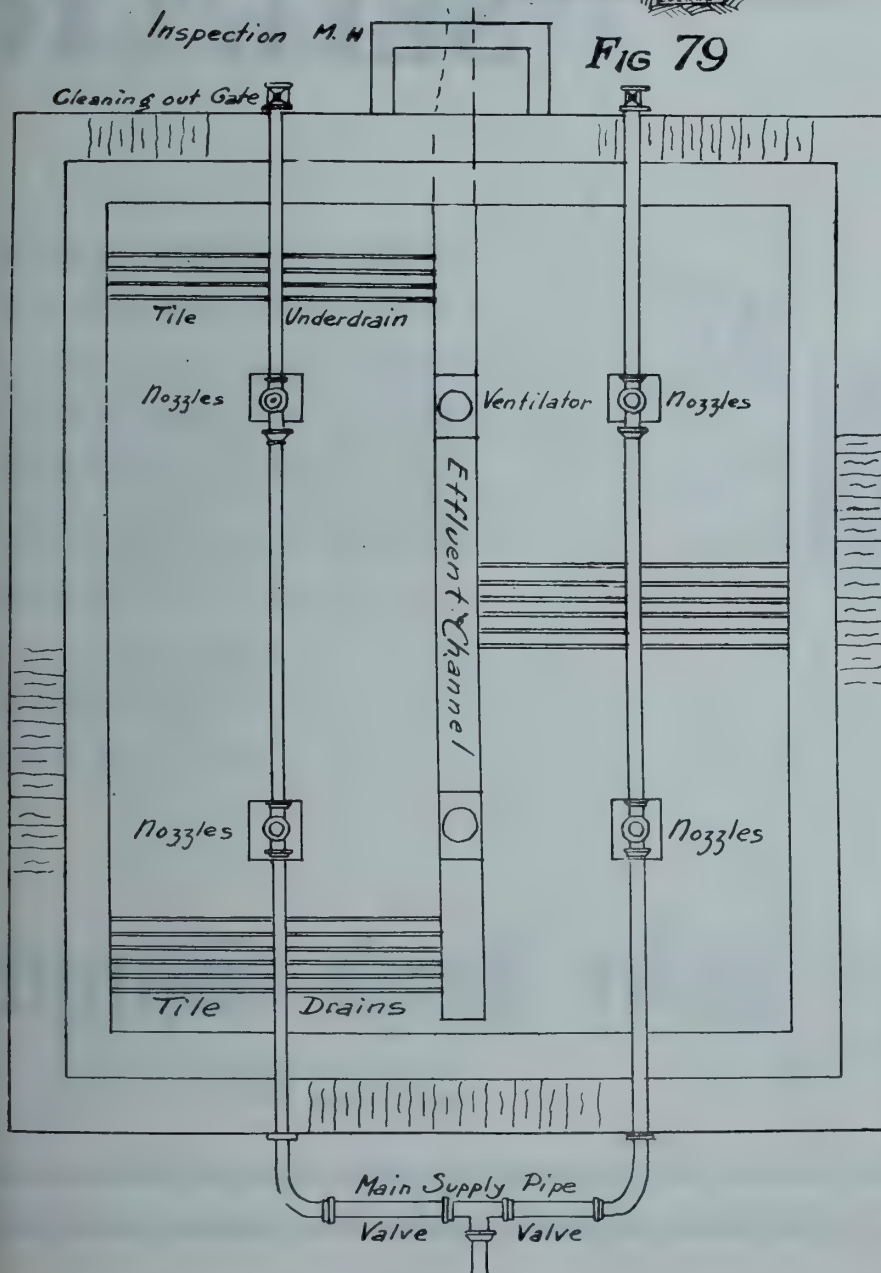

FIG. 80.

FIGS. 79 and 80 illustrate the general layout and plan of the building. The sewage is discharged over a weir through a small catchpit where all the sand, road grit, etc., is deposited, then passes through a screen as shown in Fig. 83 into two suction wells controlled by penstocks or grates for shutting off either suction well for repairs.

The pump house proper is 10 ft. x 12 ft. inside dimensions having two engine bed foundations for two centrifugal pumps and motors or gasoline engine for operating pump. It is always advisable to have a duplicate system of pumping for carrying out repairs, otherwise unless the storage capacity of the wells is large enough to take care of 3 or 4 days supply, flooding will take place in case of any serious breakage. Then again another great objection to having a large storage capacity is the secondary putrefaction which takes place through the sewage storage process which will become objectionable sooner or later.

The motive driving power on these pumps should be arranged so as not to rely solely upon electric current, as in several instances power can be cut off through breakage of feed wires, etc., which would then throw your pumping outfit out of commission so it is generally advisable to have either a small steam auxiliary plant or a gasoline engine to drive the pumps. Automatic floats connected to the switchboard in the suction wells operate the turning on and shutting off of the power so that manual labor and supervision is diminished considerably.

In selecting the style and size of pump one must be governed by local conditions as no two pumping stations are exactly alike. It is the best policy to calculate the number of gallons the pumps must be capable of pumping per hour and submitting same to some local firm for prices and tenders.

PATTERNS FOR METAL SPHERES

(Continued from page 21)

through these points and the pattern for one gore is finished.

Enough of these gores are cut out to make the entire sphere. They are then taken to the bumping block and the straight side is hollowed out to take on the radius of sphere, as diagram a-b-c-d shows. Observe this bumping process produces a double curve, and it is a very easy matter to develop a twist in the metal, which may not only make your sphere oblong, but lop-sided as well.

The zone method is recommended in every case, and for this draw your center axial square to one another, and from its center describe the circle to conform to the size the sphere is to be. Next divide one quarter of circle to such a number of spaces as the width of metal in the belts you can handle.

The first zone is a straight strip as M-N, and is made up in the shape of a cylinder. The two other zones are made on the principle of the taper joint of pipe. Observe in this case the distance Q-P is the center top and bottom disc, and this much can be easily bumped into shape of either tin, iron or copper. Then the remaining space as P-N is subdivided as in point O. Many mechanics who are handy at bumping will make each half in three parts, which only means the lengthening of the zones.

Now extend the center line and join points N-O, also O-P and extend them until they intersect the center vertical line as in points X-Y. From these centers describe the arcs for patterns. Then figure the circumference as 3.1416 times diameter, and mark on the circumference on the outer arc N-3. Notice that this outer arc N-3 must be of equal length as the middle zone M-N. Then by drawing a few radial lines to X as 2-2 ft.; 3-3 ft.—the new spaces 2 ft.-3 ft. will be the true girth spaces of the outer arc of zone II. Set these spaces as O-2 inch-3 inch, etc. If you have more zones, you would draw radial lines to Y and repeat the process.

The disc patterns are described with the radius Q-P, and in bumping the metal stretches a bit, and that makes up for the arc above chord line. The other belt patterns are made in such lengths as will work out of a sheet crosswise the best. Cross seams are riveted, when the entire belt is made into a ring, then nest the upper and lower one together and bump out the segment arc. Take out all hills and hollows and see that the surface is quite smooth and again round out all belts. Next assemble the zones, starting from the top disc and working toward the center. This enables countersinking the seams as at sketch W. All soldering is done on the inside and only the last seam in the center is soldered on the outside, and then the solder is scraped off. Of course, each semi-sphere should be re-scraped to be perfectly true before joining the two halves.

STRAW FILTERS FOR

SEWAGE PURIFICATION

(Continued from page 20)

keeping them adjusted and cleaning the notches, but later it was sufficiently good for this layer, which is not really operative, but merely being prepared to become so.

The pump that fed the filter could not be worked at a slower rate than about 17 gallons per minute. This would not have given too quick a rate of application had both units been in use, but with only fifty gallons storage capacity in the tank first installed it was too fast for one filter. Moreover, it took some time to persuade the pump-driver that the rate of pumping really mattered, so that at first he ran his pump as fast as possible unless he was watched, and the actual rate of application of the sewage was as high as 450 gallons per cubic yard per day, instead of 60-80 gallons required. Under these conditions it is not surprising that the actual removal of nitrogen by the filter was very small. But even then the effluent was free from smell, and neither at this or at any subsequent time was there any nuisance from the filter itself or from the ditch receiving the effluent, nor did flies collect around the filter. The rate of flow to the straw was gradually reduced to 96 gallons per cubic yard per day by restricting the tank outlet pipes with a corresponding improvement in the nitrogen recovery. The best purification, as measured by five days' dissolved oxygen test, was 80 per cent. Negative purification was generally shown by four hours permanganate.

When a new tank of 960 gallons capacity was installed, the improvement in nitrogen recovery was very marked. The best figure recorded was 65 per cent. of the nitrogen in the sewage. On incubation for five days the effluent was invariably putrid. From such a strong liquor, ten times as strong as normal sewage, it is probably impossible to produce a non-putrescible effluent by straw filtration alone.

Wainfleet Straw Filter

Average analysis of samples taken after installation of larger overhead tank.

Parts per 100,000.	
Sewage	Effluent.
Ammonical nitrogen ..	18.92 10.19
Oxygen absorbed in four hours from permanganate	31.88 20.82
Dissolved oxygen taken up in five days	80.4 14.9
Chlorine	31.0 39.3
Dry matter. Per cent.	
Total nitrogen in raw straw....	0.50
Total nitrogen in straw removed from filter	1.62
Total nitrogen after storage for six months	2.06

In order to recover all the nitrogen possible, about 2 lb. of dry straw per man per day is required. During the years' working at Wainfleet the amount of straw used was considerably less. For a period of thirty-five days 2,800 lb. of

nitrogen was pumped on to the straw in the sewage. The weight of straw shown by laboratory experiments as necessary to recover this amount of nitrogen is 5,000 lb. Even if the rate of flow had been low enough to allow proper biological action, only about half the nitrogen could have been recovered. The straw removed was in fact, overloaded with nitrogen all through the experiment. The resulting manure, after storage in a heap alongside the filter, was of excellent quality, containing 2.06 per cent. of nitrogen, and was in good condition for applying to the soil. This manure has no smell whatsoever.

The practical application of this process is so far limited to such sewage works as have access to straw in quantity and where a demand exists for farmyard or stable manure which cannot be met at present. There are, however, many places in this country where these conditions now exist, while the supplies of stable manure are rapidly diminishing.

Straw is by no means the only substance suitable for the process, and further research may show how the less digestible carbo-hydrates in sawdust and other vegetable waste products may be made available.

PUMPING EQUIPMENT
INEFFICIENT

New Glasgow, N. S.—Councillor Laferty, Chairman of the Water Committee, has presented an exhaustive report dealing principally with the pumping operations at the local reservoir.

It contained important data with reference to (1) Consumption; (2) Operation and (3) Equipment. Close observation and frequent tests had driven the Committee to the conclusion that water was being wasted in some mysterious way. Their calculations had been made on a basis of 80 gals. per minute which the chairman thought was misleading as 70 gals. was probably nearer the mark.

The committee then decided that the existing equipment was inadequate and if a breakdown occurred it would prove serious for the town. It took 25 days working 8½ hours per day to fill the reservoir. The pump was kept working practically all night and it would be necessary to have two shifts to attend to this.

The Committee had been in communication with a U. S. concern, who with the installation of their equipment, in addition to the existing equipment, would guarantee pumping at the rate of 150 gallons per minute which is what is really required. The cost of the whole would be in the vicinity of \$1300. All the councillors discussed the matter fully. It was agreed that if anything happened now to the Air Lift the town would suffer. It was resolved finally to bring the matter up at next council meeting, when the written communication from the American Pump Co., would be before them and they then could more intelligently deal with it.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

NEW FIRMS

Kingston, Ont.,—H. Appelton has opened an up-town plumbing and heating establishment at 417 Princess street. Contract and job work of all kinds will be done.

NEW COMPANY FORMED

Montreal.—The Victory Radiator Co., Reg'd., will now manufacture the Victory radiators which were formerly made by the Montreal General Tool Co. W. Yorke and A. Bonenfant are the chief executives in the new company, and plans for extension are now under way.

OBITUARY

Allen G. Ingalls died recently at his home in La Prairie, Quebec. Mr. Ingalls was 66 years of age and was well known to the trade in Montreal, as he frequently used the daily press for letter writing on questions appertaining to heating systems. Although having no direct connection with the manufacture or selling of any particular system, he took great interest in solving the different problems arising before the heating engineer, and some of his articles were very instructive and helpful.

E. W. B. Snider, President of the Anthe Foundry Company, Toronto, died this week at his home in Kitchener, Ont. Deceased was a member of the Ontario Legislature for thirteen years and was in his eightieth year. At his death Mr. Snider was also connected with the Waterloo Manufacturing Co., farm implement makers. He was regarded as one of the pioneers of the Hydro power scheme in the province.

PLUMBING BUSINESS ACTIVE

E. Y. Lane, Truro, N. S., says business is good and has never seen it better. At the present time he has three extra men on and is doing all the work that he can handle. There have been a number of new houses erected here this season.

TENDERS

Georgetown, Ont., — Sealed tenders will be received by the Town Clerk, until 8 p.m. on Tuesday October 25, 1921, for the following works:

Construction of Concrete Reservoir and Pump House.

Construction of Concrete Screen Chamber and Weir.

Laying Gravity Main.

Furnishing Cast Iron Pipes.

Furnishing and Erecting Pumping Machinery, two units, 400 gallons each.

DEATH OF A. S. PURDY, PRESIDENT PURDY, MANSELL LTD.

There died at his home in Toronto one of the pioneer business men of the city in the person of Alexander S. Purdy, president of the plumbing and steam fitting firm of Purdy, Mansell, Ltd. The late Mr. Purdy had been ill for about 18 weeks. He was born in Toronto in 1859. In 1875 he became apprenticed in the steamfitter's trade and in 1887 the firm of Purdy, Mansell & Manhinter was formed. Mr. Purdy leaves a wife and three sons in Toronto.

LATE ALEX. S. PURDY

President of plumbing and steamfitting firm of Purdy, Mansell Limited, Toronto, whose death is announced.

APPRECIATES REPORT IN SANITARY ENGINEER

Sanitary-Engineer,
Toronto, Ont.

Many thanks for the publication of the report of our convention of Sanitary Inspectors. More than delighted. Hope that it will promote the welfare of our Association.

Will you kindly mail about 10 copies for mailing purpose amongst our members.

Yours Truly,

G. O. Laflamme,

Chief Sanitary Inspector, Ottawa, and newly elected President Sanitary Inspector Assn. of Canada.

WESTERN ONTARIO NEWS

Contracts for three new siphon lines in connection with sewage improvements at London, Ont., have been awarded to the Webster Construction Co., and Peter Mohan, both of London.

In connection with the new warehouse at London, Ont., for Crane, Ltd., the contract for plumbing and heating has been awarded to Eggett & Company.

J. A. Brownlee, of London, Ont., has secured the heating contract for new \$10,000 school being erected in Manor Park.

The contract for heating and plumbing for new \$5000 residence at London, Ont., for A. Henderson was awarded to Alex. Doyle.

Plans are being prepared for a new \$5000 bungalow for Dr. Geo. Ingham of Strathroy and prices are wanted on hot air heating, plumbing and electrical work.

Thomas Partridge has been awarded the heating and plumbing contract in connection with alterations costing \$20,000 to residence of Wm. E. Robinson at London, Ont.

Kellow and Robinson of Leamington, Ont., had an unusually attractive exhibit of plumbing goods and electrical supplies on exhibition at the Leamington fair. As a result of their enterprise they got in touch with many prospects that will eventually become purchasers.

Eggett & Co., of London, have been awarded the plumbing and heating contracts in connection with remodelling the residence on the Mitchell estate at London into apartments.

NEED NEW SEWAGE PLANT

Kitchener, Ont.—With the idea of stirring the city council to action the Board of Health recommended to council that a new filtering plant for sewage be constructed at Spring street where at present there is a pumping plant.

It was suggested that there might be some objection to this on the ground of expense and the figure of \$100,000 was mentioned as the probable cost.

Sanitary Inspector Rau thought this estimate was high declaring that no pumping was necessary as it was down grade all the way. However an easement would be needed over a farm and that is where the expense would likely be heavy.

"It has got to be started though," said Dr. McGillawee the M. O. H. and the board decided to send the recommendation to council thus placing the responsibility upon that body.

Montreal May Face Water Shortage

If Completion of Aqueduct and Installation of New Pumps Not Carried Out, City Will Not Receive Ample Supply, Says Chairman of Administrative Commission—Mayor Secures Rejection of Report Asking For \$545,000 for Completion of Work

MONTREAL.—If the aqueduct is not completed, and the three new electric pumps not installed in the new low level pumping station at Point St. Charles in the near future, Montreal will face a serious shortage of water. The cause of the threatened shortage is the refusal of the City Council, led by Mayor Martin, to vote the final credit of \$545,000 necessary for the completion of this work. The grounds for refusal are based on allegations made by Mr. Ouimet, civil engineers, that the aqueduct now being built, if completed along the lines contemplated, would leak unduly and cause damage to adjacent lands.

The water level of the river is now dropping daily and were the new aqueduct open, there would be a sufficient head of water to keep the electric pumps working at capacity, which is 75,000,000 gallons of water per day. The aqueduct would hold close to 100,000,000 gallons. As things are now, with the conduit leading directly from a rapidly sinking level in the river, the slightest interruption may result in the cutting off of the water supply in some parts of the city, with attendant discomfort and danger.

The members of the Montreal Board

state that they are confident that there will not be undue seepage and if any damage does result, it will be negligible. The old aqueduct which carried water for years should not give trouble in this regard, except in certain isolated cases which were now being strengthened. The present aqueduct, although deeper than formerly, is on the same site and in the deepening operations carried out no layers of porous material was cut through.

The present works are being constructed, the members say, in the same manner as the adjoining Lachine Canal which does not give a great deal of trouble from leakage, and in order to collect any surplus water which may collect a proper drainage system has been provided. Dealing with Mr. Ouimet's specific contentions with regard to the building of the canal, the Board state that in remote contingency of any unforeseen accident, the canal has been so built that any part of it may be unwatered separately, in order that repairs may be made with all expedition. In concluding the Board state that they are unanimously agreed that the proper method of procedure, both from the economic and engineering viewpoint, is the one the Board has adopted.

SPEND MILLIONS FOR WATER SUPPLY

In connection with the new water system just completed for the eastern division of the Township of York, north of Danforth Avenue, some interesting facts and figures are announced. The water is received in bulk from the city at twenty cents per 1,000 gallons and distributed by the township at thirty cents; the difference is to cover the losses and cost of administration.

About five and a half miles of twelve inch pipes and about eight miles of six inch pipes have been laid at a cost of about \$300,000.

An elevated steel tank capable of holding 200,000 imperial gallons and standing at about 151 feet above street level has been erected at a cost of \$30,000.

Each of the two modern improved pumps has a capacity of 240 gallons per minute, working against the water head contained in the elevated tank.

The eastern water area measures about 1,200 to 1,400 acres and the population is estimated at about 12,000.

The urban portions of York Township now have a large system of water-

mains with about 88 3-4 miles of pipe lines constructed in the districts surrounding Toronto at an approximate cost of \$2,000,000.

UXBRIDGE PLANNING NEW WATER SYSTEM

Uxbridge.—It is likely that the ratepayers will vote on a by-law at the January elections to install a municipal water system.

Engineer E. A. James, of James, Redfern & Proctor, has been instructed by the Council to prepare plans and estimates. It is proposed to secure the water form flowing wells on the property of Mr. James Clyde, and the scheme includes the erection of a standpipe.

Last year the pipe would have cost \$22,000. Engineer James told the Council that it would now cost \$15,000.

Few exhibits at the Leamington fair attracted more attention than those of Lendon & Cook, and the Leamington Hardware Co. The latter firms showing of stoves was splendidly arranged and many excellent prospects were secured.

Catalogs and Booklets

A review of new catalogs, etc., as published by manufacturers, wholesalers and others in the trade for the information of the trade.

"ROSS" HEATERS

A copy of a catalog issued by the Ross Heater & Mfg. Co., Inc., Buffalo, N.Y., has been received. Ross heaters are of the closed or tubular type and are for heating all kinds of fluids through any range of temperature desired. The most common liquid to be heated for commercial purposes is water, but the makers claim that the Ross heater is equally well adapted for heating oil, sugar juice, chemical compounds, or any other liquid where an increase of temperature is required.

Two general types are manufactured by the company; one the instantaneous type in which the liquid is heated as it is being used, and the other is a storage type, which as the name implies, has a storage capacity to be drawn on in emergencies.

The Ross Heater Co. state that by using reasonably small tubes and passing the water back and forth through the tubes a number of times, the highest possible heat transfer is obtained and that for hot water service for hotels, factories, hospitals, schools, apartment buildings, etc., this style of boiler is especially suited. The heaters made for different purposes are fully shown and described in catalog and ratings and conversion tables are given for the various sizes.

Ross surface condensers, airjector pumps, distilling condensers, temperature regulators and evaporators are also shown and described.

Canadian branches of the company are at Toronto, Montreal and Vancouver, B.C.

"PEERLESS" WATER SYSTEMS

An interesting booklet issued by the National Equipment Company, Limited, of Toronto, is their latest catalog covering full descriptions of "Peerless" Water Service systems. The illustrations and reading matter contained therein are not only attractive, but to the plumber and sanitary engineer, are calculated to be of service, as well as instructive.

The Peerless system is specially adaptable for rural and suburban homes, country estates and also large buildings. The simple syphon principle is the keynote of operation, and it is equally reliable with either an electric motor or gasoline engine supplying pumping power. It automatically stops and starts as the pressure in the tank rises or falls. The manufacturers and distributors claim that every convenience of the city home can be supplied and enjoyed in connection with Peerless water systems. The booklet is ready for distribution to the trade on application.

GURNEY'S NEW BOOK

A neatly-arranged and easily reviewed book on stoves and ranges has been distributed by the Gurney Foundry Co., of Toronto. The new catalog presents to the trade, both through illustration and description, the latest types of Gurney products in cooknig and heating service. It is a comprehensive book of 52 pages, interfore the dealer various styles of stoves and ranges, adaptable for wood, coal and gas fuels; while a section is also devoted to the presentation of combination stoves. The book is finished in attractive colors, and numbered by the manufacturers, catalog S-212.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

NUMEROUS price developments embracing both recessions and advances, feature the current markets in plumbing and steam-fitting goods. Lower quotations appear on many lines of pipe fittings including, cast iron fittings, all kinds of plugs, malleable and cast bushings, unions of all sizes, and black and galvanized malleable fittings. Other reductions recently announced cover, Canada plates, bolts and nuts, jack chain, blacksmith, straight shank, and taper shank twist drills, many grades of hammers, stocks and dies, also Trimo and knife-handled wrenches.

Higher quotations appear in eastern markets on copper tubing, rods and sheets, while other markets report declines in copper and brass products of this nature, in spite of the firmer tone and recent price gains on the primary copper markets. Another new list on

range boilers bringing quotations to a higher level all through, has been announced. This change is the evident result of the desire to secure a settlement in this line more in keeping with production costs. The wire nail base has advanced 25 cents per keg. Eastern markets report new prices on enamelled ware, and also higher quotations on closet outfits.

Some higher prices on galvanized sheets have been adopted on primary steel markets, but domestic base prices generally hold unchanged. The current condition of stocks, and the state of liquidation, are still contributing factors to the prevailing boiler tube figures. There is now a better outlook in scrap material markets, while an improvement has also been noted in some ingot metals, noticeably copper, spelter and tin.

MONTREAL MARKETS

MONTREAL, October 14.—Revisions in prices, both upward and downward, are of special interest to the plumbing and heating trade. The recent strength in copper on the primary market has already resulted in higher prices on copper sheets, tubing and rods. It has not yet reflected on other articles prominent to the plumber and steamfitter, but the markets on various lines have taken on a firm attitude. Pipe fittings offer the chief reduction, the discounts on the various lines being changed, thus lowering prices. Range boilers are now selling on new higher quotations. Enamelled ware and closets are both now quoted slightly higher. The advanced prices are not resulting from any firmer tone in the market, but are announced in the hope of recovering the market which has been very unsettled locally. Bolts and nuts, hammers, stocks and dies, and twist drills are all recorded with a reduction in prices.

A feature also, is the improved condition in the iron and steel industry. The trend of the many lines appertaining to the trade have been repeatedly reported with an easier tendency owing to the demoralized state of the market. Although no revisions to higher prices are yet announced, many lines are now firmer with price changes in some cases imminent. Ingot metals have improved in the last two weeks, also a better tone in the scrap market.

TWIST DRILLS NOW 50 PER CENT. OFF

Montreal.

A substantial reduction is made in twist drills when the discount now quoted is 50 per cent off list prices. Former discount was 35 per cent. off. This applies to blacksmiths' drills, straight shank, wire and taper shank.

NEW LOWER BOLT AND NUT LIST

Montreal.

Through the issuing of a new list on bolts and nuts to the trade these will now cost less. The reduction varies, but covers all kinds of bolts, square and hexagon nuts both tapped and blank.

HAMMER PRICES REDUCED 10 PER CENT.

Montreal.

The various manufacturers of hammers announce a reduction of approximately 10 per cent. in their lines. This is effective on machinists', riveting, tinners', sledge and nail hammers.

STOCKS AND DIES AT LOWER PRICES

Montreal.

Through a change in discounts the net prices on pipe stocks and dies have been reduced. Present discount is 22 1-2 per cent. off list prices.

REVISED DISCOUNT ON ENAMELLED WARE

Montreal

Enamelled ware will now sell for slightly higher prices than have been ruling in the past few weeks, the discount being revised to 20 and 10 per cent. off, formerly it was 30 per cent. locally. This makes the second change in quotations in the past month, and prices are now set at figures that existed before the price-shading commenced last spring and summer. There is now a more promising outlook to the market, the new prices while a little higher, are offered to stabilize conditions and bring quotations to a level in comparison with replacement costs. Business is reported as fair among the jobbing houses, buildings under construction now demanding supplies. Following are list prices and discounts.

Sinks, roll rim—			
18 x 30			\$28 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	\$ 7 50	\$ 7 40	\$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet			57 10
Lavatories—			
17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim, F241 or P4345			12 60
Less 20 and 10 per cent.			

NEW HIGHER PRICES ON CLOSET OUTFITS

Montreal

Accompanying the revised quotations on enamelled ware are new higher prices announced on closet outfits. The standard outfit will now sell for \$27.50, an increase in price of \$1.50. Closets are now selling on a much steadier market than has prevailed during past weeks when prices showed a marked variation

among the different jobbing houses. The new quotations, although slightly in advance of former prices, should stabilize conditions as former prices were very low in comparison with replacement costs. Following are revised prices:

CLOSET OUTFITS—	
Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for 3/8 in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	9 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitreous China	20 00

PIPE FITTINGS BROUGHT TO LOWER LEVELS

Montreal.

Practically all kinds of pipe fittings are revised to lower quotations. The extent of the reduction varies on the different lines, malleable fittings showing a greater price decline than the cast fittings. The new prices of nipples and couplings accompanied the new list on wrought pipe, the change being to increase the discount 10 per cent. In pound goods the net prices are lowered from 2 to 10 cents per pound according to the class. Revised prices and discounts on all lines are the following:

PIPE FITTINGS—	
Cast iron fittings	25
Bushings, cast	27 1/2
Bushings, malleable	20
Flanges	37 1/2
Plugs	27
Flange unions	22 1/2
Malleable unions	42 1/2
Dart unions, black	29
Do., galvanized	8
Nipples, 1/2 to 4" close and short	50
Do., long	60
Do., 4 1/2 to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4 1/2" and larger	10
Pound Goods—	
Class A	0 53
Class B	0 20 1/2
Class C	0 14

COTTON WASTE HOLDS UNCHANGED

Montreal.

Quotations on the various grades of cotton wastes still remain unchanged, although a revision to higher levels has been more or less expected in the past two or three weeks. Cotton goods in general are now settled at higher prices. However, dealers now state that a steady market is looked for. The undertone of the market is undoubtedly firm and if any change occurs it will in all probability be in the upward direction. Following are present quotations.

COTTON WASTE— Cream polishing, 20c; White, XXX, 17c; XX, 16c; X, 15c; XLGR, 15c; X Empire, 14c; X Press, 13c; 6 X Special, 12c. Colored, Fancy, 14c; Lion, 12 1/2c; Popular, 10c; Keen, 9c. Wool Packing, Arrow, 30c; Axle, 25c; Anvil, 20c. Dominion Wipers, Washed and Sterilized, White cotton, 22c; colored cotton, 16c.

Above lines subject to trade discount for quantity.

LEAD PRODUCTS MARKING TIME

Montreal.

Current quotations on the various lines of lead products remain unchanged, but the tone of the market is somewhat firmer than has been ruling for some time past. Without exception, metals used in the manufacture of these goods are reported with increased strength on the primary market in the past few weeks. It has been felt too, that prices ruling on the finished product were well down to bottom in accordance with metals on the primary market, and any strength shown here would immediately reflect on the finished goods. However, for the present prices are holding, with the market much firmer.

LEAD PRODUCTS—

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13 1/2
Lead sheets, 2 1/2 lbs.	0 10 1/2
Lead sheets, 3 to 3 1/2 lbs., sq. ft., lb.	0 10 1/4
Do., 4 to 8 lbs., sq. ft.	0 09 1/2
Cut sheets 3/4 lb. extra and cut sheets to size, 3/4 lb. extra.	
Solder, guaranteed, lb.	0 25 1/2
Do., strictly, lb.	0 23 1/2
Do., commercial, lb.	0 20 1/2
Do., wiping, lb.	0 21*
Do., wire, lb.	0 25
Zinc, sheets, casks	0 11 1/2
Do., broken lots	0 12

A BETTER TONE IN

COMPRESSION WORK

Montreal.

Quotations on the various lines of compression goods continue unchanged, but the tone of the market is a little different in the past week from what has prevailed recently. Both copper and brass on the primary markets are showing remarkable strength at present, particularly the former. This will in all probability reflect on most lines of valves and bibbs, and although there is no present indication of an advance in quotations on any lines, the market is now much firmer than formerly. Following are discounts on the various lines:

COMPRESSION WORK—

Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	46%
Roundway stop and waste cocks, std.	40%
Brass steam cocks, standard	10%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, standard	20%
Gate or straightway	16/10%
Jenkins Globe	10/10%
Jenkins gate valves	10%
Emco Globe Valves	20%
Emco Check Valves	20%

HIGHER PRICES ON RANGE BOILERS

Montreal

The quotations on range boilers are revised to higher levels on all sizes, both in standard and extra heavy. The new list of figures follow the unsteady market that has prevailed on range boilers for some time, and while new higher prices were expected, it was not generally thought the revision would be to such an extent. For example, the 30 gallon standard boiler was formerly selling on the local market for \$7.50. This

quotation was really the result of price-shading among the various dealers. The new quotation now ruling on this size is \$9.25. Following are the revised prices.

RANGE BOILERS—	Std.	Ex.	Heavy
30 gallon	9 25	11 75	
35 gallon	12 00	14 50	
40 gallon	14 50	17 00	
52 gallon	21 00	26 00	
66 gallon	30 00	36 00	
82 gallon	37 50	50 00	
100 gallon	48 00	58 00	
120 gallon	57 00	67 00	

CORRUGATED SHEETS ARE SOMEWHAT FIRMER

Montreal.

The new lower list on corrugated sheets, reported in our last issue is the last change made in quotations on these products. The trend of the market on corrugated, has been for some time past easier, and at almost regular intervals quotations would be revised to lower levels. The situation is now somewhat reversed and both plain and galvanized and black sheets are on a much firmer market; with corrugated sheets now also recording more strength than has been shown on the market this year. Present list prices and discounts are as follows:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	\$ 7 00
No. 26 gauge	7 50
No. 24 gauge	10 50
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	18 50
Less 7 1/4%.	
Lighter than 24 gauge and wider than 27 inches 75c a square extra.	

EAVESTROUGH AND CONDUCTOR PIPE QUIETER

Montreal.

Current demand for eavestrough and conductor pipe are not as heavy in the past two weeks as formerly. Although the season is advancing, dealers look for a fair amount of business still before the cold weather sets in. Buying has been light all season and with stocks low in the hands of the outside dealers, the later demand from the consumer for trough should reflect to an extent direct on the jobber. The market for trough and pipe is steady to firm, the recent strength of galvanized sheets altering the situation from one of easiness, to firmness. Unchanged prices and discounts are the following:

EAVESTROUGH—	
O. G. Square Bead—Per 100 ft.	
8 inch 10 inch 12 inch 15 inch 18 inch	
\$15 90 \$17 70 \$21 20 \$28 80 \$36 80	
O. G. Round, and Half Round—Per 100 ft.	
8 inch 10 inch 12 inch 15 inch 18 inch	
\$16 90 \$18 70 \$22 20 \$29 80 \$37 80	
Discount 60/10 per cent. off list.	

CONDUCTOR PIPE—Per 100 ft.	
2 inch 3 inch 4 inch 5 inch 6 inch	
\$18 40 \$22 30 \$29 60 \$40 00 \$49 00	
Discount 60/10 per cent. off list.	

CONDUCTOR ELBOWS—	
Plain round or round corrugated.	
2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 55 per cent	

NO FURTHER CHANGE IN
WROUGHT PIPE

Montreal
There is no further change in wrought iron and steel piping since the announcement of the new list in our last issue. The demands for wrought pipe are still more or less irregular, with the general movement confined almost entirely to the smaller sizes. With the new list now the selling basis, the market is said to have settled on a fairly steady basis, with an improvement looked for in sales before the colder weather sets in. Following is the new list No. 53:

To Take Effect Sept. 22, 1921.
Standard Butt Weld Pipe S-C
Per 100 feet.

Price List No. 53.	September 22nd, 1921.
1/4 in. \$ 6.00	\$ 8.00
1/2 in. 4.20	6.30
3/4 in. 4.20	6.30
1 in. 5.36	6.97
1 1/4 in. 6.44	8.28
1 1/2 in. 9.18	11.90
1 3/4 in. 12.42	16.10
2 in. 14.85	19.25
2 1/2 in. 19.98	25.90
3 in. 31.59	40.95
3 1/2 in. 41.31	53.55
4 in. 53.36	68.08
4 1/2 in. 63.22	80.66

Standard Lap Weld Pipe S-C
Per 100 feet.

2 in. \$ 23.68	\$ 20.60	\$ 31.82	\$ 37.74
2 1/2 in. 35.10	44.45	47.97	57.33
3 in. 45.90	58.14	62.73	74.97
3 1/2 in. 54.28	70.84	74.52	91.08
4 in. 54.31	83.93	88.29	107.91
4 1/2 in. 72.39	92.71	1.04	1.24
5 in. 84.36	108.04	1.21	1.45
5 1/2 in. 1.09	1.40	1.57	1.88
6 in. 1.45	1.88	2.02	2.45
6 1/2 in. 1.53	1.98	2.13	2.58
7 in. 1.76	2.28	2.45	2.97
8 in. 2.14	2.76	2.97	3.59
10 in. 1.98	2.56	2.75	3.33
12 in. 2.55	3.30	3.54	4.28

STOVES AND HEATERS NOW
ACTIVE

Montreal
Stoves and heaters are now entering the active fall season. Shipments are being forwarded from the local warehouses, and while sales are not as heavy as last year at this time, they are quite satisfactory. The many exhibitions and fall fairs throughout the country have apparently done their part insofar as stoves and heaters are concerned, for sales immediately increased with the commencement of these exhibitions. These seem to prove more beneficial each year, many sales to consumers being made as well as a great help with the dealers' trade.

There seems little likelihood at present of a further price change in any line. The last revision is taking care of present productive costs and it is worthy of note that a slight increase is made on raw materials on the American market. This will not, in all probability, have any direct effect on the situation here for the present, but it leaves the chances of a further revision to lower levels more remote.

COPPER SHEETS, RODS AND TUB-
ING ADVANCE IN PRICE

Montreal.
The strength on the copper market in the primary stage is reflected on rods, sheets and tubing. Sheets now the most marked advance when they are quoted from 1 to 3 cent per pound higher. The

situation of copper in the last ten days has been one of interest. The heavy stocks, accumulated since the close of the war when both the virgin metal and scrap have been in over abundance on the market, caused new quotations on copper to drop to the low level of 11 1-2 cents in the U. S. A. The price of 13 cents is now reached, this advancement taking place in the past ten days to two weeks. With a continuance of this strength it would seem altogether possible that higher prices were imminent on the above mentioned articles.

Following are the revised quotations:

BRASS—	Base
Sheets	0 25
Rods, 1/2 to 1 inch, round	0 23
Tubing, seamless	0 32
COPPER—	
Rods, 1/2 to 2 inch	0 30
Soft sheets, plain, 16 oz. and heavier, lb.	0 33
Plain tinned, 16 oz. and heavier, lb.	0 38
Polished and tinned, 16 oz. and heavier, lb.	0 43
Tubing, lb.	0 34

BOILERS AND RADIATORS STEADY
TO FIRM

Montreal.
Buying in boilers and radiators is now quite active. Buildings under construction in the past months have now reached the stage where the heating system is required. Quotations on both lines are holding, with an improvement recorded in the tone of the market, but no present indication of a revision in prices in either direction. Prices and discounts are as follows:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53% for hot water and 54% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.
Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 0 per cent. off list.
Square or sectional hot water or steam boilers, 15-in., 10 per cent.
For Ontario Government trimmings add 5 per cent.
Square or sectional water boilers, 19-in. to 36-in., 10 per cent. off list.
Square or sectional steam boilers, 19-in. to 36-in., 10 per cent. Ontario Govt. trimmings, net list.
Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.
All prices f.o.b. Toronto, Montreal, . Guelph, Hamilton, St. Catharines or Brantford.

BOILER TUBE MARKET ALSO
SHOWS STRENGTH

Montreal
Although no actual price changes are given out on boiler tubes, they are now firmer along with other lines of iron and steel. With the market continuing to show strength, it is a question as to the time necessary before price locally will show a change but it is thought these will not record advances as readily as other lines, such as bar iron and sheets. Present quotations are the following:

BOILER TUBES—	Seamless Lapweld
1 inch	24 70
1 1/4 inch	24 50
1 1/2 inch	24 00
1 3/4 inch	26 00
2 inch	24 50
2 1/4 inch	27 75
2 1/2 inch	27 75
2 3/4 inch	35 00
3 inch	42 00
3 1/2 inch	54 50
4 inch	75 00

SHEET PRICES STILL UNCHANGED

Mon'treal
Notwithstanding the continued improvement in sheets, and the recent advances made in other markets, prices locally remain at former figure on all kinds. It would not be surprising, however, if an advance was made at any time, especially on the galvanized sheets. These seem to hold the centre of attraction, with the demand also showing increase in the past two week. There are no new developments at the mills since advance in prices of a few week ago, but the improvement continues and the future trend seems asured. Following are unchanged local quotations:

BLACK SHEETS—		
10 gauge	4 30	4 65
12 gauge	4 40	4 75
14 gauge	4 50	4 85
16 gauge	4 60	4 95
18-20 gauge	4 80	5 20
26 gauge	4 95	5 40
22-24 gauge	4 90	5 35
28 gauge	5 00	5 50
GALVANIZED SHEETS—		
10 3/4 ounce	6 85	7 75
28 gauge	6 45	7 35
26 gauge	6 15	7 00
22-24 gauge	5 95	6 75
20 gauge	5 80	6 60
18 gauge	5 80	6 50
16 gauge	5 70	6 50
14 gauge	5 65	6 50
12 gauge	5 40	6 50
10 gauge	5 30	6 50

English Standard—		
28 gauge	8 50	7 75
26 gauge	8 25	7 50
24 gauge	7 65	7 10
22 gauge	7 30	6 65
18-20 gauge	4 95	5 20
NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10 3/4 oz. 25 cents per 100 lbs.

20 x 28 LXXX, 56s	12 00	

IRON AND STEEL FIRM

Montreal
With the undertone on iron and steel remaining firm, prices locally are unchanged this week. It was thought in some quarters that prices would have shown an advance before now, but others maintained that while no changes were recorded at the mills, or in the primary markets, there was little likelihood of an increase locally. Following are existing prices.

Common bar iron, 100 lbs.	3 00	3 25
Refined iron	4 00	4 90
Iron finished machinery steel	3 45	
Mild steel	3 00	3 40
Single reeled machinery steel	5 00	5 25
Band steel	3 00	3 40
Spring steel	6 00	
Sleighshoe steel	3 00	3 40
Tire steel	3 00	3 60
Toe calk steel	4 00	4 30
Harrow tooth steel	3 55	
Mining teeth steel per lb.	0 22	
Black Diamond tool and cast steel	0 22	
NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.		
Band steel in scroll bundles, 50c per 100 lbs. extra.		
Flats, iron and steel, 3-16 and thinner, 50s per 100 lbs. extra.		

SCRAP MARKET IMPROVES

Montreal.

A somewhat better feeling now exists among dealers of waste materials. The actual business turnover is still light, although slightly improved in the past two weeks, but enquiries and the general tone of the market now lend encouragement. As one dealer stated "Where there is smoke there is fire." The improvement follows the better tone in the iron and steel market. Scrap material has been dull for a long period, but present indications of an improvement are thought to be a genuine feature and better market conditions are anticipated. Following are nominal local quotations:

Automobile tires	0 75
Rubber shoes	0 02½
Yellow brass	0 05
Red brass	0 08½
Light brass	0 04
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02½
Light copper	0 07¾
Heavy copper	0 10½
Wrought iron, R.Rd., No.1 per gr. ton.	10 50
Malleable scrap (ton)	10 50
Pipe scrap (ton)	7 00
Heavy melting steel	7 50 to 8 00
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	20 00

INGOT METALS ARE MUCH IMPROVED

Montreal

The firmer tone recorded last week in ingot metals is still maintained and there is every indication of a better tone and a stiffening of prices generally. The volume of business is improving to some extent, and it is generally realized that prices will be higher in the near future.

TIN—This metal is lagging somewhat as compared with others, and there is

still an opportunity to buy at a reasonable price. The market is in a condition where any indication of real buying would be followed by an advance in prices. The strength of Sterling exchange is also an important factor. The local market is firm at 35 cents.

COPPER—The strength shown by New York is unmistakable. The volume of buying has broadened considerably both for local and export consumption. Locally copper is strong at 17 3-4 cts. for electro and 11 1-2 for casting.

LEAD—There is no particular change to report in this metal. Both London and East St. Louis being at about the same level. The demand continues good and there is no sign of any weakness. Local price is slightly higher at 7 cents.

SPELTER—The advance still continues in the U.S.A. and the position appears very firm. It would not be surprising, however, if a quieter period ensued as the advance has been rather rapid after a long period of dullness. It is difficult to buy at less than \$4.62 1-2 for spot with a premium for futures. Producers are more or less indifferent at these prices. The English market also remains very firm. Local price 7 3-4 cents.

ANTIMONY—The market in New York is somewhat quieter after the recent advance, but without any evidence of weakness. Locally the market is firm at 7 1-2 cents for ordinary brands and 8 1-4 for high grade English.

ALUMINIUM—This metal has an easier tone and the market is dull with quotations lower at 28 cents.

TORONTO MARKETS

TORONTO, October 14.—Another extensive list containing important price revisions which are mainly of a downward nature, features recent developments on the current plumbing and heating goods markets. Revised discounts, with consequent lower quotations, are apparent on many lines including cast iron fittings, all kinds of plugs, malleable and cast bushings, unions of all sizes, also both the steel and brass jack chain.

Other price reductions appear on knife-handled wrenches, Canada plates, bolts and nuts; while substantial declines have been given locally on brass and copper rods, tubing and sheets, in the face of the firmer tone reported from primary markets on ingot copper.

Another new list has been announced on range boilers, bringing quotations to a higher level, which is claimed to be more in keeping with replacement costs. Black and galvanized malleable pipe fittings all register price developments; and the wire nail base has been advanced 25 cents per keg.

Higher prices have appeared on galvanized sheets in primary market circles, but the local base price generally holds. The condition of stocks and state of liquidation, are still contributing factors to prevailing boiler tube prices. Iron and steel prices are firmer, with a better outlook. Cotton waste quotations are holding unchanged. There is an improved note of confidence in the scrap material markets, while gains are recorded in some ingot metals, noticeably copper, spelter and tin.

ANOTHER NEW LIST ON RANGE BOILERS

Toronto.

The recent higher price levels on galvanized sheets have been reflected in another new list of increased quotations on the galvanized range boilers. This latest change supersedes the revision on these products recently recorded on the local markets and is mainly attributed to the slightly improved general business conditions, coupled with the advancing cost of the sheet material. As manufacturers have claimed there remained no profit in the low prices that have been evident on the markets during the last two months, the increase in prices at the steel mills afforded an opportunity to stabilize the current quotations on range boilers in an effort to steady the market.

Prices on the 30-gallon standard size are now 50 cents higher than the previous list of two weeks ago, and give a total advance of \$1.00 from the level at which this boiler was being recently quoted. Quotations all through the list give a general increase, varying from 75 cents to \$2.00 and \$3.00 on the different sizes. Following are the revised quotations:

RANGE BOILERS—		Standard	Ex. Heavy
30 gallon	\$ 9 25	\$11 75
35 gallon	12 00	14 50
40 gallon	14 50	17 00
52 gallon	21 00	26 00
66 gallon	30 00	36 00
82 gallon	37 50	50 00
100 gallon	48 00	58 00
120 gallon	57 00	67 00
144 gallon	76 00

SUBSTANTIAL DECLINES ON BRASS AND COPPER

Toronto

Substantial reductions are again recorded in prices on copper and brass goods. Following on the recent declines of approximately 2 cents per lb. on sheets, rods and tubing, these products now take further extensive reductions varying from 3 to 7 cents per lb.

With the recent gains in ingot copper, the strength of this market was expected to be reflected in prices on copper products, but up to the present no change has resulted. Increases, varying from 1 to 2 cents per lb. are however, reported from other centres on copper goods. The local prices are included in the following list, but one dealer stated that there is a possibility of the higher level developing in the near future.

BRASS—

Sheets base, per lb.	\$ 0 22
Rods, base, per lb.	0 20
Tubing, base, per lb.	0 25

COPPER —

Rods, base, per lb.	0 26
Soft sheets, plain, 1 oz. and heavier, lb.	0 28
Do., plain tinned 16 oz. and heavier, lb.	0 35
heavier, lb.	0 40
Tubing	0 27

K & F HORSE RASPS HAVE REVISED DISCOUNTS

Toronto.

Following the announcement last week of lower prices on the Hellers horse rasps, the K & F make of horse rasps have also revised discounts. The new quotation is list, less 75 per cent.

It Pays to Give Your Customers the Best

Satisfied customers are your best advertisement—as they are ours. Your customers deserve the best that you can give them—in Brass Goods as well as in workmanship.

MUELLER Brass Goods are made with such infinite care and precision that no special fitting is necessary for their installation—thus saving you time that means profit on the job.

MUELLER ADJUSTABLE TRAPS

You can save time by installing **MUELLER** Adjustable Traps—either plain like A 2090 or vented like A 2094, illustrated above. **MUELLER** also makes “S” traps both plain and vented. All with cleanout plugs if desired.

MUELLER Traps, like every **MUELLER** product, are made from carefully selected materials by skilled artisans, who take pride in their work. The name **MUELLER** is a guarantee of excellence.

MANY PRICE CHANGES

ON PIPE FITTINGS

Toronto

Following on the price revision in wrought nipples and couplings recently enumerated in the market reports, quotations on other classes of pipe fittings are also changed. The current price adjustments are chiefly to lower levels, attained through revised discounts. Cast iron fittings; all kinds of plugs; malleable and cast bushings; and unions of all sizes are affected; while prices on the black and galvanized malleable fittings in classes A, B and C, have all registered additional changes.

Current sale of pipe fittings are quoted as fair, with orders continuing of the small variety, but more numerous. Following are the prevailing discount revisions:

PIPE FITTINGS—

Cast iron fittings	25
Plugs, cast iron	28
Do., solid	28
Do., countersink	28
Bushings, mall.	28
Do., cast	28
Unions, 1/4 in. to 2 in.	45
Do., 8 in., 2 1/4 to 4 in.	45
Flanged unions	25
Dart unions, blk., 1/4 to 2 in.	29
Do., 1/2 in., 2 1/4 to 4 in.	40
Do., galvd., add to black	30

Do., 4 1/2 in. and larger	40
Do., long, 1/2 in. to 4 in.	60
Do., 4 1/2 in. and larger	50
Do., running thread	30
Couplings, 4 in. and under	30
Do., 4 1/2 in. and larger	10

MALLEABLE FITTINGS—

	Black	Galvanized
Class A	0 55	0 68
Class B	0 23	0 33
Class C	0 15	0 23

IMPROVEMENT NOTED IN LEAD AND ZINC GOODS

Toronto

The market on lead and zinc goods has remained steady during recent weeks, and prices on these various products have held firmly. This condition has been supported by an improvement in the current demand, with the volume of Fall business showing a seasonable activity. The recent lower price levels on the different grades of solder are still being shown, and the following list of quotations, remains generally unchanged:

LEAD AND ZINC GOODS—

Lead, pipe, list, per lb.	0 12 1/2
Lead, waste pipe, list, per lb.	0 13 1/2
Do., over 8 in., list, per lb.	0 14 1/2
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends, 10 per cent.	
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb	0 09 1/2
Cut sheets, 1/2 c to 3/4 c lb. extra and cut sheets to size, 1 c lb. extra.	
Solder wire, per lb.	0 29
Do., commercial, lb.	0 20
Do., strictly, lb.	0 22
Do., guaranteed, lb.	0 24
Do., wiping, lb.	0 20
Zinc sheets, per lb.	0 13

REVISED DISCOUNT SHOWN ON JACK CHAIN

Toronto

A new discount has been given covering prices on jack chain. This change is applicable to both the steel and brass chain, and the revised quotation is list less 15 per cent.

NEW LOWER LIST ON BOLTS AND NUTS

Toronto.

A new revised list is now effective on bolts and nuts, showing reduced prices on both products. The decline on bolts averages approximately 10 per cent, this change affecting carriage, machine and miscellaneous bolts; while the similar lowering in quotations on square and hexagon nuts, both blank and tapped, amounts to \$1.00 per 100 lbs.

BOLTS AND NUTS—

—Discount sheet applying to standard lists.	
Carriage bolts, \$1.00 list, 3-8" dia. and smaller, 6 in. and shorter	40
Do., longer lengths	30
Do., 7-16 in. and larger	25

Step bolts, large head (\$3 list)	25
Whiffletree bolts	25
Nuts, 2 in. and smaller, square blank, off list	\$0 50
Nuts, 2 in. and smaller, square tapped, off list	Net list
Nuts, 2 in. and smaller, hexagon—blank, off list	Net list
Do., tapped, add to list	0 50

CANADA PLATE PRICES AGAIN LOWERED

Toronto

Another 30 per cent reduction has been announced in the prices on Canada plates this current change bringing the prevailing quotations on dull, 60 sheets, to \$5.65 per box; and on the ordinary, 52 sheets, to \$5.60.

	Per box
PLATES, CANADA—	
Dull, 60 sheets	5 65
Ordinary, 52 sheets	5 60
PLATES, COKE TIN—

1X, 20 x 28, 5 6 sheets	14 00
1XX, 20 x 28, 56 sheets	16 00
PLATES, TERNE—	
1C, 14 x 20, 112 sheets	12 00

WIRE NAIL BASE PRICE ADVANCED TO \$4.25

Toronto

As outlined in a previous issue of Sanitary Engineer, the recent reductions in wire nail base prices have failed to to hold for any length of time, and the reaction to higher levels has now set in, an increase of 25 cents being recorded. This advance brings the current quotation to \$4.25, and is parallel with the increases noted on southern primary markets, to which reference was made in a previous report covering this situation. On the strength of Pittsburgh base prices, the evening-up revision was more or less expected; and the recent declines mainly indicated a local situation on Canadian wire products markets.

HIGHER PRICES APPEAR ON GALVANIZED SHEETS

Toronto.

An advance in quotations on galvanized sheets to the extent of 15 cents per cwt., has been made by some of the local

wholesale houses. The new prices given are based on \$6.25 for the 28 gauge sheets, and \$6.65 per 100 lbs. for the 10-3/4 oz. However, the increase is not yet generally applied, as the lower quotation of \$6.10 base on galvanized sheets is still on the market.

Some advance in prices on a more general scale is predicted in reports from southern primary steel markets. Recent developments indicate that the higher level on sheets effective in U. S. circles will be reflected throughout all phases of the trade in the near future. At present there is evident a very strong market in sheets and plates, with more activity and a firmer demand than has been apparent for a number of months. In this connection it is significant that one large Canadian producer has sufficient bookings on hand to keep the shop operating at full capacity for the next sixty days. The whole trend of the present market, is therefore, towards an increase; and, as pointed out, the following quotations have already been revised to a higher level in some quarters:

BLUE ANNEALED—

10 gauge, base	4 00	4 50
12 gauge	4 05	4 55
14 gauge	4 10	4 60
16 gauge	4 15	4 65

BLACK—

18-20 gauge	4 55	5 05
22-24 gauge	4 60	5 10
26 gauge	4 65	5 15
28 gauge	4 75	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—

	Queen's Head.	Fleur-de-lis.
28 gauge	9 50	8 75
26 gauge	9 25	8 50
24 gauge	8 65	8 10
22 gauge	8 30	7 65
18 and 20 gauge	7 60	7 50
Premier and Apollo—		
10 3/4 oz.	6 50	7 00
U. S. 28, base	6 10	6 60
U. S. 26	5 80	6 30
22 and 24	5 65	6 15
18 and 20	5 50	6 00
16	5 35	5 85
12 and 14	5 20	5 70

An extra is now charged on galvanized sheets, 10 3/4 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is from 20c to 30c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

NEW PRICES GIVEN ON KNIFE HANDLED WRENCHES

Toronto

Lower prices are announced on knife handled wrenches, the revised quotations being as follows:

KNIFE HANDLED WRENCHES—

	per doz. net
Size 8 inch	\$15 60
Size 10 inch	18 60
Size 12 inch	24 00
Size 15 inch	32 40
Size 18 inch	40 80
Size 21 inch	49 80

CONDITION OF STOCKS GOVERNS TUBE PRICES

Toronto.

There has been no apparent change in the current situation on boiler tubes. The demand has failed to exhibit signs of any strong activity, while prices still re-

TORONTO MARKETS

(Continued from page 34)

flect the condition of present stocks, and are made according to the state of liquidation. No marked improvement in this situation is anticipated while the buying movement is at its present depressingly low state, when compared with normal seasonable demands. It is considered speculative in some quarters whether the betterment of this class of tubular goods will develop during the coming winter or early spring months. Following are the current average quotations in tubes:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00
1 1/4 inch	27 25
1 1/2 inch	26 25
1 3/4 inch	29 75	25 00

3 1/2 inch	60 00	40 00
4 inch	75 00	50 25

LOWER PRICES HOLD ON

COMPRESSION WORK

Toronto.

In contrast with the many recent revisions that have been recorded, prices on valves and compression work generally remain unchanged. Some new business has been reported at the lower quotations, but any general improvement is said to be very slight, as trade is only described as fair for this season of the year. Following are the prevailing discounts.

VALVES—

	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecoals, stand'd	46

FAIR INTEREST IN CORRUGATED SHEET MARKET

Toronto.

Quotations on corrugated sheets are holding at the lower levels recently announced; and with an average volume of business recorded. Further price revisions on the flat galvanized sheets on the primary steel markets, have created a renewed interest in corrugated, owing to the proportionate range on these products. With the higher prices on flat galvanized sheets now developing, a firmer tone is reflected in current quotations on corrugated. The prevailing levels follow:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 2 1/2 gauge	10 50
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	18 50
Less 7 1/2%	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

FIRMER UNDERTONE IN PIPE

Toronto.

The stronger tone which has developed throughout the steel industry, coupled with the price gains on certain products which have recently been recorded, tend to reflect a corresponding firmness in the market on conductor pipe and eaves-trough. While local quotations remain at the recent lower revisions, and no changes have been announced either on outside or domestic markets, the opinion has been expressed that prices have now reached the bottom of the downward movement.

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth:

	Per 100 ft.

4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 55 per cent.	

IRON PRICES ARE FIRMER WITH BETTER OUTLOOK

Toronto.

Reports emanating from the southern primary steel markets indicate the feeling is fast spreading among the mills that prices on bars, shapes and plates, have now been fully liquidated. As a result, steel producers are said to be contemplating an advance in quotations on these products in the near future.

On the other hand, leaders in the steel trade speak more confidently of larger mill operations and increased volume of business, that was not apparent a month or six weeks ago. The trend of prices on the primary steel markets generally has been toward a higher and firmer level.

Local quotations on bar iron and steel, however, generally remain unchanged, as follows:

IRON AND STEEL

Mild steel bars, base	3 25	3 50
Mild steel bands, 3-16 in. base	3 75	4 00
Bar iron, base	3 25	3 50
Angle iron, base	3 35	3 60
Horseshoe iron	4 10	
Tire steel	4 75	5 90
Spring steel	9 50	11 50
Crucible cast steel	30 00	35 00
Mining drill steel	18 50	
Cast tool steel, medium	20 00	23 00
Cast tool steel, high grade	30 00	36 00
Sleigh shoe steel	4 10	4 50
Norway iron	15 00	
Toe caulk iron	5 40	6 40
Hoop steel	4 50	4 75

IMPROVEMENT IN SOME INGOT MARKETS

Toronto.

An improved tone is now generally apparent throughout the ingot metal markets, with copper, spelter and tin, attracting chief interest in the order named. The increase in inquiry is the principal feature which has served to

partially restore confidence in these metals, and in view of the steady consumer interest, prices on British and American primary markets, have reflected this betterment in conditions by higher quotations. Whether the gains will materialize in permanent improvement, however, is primarily dependent upon the strength of the buying movement being sustained.

COTTON WASTE QUOTATIONS

HOLD UNCHANGED

Toronto.

Dealers report that prices on cotton wastes remain unchanged, at present, but a tendency towards an advance in quotations is manifest among certain dealers. Based on the prevailing high price of raw cotton, and the corresponding higher levels on manufactured cotton goods generally, some increase on cotton wastes has even been predicted in one quarter; but this has not yet materialized; and the average local prices hold steady, at the levels which have prevailed since the last general revision in June. Current quotations follow:

Above lines subject to trade discount for

BETTER OUTLOOK IN SCRAP MATERIAL MARKETS

Toronto.

The outlook in scrap materials is beginning to be a little more encouraging from the dealer's viewpoint. Iron and steel scrap consumers are inquiring more freely but demand has not yet recovered to any extent. Local dealers are hopeful of firmer prices in the near future, as quotations on waste materials in the American markets have recently been advancing. Local quotations, at present, remain unchanged. Following are the averages of dealers' nominal buying prices for fairly large quantities:

WASTE MATERIALS—

No. 2 busheling	11 00
Heavy melting steel, gross ton	9 50 10 00
R. Rd. wrought iron, No. 1, gr. ton	10 25 11 25

THEN INSTALL THE **Jewell** Pipeless Furnace

There is real profit when you install a "Jewell," for not only do you earn dollars and cents, but you have the satisfaction of knowing that you are giving your customers the best that money can buy—that the good-will created by such satisfactory sales will be a real business builder in the future.

Scientifically designed, built under the supervision of experts, by skilled workmen, of the finest materials obtainable anywhere it is doubtful if the "Jewell" can be equalled in the pipeless furnace field. Certainly it is unsurpassed.

WINNIPEG MARKETS

WINNIPEG, October 14.—One of the most important price developments featuring the markets on plumbing goods is the change in wrought iron and steel piping. A new list has now been issued, thus bringing quotations to a lower level. Reductions are also evident in prices on corrugated sheets; while a decline is given on soldering coppers.

Other primary markets in steam-fitting lines have practically remained stationary, few price revisions being recorded. A firmer tone is evident in cotton wastes, this being a reflection of the strength of raw cotton, and the consequent higher prices on manufactured cotton goods. Current business in many products is said to be just fair. Some revision in the list prices on range boilers is looked for with a settlement in this market reported as imminent.

FIRM TONE IN COTTON

WASTE MARKETS

Winnipeg

While prices of cotton wastes are at present unchanged, and locally are holding at the levels which became effective in June, some price advances have been made in Southern markets, and a firm tone exists in cotton generally. The higher price of the raw material, coupled with the recent advances in prices on manufactured cotton goods, has developed the strong undercurrent in wastes. However, dealers state that if the cotton wastes were locally in steady or increased demand, prices would undoubtedly have advanced. There is, however, no wish on the part of dealers to retard what business is now evident in wastes by higher quotations, but based on the present cost of raw cotton, advanced prices on wastes will likely be in order as soon as present stocks are consumed.

Above lines subject to trade discount for quantity.

NO MARKED CHANGE

IN LEAD PRODUCTS

Winnipeg

Quotations on the different lines of lead products continue unchanged, with the tone of the market practically the same as last week. Following are the present prices:

LEAD PRODUCTS—

Lead pipe, per 100 lbs.	\$12 06
Lead waste, per 100 lbs.	12 96
Lead traps and bends, 5% off list.	
Lead sheets, full rolls, per lb.	0 10½
Less quantities	0 11
Solder, ½ and ½, case lots, per lb.	0 26
Less quantities	0 27
Zinc sheets, per lb.	0 13

REVISED DISCOUNTS GIVEN

ON TRIMO WRENCHES

Winnipeg.

The discount on Trimo Pipe Wrenches is now 40 per cent. off the list, and the parts for same are now quoted at 35 per cent. off the list.

ANOTHER NEW LIST ON

WROUGHT PIPING

Winnipeg.

Through the issuing of a new list on piping, wrought iron and steel pipe are again reduced in price. The amount of reduction varies on the different sizes. This adjustment adds another revision. to the many changes made on wrought pipe since the first of the year. Following is the list of new prices.

BLACK PIPE

CORRUGATED SHEETS ARE

LOWERED IN PRICE

Winnipeg

Prices on corrugated iron have been made lower this week. Following are the latest quotations.

CORRUGATED SHEETS—

Galvanized, Medium.	
28 gauge, per 100 lbs.	\$7 20
26 gauge, per 100 lbs.	7 83
Painted, Medium.	
28 gauge, per 100 lbs.	5 85
26 gauge, per 100 lbs.	6 75

HOPE FOR SETTLEMENT

IN BOILER PRICES

Winnipeg

For some time past the resale prices on boilers have shown a material variation among the different jobbing houses, and it is the opinion of the manufacturers that if a new price basis was established, prices would again become uniform. However, the market has improved in recent weeks, and whether new prices are forthcoming or not, it is expected an agreement will soon be reached among the dealers. There is no indication of any price changes at the present time, and the current nominal prices are as follows:

RANGE BOILERS— (Galv.)

20 gallon, each	\$10 00
30 gallon, each	10 00
35 gallon, each	13 25
40 gallon, each	16 25
52 gallon, each	23 45
66 gallon, each	33 15
82 gallon, each	40 60
100 gallon, each	62 50
120 gallon, each	75 00

LOWER QUOTATIONS ON

SOLDERING COPPERS

Winnipeg

Prices on soldering coppers have again been reduced and following are the newest quotations.

SOLDERING COPPERS—

Price per lb.	
1 lb., 49½c; 1½ lb., 45½c; 2 lb., 42c; 2½ lb., 41c; 3 lb., 39c; 3½ lb., 39c; 4 lb. and over 38c.	

PRICES ON CANDLE WICK

PACKING ADVANCE

Winnipeg.

Candle wick packing is quoted at 52 cents per pound which is an approximate advance of 5 per cent.

HEATING THE NEW PARLIAMENT BUILDINGS

(Continued from page 19)

instance, the building which was burnt down had its own heating plant, which consumed 25 tons a day. The east and west blocks burnt about that between them. The present plant has supplied these buildings and six others with ample heat on a consumption of 45 tons per day. This is a remarkable result, and amply justifies the undertaking. In all of those miles of piping we did not come across a leak, and we walked from end to end of the tunnel. A patrol is kept up of one man every shift making a complete tour of the installation and reporting on any defect he comes across. The firemen and watch engineers work in three shifts of eight hours each, and there is an engineer in charge on duty all day and one all night. There is ample opportunity in the summer when Parliament is not in session to carry out all the repairs that may be necessary.

Steam is also supplied to the parliamentary kitchens for cooking purposes, and there is of course, an enormous demand for hot water for domestic purposes in such a huge building. The central plant, takes care of it all and to everybody's satisfaction.

It is cause of satisfaction to think that this big job was designed by a Canadian consulting engineer and carried out by Canadian contractors.

Kerr Valves

Character to Work

They reflect credit on the man who specifies them, the man who installs them, and they give complete satisfaction to the men who use them.
Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face to face dimensions; observe the accessibility of the stuffing box; the strong, generous flanges and the properly spaced bolting.

"Toledo" Geared Adjustable Threading Tool,
No. 2 1-2. Capacity 2 to 6 1-2 in. inclusive.
Weight 120 lbs.

JARDINE - TOLEDO

Pipe Threading Tools

Jardine. In these effective tools the dies open out as the tool advances on the thread so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter-mouth.

Toledo. Beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble. They work easily, smoothly, rapidly and accurately. A. B. Jardine and Company, Limited, are the sole makers of "Jardine" Pipe Threading Tools and the sole licensees to make and sell "Toledo" Tools in Canada.

THE LONG Patent Steam Trap

There are many convincing features to point out to your prospective clients: properly set to drain, it cannot freeze; no valves are required other than those which admit steam to the apparatus to which the Long Steam Trap is attached.

J. T. LONG, Plumber and Electrician
127 4th. Ave., Maisonneuve, Montreal

This effective steam trap is regulated to work against 1 to 100 pounds pressure. It will drain from 900 to 1,500 feet of one-inch pipe. This proposition will pay you—write now, while you have it in mind, for particulars.

Money-Saving Information

"The most useful information contained in any paper I get"—so a Western banker writes in to-day's mail, renewing his subscription for **FINANCIAL POST**.

"Very often," his letter goes on to say, "I am called on to suggest investments for small amounts, sometimes as low as a few hundreds, and I find your Investors' Inquiry Service a reliable partner to consult. If every investor knew there was such service at his call it would surely lessen the losses of many of these people."

The Investors' Inquiry Service fills just that need. Unless you are perfectly sure of your investments write us before you buy.

It costs **FINANCIAL POST** subscribers nothing to be sure before placing hard-earned savings in stocks that may never have a chance of paying dividends. Trained service men will give you the benefit of keen analysis based on the facts behind the securities you are considering. This is one of many features enjoyed by our readers.

Swim With The Tide — Install “DAISY” Hot Water Boilers

People all over Canada like the “Daisy” Hot Water Boiler. It is “in right” and boosted by every one of its owners—over 60,000 of them. It has made good, proved itself in use, and is going strong.

Common sense shows that it is easier to sell and install Daisy Hot Water Boilers than to consume time in the endeavor to change the prospect's mind to something else.

Swim with the tide of business—it's easier going!

Good Times Just Ahead

PROSPERITY is within our reach in Canada.

All we need to have and to hold it is a sane, sure grasp on its simple elements.

They are Industry, Integrity, and Faith.

These are the cardinal virtues of human relations. They are the underpinnings of healthy, natural business life and the foundation of a wholesome social system.

They are the fountainhead from which Progress springs. A well-known business economist has called them the "Fundamentals of Prosperity."

Your purchases are an expression of Faith. They are evidence of your Industry. Make them confidently from business institutions of Integrity.

Buying is the backbone of prosperity. An active market means more employment, steadier earnings; benefits are passed around.

Wise spending gives stability to earning and for that reason is far-sighted thrift and sound economy.

The call of to-day is for cheerful thinking, willing working and constructive action by you—everybody—NOW.

To-morrow's change for the better will come about through the combined efforts of each and every one of us.

By sheer force of numbers and co-operation, by the high power of heart and mind, we can put Business on a firm, stable basis.

We can do this because all of the material factors making for better business are right.

Let us link our faith with industry, our vision with courage, and forge ahead.

Let's make an uncommon effort toward a common end—Good Times.

ATTENTION! Contract Shops, Stores, Employers, Clerks, Mechanics, etc.

Our new HOME STUDY course in BUSINESS ADMINISTRATION is now ready for the trade. It teaches you the most modern methods of Business.

Learn to extend your Markets; enlarge your Business; Learn to adjust all the business combinations to the limit. We build on top of your present Ability and give you a business training equal to the best.

We teach you in your own home or office, Clear, Personal, Direct. An Hour a day will prepare you into a highly specialized Executive. Make ready for the next great prosperous Building wave.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Saves
Tearing
Up the
House
and
Lawns

Desolvo is the modern way. It gains goodwill for you by clearing clogged or frozen pipes easily, quickly, in a common-sense way. The old method of tearing up floors, lawns, shrubbery and flower beds until the point of trouble was reached, could not help but leave a feeling of resentment in the customers who were so served.

It saves you money and time on your job to serve customers quickly and agreeably by using Desolvo.

PERFECTO

OIL-REGULATED

FLUSH VALVES

Oil-Regulation—The Secret
of Success in Flush Valves

THE long-wearing, smooth-working features of the **PERFECTO** Oil-Regulated Flush Valve are due directly to the protection given the working parts by the oil, and to the fact that the action of the valve is controlled by oil and not by water. This means that sand, dirt and water impurities cannot obstruct the by-pass, or in any way lower the efficiency of the valve. The **PERFECTO** Flush Valve can be easily and quickly regulated, and, once regulated, it does not vary. The vital working parts, being enclosed in a sealed chamber, filled with oil, are kept practically free from friction. This insures a lifetime service from the valve, and absolute freedom from trouble.

Complete satisfaction depends upon the choice of **PERFECTO** Oil-Regulated Flush Valves. Write now for illustrated catalog.

Do You Investigate Your Credits?

Before you undertake any job, or fill any order, do you determine three facts about the party to whom you are about to sell?

1—CHARACTER?

Is my prospect honest? Have his dealings always been above question?

2—CAPABILITY?

Is he capable of paying one even if he wants to? Has he energy enough and business ability enough to make it reasonably sure that he will pay one promptly?

3—CAPITAL?

How much money has he --- is it available to pay his prospective debt to me?

Manufacturers investigate the credits of all dealers even if these dealers have been doing business for years.

How much more important this is for the dealer to investigate the credit standing of his customers---about whom he may know much less.

CORRECT AIR VENTS

Five Designs Meet All Conditions

No. 31.

Wood Wheel

An Air Vent of soft metal that will not stand up under pressure is valueless.

All Air Vents are under pressure -- constant pressure -- 24 hour pressure.

All Air Vents are subject to wide variations in radiation temperatures -- to sizzling, scalding, boiling hot water -- to biting, cutting steam pressures.

All Air Vents of our manufacture are hard metal cast brass, with seats that will not cut -- they resist pressure, give long service and satisfaction with freedom from whistling, leaking, dripping.

The slight additional cost is returned many-fold -- once installed they stay installed.

When writing advertisers please mention that you saw their advertisement in the SANITARY ENGINEER.

True Economy Stack Heater

The Stack Gas Water Heater will heat water in one minute.

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated.

Take notice of the small size and large number of coils; this means quick heat. The numerous small pipes will naturally heat water quicker than one big pipe because of the greater heating surface offered. More hot water with smaller consumption of gas—that's true economy.

Send for a Stack Heater Display Card

“STANDARD” PEDESTAL LAVATORIES

THESE beautiful pedestal lavatories attract favorable attention from the first by their beauty of design, their durability, and their cleanliness.

In times when new work is not plentiful such displays attract customers interested in fitting, or refitting, bathrooms of better class homes. They also lay a good foundation for the better business that seems to be indicated as close at hand.

Wholesaler as Plumbing Merchandiser

Ontario Manufacturer and Wholesaler of Plumbing Supplies
Thinks Wholesaler is the One to Operate Showroom and Act as
Merchandiser While Plumber Should be Confined to Installation
Work—Price Becoming too Important a Factor to be Conjured
With in Sale of Plumbing Equipment

DURING THE past week a representative of Sanitary Engineer had the opportunity of discussing with an Ontario manufacturer and wholesaler of plumbing supplies, some features of the present situation as it affects this industry. This manufacturer has a number of ideas which might be looked upon by some in the trade as more or less radical, but they represent a point of view entertained by one who has had long experience in various branches of the plumbing business and from which some operators may be able to take some suggestions. Hence the opinions are given herewith.

Dealing with conditions in the plumbing industry and prospects for future trade, this manufacturer pointed out that business had recently taken a decided turn for the better and that the probability was that an improved tone in trade spread over the next few months would culminate in a much improved condition in the Spring with the likelihood of a building boom to stimulate the demand for plumbing and heating appliances. It was not expected that the recent improvement in business would continue over the next few winter months, because such a condition would be more in the nature of a boom than a return to normal conditions, but it was emphasized that from the number of enquiries now being made that there were good grounds for anticipating a revival of demand for plumbing installations for new homes in the Spring.

Where is Equipment Going?

Dealing with the recent stimulation of business this manufacturer confessed that he hardly knew where the plumbing goods now being sold in fair quantity were going, due to the apparent lack of new building. It was his opinion that there must be more building going on in the country than is apparent from reports and that operators have been working diligently to develop replacement business from existing properties. In this connection it was mentioned that the apparent lack of building, due to falling off in volume of permits issued, might be caused by the lack of construction of large buildings while there might be a good volume of small house construction under way. The nature of the demand, namely for small house plumbing installations, would seem to indicate that the latter deduction has some foundation.

This manufacturer and wholesaler is of the opinion that recent conditions in the plumbing industry, occasioned by the characteristics of the times through which we have been progressing, have demonstrated the need for some much

needed reforms. The necessity for plumbing and heating operators looking to new fields for work, the necessity of developing every possible dollar's worth of business from existing properties in the absence of new building, and the desire of everyone to economize to the greatest possible extent are all factors which have produced a highly unique condition, and those in the industry who have been unable to arrive at a satisfactory solution of the problem and follow a careful course of merchandising have "fallen by the wayside."

In this connection the manufacturer interviewed is of the opinion that a showroom for the average plumber is unnecessary and merely tends to increase his overhead charges to an abnormal degree when considered in proportion to its business pulling influence.

"The plumber is judged by his customers according to his efficiency, by the character of the work which he does and by the nature of his business dealings with them," said this manufacturer.

Wholesaler is Merchandiser

Discussing the point that the efforts of certain plumbers to set up showrooms were being made as a factor in elevating the trade to a merchandising standard, and to plainly differentiate between this class of plumber and the "shoestring" variety, working from basement shops and with a set of tools as their only asset, this manufacturer pointed out that the efficient plumber will secure all the business he can handle as against the "shoestring" plumber who is short on efficiency and long on charging. The opinion was expressed that the demonstrating of plumbing goods should then be left to the wholesaler who was described as the real merchandising element in connection with the distribution of plumbing goods. This manufacturer laid a definite line of demarcation between the plumber and the wholesaler of plumbing goods, the former being confined to efficient installation work and the latter being confined to the merchandising of plumbing goods. He pointed out that by the use of a central showroom the wholesalers should put forth every effort to increase the amount of plumbing equipment sold and that this work should be conducted on a merchandising basis. The wholesaler, it was pointed out, is in a much better position to show an extensive range of fittings than is the individual operator, and that with a wider selection to choose from and salesmen trained to make the most of their opportunity, the equipment sold would be greatly increased.

Heating Pointers for Cold Weather

Facts Which Show What the Open Window Does to the Coal Bill—Increase in Radiator Efficiency Due to Air Velocity—Effect of Automatic Temperature Regulation in Meeting the Problem

BUT LITTLE thought is ordinarily given to the increase in coal bill due to the opening of windows. This is an item which may be charged to ventilation rather than to heating, but it is more often due to wasteful practices of the tenants of a building, since if radiators are occasionally turned on or off to meet the heating requirements, but little ventilation will be required beyond that which takes place around window cracks and through walls.

Rooms should be cooled by turning off the heat rather than by opening windows,—so far as this method is consistent with suitable ventilation. However, it is doubtless more agreeable to a tenant to open a window than to bend down to operate the handwheel on a radiator valve, a practice which if successfully carried out requires considerable attention and thought.

Heating systems are designed for the maximum load which occurs when the weather outside is the coldest. In this latitude it is below zero less than 10% of the heating season. Consequently, the heating system must be run during the remainder of the heating season at less than full capacity, so that there is a tendency to overheat in the milder weather in all types of buildings.

Many an office building has been equipped by the tenants with window ventilators and other devices which increase the ventilation and therefore the heating requirements. With the high cost and scarcity of coal it seems advisable to give this matter of additional load more attention than it now receives.

Figures For a Six-Story Apartment House

With the previous remarks in mind, the following figures have been prepared for a six-story apartment house having thirty-eight apartments. In the calculations, the assumption has been made, based on lengthy observation, that on the average, in each apartment there are two windows 23 inches wide which are raised 3 inches from the bottom for 10 hours per day. The windows will ordinarily be closed in weather below 30 deg. F., for the simple reason that with windows open in such weather, the radiating surface will be inadequate for the conditions, and this has been taken into account in the figures. No attempt has been made to allow for unusual conditions which frequently occur and it is believed that the consumptions are extremely conservative.

In the usual apartment house, there are at least two 2-col. 9 section, 30-inch radiators, each of 36 sq. ft. capacity.

These are ordinarily set in a corner along a wall and at right angles to the window with a sill 26 inches high, so that with the window open the cold outside air passes directly over the entire radiating surfaces. At first thought, it would seem that only one-half of the surface would be exposed to the entering air currents, but if one smokes close to an open window on the pressure side, but in ordinary still weather, he will observe the smoke dropping directly to the foot of the radiator, since the latter creates a draft in that direction.

Increase in Radiator Efficiency Due To Air Velocity

The velocity of the air will average about 300 ft. per minute, thus increasing the efficiency of the radiator about 55 B. T. U. In addition to this there is an increase in the standard constant 1.67, which is the B. T. U. transmitted per square foot of radiation per degree of temperature difference per hour. This increase is approximately 2% for each 10 deg. of variation from the standard conditions of 150 deg. temperature difference. The latter is obtained with steam at 3 lbs. pressure having a temperature of 220 deg., and with the room heated to 70 deg. F., making a transmission of $150 \times 1.67 = 250$ B. T. U. per square foot per hour.

Calculations Based on Average Winter Conditions

From a study of the weather reports and selecting those for an average winter, it will be found that there are about 220 days in the heating season, of which 20 days are below 30 deg. F., the remaining 200 days averaging approximately 45 deg. F. The temperature difference with then be $220 - 45 \text{ deg.} = 175 \text{ deg.}$, which, with the constant 1.67 increased 5% as explained above to 1.75, will increase the transmission to $1.75 \times 175 \text{ deg.} = 306$ B. T. U. This is an additional 56 B. T. U. over that of the 250 B. T. U. for standard conditions and is due to the increase in temperature difference. Adding this to the 55 B. T. U. due to greater velocity of the entering air, will give a total increase of 111 B. T. U. and this multiplied by 36 sq. ft. of radiation equals 3996 B. T. U. per hour or 45% additional due to the opening of one window.

This amount checks closely, as it should, with the heat required to raise the volume of entering air from 45 deg. to 70 deg., an amount which is $(23 \text{ in.} \times 3 \text{ in.} \div 144 = 0.479 \text{ sq. ft.} \times 300 \text{ ft. per min.} \times 60 \text{ min.} \times 25 \text{ deg.} \times 0.02 \text{ B. T. U.} =) 4011 \text{ B. T. U.}$

Loss Expressed in Terms of Additional Coal Burned

For average boiler efficiency, each pound of coal will give 8,000 B. T. U. per pound, so it will be seen that $\frac{1}{2}$ lb. of coal will be required for each radiator of 36 sq. ft. capacity, because of the open window. Therefore, $\frac{1}{2} \times 2 \text{ lb. radiators} \times 10 \text{ hours} = 10 \text{ lbs. of coal per day per apartment, and } 220 \text{ days} \times 10 \text{ lbs.} = 2,000 \text{ lbs. or 1 ton per heating season. Thus, 38 tons additional are required for all departments, an amount which is about one-fourth of the coal ordinarily consumed in such building when the windows are not opened. This does not check with the previous statement of 45% increase, since the returns comprise an additional 10% of heating surface and there are various other conditions which enter into the building as a whole.}$

Losses May Be Higher Than Those Figured

The preceding figures show conservatively the coal which is wasted annually in a building of the class selected and beyond doubt the losses are somewhat higher, since it is impossible to figure all of the conditions and elements of waste. Windows are frequently opened wide, top and bottom, in all kinds of weather, both cold and windy, and with one window opened on the windward side and another on the lee side, the draft is considerably increased.

Effect of Automatic Temperature Regulation in Meeting the Problem

The lesson to be learned by recognition of such wasteful practices is obviously the adoption of some means to prevent their continuance. This is something which has long since been successfully solved by the application of various appliances which enter into the field of automatic temperature regulation. So well has this subject been covered in the "Advance Report of a Committee on Automatic Heat Control, as furnished to the Fuel Administration" that the following extracts taken from this report are presented in the words of the committee:

"All devices for automatic temperature regulation are and must be devices making for economy of fuel, since they shut off the heat supply whenever the desired temperature has been attained, turning the heat on again only when the temperature drops below the desired point.

"It is no uncommon thing, where automatic temperature regulation is not installed, to see a man devoting his en-

(Continued on Page 39.)

Reducing the Customer's Fuel Bill

Is the Heating Engineer Doing His Share to Assist Customers Toward Economy in Heating?—Unfortunately too Few Workmen Are in Position to Give Expert Advice—Some Common Defects—Importance of Draught

GREAT strides are being made at the present time in the Plumbing and Heating Industry, and in certain parts of the country, by advertising and other means, the trade is looking forward to even greater accomplishments. The "Plumber" is giving way to the "Engineer" and the latter is considering himself a more important personage in his community. The trade has always been looked upon as one of the necessary evils. Has it not been, to a large extent, our own fault.

The doctor is looked upon as the most important man in the community in health protection and one we cannot get on without. With the advancement of the last few years, as well as advertising by way of health talks, etc., in papers and periodicals, the public is in a better position to secure the best

physician when unfortunate enough to require his services. So with us; we must educate the public in the same manner, so that when work is to be done, the people will be in position to choose between the "Engineer" and the "Plumber."

There is one branch of our profession, which at the present moment is most important to our clients, and which has been very much overlooked by us. What are we doing, as a body, to help the public cut down their fuel bill? The various Governments and certain bodies are trying by experiments along this line to help the public, but are we doing our share?

Where Most Good Can Be Done

The place where we can do the most good for the advancement of our profession is where we come in direct contact

with our customer, and that place is usually in his home. Picture our friend getting out of bed on a cold winter's morning, in a cold house, and upon investigation gets the impression that there is something wrong with his heating system, and he immediately sends for a Heating Engineer. This is the best place possible for our propaganda for education. Was it a "Plumber" or a "Heating Engineer" that was sent for? The result tells the tale,—a knock or a boost.

I have made a special study of heating homes and as a result have made some very startling discoveries. The first and most important is that very few workmen, and few masters are in a position to advise the householder how to get the best results from his heating system, and he also rarely investigates

Getting Farmers Interested In City Plumbing

For the plumber who contemplates the arrangement of a showroom in which to display plumbing and heating equipment, the attractive layout shown herewith will be helpful. The walls have been panelled to good effect and along the walls are arranged a series of wall and pedestal basins. Mirrors and other bathroom accessories are also affixed to the wall. Sinks, drains, laundry tubs, etc., are shown on the panel at the rear behind which the plumber's office is located. The whole showroom is finished in white which, with the snowy white porcelain and enamelware, gives an attractive appearance. In the rural districts such a display will do much to whet the desire of the farmer for the plumbing conveniences of the city.

beyond his own line of business, the cause of a cold house.

A striking example of this is a case which recently came to hand, where a lady called me in to tell her why her tenants could not heat a house she had rented. The previous winter a "Plumber" had prevailed upon her to enlarge the furnace which she did and has one now sufficient to heat two houses the size of the one she was heating. The cause of the whole trouble was a defective chimney and as soon as it was fixed, everything was all right. However, her opinion of the trade in general is not the best,—caused by her needless outlay of money. More team work among the trade is required here, and too much emphasis cannot be placed upon this fact. By this, I do not mean to say that every job is right,—far from it, however, when it is right, no good results can be had by needless criticism, but when one is sure the work is faulty it is a very different matter.

No Experimenting

Again, is it advisable to experiment along these lines? No, for the simple reason that if all the petroleum produced annually in the United States should be burned for fuel it would replace but 12 per cent of their coal. By experiments carried on in England it was proved that if a manufacturer was spending \$10,000 a year on coal, oil would cost him \$18,000 for the same period. Electric heat is also too costly, for if coal costs \$40,000 per ton, and one could buy electricity at 1c per K.W. hour, heating by these two methods would cost the same. Therefore, there will be no radical change in the present system of heating houses, so we must educate the public to be in a position to get the most efficiency out of their plants as well as get them to install devices to help this along.

Another important fact is that of result of investigation made by the United States Bureau of Mines, the American Society of Mechanical Engineers, University of Utah, and numerous independent investigators, it appears to be an established fact even where high grade American coals are burned containing little or no moisture, there is an average wastage of 25 per cent. of heat value caused by inefficiency in firing and the impossibility of obtaining anything like perfect combustion on the grates.

At the present time when orders are so hard to obtain, not only will we be helping the consumer, but we can also build up some profitable business by our help. We can investigate and install devices which will increase combustion. We can recommend that furnaces be covered with asbestos. New consumers recognize the necessity of keeping flues clean, but if they knew that the loss in conductivity of boiler plate due to 1-32" of soot means a loss of 9.5 per cent. in heat, and 1/8" of soot a loss of 45.2 per cent., they would keep their furnaces much cleaner. Many, again, also imagine that by keeping a very low dirty fire on mild days they are saving coal, but they are not by any means. Nor do

all the consumers know the correct size of coal to use in their boilers to get the best results.

Importance of Draught

The most important thing about a furnace is the question of draught. As we all know no two furnaces work exactly alike for this reason, and very often a little care here will give remarkable results. Very often the draught is sluggish and again it may only be so at times. In the latter case it may be only when the wind is in a certain direction, which from local conditions of the chimney, causes air pockets, which will not allow the chimney to work. The principal defects should be easy to find, such as the smoke pipe being placed too far into the chimney causing partial or complete stoppage of draught, or obstruction in the chimney such as birds' nests, the remains of concrete forms, bricks, cement, etc., which with the help of soot soon fills up the opening. There may also be two or more openings in the chimney, or the chimney may be new and not thoroughly dry. Again, there may be holes in the chimney which allow air to pass through, and further, the chimney may not be high enough. Very often we find that a furnace has no damper, and if it has, is not working.

There is also the question of a number of so-called economizers, which as far as I am able to ascertain, are not correctly named but should be called "checks," because when they are put into operation, the heat of the system immediately starts to lower and the hot air of the basement is brought up through the chimney and lost. I have been using a device for hot water boilers, and meeting with much success for the past three years, which I think is a great boon to the consumer. On twin installed furnaces of the same size, one with an economizer and one without, the former noted a saving of 25 to 50 per cent. in the amount of coal consumed, and from 30 to 60 per cent. less ashes with no clinkers having been taken out.

This device really turns the furnace from a bottom draught to a top draught, and by burning the gases, permits of a more thorough combustion. The device is simplicity itself and the house can be kept at an even temperature without continually going to the furnace, and also permits it to be left for a longer period without attention.

Some Common Defects

I do not think it will be amiss if I mention here a few of the defects that are outside the trade, and which may at some time be of benefit to the heating engineer. In all new houses, but particularly of the class that are being built to-day, the construction has something to do with not getting the proper results from the heating system. When draughts are noticed around the windows, weather-strip is usually recommended. If the windows are to slide, 1-16 of an inch of play on each side must be left, which leaves a space 1/8" wide if the window works to one side. Through this opening considerable cold air can go when a wind is blowing, whereas metal to wood does not need any play, and fills up the space. But you still have the space between the window-frame and the brick or stone work. This varies according to the seasoning of the wood before it was put into the building. This space should be packed with oakum, and the best time to do this is after the building has been constructed at least two years. If, however, the draught is in an old building, the trouble may be caused by the 'pointing' around the windows having fallen out. Then again there may be some fancy brickwork which has holes in it where no pointing has been done.

These and other points should be at the finger tips of the "engineer"—thus he is in a position to convey his learning to his prospective customers. Let us therefore, take as a motto, "Educate the Public," so that a dissatisfied customer will be an unknown quantity even in the plumbing trade.

Damaging Effect of Electrolysis on Sewers

St. John, N.B., Engineer Says Much Damage to Sewers Caused by Electric Current from Rails

St. John, N. B.—Commissioner Thornton filed with the Common Council a preliminary report on the subject of electrolysis from the City Electrician, Barry Wilson. It was decided to have a copy furnished the Commissioner of Water and Sewerage and to deal with the matter of purchasing the machines mentioned in the report when the estimates are being made up for 1922.

Following is the report:
Gentlemen:

Herewith I beg to make a preliminary report on Electrolysis in the City of St. John.

I feel confident in stating that this matter is one of vital importance in the maintenance of uninterrupted water and

sewerage service. Although it seems impossible to prevent stray currents in underground pipes and cables, nevertheless these can be reduced to such a minimum degree by properly bonding, running return feeders, and installing boosters in the return circuit of railway systems, that little effect is experienced in the life of cables and underground pipes. Rigid rules and regulations are in force in some parts of Europe and United States to eliminate to a minimum degree electrolysis.

The effect of electrolysis from a railway operating point of view is a very expensive one, as it has been proven that the loss in power, due to low con-

(Continued on Page 13.)

Advertise Plumbing Price Declines

Plumber of Sherbrooke, Que., Gives Straight Talk in His Advertising to Those Who Think Plumbing Prices are too High—Percentage of Reductions Quoted—Going after Rural Plumbing Trade and Tinsmithing Business in Local Advertising

SOME samples of recent effective local plumbing advertising done by sanitary and heating engineers in various parts of the country are shown herewith. Perhaps the most radical departure from the usual run of such advertising is the one by Ernest Conley, sanitary engineer of Sherbrooke, Que., which under the heading "Who says Plumbing and Heating Prices have not dropped," gives a little talk on plumbing and heating business and gives a list showing reductions which have been made in plumbing and heating materials in the past year. The text of this ad is as follows:—

"Plumbing is a profession and should be regarded as such by everyone. The plumbers spend as much time and energy in perfecting themselves for their

calling as any other group of professional men, but they receive a smaller compensation than any other profession.

"As farm products have decreased in price so have building materials. Although some articles increased tremendously in price during the years of the war, plumbing and heating materials did not go sky-rocketing like a number of other building materials. Hence the percentage of drop need not be so large in order to reach the previous price level.

"When an article has increased a 100 per cent. in price a drop of 50 per cent. brings it back to the original price.

"Plumbing and heating materials constitute a very small part of the total building cost. In the average seven or eight room house where hot water is used the cost of plumbing and heating is

only about eight or ten per cent. of the total cost. In other buildings it is less.

"Following are some of the reductions made in plumbing and heating materials since one year ago:—Soil pipe and fittings, 37%; Lead goods, 31%; Brass radiator valves 30%; Brass goods generally 25%; Iron and malleable fittings 25%; iron pipe, 16%; enamelware, 15%; radiation, 28%; range boilers, 45%; other goods, 15% to 40%.

"Respectfully submitted by the undersigned for the consideration of all fair minded citizens."

Specials For Saturday

O. J. Muntz, tinsmith and plumber of Ingersoll, Ont., advertises a special price on a large quantity of extra heavy blue-black stovepipe for Saturday. An illustra-

Who says Plumbing and Heating Prices have not dropped?

Plumbing is a profession and should be regarded as such by everyone. The plumber spends as much time and energy in perfecting himself for his calling as any other group of professional men, but they receive a smaller compensation than any other profession.

As farm products have decreased in price so have building materials. Although some articles increased tremendously in price during the years of the war, plumbing and heating materials did not go sky-rocketing like a number of other building materials. Hence the percentage of drop need not be so large in order to reach the previous price level.

When an article has increased a 100 per cent. in price a drop of 50 per cent. brings it back to the original price.

Plumbing and heating materials constitute a very small part of the total building cost. In the average seven or eight room house where hot water is used the cost of plumbing and heating is only about eight or ten per cent. of the total cost. In other buildings it is less.

Following are some of the reductions made in plumbing and heating materials since one year ago:

Soil pipe and fittings	37%
Lead goods	31%
Brass radiator valves	30%
Brass goods generally	25%
Iron and malleable fittings	25%
Iron pipe	16%
Enamelware	15%
Radiation	28%
Range boilers	45%
Other goods	15% to 40%

Respectfully submitted by the undersigned for the consideration of all fair minded citizens.

Have Your Bathroom First Class

Have it second to none among the rooms of your home. Your family uses that room constantly, so why not have it right? Let us install our modern sanitary equipment, such as porcelain tub, wash basin, toilet, footbath, etc.

Chestnut & Sons, Ltd.
Plumbing Department
Phoenix Square

tion of a furnace with some details are given.

"When planning your home, consideration of health comes first" says the ad by Dufton & Saunders, Stratford, Ont., continuing, "That means plumbing—good sanitary fixtures and fittings in the kitchen and elsewhere. Above all, the bathroom must be right. It must be as spick and span and wholesome as you would have yourselves and your children. Let us show you the lustrous white porcelain enameled bathroom equipment we have in our store. You will find its price as satisfactory as are its appearance and obvious convenience."

Rural Plumbing

In line with the steps being taken to develop farm plumbing trade, W. H. Doney, Brampton, Ont., advertises "Plumbing for Country Homes." Under the heading, "Where Comfort Pays" is listed the following: "A farm with a water supply system is more than a farm, it is a home full of comfort, built for living as well as for working. You can live better, more easily, more healthfully and at the same time make a profit out of it. It pays in actual cash. Look into it further. Water under pressure for fire protection, lifting the burdens of household drudgery from your wife's shoulders for more important duties, are only some of the advantages. We'll be glad to make a complete estimate for you."

Tinsmithing

J. McKinnon of Kamloops, B. C., advertises his equipment for sheet metal work is so complete that he is able to fill any order, large or small, whether it be for a new flue for the furnace in the cellar or a new roof or cornice for the top of the house.

"Have your bathroom first class" is the admonition on the ad by R. Chestnut & Sons, Ltd., Fredericton, N. B., continuing, "Have it second to none among the rooms of your home. Your family uses that room constantly so why not have it right? Let us install our modern sanitary equipment such as porcelain tub, wash basin, toilet, footbath etc."

Using Booklets

The firm of Jean J. Daoust, Ltd., St. Boniface, Man., makes good use of a three sheet booklet printed in three languages. A recent issue of this booklet states, "A modern plumbing and heating installation in your home is an asset, let alone the consideration that it constitutes a positive safeguard to the health and is moreover of indispensable assistance to the housekeeper."

Advertising a combination sink and laundry tray as a kitchen necessity, Flynn Bros., Niagara Falls Centre, Ont., state "If there is one in your home your wife and daughters will say they could not do without it. If there isn't ask them what such a sink would mean to them—one specially made for laundry work as well as for dish-washing, equipped with drain board and wringer holder and made of snowy white porcelain enamelware.

We install every kind of sanitary convenience required in homes where work is made easy and health is the prime consideration."

Simons Bros., Kingston, Ont., advertise tinsmithing work thus: "We have everything in tin and sheet metal. We have facilities for making a small can or a monster tank, a simple leader or an elaborate cornice or portico. If you are in doubt as to what is best adapted for your purpose in tin or sheet metal we shall be glad to assist you with our advice based on experience and knowledge.

"Plumber to let" is the heading on an ad by Farquhar Bros., Ltd., Halifax, N. S., stating "Right now is the time reserved for private plumbing. A little later most of our best men will be tied up handling new building contracts. Better take advantage of our free inspection now and enjoy short slack season prices. We could lay these men off, but they're too good for that—instead take their services for less."

WHOLESALE AS PLUMBING MERCHANDISER

(Continued from Page 13.)

Showroom Stock Depreciates

Supporting this argument this manufacturer pointed to certain plumbers who had opened plumbing showrooms only to find that the overhead charges were such as to place their prices on installations so far above competitive bids as to result in the loss of much business. These operators found that the showroom did little to increase the sale of equipment and due to the slow turnover the goods on display soon became shop worn and depreciated in value. It was soon found that it was not a paying proposition to have hundreds of dollars invested in various pieces of plumbing and heating equipment, only to have them remain in the showroom until heavy interest charges against the investment they represented had been run up and until the heavy overhead charges of the showroom had eaten up all the profit there would be in them even if they were sold. It was stated that even if such an operator was to get one purchasing customer in the shop in the day and spend half an hour with him that for the remainder of the day the overhead charges mount up to great heights and soon reduce the margin of profit made on the one sale and also on the other work which comes to the operator through the ordinary channels.

Price More Important Factor

It was emphasized that price is becoming a most important argument in the sale of any line and that this must be taken into consideration by the operator in the direction of his business. It was the opinion that the plumber could make splendid use of the wholesaler's showroom by sending his

customers to it for an examination of equipment, and on the other hand the wholesaler will likely sell equipment to many people who would otherwise not be purchasers, and so increase the volume of installation work for plumbers.

In connection with the quoting of prices on plumbing equipment in wholesalers' showrooms, it was the opinion of this manufacturer that much business was being lost today due to the practice followed in many showrooms of quoting prices to buyers sufficiently high to protect the operator who would be doing the installation. On this basis prices quoted were so high that much business was frequently lost. Under the plan suggested, of concentrating the displays in one central showroom and prices quoted separately on equipment and installation, allowing in each case fair profit to all concerned, this danger would be removed and more business result.

"Price is becoming too important a factor in business to be conjured with as is now being done in the sale of plumbing equipment," said this manufacturer in support of the plan outlined.

EFFECT OF ELECTROLYSIS

(Continued from Page 16.)

ductance in the return feeder is more than sufficient to pay for the interest and sinking fund on the cost of installing a heavy copper return feeder, in addition to properly bonding rail ends and cross bonding between rails.

I am informed from different sources, and from those who speak with authority on the subject, that a large percentage of water main breaks have been due to the passing of electric current from the water mains back to the rail return system of the electric railway.

In laying out the water system at the present time, every precaution is taken to have all mains laid in streets or districts where there will be slight possibility of them coming in direct contact with electric railway systems, and that the return circuit consist of a copper return, in addition to having the rails properly bonded and used as an auxiliary return circuit. But in view of the fact that the water system in this City was installed previous to the knowledge of existing troubles through electrolysis I feel that the proper method of procedure would be to have a complete potential survey of the entire system in the vicinity of the Street Railway tracks to make excavations where possible to obtain the current flow in the water mains as well as taking a potential gradient of the tracks per 1,000 feet.

From the information thus obtained and a suitable map of the water supply system, the dangerous area could be readily defined and eliminated.

Small Set of Books for Plumbers

Proper Bookkeeping in the Plumbing and Heating Shop Commences with Small Set of Books for the Small Operator, Allowing Expansion as Business Grows—Valuable Information Based On Findings of National Trade Extension Bureau

THE previous article dealt with the Workman's Order and the Sales Journal. These two forms or sheets give a complete record of every sale. They also furnish information as to the cost and profit on sales information that is absolutely necessary in every successful business.

This article will describe the Purchase Journal. Every purchase, whether for cash or on credit, is entered on these sheets. Herewith is shown a sample of the heading and some entries on this sheet condensed for lack of space.

Two sample entries have been made. One an invoice from the supply house. The other a Weekly Pay Roll. In the first column is entered the date on which the entry is made. The next column headed "L. F." which stands for "Ledger Folio," is used to indicate what further entry is made of the transaction. The check mark in this column, for the first entry on the sheet, indicates that the entry has been posted in the Smith Plumbing Supply Co., account in the Ledger. This is done because there are many purchases during the month from this firm, and they are not paid for until after the end of the month. It is just as necessary to know how much we owe our different creditors, as it is to know how much our different customers owe us. Therefore, all purchases on credit are assembled on separate pages ac-

cording to the firms from whom they were made.

Many contractors fail to do this, relying on the supply house statement at the end of the month for the amounts they owe. This is gross carelessness, because every one is liable to mistakes, and through lack of this record you may be paying for something you did not get. Such a record as is furnished by a creditor's statement is not a permanent one, and when wanted in the future often times cannot be located.

The next entry is a Cash transaction, so that it is not necessary to carry this to the Ledger as was done with the previous one. However, we indicate that it has been paid by putting the number of the check which paid it instead of the check mark. In doing this, however, be careful to see that the amount of the entry in the Cash Book is exactly the same as the amount entered in the Purchase Journal.

The next two columns are self-explanatory, covering the name of the party from whom the purchase was made, and the details of the purchase.

The next column is for the amount of the invoice or purchase. This column is headed "Accounts Payable," because the amounts entered in it are amounts we have to pay. These are the amounts which are posted to the respective accounts in the Ledger when the transac-

tion is on credit, as illustrated in the first entry. You will note from the heading that they are to be entered on the Credit side of the Ledger account.

The next column is not needed by every contractor. Some times, however, when goods are bought from out of town firms, part or all of the freight is allowed by the seller. Some times this freight is deducted on the invoice. Where this is done the amount deducted is entered in the column headed "Freight Allowance." In the entry shown here, the actual cost of the goods was \$426.00, but the amount to be paid was only \$423.57. Freight Allowance was credited with the difference of \$2.43, and the Supply Company credited with the actual amount owing. When this Freight on the shipment is paid to the Railroad Co., it is charged to Freight Express and Drayage.

In the remaining columns are distributed the same amounts as entered in the two columns just mentioned. These entries are made according to what the purchase was for.

You will note that these columns are divided into two general sections "Job and Contract Accounts," and "Overhead Accounts." The first named section includes all purchases for resale, that is, items that are part of the cost of different jobs. You will note that there are columns on the Sales Journal corres-

ILLUSTRATION OF PURCHASE JOURNAL

ponding to these. You should watch carefully to see that the total of each of these various columns does not exceed the total of the corresponding column in the Sales Journal.

The column in the Purchase Journal shows the amount bought and the column in the Sales Journal the amount sold. With the exception of material, everything bought is resold on some job or contract and should be figured into the cost of the job, and entered in the Sales Journal. Where the total on the Purchase Journal is greater than on the Sales Journal it indicates that all costs have not been properly charged. Watch this closely it is one of the leaks that exists in many shops.

Overhead Accounts

The other section headed "Overhead Accounts" covers all expense items in connection with the business and the total of all the columns in this section is the amount that must be covered by your Overhead percentage. In the Sales Journal is a column marked Overhead. The total of this column should be compared with the total of all columns in the Overhead section of the Purchase Journal. If the Purchase Journal total is greater it indicates that the Overhead percentage is too low. This is another leak in the business and should be watched even more closely, if possible, than the comparison referred to regarding the Job and Contract section.

In each of these sections is a column "Miscellaneous Accts." Enter in these columns the amounts for which a separate column has not been provided, writing the name of the account in the wide space provided. For instance you take out a permit on a job. When the entry is made on the Purchase Journal enter the amount first in Accounts Payable column and also in the Miscellaneous Accounts column (writing Permits) in

the Job and Contract accounts section.

When you pay rent do the same except use the Overhead Accounts section. In the first instance the permit is to be charged to a certain job and entered on the Workman's Order and from these to the Sales Journal as part of the cost. In the second instance rent is part of the Overhead expense.

You will note the word Debit over all these columns. At the end of the month these columns are totalled and if desired can be carried to an account in the General Ledger. This however is not necessary in a small business.

When a page in the Purchase Journal is filled, foot each column and test the correctness of your work by seeing that the sum of the Debit column totals equals the sum of the Credit column totals. When all transactions for the month have been entered add up each column and apply the same test. Carry forward underneath the month's figures, the totals from the previous month. You then have a statement of your purchases also of your Overhead expenses for the month and for the year to date.

The use of this journal will prove a great help at the end of the year in making up your Income Tax return. You have an itemized total of all your expense accounts and it will not be necessary to go through the entire year's business and gather this information. Without such a record this is very difficult to do, to say nothing of the time involved.

The Cash Book

In the Cash Book is kept a record of all Cash Received and Spent. Every cent of Cash taken in should be deposited in the bank. All disbursements (money spent) in excess of one dollar should be made by check. By following this practice your Cash Book becomes your itemized account with your bank. Your

checks are receipts and records of what you have spent.

Of course there are times when it is very inconvenient to make certain payments by check and currency is necessary. To take care of these, set aside for this purpose, a certain fund of, say, \$25.00, or more if necessary. Keep this money in the safe under lock and key, and every time any of it is spent make a record of how much and what for, either in a small memo book or by putting a receipt or ticket in with the money. When this fund is nearly spent, add up the tickets or the entries in the memo book, and draw a check for the exact amount of these tickets or entries. Go to the bank, cash the check and put the money in the original fund. This should bring the fund back to the amount you originally started with. Treat these checks as purchases and enter them on the Purchase Journal, showing in the proper columns what the money was spent for, as shown by the tickets or entries in the memo book. By this method you avoid the petty annoyance of balancing the cash every night, and the numerous "overs and shorts" that are continually coming up. The total of the tickets or entries, plus the cash in the box, should equal the amount of the fund. This system of handling cash is in universal use, and is recommended by every good accountant. It is called the "Imprest Fund" system. When the check is drawn for the original amount it is entered in the "Amount Check" column, and also in the "General Ledger column" on the Cash Disbursement sheet.

Entering The Cash Receipts

Enter the amount of the check or cash received in the first column. In the next column enter any cash discount allowed the customer for prompt payment. If you are in the habit of al-

SALES JOURNAL FOR MONTH OF															
					Amount Charged	PLUMBING AND CONTRACT ACCOUNTS					STORE SALES				
					DEBIT	CREDIT					CREDIT

ILLUSTRATION OF SALES JOURNAL

lowing a discount for cash you should also enter the amount of such discount on the Workman's Order, opposite "Discount," under the heading Cost Recap, then copy the amount in the proper column in the Sales Journal. By doing this you will not have any deduction from your profits to cover this, because it will have been deducted when the cost was figured. On the contrary there will be additional profit for you arising from customers failing to pay in time to be allowed the discount which has been set aside out of the profits for them. Allowing Cash Discount is a wonderful help in keeping up collections.

The next column, "Deposited in Bank," is to be used for entering the items that are deposited in the bank. The total of each deposit can be entered, or each item entered in the "Cash Received" Column, can be extended into this column also.

This column is provided for offices where the Petty Cash method is not used. In such cases, all checks deposited should be extended in this column, and, in addition, the amount of currency deposited should also be entered. The total of this column for the month can be checked against the total of deposits as shown by the Bank Book or statement.

The column L. F. (Ledger Folio) is for the check mark which is used to indicate that the item has been posted to the Customer's Account in the Ledger.

The column on the right side, "Customers' Accounts," shows the amount to be credited to the customer, and is the amount to be posted to his account. Where the Cash Discount is allowed, this "Customer's Accounts" column amount is the total of the amounts in the "Cash Received" and "Cash Discount" columns.

The next column, "General Ledger," is for all amounts received from sources other than customers. This includes money borrowed from the bank, etc., or cash invested in the business by the proprietor. It does not include Cash Sales, which should be entered in the "Customers' Accounts" and credited to a "Cash Sale" account in the Customers Ledger. A corresponding charge for all Cash Sales should be made in the Sales Journal, and costs figured on such sales just the same as on Charge Sales. A Workman's Order should be made out for Cash Sales on which all sales for a week or longer can be entered, and the total carried to the Sales Journal.

Each sheet should be totaled, and the work proved by the same method as used in the Sales and Purchase Journals. The combined totals of all Debit columns should equal the combined totals of all Credit Columns.

Entering Cash Disbursements

In the first column, "Amount Check," enter the amount of every check drawn. In the next column, "Cash Discount," enter the amount of discount deducted for prompt payment on all purchase invoices.

The next column, "Currency Spent," is for use in offices where "Petty Cash Fund" system is not used. Enter in

this column all expenditures other than by check—that is, in currency.

By a check mark in the L. F. (Ledger Folio) column, indicate such payments as are made on open accounts that are carried in the Ledger. This check mark is to be made when the entry is posted in the Ledger. On Cash transactions that are entered in the Purchase Journal only, enter the letters "P. J." when the check number is placed in the L. F. column in the Purchase Journal.

In the column marked "Check No.," enter the number of the check drawn.

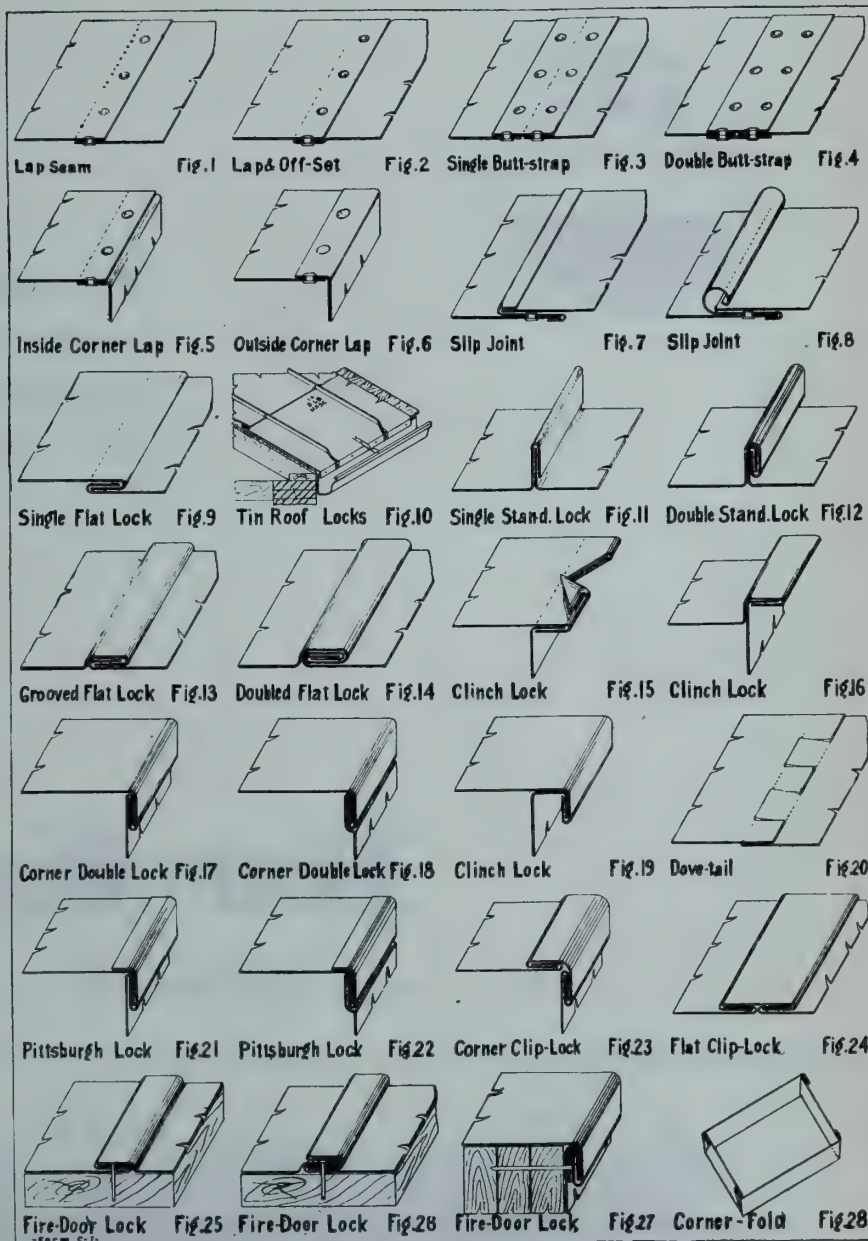

The next column, "Accounts Payable," is for the extension of the amount

or amounts entered in the first two columns, "Amount Check," and "Discount Earned." All payments covering transactions entered on the Purchase Journal should be extended into this column. This includes also payments made on Credit Accounts where several entries are made in the Purchase Journal during the month, and from there posted in the Ledger.

In the last column, "General Ledger," all amounts are to be extended where the entry was not previously made in the Purchase Journal. Entries of this kind which occur frequently are pay-

Editorial Briefs

MOVIES to educate property owners as to the correct method of installing plumbing, are to be used in the country to the south. Educational authorities have conceived of the plan of circulating a motion picture film showing the correct way of installing plumbing and its importance from the health point of view. This is a means of education which should prove very effective, dealing with a subject which has been only too much neglected.

A PLUMBER who is doing his utmost to convince his prospects of the necessity for having more than one lavatory in the home points to the fact that before plumbing became common and the bathroom a part of every modern home, every bedroom had its washstand. Though it lacked the boon of hot and cold running water, yet it served an important purpose because it was convenient. The introduction of the bathroom has resulted in discarding the washstand in each room but extra lavatories have been overlooked and much inconvenience sometimes results where there are guests or a number of young children in the home. Many homes need two or more lavatories. This is something which both plumbers and architects might keep in mind.

THE PLUMBING and heating engineer who operates a showroom might well take a leaf from the notebook of other retail merchants who are now making best use of their window displays. These merchants have found an increase in the "shopping" spirit among customers. This means that they are comparing prices and quality more than was the case during the boom years. Therefore the necessity of emphasizing good value and of showing prices is evident. People need sanitary equipment and they will go "shopping" for it just as they will for other lines. In planning the window display or showroom display, the plumber might well keep this tendency in mind and give attention to plainly showing prices, particularly those announcing bargains.

INSINUATIONS concerning the charges made by plumbers continue to be made in the daily newspapers and elsewhere and the usual crop of jokes in which the plumbers' bill is the butt, continue to be made. While it may be true that some operators are too much inclined to loaf on the job and so run up a bill of considerable proportions for a comparatively small job, yet it is a fact that by far the great majority of plumbers follow the policy of giving a square deal. The far-seeing plumber will realize that a reputation for honest dealings will do more to develop his business than anything, and sooner or later those who claim to be overcharged for plumbing work will realize that all plumbers should not be placed in the same class. Then the opera-

tor whose method of charging has produced such dissatisfaction will be forced to change his ways or take up some new line of trade.

PLUMBING and heating engineers who operate showrooms and have a number of appliances on hand should keep in mind the fact that the longer those appliances stand on the floor unsold, the greater the overhead charges against them and sooner or later they will represent a loss to the seller even at the time of sale. Few plumbers realize that equipment valued at two hundred dollars will have interest charges of twelve dollars against the capital invested in it within one year. This is to say nothing of the other overhead charges of the shop. The only way to combat this is to speed the turnover of all showroom goods.

Heating System Economy

WITH THE approach of the colder weather the heating engineer is presented with a splendid opportunity for developing trade in furnace and installation work. Manufacturers report an active furnace business this Fall which indicates that a normal number of installations must be under way in various parts of the country. This Winter as perhaps never before, is the necessity so great for economizing on the fuel bill. Coal is high in price and the householders' earnings have in many cases been reduced to such an extent that real economy must be practised. The heating engineer who can positively demonstrate ways in which the fuel bill can be reduced will be able to secure business at this time.

In this issue will be found a number of helpful suggestions along this line. There is no doubt but that the monetary loss of faulty house construction and lack of information on operating the fires, is very great in most Canadian cities. For instance it was recently shown that to heat an apartment in a Western Canadian city for a winter consumed coal of a value of 35 per cent. of the gross revenue of the apartment. There is much loss due to tenants preferring to open the window to cool the rooms than to turn off the heat. In one article in this issue dealing with a six floor building having 38 apartments, it is shown that through the average custom of having the window open three inches for ten hours a day a loss of one ton of coal per apartment, or 38 tons for the building, occurs each heating season.

It would seem from the foregoing that automatic temperature regulation is one of the surest means of combating the difficulty. Truly the regulation of temperature is a delicate matter and one which cannot be adjusted by the tenants of a building without much fuel loss occurring. Therefore the delicate instrument of regulation becomes of more importance, and where the building is considerable in size and has many rooms, a system of regulation having many units—such as the type using compressed air as motive power—or an electrical system, is said to be least expensive and most satisfactory. With its control of each unit of radiation, varying the amount of heat as the varied exposure and heat source conditions of the buildings require, such a plant must reach a high efficiency. Maintenance costs, on the average, not more than 2 per cent. of the cost of the plant. It is roughly estimated that a good system of automatic temperature regulation can be installed in a building for from 5 to 10 per cent. of the cost of the heating plant.

From the above figures it should be easy for the heating engineer to prepare definite statistics showing his prospects just what can be accomplished in the saving of fuel due to correct firing, adequate covering of heat pipes, proper ventilating and regulation of heat.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May Be Referred to and Studied

Article No. 41 of Series Illustration No. 83

THERE are several different kinds of pumps on the market for lifting liquids to a higher elevation, but the piston or plunger pump and the centrifugal are usually employed and has proven so far the most successful. Other styles such as the oscillating and screw pumps have been tried without much success.

In deciding between the plunger pump and the centrifugal pump, local conditions must be taken into consideration, but with an ordinary lift the centrifugal is usually more economical to run than a plunger pump.

To operate a centrifugal pump successfully you require a constant volume of sewage all the time the pump is to operate for its proper and efficient working, and this necessitates the installation of a storage basin for collecting the sewage which is sometimes an objection as previously explained, but becomes absolutely essential for installing an automatic pumping plant for starting and closing down the pumps without manual labor.

The plunger style of pump required the removal of all large solids or gritty matter, hence the sewage must be well screened and passed through some sort of settling tank to remove the large solids and gritty matter, otherwise the grinding action of the grit wears out the moving and vital parts of the pump. This is more noticeable in this style of pump installations should be preceded with than in a centrifugal but in most cases screens and grit chambers.

The general construction of a centrifugal pump is briefly as follows:

A series of curved blades or discs are mounted on a spindle and made to revolve in a cast iron case in a similar manner to a fan-blower. The revolution of these blades, aided by the pressure of the atmosphere brings up the water and it is upon their proper proportion, construction and arrangement that the effective working of the pump chiefly depends. The blades, for effective results, should be arranged so that the water enters the pump with as little friction or shock as possible and with this object in view the blades are usually made curved and fixed almost tangentially to the periphery of the pump disc; they are made of steel and the disc should be very carefully balanced or the bearings will wear away

rapidly and produce uneven motion on the water.

A well designed centrifugal pump will discharge a larger volume of water in proportion to power used than any other. It will lift up to 20 feet but discharges more water as the lift decreases, providing the same working conditions are maintained—about 7 feet is found a very effective lift.

The pump may be placed either above or below the water level and if the latter

is adopted the speed may be increased and a larger discharge obtained. The speed of the water through the pipes should not exceed 4 feet per second as the friction in the pipes increase in proportion to the square of the velocity. To reduce the friction of the water in a pump the suction should be arranged to enter at the side of the disc. The pump casting should be so arranged that the slides can be taken off to allow the pump disc to be periodically inspected and cleansed; hand holes should be fitted with bayonet pointed covers, placed on either side of the suction pipe so that any obstruction can be readily removed.

PUMP CONTRACT AWARDED

The Dominion Engineering Works, Limited, Lachine, Quebec, have secured the contract for the 3-30 million gallon electric pumps, 12-36 inch Johnson combined stop and check valves, and 6-42 inch gate valves, required for installation in Montreal's new low level pumping station.

RETURNING TO WORK

Chicago.—Five thousand members of the Journeymen Plumbers' and Gas Fitters' Union who have been on strike since the announcement of Judge Landis' wage award of \$1 instead of \$1.25 an hour, are returning to work under an agreement signed with the Master Plumbers' Association.

TESTS WATER SYSTEM

Birch Cliff, Ont.—Public Utilities Commissioner Alfred Essex, resident engineers and contractors' workmen, tested the water mains, hydrants and valves of the new Southwest Scarboro water system and were pleased with the results. The report in a morning paper to the effect that water had been turned on in 320 houses is incorrect. Commissioner Essex states that more tests are to be carried out before the house services are ready for operation. The system creates a precedent in that it is the only township-owned, independent water system in the province. The official turning on of the water is to be announced soon.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Sydney, N. S.—Isaac Grenwell has recently assumed the management of the stove and tinware business formerly carried on by his father, J. W. Grenwell in Sydney, N.S.

OBITUARY

Cookshire, Que.—Louis D. Gauthier, of Gauthier & Co., plumbers, is dead.

PLUMBER IS BURNED

Kingston, Ont.—James Devine, member of the plumbing firm of Hall & Devine, Brockville, was severely burned about the face, neck and right hand while repairing a leaky gas pipe.

NEWS OF MONCTON, N.B., PLUMBING AND HEATING INTERESTS

Moncton, N. B.—Messrs. Duffy and McCarthy are finishing up on the last of 26 houses in which they have installed the plumbing. These houses were built for the Gov't. Housing Board.

Edgar F. LeBlanc who has just finished installing a Hot Water Heating System for C. W. McLeod, Springhill, N.S., is working on a contract of plumbing and heating for the Commercial Hotel, Bathurst, N. B.

H. M. Wilson buyer for the plumbing store of Summer C., Ltd., was recently married to Miss Bessie Drischall of this city. Mr. and Mrs. Wilson spent their honeymoon in Montreal and other upper Canadian cities. Mr. Wilson's associates in the company presented them with a large case of table silver.

4,236 LONDON HOMES ARE WITHOUT BATHTUBS

London, Ont.—The ancient and honorable order of the Saturday night bath is still conferred in 4,236 London homes by means of the old-fashioned wooden or tin tubs that held sway in the days before plumbing became general and not a luxury of the rich. Statistics compiled by civic departments dealing with plumbing regulations and water services show that 4,236 London houses have not yet acquired bathtubs.

In these homes the old-fashioned Saturday night bath is a function which varies not one whit from the baths of elder years. But the tide of progress continues to overwhelm old landmarks and the porcelain bath is replacing the tub at the rate of hundreds each year.

MOVES TO NEW PREMISES

Toronto.—W. Wilkinson who has carried on a plumbing business at the corner of Danforth and Greenwood Ave. will shortly move to his new store at Stop 18 where he will carry on the business of plumbing. He will also handle stoves and ranges.

45 PLUMBERS MAY DIVIDE \$1,000,000 OF WORK

Proposed, cutting off of licenses to Toronto city plumbers for York township means that 45 master plumbers will divide nearly one million dollars worth of contracts in the township next year. At present 45 townships and 120 city plumbers hold township licenses.

In the first nine months of this year building permits to the value of \$6,105,850 were issued. It is thought that some city plumbers may try to overcome the boycott by taking up residence in the township.

York township has a population of 54,000, and building is going ahead rapidly. So far this year 2,705 permits have been issued. Building Inspector Dever predicts building operations totalling about \$750,000 will be carried out this winter.

STEAM HEAT SCHEME AT CHATHAM FAILS

Chatham.—That there will be no heat from a central steam heating plant in Chatham this winter is the announcement made after a futile attempt on the part of citizens to secure sufficient contracts to warrant the Chatham Steam Heating Company opening up their plant on King Street. As a result the merchants on King Street and the balance of the business section are now digging up old stoves and furnaces in the hopes of providing sufficient heat for the coming winter.

The directors of the company, when appealed to about two weeks ago, stated that they would require a certain amount of money guaranteed through contracts before they could start up the plant. Efforts on the part of the citizens' committee which was formed at a meeting in the chamber of commerce brought out contracts which totalled around \$23,000, but this amount was not enough. Yesterday it was stated that two more contracts would cover the amount required, but these could not be secured; hence the project fell through.

WESTERN ONTARIO NEWS

Thomas Jacklin, Blenheim, Ont., wants prices on hot air heating plumbing and electrical work for new \$5,000 bungalow.

L. E. Carrothers, Board of Education London, Ont., will prepare plans for a new four-roomed school at Ealing to cost \$50,000.

Durden and Staright of Leamington, Ont., have purchased the plumbing and heating business of A. E. Law. Mr. Law will continue his electrical business.

The council of Kingsville, Ont., has awarded the contract of installation of pressure filters at the waterworks to the Norwood Engineering Co., of Florence, Mass.

S. C. Bartlett, St. Marys, Ont., wants prices on heating, plumbing and electrical work in connection with new \$7,000 dwelling.

Charles B. West, sanitary engineer, London, Ont., has the sympathy of a wide circle of friends in the trade in the death of his daughter, May Victoria, aged 25, which occurred on October 26.

Lawrence & Wakefield of Dresden, Ont., are preparing plans for new flour mills to cost \$100,000 and want prices on heating, plumbing and electrical equipment.

Andrew Sanderson, 71 Evergreen Avenue, London, Ont., wants prices on heating, plumbing and electrical equipment.

Ray Lawson, c/o Lawson & Jones, Clarence St., London, wants prices on heating system for small greenhouse.

Harold White, 514 Dundas St. London, is preparing plans for \$8,000 bungalow and wants prices on heating, plumbing and electrical work.

A. H. Smyth, Strathroy, Ont., wants prices on heating, plumbing and electrical work for new \$7,500 residence.

A new sewage disposal system to cost \$300,000 is to be built at London, Ont. Plans are now under way by City Engineer, Brazier, and work will be commenced as early as possible in the spring.

R. H. Smith, 193 Wharncliffe Road South, London, Ont., wants prices on heating, plumbing and electrical work in connection with new \$10,000 store with dwelling above.

The ratepayers of Petrolia, Ont., are to vote on a bylaw, November 30 to provide \$25,000 for a new reservoir of 750,000 gallons capacity and \$20,000 for the electrification of the present waterworks pumps.

Joseph McLean of Forest, Ont., wants prices on heating and plumbing for new \$5,000 residence.

Contracts Awarded

Moncton, N. B.—J. W. McCarthy has plumbing and heating contracts for Orange Hall.

Moncton, N.B.—Thos. Johnson Co., has plumbing contract and Duffy and McCarthy has heating contract for Knights of Pythias Hall.

Goderich, Ont.—General contract for construction of chlorinating and filtration plant for town is awarded to Canadian Engineering & Contracting Co., 72 James St., N., Hamilton.

Halifax, N. S.—General contract for erection of pumping station for City is awarded to Standard Construction Co., Metropole Bldg.

Hamilton, Ont.—General contract for repairs to reservoir costing \$14,664 for City is awarded to Russell Construction Co., Ltd., Harbor Cmsn. Bldg., Toronto.

Hamilton, Ont.—Additional contracts for addition to school costing \$60,000 for Separate School Bd. are: plumbing and heating, Robert Fitzsimmons Co., Ltd., 21 Rebecca St.

Kingston, Ont.—Heating contract for heating plant costing \$125,000 for Queen's University is awarded to McKelvey & Birch, Ltd., 69 Brock St.

Montreal, Que.—General contract for addition and alterations to jail for Prov. Govt., Dept. Pub. Works, is awarded to O. Archambault, 610 Park Lafontaine. Additional contracts are: Plumbing and heating, Conroy Bros., 291 Centre St.

Hamilton, Ont.—Additional contracts for erection of Nurses' Home costing \$300,000 for Hospital Bd. are: plumbing and heating, R. Fitzsimmons, 21 Rebecca St.

London, Ont.—Plumbing and heating contracts for remodelment of residence costing \$20,000 for W. E. Robinson, 264 St. James St., are awarded to T. Partidge, 430 Wellington St.

London, Ont.—Plumbing and heating contracts for remodelling residence into apts. for Mrs. Bicknell, 114 Dundas St., are awarded to Eggett & Co., 336 Ridout St.

Montreal, Que.—Additional contracts for apt. house for John Dominique, Grey and Sherbrooke Sts., are: roofing, plumbing and heating, Lavigne & Menard, 2483 St. Lawrence Blvd.

Ottawa, Ont.—Plumbing and heating contracts for residence costing \$13,000 for L. E. Stanley, 109 Rideau St., are awarded to H. Tapp, 36 Armstrong St.

London, Ont.—Plumbing and heating contracts for warehouse costing \$55,000 for Crane Ltd., 88 Teraulay St., Toronto, are awarded to Eggett & Co., 336 Ridout St.

Toronto, Ont.—Contracts for erection of addition to Rose Ave. School for Bd. of Education are: plumbing and heating at \$32,985, Mechanical Trades Ltd., 54 University Ave.

Toronto, Ont.—Contracts for erection of addition to Malvern High School for Bd. of Education are: plumbing and heating, \$19,400, Bennett & Wright, 72 Queen St. E.

Westmount, Que.—Plumbing, heating and ventilating contracts for synagogue for Congregation Shaar Hashomayim are awarded to Garte Co., 28 Craig St. W.

Montreal, —Plumbing contract for apt. house costing \$250,000 for Westmount Industrial Corp., is placed with Thos. O'Connell, 183 Ottawa St.

Montreal, —Plumbing and heating contracts for residence costing \$8,000 for J. A. Desautels, 2001 De Laroche St., are awarded to Mr. Archambault, Desery St.

Windsor, Ont.—Additional contracts for Prince Edward Hotel costing \$1,000,000 for Border Cities Hotel Co., are: Ventilating, heating and plumbing, Drake-Avery Co., 103 John St., Hamilton.

Point Grey, B.C.—Plumbing and heating contracts for residence costing \$8,000 for Col. Robert Williams, 448 Seymour St., Vancouver, are awarded to Peter Murie, 617 15th Ave. E., South Vancouver.

Quebec, Que.—Plumbing and heating contracts for residence costing \$10,200 for Laetare Roy, 42 Louis St., are awarded to Nap. Le Page, Levis, Que.

Sydney, N.S.—Plumbing and heating contracts for residence costing \$8,500 for Richard Logue, Charlotte St., are awarded to Hagen & Co., Ltd., 452 George St.

Three Rivers, Que.—Plumbing and heating contracts for two stores and flats costing \$22,000 for Martineau & Frere, Ste. Cecile St., are awarded to Nobert & Dugre and Treffe Hamelin.

WATERWORKS AND SEWERAGE

Montreal, Que.—Construction of sewerage costing \$14,110 on St. John St. is planned by City Council.

Ottawa, Ont.—City Council plan construction of watermains at cost of \$165,000 in Westboro district.

Plans are prepared for sewerage scheme to cost \$327,000 connected with Westboro-Ottawa annexation for City. A. F. Maccallum, Commer. of Works.

Saanich, B. C.—Saanich Council will proceed with construction of waterworks costing \$150,000 by day labor. Hector Cowper, clerk.

Three Rivers, Que.—City Council plans construction of extensions to sewers and waterworks at estimated cost of \$30,000 Z. Lambert, Engr.

WATER SUPPLY IMPROVEMENTS FOR BAGOTVILLE, QUE.

One hundred thousand dollars are being spent for extensions and improvements on the water supply system of the town of Bagotville, Quebec. The pre-

sent water-works have been in operation since 1913 and are owned by the municipality. Water was pumped from River a Mars directly into mains and was distributed through over two miles of 6 in. to 2 in. pipes. The pumping station, at the intake was operated by water wheels working under a head of 8 to 10 feet and developing 25 to 40 h.p. The turbine required about 80 times the amount of water pumped into the mains and it was found, that, at low water stage, the supply was insufficient, the pressure obtained by the centrifugal pump being only around 50 lbs. per square inch.

Cast iron pipes of 16 in. to 6 in. diameter, supplied by the Canada Iron Foundries, Limited, were brought at a cost of \$60,000.00. The general contract for laying the pipes was awarded to Messrs. Emile & Alfred Gagnon of Jonquieres.

The pipe line is being laid for a certain distance by the side of a road but, at the upper end, the pipe crosses the river under water and the trench is made in the bush on a length of over one and a half miles. The trenching was done at a cost of 15 to 40 cents per running foot depending on the nature of the excavation, which prices, of course, do not apply to places where blasting was required. At the upper end, of course, gravel and boulders were found and one of the main difficulties there was to secure the proper material to bury the pipe with.

An ideal location has been found for the new intake. It is being excavated in solid rock on top of little falls which drop about 10 feet and where Nature has provided a regular dam and forebay, so that no such works need to be made. At the lower end, the new pipe line will be connected to the present 6 in. mains.

SEWAGE PLANT TO COST OVER \$300,000

Peterboro, Ont.—That the new Imhoff sewage disposal plant will cost \$320,100 was the figure submitted by City Engineer Parsons to the City Council and the mayor is urging as early a start as practicable to be made on this work to provide jobs for the city's unemployed.

The engineer has prepared a detailed report of the whole system as planned by him, which will take care of 6,000,000 imperial gallons of sewage per day, as against the present flow of 3,500,000 gallons. His estimated cost of this system, including land, is \$320,100.

Ald. Whitehouse and Hay moved that the plans and specifications of the Engineer for his system, including a two-storey pumping station, tanks, pipe main and other work to be sent to the Provincial Board of Health for approval, and that a deputation from the Council accompany the plans, in furtherance of their endorsement for proceeding with the plant's construction. This carried.

Hespeler Manufacturers Hold Exhibition

Successful Event Arranged to Educate District People to Lines Manufactured Locally—Plumbing Firms Take Part

(By Special Representative of Sanitary Engineer)

THE manufacturers of Hespeler, Ont., recently decided that the citizens of Hespeler and surrounding districts were not sufficiently acquainted with the products manufactured in that town, and put on, therefore, a Made in Hespeler Exhibition. The following firms had exhibits:

Canadian Machinery Corp., wood-working exhibit; A. B. Jardine & Co., blacksmith machinery, boiler makers and pipe fitters' tools; Stamped & Enamelware, Ltd., had a fine exhibit of all lines of enamel cooking utensils as well as enameled portions of modern gas and electric stoves; R. Forbes Co., Ltd., woolen textile; Hespeler Wood Specialty Co., Ltd., (this firm has just started to manufacture a new line of hockey sticks and their success so far has been very gratifying to the promoters); Hall Zryd Foundry Co., had an excellent display of Pilot Stoves and Pipeless Heaters. This display was one of the largest and certainly a credit to the Hall Zryd Co.; W. A. Kribs showing a line of Kribs Washers and Factory Trucks; Bert. Stewart Co., Ltd., builders' hardware; A.

Lardner & Sons, a line of cast metal top.

The whole exhibit was certainly a credit to a town of 3,500 inhabitants, and the promoters of the affair, especially Oscar Zryd of the Hall, Zryd Co., who stated that literally thousands of people were attracted to the Exhibition from the surrounding towns in the Grand River Valley.

There is some talk now of the Hespeler manufacturers taking space in the Canadian National Exhibition, as a Hespeler section.

This exhibition proved such a success that the directors decided to prolong it for three days longer than originally planned.

It is hoped next year that this exhibition may be made more of an attraction so as to attract the western wholesale buyers as well as the local people.

It was organized this year for the purpose of creating a community spirit in Hespeler, but the directors now believe that if this thing was properly organized and advertised far enough ahead that they could do considerable amount of business.

ELECTROLYSIS

Hamilton, Ont.—Enactment of Federal legislation that would check and control electrolysis was urged at the third annual meeting of the Natural Gas & Petroleum Association of Canada by D. A. Coste of Niagara Falls.

Mr. Coste said that one of the most pernicious influences public utilities like gas concerns, sewer and waterworks departments had to combat was electrolysis. It was an influence which in almost all fair-sized cities was playing hob with underground systems where metal was employed. In Niagara Falls the water mains were found to be losing from 15 to 25 per cent. of their normal pressure through leaks caused by electrolysis. Mr. Coste said that in Germany, France, Great Britain and other countries there were Federal laws in force that checked the spread of this agent, and placed the blame on those responsible.

He knew of no business men whose investments were so much the prey of electrolysis as were gas men. He therefore urged action. A petition will be forwarded to the Federal Government.

FILTERED WATER FOR PETERBORO

Peterboro, Ont.—Completion of the filtration plant, and the 2,000,000 gallon water reservoir in the old Carnegie property above the pumping house proceeds apace and according to R. L. Dobbin, waterworks superintendent, the plant is 90 per cent., and the reservoir 85 per cent. completed. It is confidently expected that the first filtered water will go into the mains on December 1st.

SMALL SET OF BOOKS

(Continued from page 21)

ments made for the proprietor's individual account, or purchases of equipment of various kinds

The work on these sheets should be proved by the same method as previously indicated, that is, the totals of both Debit Columns should equal the total of both Credit columns.

Reconciling Bank Account

At the end of the month, after all footings have been made, and the month's work proved as indicated in the preceding paragraph, a statement should be made on last "Cash Receipts" sheet showing the Cash in Bank, and also showing that it is correct according to the Bank Book Statement. The following is a simple form of Statement—

Balance beginning of month	
(from previous month's statement)	\$ 250.00
Deposits (total of "Cash Received" or "Deposited in Bank" column)	1 250.25
	<hr/>
	\$1,500.25
Checks drawn (Total of "Amount Check" column)	963.75
	<hr/>
Cash in Bank end of month	\$ 536.50

After putting this much of the statement on the book, take your cancelled checks, and check the amount of each check as shown on the list returned by

the bank. Next sort the checks in numerical order, the lowest number on top. Compare the amount of each check with the amount entered in the "Amount Check" column, putting a check mark in red ink to the right of the amount entered on the "Cash Disbursements" sheet. In checking off the checks, use the previous month's reconciliation for all checks entered prior to the current month. Next, draw off a list of all amounts that are not checked in red ink. These are the "checks out," that is, the ones that have not been paid by the bank. Continue your statement now as follows: (Of course, the figures used here are for example only. Your figures will be the actual ones shown by your records).

Bank Balance (from Bank Book or Statement)	\$636.25
Less checks out—	
No. 123	\$50.00
No. 126	25.00
No. 129	10.00
No. 135	14.75
	<hr/>
	99.75
Cash in Bank as shown above	\$536.50

This article completes our description of the books of account necessary in this simple booking system. Our next article will tell how to use a General Ledger in connection with them, and how to make up a Monthly Trial Balance or report without using a Ledger.

New Plumbing Goods

WEST SMOKE ABATOR SAVES FUEL AND HEAT

With the combined object of saving fuel and abating the smoke nuisance, the West Perfected Smoke Abator has now been placed on the Canadian market. This product is a "carburator" which mixes the hot air—containing oxygen—with the gases over the fire bed of stoves, furnaces, hot-water heaters, hot-air furnaces, steam heating or power plants. The West Smoke Abator is attached to the fire door, and is entirely out of the way while firing. The manufacturers claim that it increases heat 25 to 50 per cent; burns the smoke; reduces ash soot; and also lessens labor and fuel bills. The West Smoke Abator is being marketed by the Canadian Combustion Co., Ltd., Toronto, Ont.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

CURRENT market developments indicate that present prices are more stable, with business trends registering a more healthy tone generally. The proportion of activity in some lines is now seasonal, owing to many buildings having reached the stage where sanitary and heating equipment is required. While these conditions are mainly considered of a temporary nature, yet it is noticeable that prevailing price changes are far less numerous than has been the case during recent months.

Price revisions to a lower basis are announced on certain lines of compression goods, these changes chiefly affecting both the round way and flat way standard stop and waste cocks; also the Webber

line of gate valves. Dominion wipers, both white and colored cotton, have also been reduced 2 cents per lb. There has appeared another decline in quotations on some coke tin plates. Other primary market lines generally remain unchanged, as regards price, with a firmer undertone in boiler tubes, eavestrough, and conductor pipe, corrugated sheets, radiators and boilers, and similar goods.

Range boilers are again entering the limelight; the recent new higher list prices not being well maintained on the 30-gallon size, owing to the approach of the quiet period. It is recorded that some dealers are quoting easier levels with the object of reducing stocks prior to the winter season. The steel markets are a little quieter; with ingot metals generally failing to retain the upward trends.

MONTREAL MARKETS

MONTREAL, October 31.—Although fewer actual price changes are recorded in the markets, there is much of interest to the plumbing and steam-fitting trade. Dominion wipers and certain lines of compression goods are featured in revisions. Wipers show a reduction of 2 cents on both colored and white; while flatway and roundway stop waste cocks are reduced through a change in discounts. The better tone in the steel industry continues to hold many staple lines on a steadier basis, where formerly easier prices were continually being reported. Sheets, both black and galvanized tinplate; Canada plate; bar iron and steel; corrugated sheets; eavestrough, and conductor pipe; boiler tubes; boilers, and radiators, are all recorded with a firmer tone. Owing to the strength of metals on the primary markets, lead products are also much firmer. Copper goods are stronger in tone, owing to slight recovery from the re-action of copper during the past week. Range boilers are again unsettled, but not to the extent that prevailed a few weeks ago. Some jobbing houses, which have a surplus stock on hand, are offering a price concession in the hope of reducing their supplies before winter sets in. Enamelled ware and closets remain at former quotations. Ingot metals are somewhat improved in tone, although changes in quotations are very slight.

STEADY TO FIRM SITUATION ON BAR IRON

Montreal.

The market tone of bar iron and steel continues firmer, but not to the extent that is evident in sheet products. However, it is generally conceded that the next change in quotations will depend on future developments at the mills. Although no advance has yet been recorded locally, the much better feeling still exists and if there is any marked increase in steel orders during the next few weeks, there is every likelihood of advanced prices. Business locally shows a seasonable improvement

with more enquiries, but large orders are not yet in evidence. Present current prices are as follows.

IRON & STEEL—

Common bar iron, 100 lbs.	3 00	3 25
Refined iron	4 00	4 90
Iron finished machinery steel	3 45	
Mild steel	3 00	3 40
Single reeled machinery steel	5 00	5 25
Band steel	3 00	3 40
Spring steel	6 00	
Sleighshoe steel	3 00	3 40
Tire steel	3 00	3 60
Toe calk steel	4 00	4 20
Harrow tooth steel	3 55	
Mining teeth steel per lb.	0 22	
Black Diamond tool and cast steel	0 22	

NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

A BETTER TONE TO CORRUGATED SHEETS

Montreal.

The undertone of the market for corrugated sheets is somewhat firmer, owing to the improvement in the plain sheet situation. There is no present indications of any revision of prices, this probably because of the quiet season now approaching for these products. Sales are only fair, the season recognized as being fairly well over. Following are current prices:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	\$ 7 00
No. 26 gauge	7 50
No. 24 gauge	10 50
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	18 50

Less 7½%.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

RANGE BOILERS RATHER UNSETTLED AGAIN

Montreal.

The undertone of the market for boilers continues firm, as do most other sheet products. However, locally there is again a rather unsettled feeling among the trade. The season is now advancing and jobbers are finding a slight slackening in sales. Being stock-ed fairly heavy they are now anxious to dispose of any surplus, and are offering a reduced figure. The older quotation of \$8.75 is again found among some dealers. Following is the revised list of a few weeks ago:

RANGE BOILERS —	Std.	Ex.	Heavy
30 gallon	9 25	11 75	
35 gallon	12 00	14 50	
40 gallon	14 50	17 00	
52 gallon	21 00	26 00	
66 gallon	30 00	36 00	
82 gallon	37 50	50 00	
100 gallon	48 00	58 00	
120 gallon	57 00	67 00	

COPPER IS AGAIN IMPROVED IN TONE

Montreal.

Copper on the primary markets has again improved, recovering from the slight re-action last week. The advance now recorded is slight, but fully satisfactory as dealers are hoping the gain will not be of a rapid nature. Prices on sheets, rods and tubing are holding unchanged, with the tendency again of an upward nature. Following are existing quotations:

BRASS—	Base
Sheets	0 25
Rods, ½ to 1 inch, round	0 23
Tubing, seamless	0 32
COPPER—	
Rods, ½ to 2 inch	0 30
Soft sheets, plain, 16 oz. and heavier, lb.	0 33
Plain tinned, 16 oz. and heavier, lb.	0 38
Polished and tinned, 16 oz. and heavier, lb.	0 43
Tubing, lb.	0 34

SMALLER SALE OF EAVES-TROUGH

Montreal.

The recent improvement in steel products generally, which was accompanied by higher prices on certain products, has reflected a somewhat firmer tone in the market for eavestrough and conductor pipe. There is no indication locally of higher prices at present, probably because of the off-season, but it is generally believed the next revision in prices will be in the nature of an advance. Activity in these products is confined to small orders, dealers no doubt finding their customers still require troughing done before the winter commences. Following are list prices and discounts:

EAVESTROUGH—					
O. G. Square Bead—Per 100 ft.					
8 inch	10 inch	12 inch	15 inch	18 inch	
\$15 90	\$17 70	\$21 20	\$28 80	\$36 80	
O. G. Round, and Half Round—Per 100 ft.					
8 inch	10 inch	12 inch	15 inch	18 inch	
\$16 90	\$18 70	\$22 20	\$29 80	\$37 80	
Discount 60/10 per cent. off list.					
CONDUCTOR PIPE—Per 100 ft.					
2 inch	3 inch	4 inch	5 inch	5 inch	
\$18 40	\$22 30	\$29 60	\$40 00	\$49 00	
Discount 60/10 per cent. off list.					
CONDUCTOR ELBOWS—					
Plain round or round corrugated.					
2 inch, list				5 25	
3 inch, list				6 00	
4 inch, list				10 50	
5 inch, list				24 00	
6 inch, list				29 00	
Less 55 per cent					

COTTON WIPERS ARE LOWERED IN PRICE

Montreal.

While cotton wastes have been much firmer in tone, wipers did not follow, and these are now quoted at a reduction. The white wipers have been reduced from 22 cents to 20 cents; colored from 16 to 14 cents. Wastes and wool packing are remaining on a steady market, but the firmer tone to the market is not as strong as was evident a few weeks ago. Following are prevailing prices:

COTTON WASTE — Cream polishing, 20c; White, XXX, 17c; XX, 16c; X, 15c; XLCR, 15c; X Empire, 14c; X Press, 13c; 6 X Special, 12c. Colored, Fancy, 14c; Lion, 12½c; Popular, 10c; Keen, 9c. Wool Packing, Arrow, 30c; Axle, 25c; Anvil, 20c. Dominion Wipers, Washed and Sterilized, White cotton, 20c, colored cotton, 14c. Above lines subject to trade discount for quantity.

LEAD PRODUCTS ARE FIRM BUT UNCHANGED

Montreal.

Following the tendency of the metals used in their manufacture on the primary markets, lead and zinc products are somewhat firmer in tone. The finished products have for some time been selling at what was considered bottom prices, and it is now felt that the continuance of the improvement of the ingots will very shortly reflect on the market for these products. This would especially apply to solders and zinc sheets, these being somewhat stronger than the rest. Business is reported as only fair, but not unusually so as the season is advancing to the usual dull period. Following are prevailing prices:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 10½
Do., 4 to 8 lbs., sq. ft.	0 09½
Cut sheets ¼ lb. extra and cut sheets to size, ¾ lb. extra.	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Wo., wiping, lb.	0 21½
Do., wire, lb.	0 35
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

NO CHANGE IN FITTINGS

Montreal.

There is practically no change to report on pipe fittings. Prices hold at revisions of a few weeks ago and sales are fair, and of a sorting character. Following are prices and discounts:

PIPE FITTINGS—		Per cent.
Cast iron fittings25
Bushings, cast	27½
Bushings, malleable	25
Flanges	37½
Plugs	27½
Flange unions	22½
Malleable unions	42½
Dart unions, black	29
Do., galvanized	8
Nipples, ½ to 4" close and short	50
Do., long	60
Do., 4½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4½" and larger	10
Pound Goods—		Blk. Galv.
Class A	0 53 0 65
Class B	0 21½ 0 28¼
Class C	0 14 0 21½

SHEETS STILL HOLD IN PRICE

Montreal.

It was anticipated that a revision to higher levels in sheet quotations would probably have appeared before now, but this week still finds former prices holding. The tone in the primary steel market continues firm; especially marked in sheet products, and a change in local prices at any time would cause little surprise. Sheet distributors state that while present local stocks hold out, prices will in all probability remain unchanged, but immediately they are forced to purchase at the higher mill prices, some increase is likely. Stocks have been comparatively small for some time, but the demand has been such that they are found ample to meet all the requirements up to the present. There is an improvement continuing in sheet orders

and the better tone of the market remains. Further developments at the mills will be watched very carefully by dealers in anticipating their new selling prices.

English sheets and Canada plates also have a firmer outlook but are held unchanged, as in the case of American products. Local distributors state no change will be made in quotations until present stocks are exhausted. Local current quotations are as follows:

BLACK SHEETS—

10 gauge	4 30	4 65
12 gauge	4 40	4 75
14 gauge	4 50	4 85
16 gauge	4 50	4 95
18-20 gauge	4 80	5 20
26 gauge	4 95	5 40
22-24 gauge	4 90	5 35
28 gauge	5 00	5 50

GALVANIZED SHEETS—

10½ ounce	6 85	7 75
28 gauge	6 45	7 35
26 gauge	6 15	7 00
22-24 gauge	5 95	6 75
20 gauge	5 80	6 60
18 gauge	5 80	6 50
16 gauge	5 70	6 50
14 gauge	5 65	6 50
12 gauge	5 40	6 50
10 gauge	5 30	6 50

English Standard—	Queen's Fleur-de-lis
28 gauge	8 50 7 75
26 gauge	8 25 7 50
24 gauge	7 65 7 10
22 gauge	7 30 6 65
18-20 gauge	6 60 6 50

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10½ oz. 25 cents per 100 lbs.

CANADA PLATES—

Dull.	
18 x 24 x 52s	5 80

20 x 28 IXX, 50s	11 25
20 x 28 IXXX, 56s	12 00

NO FURTHER CHANGE IN CLOSET OUTFITS

Montreal.

No further change is made in closet outfit quotations since the revision of three weeks ago. Sales are fair, building construction still demanding supplies. General dealer business is said to have slackened somewhat in the past few weeks. Following are prevailing prices:

CLOSET OUTFITS—

Closet, standard outfit	27 50
Do., with post hinge seat	28 50

MUELLER

Slop Sink Cock with Pail Brace

For factories, hotels and all public buildings this durable and serviceable fixture, A-2351, is highly recommended.

Made on the patented Rapidac principle, with detachable shank and adjustable flange, fully nickel plated and furnished with brass index lever handles, if preferred.

The supremacy of *MUELLER* Brass Goods is due to the fact that each article is expressly designed for the work it is to do and is then manufactured with the utmost care and precision to insure perfect performance and enduring service.

Write for catalogue and prices. Mail orders given prompt attention.

H. MUELLER MFG. CO., LIMITED, SARNIA, ONT.

Water, Plumbing and Gas Brass Goods and Tools.

American Factory at Decatur, Illinois, U. S. A.

Branches, New York and San Francisco

Mueller Metals Co., Port Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; Die Castings in White Metal and Aluminum; also Screw Machined Products.

MONTREAL MARKETS

(Continued from Page 30.)

BUILDING CONSTRUCTION DEMANDS BOILERS AND RADIATORS

Montreal.

Both radiators and boilers hold at previous discounts with little change either in the movement or market tendencies to report. Being of the heavier class of iron and steel products there is a slightly firmer tone in the market, but no indication at present of a change in prices. Owing to building construction requiring supplies, sales continue on a fair scale. Following are prevailing prices and discounts:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53% for hot water and 54% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 0 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 10 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in., 10 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 10 per cent. Ontario Govt. trimmings, net list.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

WROUGHT PIPE SHOWS NO CHANGE

Montreal.

Wrought iron and steel pipe prices are holding at list No. 53. Some are of the opinion that the market reached bottom when the revision of last month was announced. Since that date it will be noted that other iron and steel products have improved, and price advances made in some quarters. The tone of the market has firmed slightly with chances of a continued downward trend more remote. A fair seasonable amount of business is reported. Following is list No. 53:

To Take Effect Sept. 22, 1921.
Standard Butt-weld Pipe S-C
Per 100 feet.

Price List No. 53.	September 22nd, 1921.			
	Steel.	Galv.	Black.	Wrot Iron.

10 1/2 in.	2.56	3.30	3.54	4.28

SOME BRASS GOODS LOWER

Montreal.

With current sales on the various lines of valves and bibbs continuing with little change, quotations on both flatway and roundway stop and waste cocks are lowered through a change in discounts. Flatway are now less 54 per cent; roundway selling at 46 per cent off. Other lines are holding unchanged. There is a little better undertone to the market owing to improvement in both brass and copper on the primary centres. While this improvement is not yet extensive enough to reflect to any degree on compression goods, it serves to relieve the undertone from the continued easier tendency that has prevailed for some time past. Present discounts on the different lines are as follows:

COMPRESSION WORK—

Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	64%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard	10%
Radiator valves, standard	58%
Do., removable disc	52%
Globe, angle and check valves, standard	20%
Gate or straightway	16/10%
Jenkins Globe	10/10%
Jenkins gate valves	10%
Emco Globe Valves	20%
Emco Check Valves	20%

ENAMELLED WARE FAIRLY ACTIVE

Montreal.

Activity in enamelled ware holds fairly well for this season of the year. Buildings under construction are in many cases now at the stage where they require supplies. The discount remains at 20-10 per cent off list prices, and a somewhat better feeling now exists, although some jobbers are anxious to rid themselves of surplus stock and are offering a slight price concession for quantity buying. This unsettled state of the market locally is again being censured by some local dealers, who claim a new selling method must be adapted by all concerned in disposing of enamelled ware before any market improvement can be looked for. Following are list prices and discounts:

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$ 7 50 \$ 7 40 \$ 7 30
18 x 30	8 70 8 60 8 50
20 x 30	9 90 9 80 9 70
Bath tubs, roll rim, 4, 4 1/2, 5 feet, 24 to 30 in. wide	51 40
Bath tubs, 5 1/2 feet	57 10
Lavatories—	
17x19 in. Apron F139 or P4045	15 30
18x24 in. Apron F154 or P3845 or P3847	23 60
18x21 in. Apron F169 or P4205	17 60
17x19 in. Roll rim, F241 or P4345	12 60
Less 20 and 10 per cent.	

LIMITED AMOUNT OF BOILER TUBE BUSINESS

Montreal.

Quotations on the various sizes of boiler tubes are holding with only a limited amount of business recorded. The improvement in iron and steel products generally, has given reason to believe that tube prices have reached the bottom of the downward trend. Owing to

lack of larger construction work, sales are still confined to repair work.

BOILER TUBES—

	Seamless	Lapweld
1 inch	24 70
1 1/4 inch	24 50
1 1/2 inch	24 00
1 3/4 inch	26 00	27 00
2 inch	24 50	22 30
2 1/4 inch	27 75	25 50
2 3/4 inch	35 00	26 75
3 inch	42 60	34 00
3 1/2 inch	54 50	39 00
4 inch	75 00	49 50

BETTER FEELING IN SCRAP METALS

Montreal.

Scrap consumers continue to enquire more freely, but the demand as yet, has failed to show any marked improvement. With quotations on the various lines, especially iron and steel waste, now at a very low level, dealers are hoping the improvement in these markets will still reflect on scrap before winter sets in. The better feeling now in the market is encouraging after the prolonged period of depression that has existed in scrap and waste materials. Following are nominal quotations:

Automobile tires	0 75
Rubber shoes	0 02 1/2
Yellow brass	0 05
Red brass	0 08 1/2
Light brass	0 04
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02 1/2
Light copper	0 07 1/2
Heavy copper	0 10 1/2
Wrought iron, R.Rd., No. 1 per gr. ton.	10 50
Malleable scrap (ton)	10 50
Pipe scrap (ton)	7 00
Heavy melting steel	7 50 to 8 00
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	20 00

INGOT METALS ARE AGAIN MORE SATISFACTORY

Montreal.

The ingot metal markets are more or less marking time with no special changes in prices, and as far as the American markets are concerned, there is little alteration to record. The situation generally, however, is satisfactory, and there is no desire to see prices advance too rapidly.

TIN—Although the changes are not very great, the tendency generally is slightly upward, and the strength of Sterling exchange assists in this direction. It is not likely that there will be any pronounced movements as yet, but there is little doubt but that the trend will be gradually upward. Local price 35 1/2 cents.

COPPER—The slight reaction in New York is over for the present, and prices are again somewhat higher. Export business is however a little less in volume, and will be until the exchange situation in Germany becomes more stable. The situation generally is quite satisfactory, producers not being inclined to cut prices. Local market is steady at 17 1/4 cents for electro, 17 cents for casting.

LEAD—London market is quite firm, but there is little change at East St. Louis. The situation is quiet but firm,

MONTREAL MARKETS

Continued from Page 32.)

with a fair demand and supplies generally adequate. Local price unchanged at 6½ cents.

SPELTER—Both London and East St. Louis are slightly easier, but the reduction is not very great, and the situation in Europe is quite firm. A further change is looked for when the pres-

ent reaction is through. Unchanged quotation is 7¾ cents.

ANTIMONY—The market for antimony is easier again in New York, the recent advance having petered out. Local prices are also slightly lower in sympathy. Chinese is quoted at 7 cents, high grade English at 8 cents.

ALUMINUM—Aluminum apparently refuses to cause interest in the market and remains dull and quiet at 28 cents.

TORONTO MARKETS

TORONTO, October 31.—With only a moderate number of price revisions occurring on the current markets, quotations on plumbing and steam-fitting supplies have now developed a more stable attitude. This condition, although only considered of a temporary nature, is significant, and is attributed to the recent improvement in the steel industry, with a reflection of this better feeling having spread to many semi-finished and finished materials comprising sanitary and heating lines.

Products embodying price changes are chiefly confined to certain lines of brass goods, and also coke tin plates. The latter show a slight decline in price; while the downward revision in compression goods affects both the round way and flat way standard stop and waste cocks; also the Webber gate valves.

The copper markets have now developed a quiet attitude, with only a moderate proportion of enquiry. The ingot metals generally have failed to retain the recent tone of improvement. There has been no marked increase in the scrap material demand; while the rise in raw cotton prices—which was reflected in quotations on many manufactured cotton goods and also cotton wastes—has now evidently spent itself. Optimistic expressions as to the future outlook in business conditions in general are now more noticeable.

FURTHER PRICE CHANGES ON COMPRESSION GOODS

Toronto.

Further price changes have now developed in the quotations on compression goods. Through the increasing of discounts, the prices on standard flat way stop and waste cocks are brought to a lower level, and a similar revision is made on the round way type of this product. Changed quotations are also noted on Webber gate valves.

With a fair market in compression goods, sales are stated to be of a moderate nature. Current conditions show varying price developments in the efforts to stimulate business generally, and thus reduce stocks prior to the annual inventory period. Prevailing quotations follow:

VALVES —

	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecoaks, stand'd	54

Emco, Globe valves 2½" to 3"	20
Basin cocks—	
No. 1 and 1, Fuller pattern	30
Quick opening No. 3633	43

DECLINE IN PRICES ON COKE TIN PLATES

Toronto.

Reduced quotations are now being given on coke tin plates, the extent of the decline being approximately 5 per cent. This change brings prices on these products to the following levels:

PLATES, CANADA—	
Dull, 60 sheets	Per box 5 65
Ordinary, 52 sheets	5 60
PLATES, COKE TIN—	
1C, 20 x 28, 112 sheets	16 00
IX, 20 x 28, 11 sheets	19 00
1X, 20 x 28, 56 sheets	12 00
PLATES, CHARCOAL TIN —	
IX, 20 x 28, 112 sheets	14 00
1XX, 20 x 28, 56 sheets	16 00
PLATES, TERNE—	
1C, 14 x 20, 112 sheets	12 00

FAIR ACTIVITY IN SOIL PIPE AND FITTINGS

Toronto.

Business in soil pipe and fittings is generally quoted as just fair, for this season of the year. However, there has been some improvement recorded during the month of September, over the dull period noted throughout the summer, but this betterment in trade activity was generally looked for during the Fall. Current prices and discounts remain unchanged at the following levels:

SOIL PIPE—	
2 and 3 inch	35 per cent.
4 inch	40 per cent.
5 and 6 inch	40 per cent.
8 inch	Net
FITTINGS—	
2 to 6 inch	50 per cent.
8 inch	Net

SHEET MARKETS STRONG WITH QUOTATIONS FIRM

Toronto.

Activity is still reported on the increase in primary steel markets, and this degree of improvement has been specially marked in sheet products. There has been an improvement in the volume of steel orders, and in this direction also, sheets generally lead. Price declines have ceased, and some American mills have made a further advance in sheet quotations. However, prices on local markets remain unchanged, at present, the situation still being the same as described in previous market reports. Sheet distributors state, however, that some increases may develop at any time, owing to the present strength of these markets, and the recent price gains at the mills.

BLUE ANNEALED—

10 gauge, base	4 00	4 50
12 gauge	4 05	4 55
14 gauge	4 10	4 60
16 gauge	4 15	4 65

BLACK—

18-20 gauge	4 55	5 05
22-24 gauge	4 60	5 10
26 gauge	4 65	5 15
28 gauge	4 75	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—

	Queen's Head.	Fleur-de-lis.
28 gauge	9 50	8 75
26 gauge	9 25	8 50
24 gauge	8 65	8 10
22 gauge	8 30	7 65
18 and 20 gauge	7 60	7 50

Premier and Apollo—

10½ oz.	6 50	7 00
U. S. 28, base	6 10	6 60
U. S. 26	5 80	6 30
22 and 24	5 65	6 15
18 and 20	5 50	6 00
16	5 35	5 85
12 and 14	5 20	5 70

An extra is now charged on galvanized sheets, 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of 25c per 100 lbs. is made for less than case lots.

RECENT REVISIONS HOLD ON PIPE FITTINGS

Toronto.

No changes have developed in prices on pipe fittings, and the recent revisions are still being maintained. No market item of interest has been recorded, and the general market tone is unchanged. Following are the current quotations:

PIPE FITTINGS—	Per cent.
Cast iron fittings	25
Plugs, cast iron	28
Do., solid	28
Do., countersink	28
Bushings, mall.	28
Do., cast	28

TORONTO MARKETS

(Continued from Page 34.)

LOW PRICE LEVELS HOLD ON
COPPER AND BRASS

Toronto.

The new lower prices recently announced on copper sheets, tubing and rods, are still being quoted locally, in spite of the higher levels on the primary copper markets, and some slight increases in other quarters. Quotations on brass goods of this nature are also holding unchanged, at present. There remains a firm tone in these products, and in view of recent market developments, quotations are undoubtedly being closely watched. Following are the local prices:

BRASS—

Sheets base, per lb.	\$ 0 22
Rods, base, per lb.	0 20
Tubing, base, per lb.	0 25

COPPER —

Rods, base, per lb.	0 26
Soft sheets, plain, 1 oz. and heavier, lb.	0 28
Do., plain tinned 16 oz. and heavier, lb.	0 35
Do., heavier, lb.	0 40
Tubing	0 27

FEW RANGE BOILERS SOLD AT
NEW LIST PRICES

Toronto.

The new quotations on range boilers, given in the revised list recently announced, are reported as not being well maintained. Business in these products is undoubtedly dull, with the 30-gallon size showing the only signs of movement. One dealer stated that there had not been very many boilers sold at the new prices, the evident deduction from this being that buyers had practically been sold up during the period while price cutting was in progress. The prevailing price list on range boilers is as follows:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$ 9 25	\$11 75
35 gallon	12 00	14 50
40 gallon	14 50	17 00
52 gallon	21 00	26 00
66 gallon	30 00	36 00
82 gallon	37 50	50 00
100 gallon	48 00	58 00
120 gallon	57 00	67 00
144 gallon	76 00

QUOTATIONS STEADIER ON BAR
IRON AND STEEL

Toronto.

While there has recently been some improvement in the market tone on bar iron and steel, yet the average current demand cannot be compared with the recovery that has recently been apparent in the sheet markets. Quotations are, however, generally steady, and are unchanged at the following levels:

IRON AND STEEL		
Mild steel bars, base	3 25	3 50
Mild steel bands, 3-16 in. base	3 75	4 00
Bar iron, base	3 25	3 50
Angle iron, base	3 35	3 60
Horseshoe iron	4 10
Tire steel	4 75	5 90
Spring steel	9 50	11 50
Crucible cast sheet steel	30 00	35 00
Mining drill steel	18 50
Cast tool steel, medium	20 00	23 00
Cast tool steel, high grade	30 00	36 00
Sleigh shoe steel	4 10	4 50
Norway iron	15 00
Toe caulk iron	5 40	6 40
Hoop steel	4 50	4 75

TONE IN CORRUGATED SHOWS
IMPROVEMENT

Toronto.

While the average demand for corrugated sheets does not contain any development of a marked nature, yet the undertone has recently improved owing to the firmer basis on primary sheet circles. With the slight price advance on plain galvanized sheets, and general improvement all through the steel industry—both as regards the percentage of production, and the volume of inquiry—quotations on corrugated sheets are now more firmly held. No further revisions have been recorded, and although the seasonal demand is drawing to a close, the tendency towards easier prices on corrugated is not so pronounced, in spite of the quieter period in this class of trade now approaching. Following are the unchanged quotations:

CORRUGATED SHEETS—

	Per 100 Sq. Ft.
No. 28 gauge	7 00
No. 26 gauge	7 50
No. 24 gauge	10 50
No. 22 gauge	12 50
No. 20 gauge	14 00
No. 18 gauge	18 50
Less 7½%.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

JUST MODERATE SALES FOR
EAVESTROUGH

Toronto.

Sales of eavestrough and conductor pipe are described as just moderate, at present. The brisk fall movement of these products has registered a falling off in volume during the past week. There have been no special developments in these markets, and prices remain unchanged at the following levels:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth:

4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 55 per cent.

SLIGHTLY BETTER TONE IN TUBE
MARKETS

Toronto.

Quotations on boiler tubes remain nominally unaltered, with the average range of prices generally being maintained to care for current business. The weakness in this market has now subsided to some extent, and although there is no marked revision in demand for this class of tubular products, yet the recent improvement throughout the steel industry generally is reflected in the better undertone in tubes. Production of semi-finished steel products has recently increased, together with a better demand. This recovery has not been

featured to any extent in the boiler tube markets, but a gradual expansion of inquiry is now looked for with the approach of the winter season. Following are the local prices on tubes generally prevailing:

BOILER TUBES—		Seamless	Lapweld
1 inch	26 00
1¼ inch	27 25
1½ inch	26 25
2 inch	28 75	25 00
2½ inch	28 00	22 00
3 inch	32 00	25 00
3½ inch	40 00	27 00
4 inch	44 00	35 00
.....	60 00	40 00
.....	75 00	50 25

LEAD AND ZINC GOODS HOLDING
THEIR OWN

Toronto.

Conditions in the lead and zinc markets remain generally unchanged, and these products are described as just "holding their own." Prices have remained steady for some weeks, and this is attributed to the fact that stocks have been thoroughly liquidated, and quotations are considered as being down to rock-bottom. The position and developments on the primary material markets are re-act, from time to time, in lead and zinc products. Following are the prevailing quotations on these goods:

LEAD AND ZINC GOODS—

Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.
Lead traps and bends, 10 per cent.
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb 0 09½
Cut sheets, ½ to ¾ lb. extra and cut sheets to size, 1c lb. extra.
Solder wire, per lb.	0 29
Do., commercial, lb.	0 20
Do., strictly, lb.	0 22
Do., guaranteed, lb.	0 24
Do., wiping, lb.	0 20
Zinc sheets, per lb.	0 13

NO LARGE INCREASE IN SCRAP
DEMAND

Toronto.

The slight increase in buying has continued in the scrap iron and steel markets, but this current improvement in demand is described as not being large enough to affect prices. Quotations, therefore, have not yet responded, and generally remain unchanged. Other scrap metals are quiet, with a lessening in the call for copper. A spasmodic movement is noted. It is said that scrap rubber is just moving sufficiently to keep the market from becoming stagnant. The following averages of dealers' nominal buying prices are for fairly large quantities:

WASTE MATERIALS—

No. 2 busheling	11 00
Heavy melting steel, gross ton	9 50
R. Rd. wrought iron, No. 1, gr. ton	10 25
Scrap pipe, gr., ton	00 7 00
Stove plate, net ton	11 00
No. 1 machinery cast, net ton	15 00
Heavy lead	3 75
Tea lead	2 00
Red brass	9 00
Yellow brass	5 00
Light brass	3 00
Heavy copper	9 25
Scrap zinc	3 00
Old rubbers, boots and shoes	2 00
Lumberman's rubber boots	1 25
Auto tires	0 50
Solid tires	0 75

(Continued on Page 38.)

"HERCULES" ABSOLUTELY NO FUMES

As well as being the strongest Drain Pipe Solvent made, Hercules has the much desired feature "no Fumes." It will open the most difficult stoppage. Use Hercules for frozen stacks, clogged sinks, closets, baths, wash tray, etc.

Guaranteed not to injure the piping nor affect glazing on enamel ware. Put up in 1 and 2 lb. cans. Cartons of 2 and 3 dozen.

"C. & H." Knife-Blade CUTTER WHEELS

These Cutter Wheels are positively the highest grade made, thin but just properly tempered to stand the severe strain. Our wheels are standing up and giving the service. We have them in all sizes to fit all makes of cutters.

Try the "C. & H." wheels and you'll never be content with any other.

Buy from your Jobber or send direct to

W. H. Cunningham & Hill Limited.

TORONTO MARKETS

(Continued from Page 36.)

ENAMELLED WARE BUSINESS
STILL FAIRLY GOOD

Toronto

Current business in enamelled ware is reported as still good. Both prices and discounts are being well maintained; and in summing up the current situation in these products, one dealer stated to Sanitary Engineer, that prospects are considerably brighter than they were during the summer months. The recent improvement in general business conditions has been responsible for the development of a more optimistic outlook. Prevailing quotations on enamelled ware follow:

ENAMELLED WARE—			
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51	40	
Do., 5½ ft.	57	10	
All Steel Enamel Baths, 4, 4½ or 5 ft., net	16	25	
Do., do., 5½ ft., net.....	17	50	
Lavatories—			
17x10" Apron F139 or P4045	15	30	
18x24" Apron F154 or P3845 or P3847..	23	60	
18x21" Apron F169 or P4205	17	60	
18 x 21" Roll Rim, F197, F199 or P4655-6	15	40

18 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90
All above list except lines marked net.			

CURRENT ACTIVITY STILL BRISK
IN RADIATORS

Toronto.

Current activity in radiators and boilers is still noticeably brisk, many buildings and homes erected during the recent months now having reached the stage of heating installation. The increase in the proportion of fall construction work, has also been a factor in producing the better market tone on radiators generally. Discounts are holding at the revisions recently announced. The prevailing quotations follow:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 53 per cent. for water and 54 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent. for water and 49 per cent. for steam.

Discounts on 1-column hospital size, water 30 per cent.; steam 31 per cent.

Wall radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 50 per cent.

BOILERS—

Water:

Round, 60 per cent. off list. Square 10 per cent. off list.

Steam:

Round, 15 per cent. off list; square, 5 per cent. off list.

ONLY MODERATE DEMAND NOW
FOR CEMENT

Toronto.

The movement in cements is reported to have registered a falling off from the degree of activity apparent a few weeks previous. The current demand is therefore, mere routine, with only moderate sales anticipated. Prices are holding unchanged, at present, but the opinion has been presented in some quar-

ters that recessions may develop with the end of the present season. The prevailing quotations follow:

CEMENT—

Car load lots.		Toronto.
Per barrel	4	00
Less car lots		
Per barrel, f.o.b. yard	4	75
Per barrel, delivered	5	00
Single bags, \$1.25 each; 4 bags to barrel.		
Extra charge of \$1.50 per load on less than 24 bag lots.		
Rebate of 20 cents for empty sacks.		

REVISED PRICES HOLD IN CLOSET
OUTFITS

Toronto

The recent price revisions on closet outfits, tanks, and bowls, has served to encourage the general situation in these products. The firming up in quotations has been noted with a stronger undertone in the market generally, and prospects are stated as fairly bright. There have been no further price readjustments announced; the recent new list prices generally being well maintained. Following are current prices:

CLOSET COMBINATIONS, low down each

Closet, standard outfit, oak	28	00
Do., with post hinge seat	28	75
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	31	00
Do., vitreous china, with oak post hinge seat and cover	31	55
Do., vitreous china, with mahogany post hinge seat and cover	31	75
Do., white, Vitro or Pussyfoot, with oak post hinge seat and cover	31	55
Do., white vitre or pussyfoot, with mahogany post hinge seat and cover	31	75
Do., enamelled iron tank with oak post hinge seat and cover	31	55
Do., enamelled iron tank with mahogany post hinge seat and cover	31	75
Additions or reductions to above

Vitreous china tank with fittings, flush elbow and supply	18	00
Enamelled iron tank with fittings, flush elbow and supply	20	25

CLOSET SEATS—

Oak wood strip seat and cover	3	70
Oak post hinge seat and cover	4	75
Mahogany finish post hinge seat and cover	5	00

RISE IN RAW COTTON PRICES NOW
SPENT

Toronto.

The tide is now reported to have turned in the cotton markets generally, and the course of the recent rise in raw cotton, which was also reflected in prices on manufactured cotton goods, has evidently spent itself. This easier tone has resulted in holding prices on cotton wastes, with dealers stating that these recent cotton developments have generally served to maintain present quotations. While it was at first thought in some quarters that higher waste prices might materialize, as a result of the cotton flurry, distributors have adopted the principle of adhering to prevailing levels, rather than discourage the present volume of business through advanc-

ing prices. However it is said that easier waste prices are not so likely to develop under current cotton market conditions, for the downward tendency was undoubtedly more evident prior to the recent gains in the raw material. Quotations, therefore, are being held at the revised list announced last June.

RENEWED INTEREST IN WROUGHT
PIPE

Toronto.

The new pipe list, No. 53, has resulted in renewed interest in wrought iron and steel piping. Some markets report an increased demand developing during the past two weeks, while the production ratio at the mills has registered no change. The bulk of the buying in pipe consists of seasonable orders, according to immediate needs. Following is the new list:

Price List No. 53. Sept. 22, 1921.

Size	Standard		Butt Weld Pipe		S/C	
	Blk.	Galv.	Blk.	Galv.	Blk.	Galv.

METALS DO NOT RETAIN RECENT
IMPROVEMENT

Toronto.

Ingot metals generally have failed to retain the recent degree of improvement, and after some advances on the primary markets, are now marking time at slightly easier levels. Both the domestic and foreign demand for copper is now described as only of light proportions. Some market fluctuations, and the general decline in the volume of inquiry, have produced a stationary effect on other metals.

COPPER.—A quieter market and lower prices have developed on copper at primary centres. Producers' quotations have eased from the high advances recently recorded, and both the domestic and foreign demand has fallen off noticeably. The local situation remains unchanged, and prices are still at the 17 cent level.

TIN.—The recent fluctuations in exchange have alternately affected tin quotations to both higher and lower levels. These changes render the market somewhat uncertain, but the sharp rise in exchange values early in the week, caused a corresponding strength in primary market quotations on tin. Local prices are holding at 35 cents.

LEAD.—This market is stated as steady in some reports, but the current quotations are generally unchanged. Local prices vary from \$6.50 to \$6.75.

WINNIPEG MARKETS

WINNIPEG, Oct. 29.—Several price changes affecting plumbers and steam-fitters' supplies have recently been recorded. Among the most noticeable revisions are the lower prices on black and galvanized sheets, this decline taking place at the same time that the primary sheet markets have registered an increase in demand, with this firmer tone being reflected through other phases of the steel industry.

Quotations on Canada plates are again reduced; and lower prices are given on wrought iron nipples and wrought couplings. Trim pipe cutters also cost less. A firm tone appears in the cotton waste markets; with eavestrough, conductor pipe, and range boilers being other products continuing to hold their own. Prices on other sanitary and heating goods generally remain unchanged.

REVISED QUOTATIONS ON GALVANIZED SHEETS

Winnipeg

A reduction in quotations on black and galvanized sheets has been made since last issue of Sanitary Engineer. It is thought however that these prices will not stand long as the market is taking on a firmer tone and another revision in prices may be announced at any time. Following are the latest quotations:

SHEETS—	Galvanized, Black.
	Per 100 lbs.
10 gauge	5 70
12 gauge	5 70
14 gauge	5 80
16 gauge	6 75
18 gauge	6 90
20 gauge	6 90
22 gauge	7 05
24 gauge	7 05
26 gauge	7 20
28 gauge	7 80
10½ oz.	8 20

WROUGHT NIPPLES HAVE SLIGHT PRICE CHANGE

Winnipeg

New discounts have been recorded on wrought iron nipples, which make the selling prices somewhat lower. Following are the new quotations:

WROUGHT NIPPLES—	
Close or short:	
4 inch and smaller	45 per cent. off
4½ inch and larger	35 per cent. off
Long:	
4 inch and smaller	55 per cent. off
4 inch and larger	45 per cent. off

SPELTER.—Some stiffening in the spelter markets coupled with slightly advanced prices, has been noted in recent reports from southern markets. The increase in activity is attributed to brass manufacturers, and inquiries from other producers. No marked gains, however, can be recorded and local markets do not show any signs, at present, of either improvement or change. The price of \$7.00 still generally remains.

ANTIMONY.—This market is steady and unchanged at previous levels. Sales are by no means numerous, and there are no new features to report. Quotations remain locally from 8 to 10 cents.

ALUMINUM.—Some inquiries are reported to have been received lately from automobile manufacturing interests, but the question of price is given as one of the drawbacks to the consummation of orders. The average local price prevailing is now 28 cents.

RANGE BOILER PRICES HOLD UNCHANGED

Winnipeg

Although the prices of galvanized sheets have been reduced no change has been made as yet in the prices of Range Boilers. The unchanged prices are as follows:

RANGE BOILERS—	
20 gallons, each	10 00
30 gallon, each	10 00
35 gallon, each	13 25
40 gallon, each	16 25
52 gallon, each	23 45
66 gallon, each	33 15
82 gallon, each	40 60
100 gallon, each	62 50
120 gallon, each	75 00

CANADA PLATE PRICES AGAIN LOWERED

Winnipeg

Another reduction has been announced in the prices on Canada plates. Following are the new quotations:

CANADA PLATES—Blued.	
18 x 21 inch, per box	7 25
18 by 24 inch, per box	7 25
20 by 28 inch, per box	7 25

REDUCED PRICES GIVEN ON WROUGHT COUPLINGS

Winnipeg

Prices have been reduced on wrought couplings and following are the latest discounts:

WROUGHT COUPLINGS—	
¾ inch to 4 inch	20 per cent. off
4½ inch and larger	5 per cent. off

TRIMO PIPE CUTTERS NOW LESS

Winnipeg

Prices are lower on Trim Pipe Wrenches. Following are the new prices:

TRIMO PIPE CUTTERS—	
No. 1, each	3 25
No. 2, each	4 50
No. 3, each	7 50

HEATING POINTERS

(Continued from page 14)

tire time to the manipulation of the heating system and the windows or to the valves governing the temperatures for certain processes of manufacture.

"The cost of heating buildings supplied from an outside source, especially when steam is used, is nearly always materially reduced by installing automatic temperature regulation. With such systems of heating, the occupants control the temperature in the easiest way, which is to open the windows, and seldom turn off the heat. When the coal is burned on the premises a natural human instinct to reduce labor as much as possible tends to some extent to prevent waste.

"A fair share of all the public buildings are equipped with automatic temperature regulation, particularly those buildings having mechanical ventilation. This is done not only because fuel economy is sought, but also because, with such ventilation very rapid air changes are necessary and manual temperature control is impossible. There is a decided tendency to install automatic temperature regulation for street and railway cars, in order to take the fullest advantage of the heat given off by the occupants.

Cost of Automatic Regulation

"The cost of installing automatic temperature control to an existing plant varies, of course, with the conditions. In manufacturing buildings, it is often possible to control a large number of heating units in the same room with one thermostat. While perhaps not so minute regulation will thus be accomplished, a general condition will be attained of preventing overheating.

"Where the building is considerable in size and has many rooms, a system of regulation having many units—such as the type using compressed air as motive power—or an electrical system, is least expensive and most satisfactory. With its control of each unit of radiation, varying the amount of heat as the varied exposure and heat source conditions of the buildings require, such a plant must reach a high efficiency. Maintenance seems to cost annually not to exceed 2% of the cost of the plant.

"For buildings having but one or two rooms, and for residences of reasonable size, however heated, single-unit regulators, which may be self-contained, or electric or mechanical, give satisfactory results and the maintenance cost is negligible.

"It may be roughly stated that a good system of automatic temperature regulation may be installed in a building for from 5% to 10% of the cost of the heating plant."

Pilot Products Popular in Hespeler

The Made-in-Hespeler Exhibition, Oct. 13-18, 1921, confirmed our belief that PILOT products are popular in their own home territory—and deservedly so—for Hespeler townspeople not only know that these products are built on designs that are scientifically correct—but they are acquainted, also, with the integrity and efficiency of every workman who has any part in turning out any PILOT product. PILOT stoves and furnaces have passed the acid test—they have gained home-town popularity.

PERFECTO

—OIL-REGULATED—

Flush Valves

What Difference Does the Oil Make?

IF all water were pure water—if it didn't contain any sand or dirt or lime—if it didn't increase friction and corrosion, then water would be every bit as satisfactory as oil, for the operation of a flush valve.

Unfortunately, it isn't so, and the **PerfectO** Flush Valve is regulated by oil, because oil is better than water. Dirt or other impurities in the water cannot clog the by-pass, because they can't get near the by-pass. The operation of the valve is controlled entirely by oil. It doesn't depend on the water supply, hence it does not vary. Yet the valve action can be regulated in an instant without bother or fuss.

All vital working parts are constantly immersed in oil, enclosed in a sealed cast-brass chamber. This reduces friction to a minimum and insures a life-time service from every **PerfectO** Oil-Regulated Flush Valve.

Our new illustrated catalogue is now off the press. Write for your copy.

The Best Sheets to Use For Furnace Pipes

One of the hardest tests for a galvanized sheet is to use it to hook up the furnace to the flue.

Corrosion takes an awful wallop under these conditions—the smoke, soot and acid vapors all accelerated by heat.

Now the PEACE HEATING COMPANY, of Toronto, mindful of their good reputation adopted for such work the best sheet ever made by man.

Galvanized Sheets

and if you want the good jobs at your own price you'll do the same.

Ask your jobber for price—it's not much more than plain steel.

Write us for TONCAN METAL estimating book and TEXT-BOOK on corrosion.

Some New Thoughts From an Old Man

By Booster Binx

Last summer, I took an automobile camping trip through a remote, unfrequented part of the Adirondack Mountains. One afternoon browsing around in a clearing, picking berries for supper, I was startled by coming into an old burying ground and finding a long-whiskered man standing, statue-like among the head stones.

It turned out, he was the oldest man in those parts and spending an hour among his ancestors' last resting place.

He was mighty glad to see some folks from "the outside world," as he called it; and asked me to "drop around at dark and have a pipe with him." It turned out he had been in the heating business in Rochester; made his little pile, and years before had come back among his kin, as he said, to spend the sunset of his life.

Altho 95 he was keen as a brier.

Just naturally we got to talking business, which is only another way of saying I mentioned Burnham Boilers. He questioned me pointedly about the firm who makes them; and then about a hundred and one points about the boilers.

Finally he knocked the ashes out of his pipe and remarked:—"Your firm isn't the oldest in the business, but it evidently has the newest ideas on boilers." Then he added: "Old firms sometimes get contented, and kind of go to sleep."

You folks are young enough so you've got a long way to go before nodding time gets you."

Those are the new thoughts from an old man, that I took away with me. Now I leave them with you; so you in turn may pass them on.

When we chat together again, have a notion it will be about—Betwixt, or the Biggest Thing Between.

Talking SPENCER MAKES MANY A SALE

HOUSE SIZE

SPENCER WATER-TUBE STEAM BOILER
Capacities 1,000 to 10,000 sq. ft.

Some of the Reasons--

- 1st—**Every Owner** of a Spencer Self-Feeding Boiler saves from THREE to FIVE Dollars on every ton of coal required to heat his premises, and is DELIGHTED with the constant service he receives from the Boiler with so little attention.
- 2nd—This small-sized No. 1 buckwheat coal which the Spencer burns successfully, is always available. The only other known types of boilers that will burn this extremely low-priced fuel are the mechanically-equipped boilers, and many factories are now equipping their boilers to burn coal in a powdered condition. Of course the Spencer will successfully burn fuel in the larger sizes.
- 3rd—The magazine of the Spencer holds a 24-hour supply of fuel. The fuel feeds at a tempered condition in thin fires over the arched grates in exact proportion as the fuel is consumed, thus eliminating waste and allowing perfect control of firing conditions.
- 4th—Spencer Boilers are known to maintain temperatures for a period of 48 hours in the coldest weather, without attention.

THOUSANDS of Spencer Boilers are now in operation in various parts of Canada and the United States. We can refer you to almost every known

type of building where Spencers are successfully operating. We Manufacture in Canada the Spencer Cast Iron Sectional type of Boilers in ten different sizes, ranging in capacity from 600 square feet to 3,600 square feet, and the Spencer for steam is of fire and water-tube steel construction, ranging in capacity from 1,000 to 10,000 square feet, there being twenty sizes. Let us co-operate with you on the sales in your district. There is a SPENCER for every heating requirement.

Give us your address—NOW.

*No.6

Removal of Air From the System

The Dunham Radiator Traps attached to the radiators permit the free escape of the air from the Radiators into the return piping, but prevent the waste of any steam from the radiators.

The Dunham Air Eliminator should be installed as illustrated here for the free venting of all air from the system into the boiler room. The dry return carries only air and water---the water of condensation returns to the boiler, and the air all passes out.

The lowest point of the dry return at the boiler **should not be less than 24 inches** above the boiler waterline. This means that headroom must be carefully checked before boiler is erected, to make sure that suitable grade can be given to steam and return main and provide the necessary space (not less than 24 inches) between waterline of boiler and return main.

The Dunham Home Heating System using this method of venting the air from the system is proportioned to maintain circulation on less than **eight ounces** pressure: should the pressure on the boiler increase from any cause to a pound or more, the air eliminator float closes the vent opening and creates a sealed system.

Where conditions permit greater headroom than 24 inches between boiler waterline and dry return, make installation to secure maximum distance.

* This is the sixth of a series of talks on steam heating, appearing monthly in Sanitary Engineer.
You will find all very interesting and of help in your daily work.

The Master Key to More ANTHES

Because they open the way to more business. Installing Anthes Syphons induces a higher standard of living. Each successive step in the enjoyment of modern comforts and luxuries stimulates the desire to add further features; such as, water closets, bath tubs, wash basins, range boilers, laundry tubs, kitchen and pantry sinks.

But—your success depends on the efficiency and reliability of the system you install. Anthes Syphons are the very heart and soul of successful sewage disposal plants. Our Bulletin No. 2 will help you.

Blue Prints and Specifications furnished.

Anthes
Toronto and

Business and Prosperity Lies in SYPHONS

Anthes Syphons are superior in design and effectiveness, besides being made of superior, selected material by the highest grade of skilled labor under expert and experienced supervision. Anthes Syphons operate according to purely natural laws. There are no moving parts to stick or cause trouble. They are seamless and made in one piece. Their construction makes them very easy and simple to install. We also make superior cast iron Soil Pipe and Fittings. When you specify, specify Anthes Soil Pipe and Fittings.

Write for Bulletin No. 2, it will pay you.

"PUSSYFOOT" Closet Tanks

C.M.C.
THE MARK OF
QUALITY

Silent - Efficient - Durable

This Pussyfoot Tank is guaranteed to the extent that no matter how many years it has been in use, if a fault of material or workmanship shows, we will replace it with a new tank. The defective tank must be sent to us for inspection.

**SHEET LEAD
LEAD PIPE
SOLDER
"ARISTOCRAT"
LAUNDRY TUBS**

We can supply you with Iron Pipe and Fittings; All Brass Goods:
Block Lead; Baths; Lavatories; Sinks; "Aristocrat" Laundry Tubs; Basins, and, in fact, everything for the plumber.

The "Pussyfoot" Closet Tank is the newest and most up-to-date tank on the market.

It combines skilled design with handsome finish, and satisfies customers with its efficient service.

The "Pussyfoot" costs no more than ordinary closets, and is fully guaranteed.

**Specify
"PUSSYFOOT" to your jobber**

Ruling Affects Brass Manufacturers

Government Customs Ruling Restricts Importation into Canada of "Scrap" Brass from Munitions — Such Material Classed As Manufactured Product — German and U. S. Manufacturers of Plumbing and Other Brass Goods Purchase Such Material and Import It As "Scrap"

HOW the existing Canadian tariff schedule is operated to the disadvantage of certain Canadian manufacturers, and to the distinct gain of foreign producers of brass goods, is contained in the present interpretation of Clauses Nos. 352 and No. 348, in the tariff regulations.

The definition as to what constitutes "scrap" brass has arisen in connection with brass forgings of fuse bodies, noses and primers, taken from shells, huge quantities of which have been sold by the British Government War Stocks Disposal Board. Naturally, certain Canadian concerns interested in this connection, have attempted to import their purchases of this material under the description of "scrap" brass. It is claimed that these brass forgings, when being removed from the shells are damaged in the process to such an extent that they are of no possible further use except as scrap.

However the minister of Customs and Excise adheres to the clause No. 352, which places a 20 per cent. ad valorem duty on all imported articles of brass manufacture coming from Great Britain; although clause No. 348 of the same tariff schedule provides for the "free" admission of "scrap" brass. The ruling of the Customs Department at Ottawa that these caps and primers are liable to the duty, has far-reaching effects as regards Canadian brass products, and is liable to be reflected in the future degree of activity in the brass manufacturing industry of this country.

Importation Prohibitive

"The application of this duty," said E. W. Knight, Purchasing Agent of Frankel Bros, Limited, to Sanitary Engineer, "renders the importation of this waste material prohibitive. At the same time, this material is being imported duty free into the United States, and other foreign countries; a state of affairs which gives brass manufacturers of those countries a distinct 'edge' in the cost of production over the Canadian competitor."

"The fact that the British Government listed this material as 'scrap' and

sold it under that description," said Mr. Knight, "is claimed as an admission that the forgings are of no practical use, except for re-melting purposes. On the other hand, the Canadian authorities claim that they are part of a manufactured article, and as such are liable to taxation. This ruling is looked upon as absurd, both in the waste material markets, and also among those interested in scrap brass from the viewpoint of manufacturing brass products of various description, for it is a distinct restriction to Canadian trading in this commodity."

"The largest quantity of scrap brass, 180,000 tons, placed on the markets at any one time, has recently been sold by the British Government interests. Some fifty thousand tons of this material, shell noses, etc., have been re-sold to German concerns, thus giving Germany's brass factories a much lower ratio of production cost than manufacturers who have to use virgin metal. It is considered likely that a large proportion of the remainder—130,000 tons, will find its way into the United States, as that country allows scrap brass to enter duty free, the same as Canada. The difference comes in, however, by adhering to the 'scrap' definition at the U. S. ports; while classing the shell forgings as 'parts of manufactured brass goods' in Canadian custom regulations."

In this connection, it is said that one American dealer in scrap materials had shipped a quantity of these brass leavings to Canada, but when the consignment was held in bond here for duty, this broker had it diverted to the States. Under such conditions, the production of manufactured brass goods can be carried on by U. S. firms on a much lower primary cost basis than is attainable among Canadian branches of the industry. A number of Canadian firms, however, state that they use nothing else but the virgin metal in their products, as certain defects or pieces of iron and steel found in the ordinary scrap brass, frequently play havoc with tools used in the machining of castings. With respect

to the shell caps and primers, however, it is pointed out that these are pure brass forgings in the first place, and with such tremendous quantities available, brass goods could be produced at much lower cost.

The vast difference between scrap brass quotations and the cost of virgin metal in the ingot stage, is a factor of consideration. Its importance is accentuated when traced down to the price to the consumer, of the finished brass product. The Canadian Customs authorities, according to Mr. Knight, have repeatedly seen samples of the scrap metal under discussion, but fail to change or re-consider their decision. The last ruling on this topic, received by Frankel Bros., which firm are extensive dealers in scrap materials of almost every description, was, that the law provides the duty and that the officials are not placed there to change the law, but to administer it.

Could Not Be Used as Munitions

Under these circumstances, no steps can be taken by Canadian concerns to offset the handicap given domestic brass industries. Other factors entering into the case are, that in addition to being taken from shells, and damaged in that process, these caps, primers and so on, could not be re-modelled to meet the strict measurement requirements exercised in the use of their original purpose. Yet another phase of the situation, governing their definition as to "scrap, or not," is the fact that they could not again be used in the manufacture of munitions except under Government order.

It is further pointed out that fairly substantial supplies of scrap brass from munitions were purchased in Canada shortly after the Armistice by United States interests, and shipped to that country duty free. Should this be re-imported into Canada, the Ottawa decision is that such material would be subject to the 30 per cent duty on "manufactured" brass articles from the United States. The keynote of the whole affair hinges upon the question, "What is scrap?"

Self-Corrosion of Cast Iron Pipes

Discussion on Disintegration of Concrete in Alkali Soils Brings Out Result of Extensive Experiments Made with a View to Obtaining More Definite Information on Destruction of Cast Iron Water Mains, Particularly in Western Provinces

Reproduced in Sanitary Engineer by courtesy of W. Nelson Smith, M.E.I.C., Consulting Electrical Engineer Winnipeg Electric Railway Co.

THE widespread interest in the corrosive action of the alkaline salts found in the soils of the prairies of Western Canada has hitherto been centred upon the corrosion of Portland cement concrete. The universal use of concrete in foundations, aqueducts, and sewers has naturally caused the disintegration of all such structures to be a matter of real concern to the public, as well as to the engineering profession.

It now becomes our duty to call both professional and public attention to a new set of facts that until recently have been suspected by only a very few engineers and entirely unknown to the general public, namely,—the self-corrosion of cast iron and of other commercial metals used in buried structures, by the same group of soil salts that destroy concrete.

This investigation of a large public utility, in order to derive incontestable proof that a great deal of the destruction of city water mains by external corrosion could not be due to electrolysis from stray electric railway currents in the earth. In order to corrode a pipe, a stray current must be flowing out of it into the surrounding earth, and that can only happen adjacent to a power station or in close proximity to some other path of lower resistance, such as a railway track or an underground cable, which may be connected to the power station. A large proportion of the corroded water pipes were either remote from railway tracks or in localities where current would be flowing into them and not out of them, and it was believed that some cause other than stray current was operating in such localities.

Cast Iron Pipe Corrodes

Cast iron pipe has been generally thought to be immune from corrosion except in strongly acid soils, but our field observations and chemical researches have convinced us that the self-corrosion of cast iron pipe in the moist clay and lime silt non-acid soils of the Red River valley is an indisputable fact, and is bound to happen anyway, whether stray current is absent or present.

Although a number of research experiments yet remain to be completed, we consider the results so far obtained to be scientifically concordant and quite conclusive. We, therefore, submit these memoranda for the information of the engineering profession, and especially those members of it who are responsible for the construction and maintenance of public utilities employing cast iron pipe

and other metallic structures underground.

The vital importance to every community, of the safety of its underground water and gas pipes and lead covered cables, places the self-corrosion of such metal structures in alkaline soils in the same category as that of the corrosion of concrete, as a matter of public concern.

The following data have been collected during our work on cast iron. Other research work now being carried out on lead and copper, is still incomplete, but will doubtless be available six months hence, along with fuller details of research on cast iron, not yet ready for full presentation.

The chemical principles involved are not new. Most of them have been known to chemists for some years, but this knowledge seems never to have been widely disseminated in the engineering profession. We can only claim to have brought out facts that could have been ascertained with the aid of any well equipped chemical laboratory at any time during the past fifteen years, had the incentive been sufficient.

Electro-Chemical Principles

Every metal in contact with water tends to dissolve in the water, or in other words to pass from its metallic, atomic condition to its ionic condition independently of any e.m.f. impressed from outside. This tendency to go into solution is termed solution pressure. Such metals as sodium, potassium, and magnesium, the alkaline metals, very readily go into solution and are conceived to have a high solution pressure, while gold, mercury and platinum are metals with very low solution pressures. These solution pressures in fact correspond to the positions of the various metals in the so-called electro-chemical series of elements, tabulated in the text books.

Iron occupies an intermediate position in the electro-chemical series, but is considerably above hydrogen, which is considered as a metal in the series on account of its electro-chemical behavior. Iron has a higher solution pressure than hydrogen and can, therefore, displace it. Consequently the iron ions entering a solution are able to drive out of solution any metallic ions occurring below it in the electro-chemical series, or any hydrogen ions. Take the case of iron in water. Water, which is electro-chemically regarded as the combination of an H ion with an OH ion, easily provides the displaceable H ion whose lower solution pressure causes its ready

exit from the solution in the face of the higher solution pressure of the iron ion. In actual experiment iron was found by Walker to go thus into solution in the purest of water free from dissolved oxygen or carbon dioxide. A perfectly dry surface of iron will not corrode even when exposed to air or pure oxygen. It will only corrode if moisture be present where there is a hydrogen ion to be displaced. Rusting should therefore be conceived, fundamentally, not as an attack of oxygen, but as a retreat of hydrogen.

According to the electro-chemical conception, when an atom of metal passes into solution, it assumes a positive charge of electricity and leaves the metallic mass from which it is separated, negatively charged. Metallic ions and hydrogen are therefore conceived of as having positive charges and travelling in the same direction as the electric current. The OH ions and the acid radical ions have negative charges and travel against the current. This is true whether the act of going into solution generates the electric current, as in a primary battery, or whether the liquid solution is decomposed and its elements driven out of solution by an impressed electric current. The electro-chemical mechanism is, therefore, somewhat analogous to the reversible property of an electric current on a wire in a magnetic field, in which the current produces motion, or the motion can produce current.

The self-corrosion is therefore now recognized as being in all cases an electrolytic reaction, carried out in a water solution.

So far we have considered pure water only. Coming to the effect of impurities in the water, they either stimulate or inhibit the solution of iron.

Corrosion is stimulated by substances which increase the concentration of hydrogen ions in a solution in contact with iron. These substances all stimulate corrosion because they provide more H ions for the iron to displace.

On the other hand hydroxyl ions (OH), and all alkali hydrates, inhibit corrosion, because it is impossible to have any free hydroxyl ions. In other words a true alkali solution is non-corrosive, while a solution that tends even so slightly to be acid, will tend to dissolve iron. Certain neutral salts in the presence of water hydrolyze, thus offering free hydrogen ions which accelerate corrosion.

It is seen that the tendency of iron is to form ferrous hydroxide. If oxygen

is present in the solution or has access to the ferrous hydrate from the air, it quickly oxydizes the ferrous to the ferric hydrate, which is the reddish yellow product commonly called iron rust.

The Soils of the Winnipeg District

The soils of the Winnipeg district are lacustrine and alluvial silt and clay overlying glacial till. They are very rich in lime, and are the result of glacial pulverizing action, which was very efficient, causing the soil particles to be very finely divided. This fine division exposes the maximum of surface to the solvent action of the ground waters, and consequently the soluble and commonly called "alkaline salts" present in the original limestone have been leached out and concentrated in local areas, giving rise to the alkaline nature of our surface soils. The redistribution of these soluble salts is little understood, but the prairie areas adjacent to Winnipeg have a very high concentration of these salts in the surface layers of the soil, so great in fact that they everywhere approximate the toxicity limit for plant growth. In the presence of water, the soils are of very low electrical resistance.

The salt content of the ground waters

is very largely sulphates and chlorides of calcium and magnesium, the sulphates predominating. Aggregations of crystals of calcium sulphate and magnesium sulphate frequently occur in a layer about 4 feet beneath the surface. This layer is several inches thick, and is highly calcareous. It has been observed at many widely separated excavations where water mains had failed. When this layer is dug through in placing a pipe line, the earth used in back-filling the trench naturally contains these salts and they come in contact with the pipe, creating the possibility for galvanic action. These salts are even more frequently met with at lower levels, 10 feet or 12 feet below the surface, in the clays immediately underlying the pulverized limestone layers. They have crystallized out along the bedding planes and in the irregular vertical breaks in the horizontal layers of clay. Very frequently they occupy, as aggregations of crystals, the spaces at one time filled by the roots of a tree.

The significance of these saline deposits lies in their location respecting the water mains. In the Winnipeg region they occur at levels of from 4 feet to 12 feet below the surface, and have

been frequently observed in contact or within a few inches of the pipe as it lay in place, where the water mains had failed from corrosion.

These deposits of salts form the reservoir from which the ground waters receive their saline load. The more soluble chlorides have not been found in crystal aggregates, nor are the chlorides so widely distributed as the sulphates.

The carbonates, chiefly of calcium and magnesium, are present in very large quantity, principally as calcium carbonate. However, in the presence of CO_2 in the ground water, the carbonate CaCO_3 becomes the bicarbonate $\text{Ca}(\text{HCO}_3)_2$, which solution provides two more hydrogen ions per molecule, making the solution slightly acid in its effect, thus accelerating the solution of metals; particularly iron. The presence of a large quantity of carbonate in the soil readily accessible to ground water carrying CO_2 in solution, thus constitutes an unlimited reservoir for the creation of corrosive bicarbonates.

The distribution of these salts is by no means uniform. Excavations only a few rods apart will show wide variations in the proportion of salts, both visibly and on analysis. The proportion of moisture

Comprehensive Display of Plumbing Goods

The use of a number of sample bathrooms using various styles of equipment is one of the best methods employed by this firm to sell plumbing equipment. It will be noted that partitions, about four feet in height, separate the various booths. Shower baths, basins, closets, towel bars and other accessories are shown in place. On the other side of the display room are grouped laundry tubs, various styles of basins, sinks, etc., while closets, footbaths, bath tubs, etc. are grouped in the centre. The room is painted white to correspond with the snowy white equipment and with expert salesmen always in attendance many prospects are developed into enthusiastic purchasers of the latest in bathroom and kitchen plumbing equipment.

in the soil, which is also variable, has, moreover, everything to do with the chemical activity of all these salts.

Besides the foregoing there is also a small percentage of phosphate and occasionally a percentage of nitrate, which is extremely variable. Nitrates are commonly to be expected in soils near the surface, but sometimes occur lower down, and they are very likely to be present in the soil of unpaved streets on account of the accumulation there of animal refuse. It is suspected that soluble nitrates have much to do with the self-corrosion of lead pipe.

Preliminary Examinations of Soils

One of the first things done was to examine about eighteen samples of soil from various parts of the city, mostly from excavations around water pipes. Some were taken from the middle of the business district, and some on the outskirts of the city. Of the 18 samples, 9 were from places where pipes had been corroded to destruction, and of these 9, 2 were from areas where pipes were thought to have been generally electrically positive to the earth, 3 from where they must always have been negative to the earth, and 4 from areas where the polarity was as likely to have been negative as positive. Of the remaining 9 samples, 7 were from places where pipes had been visibly corroded but not seriously, 2 being from positive and 5 from negative areas or regions outside the electric railway zone, while 2 more were taken from excavations where pipes had never been laid. Some were from positive and some from negative areas.

These first proximate analyses were made by leaching a little of the soil sample with distilled water, filtering, and testing the clear filtrate for the dissolved chlorides and sulphates. The sulphate radical was found in every single sample, indicating its universal distribution throughout the soil of the city.

It is very significant indeed, that wherever a cast iron pipe had been corroded to destruction, whether near an electric railway power station or a mile or two distant from it, the soluble sulphates of both calcium and magnesium were invariably found in the soil close to the pipe.

Sometimes these salts were so observed in crystal form, actually in contact

with the pipe. The presence of salt crystals in contact with the pipe can only mean that the ground water in contact with the pipe was actually a concentrated salt solution.

First Experiments and Results on Cast Iron

A number of preliminary laboratory experiments were started, in May 1920, to explore the general possibilities of self-corrosion in a practical and convincing manner.

The first series was carried out with the object of determining with which salts and with what concentrations corrosive action was most pronounced. These were performed with the individual salts in dilute and concentrated solutions, and also with mixtures of all the salts, both dilute and concentrated. Pieces cut from new cast iron pipe, cleaned and weighed, were immersed in the solutions entirely without any impressed e.m.f. and heated to about 90 degrees C. Distilled water was added as evaporation proceeded. The experiment was continued for about 40 days, and during the first 25 days the solutions were heated for about 6 hours per day. At the end of 40 days the pieces of iron were taken out cleaned and weighed.

The metal surface exposed for corrosion on each sample varied between 3 and 4 square inches, but this difference probably had very little effect on the total corrosion, since the action was chiefly localized on small areas in the surface of the iron. The results of tests with mixed salts were for the most part not so marked, and for the sake of brevity have been omitted. The results were listed in the order of the magnitude of corrosion, and the concentrated solution of magnesium sulphate comes first, and the concentrated solution of magnesium chloride second.

Sodium carbonate (not bicarbonate) inhibited corrosion. This preventive action was also carried into the mixtures of salts where sodium carbonate was one of the ingredients, and doubtless accounts for the fact that the mixtures nearly all proved to be less corrosive than the individual salts. Even calcium carbonate was more corrosive than most of the sodium salts.

The calcium bicarbonate solutions stand sixth for the concentrated and seventh for the dilute solutions, in the order of magnitude of corrosion, showing the effect of the two extra hydrogen ions present in each molecule of the bicarbonate, in aiding the solution of iron. The sulphates and chlorides of magnesium and calcium head the list. Ordinary red rust appeared first in the dilute solutions, but the more concentrated solutions gave the greatest amount of corrosion.

The corrosion in almost all instances was accompanied by incipient graphitic pitting. Some of the pits were easily dug out with a knife to a depth of nearly 1-16 in. This characteristic pitting differed in no respect except size, from the pitting on corroded city water mains.

The material removed from the samples of cast iron was usually a mixture of ferrous and ferric iron compounds. The iron first goes into solution as ferrous hydrate and is oxidized later into the ferric hydrate, oxygen from the air causing the transformation.

The general conclusion from this set of experiments is that the salts dissolved in the soil of Winnipeg and vicinity will corrode cast iron of themselves, without any assistance from stray current.

To be Continued

AUXILIARY CONNECTIONS TO THE MUNICIPAL WATER WORKS

The Toronto Branch C. M. A. states:—

"Our attention has been called to certain regulations passed by the Provincial Board of Health under the authority of Section 8 of the Public Health Act, of May 27th, 1921, re the connection of auxiliary railway, factory or other water supply including fire protection system or apparatus, with a municipal water works system the distribution of which is for public, domestic or general use.

The Order-in-Council which is dated 6th July, 1921, requires that in practically every case where either a sprinkler equipment or even stand-pipe is connected with a public main, dual check valves will have to be installed before the 6th of January next.

Should Plumbers Have Show Rooms?

In the November 1 issue of Sanitary Engineer appeared an article entitled "Wholesaler As Plumbing Merchandiser," in which the views of an Ontario manufacturer of plumbing supplies were given on this subject.

This is a matter which interests every reader of Sanitary Engineer and in order to conduct a thorough discussion of the matter and bring out every angle of the question YOUR OPINION is wanted by the editor. Your name will be withheld if desired.

There will be much helpful material for you in this discussion and you will be well repaid for the time spent on writing us what you think of the points brought out in the article. Read the article and send your opinion NOW.

Making Taper Joints of Sheet Copper

By O. W. Kothe, Principal St. Louis Technical Institute, St. Louis, Missouri.

COPPERSMITHING is a very old craft dating back to the ancients; how many years nobody knows. In the modern world of affairs, the copper is used in a multitude of places and purposes, so that the coppersmith has a distinct profession of his own. We may call it a profession in that to work copper requires a peculiar knack gathered only by experience. As far as technical knowledge goes, there is not much to it. The common sheet metal worker in this respect has much more complicated laying out and calculation to do than the ordinary coppersmith.

Still, the coppersmith guards his bit of knowledge with a secretiveness and jealousy as though it were studded with precious diamonds. Much of this jealous guarding of trade features is uncalled for, since there is nothing to coppersmithing that nobody else can learn, provided they have the scope of practice and the use of the tools. Coppersmithing in fact, is a trade or a service that belong to the public and because of the extreme secretiveness and non-helpfulness adopted by the majority of coppersmiths, many of its own workmen are only partially skilled. When the diffusion of their trade knowledge in the shop and in friendly gatherings would be more general, there is not a question of a doubt that a still higher standard could be obtained and maintained for the coppersmith. But this does not mean

that he is superior to the regular sheet metal worker, because in fact the sheet metal in its many branches absorbs coppersmithing, and anyone of 6 or 7 branches of the sheet metal craft closely approaches engineering knowledge, if not enters it in many respects.

The main feature of coppersmithing is hard work with the hammer and mallet. By the gradual application of the hammer, the eye and the feeling of the individual become developed to a point where he works the metal almost unconsciously. Under this condition he is much like a person reading a book, as all the letters stand out and form words, and in the same way the places that require raising or hollowing out show themselves to a coppersmith, and he applies his mallet or hammer in such a fashion that the metal is worked easily and quickly.

Without this particular knack an outsider can worry around with a piece of work for days and then not make a decent job of it, while a coppersmith of experience can form the metal, by a few applications of the hammer or mallet, so that the metal seems to form right under the gaze of his eye. It is not all coppersmiths who are so adept, but there are some who are skilled to a very high degree, and it is amazing what they cannot raise up out of a flat piece of copper.

So we shall take up a series of articles

dealing with the main features of coppersmithing. And in treating these various problems, reader must understand that coppersmithing varies in practice in different shops in certain localities and for different purposes. Certain practices are observed in chemical plants, other practices are observed in marine shops, and still other practices are observed in railroad shops. But all follow a similar principle and their variation consists only in detail possibly of action and established practices of the shop.

In figure 1 we have the laying out of a taper joint. Let us say the copper is to be $\frac{1}{4}$ inch thick. So a working drawing is made to conform with the neutral axis of the metal. This neutral axis is assumed to be directly in the centre of the plate. In the rolling of a plate there is a line somewhere in the thickness that neither lengthen nor compresses. Just exactly where this line is located no one knows, although it is always assumed to be in the centre of the plate.

Observe that in rolling a plate, say a quarter inch thick the throat will stick. Now the metal is such that it compresses much harder than it stretches, and therefore, it is safe to conclude that the neutral axis line is not exactly in the centre. Then again the pliability of the metal must be considered, as soft and brittle spots will change the line of neutrality. However, these adjustments may take place, somewhere within the

thickness of plate as the neutral axis. So in this case we have a pipe that is 8 inches on the inside of the bottom of diameter. This will make a radius of $4\frac{1}{4}$ inches from the centre to the axis line or a neutral diameter of $8\frac{1}{4}$ inches. The side lines as B-A are extended to an apex until they meet as at X. From this apex we set our dividers using the side neutral axis A and B as radius, we describe the upper and lower arc. On this arc we measure off the circumference required for a pipe $8\frac{1}{4}$ inches in diameter, which in this case figures to 25% inches. The workman will remember that to figure the circumference we use the number 3.1416 times the diameter. This is the safest and reliable rule and should be used by all workmen. From the points thus established, lines are drawn to the apex and this also cuts the upper arc and average that circumference to correspond with the required diameter. Edges for feather edging and brazing must be allowed extra.

The next step is to feather edge the lap joints and this is done as in Figure 2 by drawing the edge out with a stretching hammer as shown. When this is done some coppersmiths use the method of forming as shown in Figure 3, where a sheet of copper representing the pattern is laid over some planks set on trusses. Then by means of a shaft 2 or 3 inches in diameter as at B, the one edge is raised and let fall thereby bending the metal. After this the other end E is raised and let drop which bends that side of the metal. This process is continued until a shape as at F below Figure 3 is produced. Some shops may have other methods for forming their sheets, and still other shops may have different methods.

After metal is formed as at F, it is then laid closer as in sketch G, so that the edges are about 1 inch apart or so. This is best done by means of a hammer and block of wood, so that the copper is kept smooth and will not be stretched unnecessarily. After this the pipe is worked as in Figure 4, by placing it on a stake or shaft as at H and working the edge over the mallet. When both edges are worked over, a copper rivet may be put in each end to hold the seam in place when preparing for bracing. In future articles we shall show other methods of holding the edge without riveting. But in this case, the joint is riveted and we have found quite a few workmen follow this practice because rivets are brazed in and hammered out afterwards, so there is no objection to their use. After this a bracket hammer as at J is used for smoothening out the edges on the stake, so that all buckles and unevenness are worked out.

After the edges are prepared, the pipe is set in a tub or on some blocks on the outside and the hose is turned on the edge, thus washing all dust and foreign matter from the seam. This joint is then ready for brazing and it is laid on a stake as at L and the workman scatters some borax along the seam and rubs it in with his thumb. The moisture, still in

the joint from the washing, sort of aids in the cleaning the metal and also helps in holding the borax in place. After this a small trough bent to a V-shape as in sketch L, is filled with some spelter and borax mixed. This is run into the pipe and tipped over on top of the seam, which prepares everything for brazing.

VILLAGE WATER SUPPLY CUT OFF BY ACCIDENT

St. Catharines.—The village of Port Dalhousie will be without its regular water supply until after the close of navigation, in consequence of the water main from St. Catharines being torn out by the rush of water when the steamer Robert R. Rhodes of the Hull Company, Montreal, upbound, carried away the headgates of Lock 3.

Questions and Answers

CIRCUMFERENCE TABLES FOR TINSMITHS

Question:—Will you please provide me with a circumference table for use in tinshops.

J. J. Boyley, Peterboro, Ont.

Answer:—Following you will find a copy of Circumference Table as generally found in tinshops. This type is small for shop purposes and can be kept in a handy lace, probably pasted on a sheet of cardboard. We would suggest that tinsmiths nail up this chart and table of allowances over their work bench.

CIRCUMFERENCE TABLE			
Dia. of parts of an inch For Pipe Work			
Dia.	Cir.	Dia.	Cir.
1-16	3-16	Dia. in full inches	
1-8	3-8	Dia.	Cir.
3-16	9-16	3.	9. 7-16
1-4	3-4	4.	12. 1-2
3-8	1. 3-16	5.	15. 3-4
1-2	1. 9-16	6.	18. 7-8
5-8	1.15-16	7.	22. -
3-4	2. 3-8	10.	31. 7-16
7-8	2. 3-4	8.	25. 1-8
1.	3. 1-8	9.	28. 1-4
2.	6. 1-4	20.	62.13-16

TABLE FOR ALLOWANCES on large end of pipe

Gauge	Thickness inches	Allow to big end
10	9-64	1.
11	1-8	13-16
12	7-64	11-16
14	5-64	1-2
16	1-16	3-8
18	1-20	5-16
20	3-80	1-4
22	1-32	3-16
24	1-40	full 1-8
26	3-160	1-8

Rule:—To find Circumference of pipe 28.3-8 inches in diameter; add different cir. as 62.13-16 for 20 inch; plus 25.1-8 for 8 inch; plus 1.3-16 for 3-8 inch pipe, and you have 89. 1-8 inches as cir. All edges must be allowed extra.

Catalogues and Booklets

FIREPLACE FITTINGS

"The fireplace is an altar for sacrifice, for worship, for refuge, for love."
"Make, therefore, this altar the most beautiful place in the home."

With the above epigram in a prominent place on the fly-leaf, the Enterprise Foundry Co., of Sackville, N.B., have placed in the hands of the trade their Catalog No. 15, on Fireplace Fittings and Open Grates.

The new booklet presents in a quietly-refined manner, the various models and types of Electric grates; Open fire grates; Portable Basket grates; Andirons; Dome and Common Fireplace Dampers; Ash Dumps, and Pit Doors. There is also a closing reference to the Enterprise lines of stoves, ranges and furnaces.

Full details of these products as to size, weight, finishes, and special features are not overlooked. The various illustrations are clear-cut, and give a more or less accurate impression of the appearance and usefulness of these many fireplace appliances.

BANNER STOVES

Catalog No. 8, a new work on stoves and ranges, has been placed before the fall trade, by the Galt Stove & Furnace Co., Ltd., of Galt, Ont. The book is neatly bound, with attractive coloring, and contains a large number of comprehensive illustrations which practically place the products before the mental vision of the dealer. Adequate description as to sizes and types is also given, while in addition to these various details, some special rules are presented governing the setting up of stoves and ranges. This list of regulations is especially useful, both to the dealer and customer.

Among the "Banner" lines catalogued in this issue are the Banner Combination in various styles; the Dunamel Combination; the Banner Chieftain; the Rexall Banner; the Banner Blunose; the Canadian Banner; the Eclipse; the Monarch Cook; the Economy; the Art Banner; the Colonist; the Dandy; the Rambler; the Cyclone Banner; the Kitchen Heater and the Banner Compact Cook. Many of these stoves and ranges are made in different models.

Heaters for various purposes, kitchen, parlor and so on, also occupy a prominent place in the pages of this book. Among these types mentioned are Tortoise Heaters; the New Maple Banner; the Highland Oak; the Premier Oak; the Victor; the Dandy; the Strathcona; the Marvel; Colonial; the Acme Farmers Boiler, and the Champion Agricultural Furnace.

The Galt Stove & Furnace Co., have announced that a separate catalog will be issued covering their line of furnaces. This firm will also mail a special booklet on the Majestic line of coal chutes and building specialties.

ENGINEERS LISTEN TO DRAINAGE EXPERT

The Toronto branch of the Engineering Institute of Canada, heard an address from A. G. Dalziel on his experiences in connection with the laying of 145 miles of sewers in Vancouver. Mr. Dalziel explained the peculiar problems and the evolution of the drainage system in the British Columbia metropolis, and brought out a number of points which are new or recent in modern drainage practice.

Small Set of Books for Plumbers

Proper Bookkeeping in the Plumbing and Heating Shop Commences with Small Set of Books for the Small Operator, Allowing Expansion as Business Grows—Valuable Information Based On Findings of National Trade Extension Bureau

(Continued from last issue)

ARTICLES in previous issues dealt with the details of various entries. They also told how the different forms were to be handled at the close of the month, and what was to be done with the various totals. Each of the sheets, Sales Journal, Purchase Journal, and Cash, were treated in a different article. For this reason the information given may not have been clearly understood by every one. This article will be in a large measure a review of part of the articles that have been previously published.

Bear in mind, first of all, that if each book, that is, Sales Journal, Purchase Journal and Cash Book, does not balance, your month's work will not balance, and you will not have the absolute proof of your work that this system is intended to give you. Add together the footings of all Debit columns, and the footings of all Credit columns, and see that both resulting totals are the same. Next carry forward the totals from the preceding month, being sure to get each total in its proper column. Add these and the totals for the month together, and make another proof of these figures. Doing this from month to month gives you at the end of the year totals of each of the different accounts.

A small business can be handled in this way by not going any further. Now let us see what these totals tell us. Taking our Sales Journal first: the first column gives us our total sales; the next column the total amount of Cash Discount we have set aside, in case we are following this method; the next two columns show the cost of Material and Labor used; the next column tells you the amount of Overhead you have applied to your sales; following this is a column showing the amount you have received for Truck Service; then comes a blank column that can be used for any special item of cost that appears frequently and for which a separate column has not been provided.

Miscellaneous Job Accounts

In the Miscellaneous Job Accounts you have the total of all other items of costs that do not have a special column. The total of this column should be separated into the various items listed. For instance, suppose you have charged in this column "Permits," "Transportation and Board," and "Incidental Expense." Beginning with the total for the first month take a piece of scratch paper and go through the month's entries adding together all of the separate items. See that the total of all the items thus added equals the total amount of that column. Underneath this total

list one under the other the name and amount of each. Do this each month and add the total for the month to the total to date for the preceding month. At the end of the year you will then have the grand total of each item for the year. The next two columns "Gain" and "Loss" show what your total Gains and Losses for the year have been. The difference between these two columns shows the Net Gain or Loss as the case may be.

The column "Sales," shows you the total business of everything on which there was Labor sold, that is, everything except "Store Sales."

The columns under Store Sales give you the same information as above regarding your Store Sales. The last column tells you what your total sales in the store were.

Purchase Journal

Your Purchase Journal works out the same way as the Sales Journal. The

first column tells us what your total purchases of all kinds were. The next column tells you how much Freight has been allowed to you on your invoice purchases.

The next two columns, headed General Ledger, are to be used in making adjusting entries where a General Ledger is kept. Where one is not being kept, extend in the column headed Debit, all purchases covering Equipment and any items that are not an expense. Sometimes the proprietor makes purchases from the supply house for personal use and these are included on the invoice for purchases for store. In such cases enter the cost of these purchases for the proprietor in the General Ledger Debit column.

The Credit column will be used very seldom where no General Ledger is used. The only occasion for its use would be where it is desired to make an allowance in a customer's account as a

matter of policy. By this we mean an instance where the customer complains of a charge solely because they think it is too high. You know the charge is correct but for special reasons you desire to allow something on the account to hold the customer's business. In such cases write the name of the customer under Name and under "For" give full particulars using more than one line where necessary. Do not enter any amount in the Accounts Payable column but instead use the General Ledger Credit column. Enter the amount of each allowance here and also enter it in the Overhead Accounts section under Miscellaneous Overhead Accounts putting in the amount in the Amount column and writing Allowance to Customers in the wide space to the left. The totals of these columns should be analyzed from month to month the same as instructed regarding Miscellaneous Accounts on the Sales Journal.

Productive Labor

The totals of the Material and Productive Labor columns show the total amount of each that has been purchased. Right here comes an important point, regarding Productive Labor. Each month you sell all the labor you purchase, because you close each one of your Workman orders, whether the job is completed or not. You enter in the Productive Labor column on the Sales Journal the cost of your Labor. For this reason the totals of the Productive Labor columns on the Sales Journal and Purchase Journal should be the same. If they do not agree it means that you have failed to charge your customers with all the Labor used on the jobs, or you have made an error in distributing your Weekly Pay Roll on the Purchase Journal. The above will not hold true of Material because of always having a stock on hand.

The total of the Truck column should be compared with the total of the same column on the Sales Journal. If the total on the Purchase Journal is greater than the one on the Sales Journal your truck is not paying its way, and you should endeavor to correct this.

Freight, Express and Drayage, the next column, shows the total amount paid out for these items. Deduct from this the total of the second column, "Freight Allowance," and you will know exactly what your freight and hauling cost you.

The "Miscellaneous Job Accounts" column corresponds to the same column on the Sales Journal. In this column you enter the items when they are purchased, and on the Sales Journal you enter them when they are sold. The total of the column on the Purchase Journal should be analyzed the same as instructed for the Sales Journal. Like the Productive Labor columns the total of these columns on both Purchase and Sales Journal should agree.

In the "Overhead Accounts" section the first three columns show the amount

spent for each of the respective items. You will note the second column is "Auto Expenses." This represents all expenses on pleasure cars used in the business while the "Truck" column takes care of the commercial car. The pleasure car is used by the proprietor in looking after jobs and general running around. It is impossible to make a definite charge to each job for its use, as is done for the truck, so all of the expense connected with it must go into Overhead.

The "Miscellaneous Overhead Accounts" column is for all items of overhead expense other than the three for which separate columns have been provided. Like the other miscellaneous columns, this column should be analyzed each month, and the total charged to each account should be shown under the total of the column. Every item entered in the four columns in "Overhead Accounts" section should also be entered in the last column, "Total Overhead."

The total of this column then tells what your expense of doing business is for the month, and the year to date. Be sure to compare this total with the sum of the two. Overhead columns on the Sales Journal. This is very important as it is by this means you determine whether or not the overhead percentage you are using is sufficiently high to cover actual expenses. If the total of the last column on the Purchase Journal is greater than the two overhead columns on the Sales Journal your overhead percentage is too low and should be increased.

Footings and proving the sheets for the Sales and Purchase Journals and Cash Book may mark the end of your month's work if you so desire where no General Ledger is used. However we strongly recommend that you transfer these totals to the Monthly Trial Balance Sheet as illustrated herewith. In the next issue we will take up in detail the figures shown on this trial balance.

Proper Ventilation With Little Heat Loss

Importance of Proper Ventilation of Churches, School-rooms and Theatres Being Taken Up by Research Bureau of American Society Heating and Ventilating Engineers — Method of Conserving Heat

THE PITTSBURGH Experiment Station of the United States Bureau of Mines is working in co-operation with the Research Bureau of the American Society of Heating and Ventilating Engineers on a number of important problems which affect each individual in his home life, in his place of business, and especially in those places where many people congregate, as in churches, school-rooms, and theatres. It is important to ventilate such places with sufficient fresh air to make everyone comfortable enough to be able to work at high efficiency. The circulation of excessive quantities of fresh air imposes a considerable cost on the heating system, therefore an efficiently designed heating and ventilating system introduces the least amount of cooled air consistent with proper conditions for health. In this connection the use of ozone has frequently been proposed and actually tried in a number of places. The ozone is supposed to deodorize and purify the air by the oxidation of organic matter and possibly by killing bacteria.

It is, however, a real question as to whether ozone can be introduced in quantities large enough to kill bacteria without producing very serious irritation of the throat and lung tissues. It is also a question as to whether harmful oxides of nitrogen are not produced simultaneously with ozone. Definite information is needed on this subject. The first step in obtaining such information is to work out methods for accurately determining the percentage of ozone and oxides of nitrogen produced for different types of ozone machines and to de-

velop suitable methods for determining the very small quantities of ozone and oxides of nitrogen that may be present in air treated with such machines. Analytical work of the highest precision is required. The gas laboratory of the Bureau of Mines Pittsburgh Experiment Station is now engaged on this problem, working in co-operation with the Research Bureau of the American Society of Heating and Ventilating Engineers which is housed in the same building.

After the chemists have worked out the methods of detecting and analyzing these small quantities of ozone and oxides of nitrogen, the next problem will be undertaken in a like co-operation of the two agencies just named working with the United States Public Health Service. Surgeons from this service are detailed to the Bureau of Mines for working on health and sanitation problems.

BATH HOUSE FOR CALGARY

Calgary, Alta.—A public bath house that will be modern, but will not cost any more than \$25,000, is the idea that Commissioner Samis has in proposing that the bath house be established as an asset of the street railway, the money to be borrowed from the depreciation fund of the electric light department.

City Architect Richards already has tentative plans outlined and will start at once to complete the plans for submission to the city council.

It is hoped to provide a pool at least 115 feet long, with dressing rooms at either end, and accommodation for 500 spectators, if possible.

Science Aids Ventilation

ANOTHER indication of the manner in which scientific research is being called upon to help in solving problems of sanitation is found in the endeavors being made by the American Society of Heating and Ventilating Engineers to solve the ventilation question in public buildings and in the private homes without the usually attendant loss of heat and consequent drain on the heating system. The use of ozone which deodorizes and purifies the air by the oxidation of organic matter and the killing of the bacteria has been suggested but it is a debatable point as to whether or not ozone can be introduced in sufficient quantity to have the effect described without having a serious effect upon the throat and lung tissues of those in the building or room so treated. Competent chemists, and doctors and engineers are engaged on the subject at present and its outcome will be watched with interest.

A Severe Handicap

IT WOULD seem as though a distinct injustice was being done the brass industry of Canada by the interpretation of Customs officials put upon clauses 348 and 352 of the tariff regulations, under which the importation from Britain of large quantities of brass cartridge cases, fuses and other similar war left-overs cannot be made except in the category of manufactured product and subject to the 20 per cent. preferential ad valorem duty applied to such imports from Britain. This material is being sold in large quantities by the British Government War Stocks Disposal Board and is being sold as "scrap" brass. As such it is being imported into the United States, Germany and other countries, and to the brass industries of those countries comes a distinct advantage over the Canadian manufacturers who would be willing to purchase part of these huge stocks of brass but cannot do so advantageously. Certain Canadian importers on receiving notice that shipments of such material are being sold in bond in Canada for duty, have had them diverted to the United States. When this material has been worked into a finished product in United States plants, the article, on being exported to Canada, would then carry the 30 per cent. duty which applies on such articles imported to Canada from the U.S.

As an ordinary rule only virgin metal is used by the majority of Canadian brass goods manufacturers. This is due to the fact that in ordinary scrap brass there is considerable foreign matter which hinders the machine process and provides a serious danger to the machinery used. No such foreign matter is present in the bulk of the munition left-overs, as outlined herewith, and it would be a distinct advantage to Canadian brass manufacturers in lowering costs, if the Customs interpretation were amended to give

domestic industries an equal footing with foreign manufacturers as far as the securing of such material is concerned.

Liquidating Stocks

A FAIR index of the trend of general business conditions in Canada is given by the consolidated statement of the chartered banks. In this connection it is significant to note that commercial loans for the month of September show some slight increase over August but show a decline of \$177,000,000 in comparison with September 1920. While this statement would seem to confirm the objection recently heard, that banks were pressing too severely for the reducing of banking indebtedness, it really indicates a healthy condition in that it represents substantial progress in the liquidation of high priced merchandise stock. Until such stocks have been replaced with others which represent a fair price to the consumer and which bring a fair profit to the distributor and manufacturer, the process of readjustment will be impeded. Meanwhile shrewd business men are following the plan of moving out high priced stocks at replacement prices, thereby giving buyers confidence and hastening the introduction of stocks at prices on which the maximum amount of trading can be done with fair returns.

Business-like Methods

THE MERCHANT himself issues a bill for any debt owed him and according to law, before he can recover the amount due him he must show that he has made proper demand for that amount. It would save a great deal of the retail merchants' time if the Government adopted the same businesslike plan in connection with the income tax collection. Instead the government in collecting this debt requires the taxable party to make out his own bill and he is fined if he delays. If the bill was simple it would not be so laborious but there is a complicated series of calculations bristling with penalty clauses for mistakes. It would probably be an advantage to all concerned if the government merely secured a simple statement of income and exemptions claimed from each individual and made out their own bills taking responsibility for any mistakes made.

Caution is Required

AS WAS expected, the Government is again letting itself in for considerable abuse regarding the proposed regulations governing the marking of the country of origin on all imports. This is a very broad question and one which has many possibilities, some favorable but many unfavorable. Undoubtedly it would be useful information to a Canadian buyer to know what country had manufactured the prospective purchase. It would serve as an added protection against importations of cheap goods, the sale of which largely depends upon the close imitation of better grade articles, and it would also give the Customs Department an effective means of checking imports. On the other hand the regulations will probably occasion much difficulty among manufacturers of plumbing, heating and other goods which are exported to Canada. Some of these manufacturers have put forth some suggestions which bear more or less merit, one manufacturer suggesting that the Canadian Customs officials take a bond or certificate from exporters, covering their products and that these officials then accept the exporter's regular stampings or markings upon the articles themselves or upon their containers. In a number of cases exporters fail to see the value of the specific marking "Made in" when the firm's name and address appear on the goods. Another opinion is that the objectional features of the regulations will more than offset any advantage which may accrue from it.

Heating and Ventilating

Standard Furnace Installation Code

Protection Is Needed Against the Speculative Contractor Who Wants "A Heating Plant for Forty-Nine Dollars"—Warm Air Pipes Need Heavier Covering—Larger Cold Air Returns Recommended—Importance of Fuel Economy

"A MATTER which interests all of us and which is of vital concern to both installer and manufacturer is the subject of Installation Codes" said a speaker at a recent convention of warm air furnace men.

The Warm Air Heating and Ventilating Association is not opposed to such legislation but has felt that in a desire for immediate state codes there is danger of not having one up to date, workable, fair to all. We have not been indifferent to the subject, for as far back as 1917 a committee presented a recommended code. This, however, was not an effort to legislate but rather the best practice at that time. Much of it is alright to-day. The Committee in presenting their report said:

It occurs to your Committee that a code, to be of any benefit to the public should cover practically every phase of furnace installation. Yet we have not endeavored to cover all phases of the furnace installation in this code because that would make it rather cumbersome, but we have covered enough of the whole matter so that anyone can write from this, with such changes as local conditions may demand, a code that will be of protection to the furnace installer and to the public in general and also protect the installer against the impositions of a shoddy, indifferent contractor.

This is the thing that we want to look out for, especially those of you who are doing business in cities where you must depend largely upon the speculative contractor for your volume of business, for a speculative contractor is not looking for size of furnace, size of registers, size of cold air pipe or anything else. What he wants is a heating plant for "forty-nine dollars." His interest ends there.

Here is a basis that puts you in a position to combat the tendency to depreciate the value of warm air heating systems in the minds of the public by eliminating the use of small undersized furnaces, small pipes, small registers, inadequate cold air supply and all such things.

I desire to call the attention to Bulletin 120, published at the University of

Illinois. It is undoubtedly the most valuable and best that has been issued on our Warm Air Furnace Research activity. If it is technical in part much of it is simple and plain and simple enough for all of us to understand and contains much of interest in connection with the practical, commercial side of business.

It would be extremely bad taste, to say the least, if I were to assume to tell you how your installations should be made, and I have no such thought or intention, but perhaps I may casually refer to some things that have developed and make some observations without offending your experience and recognized ability and goodnaturedly urge you to take advantage of what Research Work has developed or proves and publishes in the future for the advancement of warm air heating.

Warm Air Pipes Need Heavier Covering

For instance, there appears to have been so much misunderstood as to what the Research Engineers recommended as to covering furnace leader pipes that I made a statement in Pittsburg which I wish to repeat to you. Neither Professor Willard, nor anybody else that I know of, is opposed to the covering of warm air furnace pipes, but they do recommend that furnace pipes be covered sufficiently, that is with enough insulation to make such a covering efficient and save the 5 per cent fuel loss which occurs when simply one layer of thin asbestos paper is used and which has been demonstrated as worse than no covering at all. The consumer has seen furnace pipes covered with thin asbestos paper for so long, that it is quite probable they would not think an insulation complete if all covering was left off the leaders, but I am sure they will not object to a much heavier covering than has been generally used, in the past, neither will the fire insurance companies find fault with such an improvement. In Bulletin 120 Professor Willard says:

"The results of these tests present very convincing evidence against the use of thin layers of asbestos paper covering on bright tin pipes. The heat loss was 62 per cent greater with one thickness of the paper covering a bright tin

pipe than when the same pipe was left uncovered. The importance of this loss may be seen by the fact that it results in a waste of 5 per cent or more of the coal consumed in the average house furnace."

I would like also to incidentally refer to the desirability of larger first floor runs.

Larger Cold Air Returns Recommended

There also seems to be an opportunity for better practice in the sizes of the recirculating duct. The other day a piped job installation came to my attention in which the recirculating duct was 130 per cent of the outlets. We used to think that when using inside air we could get by fine with 100 per cent; then experience moved this ratio up to 120 as ideal, but there is a warm air heating plant laid out by engineers who know and who are unprejudiced, with an inside return air duct 30 per cent larger than the outlet.

I am told that the register temperatures of this installation will be found around 140 degrees, but there will be plenty of air at this temperature and that the result is going to be very pleasing indeed to the owner. The answer seems to be plain. Use larger cold air returns. I know of one installer, whose practice it is to hold a handkerchief over the return grille and if enough velocity develops to move the handkerchief, he concludes the return air capacity of the plant is too small.

We have all heard so much of the necessity of a good chimney, or in other words, a good draft and have wished for them so often without avail, that we almost accept a poor draft as a necessary evil. If there is one thing that a code should contain it should be something that will assure proper drafts, for if they are obtainable, by any way on earth, half our heating problems will be eliminated.

In Germany, chimneys must be right and unless built according to Government requirements no installer can be held responsible for the result obtained from the heating plant proper. It would

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Montreal—Beaudette and Cole, plumbers, have dissolved partnership.

OBITUARY

Hamilton—J. F. Cummings, plumber, is dead.

George R. Woodburn, master plumber of 254 Victoria Avenue, Westmount, was instantly killed when his automobile was struck by a train at a Montreal crossing.

Charlottetown, P. E. I.—Kingford J. Murray, treasurer of the firm of Murray & Dugdale, plumbers, Water street, Haverhill, Mass., is dead.

Kingford J. Murray was born in Cape Breton, N. S. May 5, 1868. He attended school in the town of his birth and came to Haverhill 32 years ago. He entered the employ of the late A. W. Cramm, who conducted a heating and plumbing store on Merrimac street for years and was foreman for Mr. Cramm. He held that position for 10 years and then entered into business with James E. Dugdale, 49 Water street, the firm being known as the Murray & Dugdale Co.

PERSONAL

Allan Lemon, a member of the firm of Lemon & Sons, plumbing and tin-smithing, met with an unfortunate accident. While cranking his automobile, he had the misfortune to have his wrist fractured. He is getting along nicely.

MOVE PLUMBING SHOP

Collingwood, Ont.—Caslakes' Plumbing Shop has been moved to the Carmichael Block, Ste. Marie St.

OPENS NEW OFFICE

The Toronto Plumbing Supply Company has opened an office and warehouse at 1218 Dundas St. W. Mr. Atkinson is the manager.

READY TO INSTALL PLUMBING

Kingston, Ont.—Lemon & Sons, plumbers, have completed the work on the drains at the new "Jock Harty rink" at Queen's University and are now ready to install the plumbing as soon as the building is closed in. The rink will be equipped with the latest plumbing appliances.

TO VOTE ON WATERWORKS

Port Credit, Ont.—A by-law for the construction of a waterworks system in

the village will be submitted to the property owners next New Year's Day. Before the by-law is submitted public meetings will be held to allow full discussion. The cost will be from \$100,000 to \$150,000.

HOUSING SCHEME PROGRESSES

That the housing scheme is progressing favorably at Hamilton, Ont., is indicated by a recent report which states that requests for loans for houses totaling approximately \$100,000 in value have been received.

CONTRACTS AWARDED

Amherstburg, Ont.—In connection with erection of high school costing \$65,000 for High School Bd., plumbing and heating contracts are placed with Ray Ryan, Park St., Amherstburg.

Montreal, Que.—W. J. Barber Co., 91-A St. Genevieve St., have contract for main sewer for hotel costing \$8,000,000 for Mount Royal Hotel Co., 422 Drummond Bldg., 511 St. Catherine St. Contract for cast iron pipe is placed with Canadian Iron Foundries, Ltd., Mark Fischer Bldg., Victoria Sq.

SMITH FALLS MAY PIPE WATER FROM BASS LAKE

Renfrew.—The Provincial Board of Health has ordered Smith's Falls to install a system of filtration in connection with the waterworks plant, and the Town Council, after having a Montreal engineer report upon filtration will now have a Toronto engineering firm report upon the piping of a high quality of water from Bass Lake, a distance of seven miles. The latter proposal will be given the preference should the cost not be found prohibitory.

CUT OFF THE TOWNSHIP

Reporting to the Board of Control, Toronto, on several applications by the township for sewer connections, Works Commissioner Harris stated that practically all the agreements entered into between the city and township have had stipulations that no storm water should be permitted to enter and that this provision has been violated.

"I therefore recommend that until the township agrees to sever all these connections and comply with the agreements, no further drainage facilities be afforded."

The board concurred.

WESTERN ONTARIO NEWS

The contract for plumbing, heating and ventilating system for new 42 room school at Walkerville, costing \$500,000 has been awarded to the firm of Drake, Avery & Co., Hamilton.

* * *

John McDonald of Vienna, Ont., is preparing plans for new \$4000 residence and wants prices on heating and plumbing.

* * *

J. V. Horne, 50 West Ave., St. Thomas wants prices on plumbing, heating and electrical work for two new dwellings to cost \$6000.

* * *

Plans for the new fourteen roomed school at London, Ont., will be prepared by Architect L. E. Carrothers of the Board of Education. Steam heating is planned with complete modern lavatory system. Work will be commenced as early in the spring as possible and will cost \$175,000.

* * *

Noble and Rich of London, Ont., were awarded plumbing and heating contract in connection with remodelling of office building for Dr. L. S. Holmes.

* * *

Plans are being prepared by City Engineer Harry Brazier of London, Ont., for new sanitary sewers for Wellington Road, South London to cost \$250,000. In addition he plans to go ahead immediately with a storm sewer system for the Pine Lawn suburb to cost \$1175,000.

* * *

Williams and Roberts were awarded contract for plumbing and heating for two new dwellings to cost \$14,000 for Hyatt Bros. at London, Ont.

* * *

W. Blackmore, Princeton, Ont., wants prices on hot air heating, plumbing and electrical work for new \$15,000 office building.

* * *

Plans are to be prepared for the installation of sanitary conveniences in the down town station at the London and Port Stanley Railway at London, Ont. Philip Pocock chairman of Commission.

* * *

Plans are being prepared for a new plant at Chatham, Ont., to make ice cream and also supply the city with ice, by Silverwoods Limited of London, Ont. The estimated cost is \$100,000.

* * *

Tenders will be received until December 15 by J. W. Gledhill, Benmiller, Ont.,

for a new three roomed school to cost \$25,000. Prices wanted on heating and plumbing equipment.

* * *

Plans for a new \$8000 bungalow are being prepared for Harold White, 514 Dundas St., London, Ont. Prices wanted on hot water heating, plumbing and electrical equipment.

* * *

R. F. Smith, Dutton, Ont., is preparing plans for new \$5000 residence and wants prices on heating, plumbing and electrical equipment.

* * *

Plans for a new waterworks pumping station and dam are being prepared in connection with the new \$1,500,000 refinery to be erected at Petrolea, Ont., by the Peninsular Sugar Co.

* * *

Negotiations are in progress at Walkerville, Ont., for the purchase of the plant of the Canadian Detroit Lubricator Co., by Colonial Motors Limited a new \$1,000,000 firm

* * *

J. A. Mundy, sanitary engineer and tinsmith at Harriston, Ont., has purchased the McCready Block.

* * *

Scott Bros. of Forest, Ont., have been awarded contract for installation of new hot air heating system in the public library.

* * *

Tenders will be called shortly for new \$10,000 church at London, Ont., for the Hill Street Baptist congregation. Prices wanted on hot air heating, and electrical work. J. Irons, 531 Nelson St., Chairman Building Committee.

WATER BY-LAW DEFEATED

Goderich, Ont.—A by-law, voted on to provide \$55,000 for improvements to the municipal water system, was defeated, the vote being 78 in favor and 305 against. The principal feature of the proposal was a filtration and chlorinating plant, which was planned in accordance with the demand of the Provincial Board of Health.

ADDITION READY FOR

THE NEW WATER PUMPS

Ingersoll, Ont.—The extension to the pumping station west of town has been just about completed, and it is expected that within a couple of weeks the two new electric water pumps will have been installed. The pumps are being made by a Galt firm. In fact they have been made and tested. The piping is coming from Hamilton, and it is expected will soon be tested. Cement abutments are to be placed under the two new pumps. These are being installed in addition to the two pumps already there, and provision has been made for a third new pump at any time it is desired. This will greatly increase the efficiency of the pumping station. It is understood that one of the pumps are to be set aside for fire purposes only.

A. H. WHEELER JOINS

CUNNINGHAM & HILL LTD.

A. H. Wheeler who for the past five years has represented The Good Mfg. Company of New York in Montreal and Eastern Canada has joined the sales staff of Cunningham & Hill Ltd., Toronto to which firm he will represent in the same territory calling on the plumbing trade. Mr. Wheeler is said to have had considerable experience in the plumbing specialty business.

A. H. WHEELER

Who has joined Cunningham & Hill, Ltd., Toronto, and will call on the plumbing trade in Montreal and Eastern Canada, in which territory he formerly represented the Good Mfg. Co., of New York.

WATERWORKS AND SEWERAGE

Almonte, Ont.—Plans will be prepared for waterworks system to cost \$300,000 for town. James Porter & Redfern, Ltd., Consulting Engrs., Excelsior Life Bldg., Toronto.

SEWERS DISPUTE GOES TO BOARD

Toronto-York Township Council is in hopes of at last getting the vexed sewerage question settled. For the thickly populated sections of the township there is only one outlet for sewerage, and that through the Toronto mains.

On November 21 the Ontario Railway Board will hear the township's case and may compel Toronto to take care of the township sewerage. There is a feeling in township circles that Toronto will grant nothing until it is forced to do so. The township will endeavor to make arrangements with the city to look after all its sewerage, but, failing this, will likely agree to divert the storm water if the city will take care of domestic sewerage.

The city claims that existing mains are not large enough to take care of all the township sewerage. Township engineers were yesterday instructed to make a thorough survey and collect data to disprove this statement before the Railway Board.

\$18,000 FOR TEMPORARY HEATING PLANT

With as much grace as the circumstances would permit the Toronto City Council accepted the inevitable in regard to the live stock arena. The recommendation of the Board of Control to spend \$18,000 on temporary heating and otherwise get the building ready in conformity with the agreement was approved, but not until the members of the Board and directors of the Royal Winter Fair were harshly criticized.

STANDARD FURNACE

INSTALLATION CODE

(Continued from page 21)

be an excellent investment to educate the entire public as to the value of good chimneys, and see that they come to know how much a good flue has to do with the capacity and efficiency of a warm air furnace. A good flue is equally important to the boiler and stove manufacturer. Better chimneys can be secured, if we not only pray for them, but work for them.

To Short Testing of Individual Warm Air Furnaces

One thing that will receive early attention is casing diameters, as it is believed there is need of correct information as to their proportions and room for improvement in that direction. Our Research work is now down to subjects that will have a direct bearing on the commercial side of the business. This naturally will be more interesting to installers than has been the work of obtaining equipment and necessary engineering data.

A few years ago, economy in fuel was not taken very seriously as an argument in favor of any kind of a domestic heater, but conditions have changed and any saving that can be made in the fuel consumed now attracts the customer. Someone has said that we have been living in a period of extravagance and that the time has come when economy practised not from choice but from necessity.

Blower Fans Increase Heating Capacity

I hold no brief for any particular fan or blower for use in connection with domestic heating, but the preliminary experiments with that accessory have not only been extremely interesting, but show some remarkable results, and were I an installer I would feel justified in giving the fan or blower careful consideration.

There is no question, but what they do increase the capacity of a furnace very materially and very promptly and that the initial cost as well as the expense of operation, are both within reason. They are neither intended or necessary for continuous use.

As a recognized authority stated, "If a warm air heater and its installation could be more perfect there would be no occasion for a fan, and while it should not be considered as a cure-all it would be found a very valuable accessory, which at present is being developed along lines that will make its use practical."

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

PRICE developments of varying importance are again prominent on current markets pertinent to plumbing, tinsmithing and steamfitting supplies. Changes involving a decline in quotations appear on bar iron and steel; soil pipe and fittings; eavestrough; conductor pipe; conductor elbows; galvanized siding and shingles; "S" wrenches; corrugated sheets; Dart unions, and Canada plates. Other price revisions to a lower level cover certain lines of force cups; galvanized vent pipes; the Penberthy line of brass valves; while a change in the differential between Queen's Head and Fleur-de-Lis galvanized sheets brings quotations on Queen's Head lower by 25 cents per 100 lbs.

The recent easier tone on the steel markets generally, is reflected in the varying reductions on bar iron, and the declines on corrugated. An easier tendency has also developed in primary market circles on tin plates. On the other hand, the range boiler quotations are being well maintained; the incentive to price-shading on these products having been neutralized. The trend of the lead markets is toward improvement. Brisk activity remains in radiator circles; with many reports of fair business in both enamelledware and closet fixtures. The rise in raw and manufactured cotton products has now subsided, and prices on cotton wastes have no upward incentive. The scrap material markets remain quiet; while the fluctuating movement is still noted in ingot metals.

MONTREAL MARKETS

MONTREAL, November 14.—Many important items among plumbing, steamfitting and tinsmithing supplies now register revisions in prices to lower levels. Soil pipe and fittings show a substantial reduction through an increase in discounts. Bar iron and steel also draw attention through the announcement of lower prices on practically all qualities. Dart unions feature the report on pipe fittings, these being reduced; while in the sheet markets both dull Canada plates and Queen's Head galvanized sheets are lower. The former shows a reduction of 20 cents on each of the quantity boxes, and the latter, through a change in the differential, is reduced 25 cents per 100 lbs. New lower prices are given on both the Simplex and Handy Andy force cups.

There is not the same strength in the undertone of several basic steel commodities, although many lines are remaining steady for the present. The improvement in the industry as a whole is not as pronounced as a few weeks ago, and where changes in prices to higher levels were thought likely, these same lines are now reported on an easier tone, if anything. Scrap metals are stated to be on a much better basis, but business continues very quiet. Ingots are holding with few marked changes, prices on all metals remaining at former levels.

LOWER PRICES ON FORCE CUPS

Montreal.

A reduction is announced in prices of both the Simplex and the Handy Andy force cups, following being the new quotations;

FORCE CUPS—	Simplex.	Handy Andy
No. 1, dozen	5 20	4 20
No. 2, dozen	6 35	5 20

LEAD PRODUCTS HOLD STEADY TO FIRM

Montreal.

The various lines of lead products remain unaltered, with the tendency also little changed. These products are apparently waiting for more marked developments in the metals on the primary markets, which continue to show slight fluctuations but resulting in little ultimate change. The recent stronger showing firmed the finished products, but not to the extent of increasing pri-

ces. This improvement is not as evident at present, leaving the chances of an early revision at least, more remote on solders and other lines. The market is, however, by no means weak but is on the other hand quite steady. Present prices are as follows.

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 10¼
Do., 4 to 8 lbs., sq. ft.	0 09½
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.	0 21½
Do., wire, lb.	0 35
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

DART UNIONS ARE REDUCED IN PRICE

Montreal.

Through a change in discounts, Dart unions are lowered in price. Black are now quoted at less 33 per cent., galvanized at less 13 per cent. off list prices. Former discounts were 29 and 8 per cent. respectively. Other lines of fittings are holding unchanged with sales continuing of a small and sorting character. Following are present discounts;

PIPE FITTINGS—	Per Cent.	
Cast iron fittings	25	
Bushings, cast	27½	
Bushings, malleable	25	
Flanges	37½	
Plugs	27½	
Flange unions	22½	
Malleable unions	42½	
Dart unions, black	33	
Do., galvanized	23	
Nipples, ½ to 4" close and short	50	
Do., long	60	
Do., 4½ to 8" close and short	40	
Do., long	50	
Couplings, 4" and under	30	
Do., 4½" and larger	10	
Pound Goods —	Blk.	Galv.
Class A	0 53	0 65
Class B	0 21½	0 28½
Class C	0 14	0 21½

NOT THE SAME FIRMNESS IN COTTON WASTE PRICES

Montreal.

No further change in quotations is recorded in cottonwastes or wipers since the decline in Dominion wipers two weeks ago. Cotton wastes are fairly steady although the strength of cotton on the primary market would seem to have spent itself, leaving the undertone of wastes not of the firm standing that has prevailed in past weeks. Unchanged prices on the various qualities are as follows:

COTTON WASTE — Cream polishing, 20c; White, XXX, 17c; XX, 16c; X, 15c; XLCR, 15c; Colored, Fancy, 14c; Lion, 12½c; Popular, 10c; Keen, 9c. Wool Packing, Arrow, 30c; Axle, 25c; Anvil, 20c. Dominion Wipers, Washed and Sterilized, White cotton, 20c; colored cotton, 14c. Above lines subject to trade discount for quantity.

BOILER TUBES COME UNDER A REVISION

Montreal.

A revision is made in all sizes of Lapweld boiler tubes, also in 2½ inch and larger Seamless tubes. Revised prices are in all cases in the nature of a reduction which varies according to size. This price change is said to be in accordance with the general easier movement in the steel industry but governed by local stocks where dealers are apparently anxious to keep well in line with the trend of the market. The buying movement in tubes is rather spasmodic, although on the whole remains seasonably dull. Following are revised prices on the various sizes;

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70
1¼ inch	24 50
1½ inch	24 00
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

VALVES AND BIBBS HOLD UNCHANGED

Montreal.

Discounts on the various lines of valves and bibbs are holding unchanged, with sales of a small and sorting character. With the advance of the winter months, little improvement in general is looked for as these lines of plumbers' supplies usually show a slackening at this season. Following are discounts on the various lines;

COMPRESSION WORK—	
Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard ..	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard	10%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, standard ..	20%
Gate or straightway	16/10%
Jenkins Globe	10/10%
Jenkins gate valves	10%
Emco Globe Valves	20%
Emco Check Valves	20%

LOWER PRICES ON PRACTICALLY ALL BAR IRONS

Montreal.

The trend of steel products, insofar as bar iron and steel is concerned, took rather a sudden turn when quotations were lowered on practically all grades. While it was generally shown that bars, shapes, etc., did not improve in past weeks to the extent that was evident on the sheet market, it was thought by many that the market would continue quite steady for the meantime at least.

It is noticeable that conditions now at the mills have not the improved standing that prevailed last month, when the brightest outlook was furnished, and it appeared that the chances of easier prices to any extent were more remote. However, the return of previous conditions seem to have settled, and in order to obtain orders lower quotations are extended. The extent of the decline varies on the different grades from 10 cents to 50 cents per hundred pounds, and following are local current prices;

IRON & STEEL—	
Common bar iron, 100 lbs.	2 90
Refined iron	4 40

Iron finished machinery steel	2 95
Mild steel	2 90
Single reeled machinery steel	4 75
Band steel	2 90
Spring steel	4 50
Sleighshoe steel	2 90
Tire steel	3 10
Toe calk steel	3 80
Harrow tooth steel	3 05
Mining teeth steel per lb.	0 22
Black Diamond tool and cast steel	0 22

NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

RANGE BOILER SITUATION GRADUALLY IMPROVES

Montreal

The standard list on range boilers is now more generally maintained, and the 30 gallon boiler is on a more settled quotation at \$9.25. Dealers who were offering the lower price in the hope of reducing their holdings before the winter set in, have in most circumstances brought their surplus to a satisfactory lower amount, and it is felt a more settled market will again prevail. Manufacturers are upholding the standard prices and believe distributors should again ask the higher price which offers a reasonable profit for their handling. Following are standard quotations;

RANGE BOILERS—	Std.	Ex.	Heavy
30 gallon	9 25	11 75	
35 gallon	12 00	14 50	
40 gallon	14 50	17 00	
52 gallon	21 00	26 00	
66 gallon	30 00	36 60	
82 gallon	37 50	50 00	
100 gallon	48 00	58 00	

NEW LOWER LIST ON CORRUGATED SHEETS

Montreal.

Accompany other products of the galvanized iron, new lower prices are announced on corrugated sheets. The trade discount remains unchanged, but list prices have been reduced on all gauges. The amount of reduction varies on the different gauges, but is from 7 to 12 per cent. Sales of corrugated sheets have eased off considerably with the appearance of winter weather, this lack of demand no doubt assisting towards the present lower quotations. The chief factor however, is said to be the easier trend of the plain galvanized sheets distributors of corrugated being anxious to keep in line with the plain sheet market. Following are the reduced prices:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 7½%.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

SCRAP ON AN IMPROVED BASIS

Montreal.

There appears to be no marked improvement in sight this season in the movement of waste materials. Slight signs of a more active market were evident in recent weeks, but an increase in actual sales has as yet failed to materialize. The season is gradually drawing to the closed winter weather which usually produces added dullness for dealers, and little hope is now expressed for improved conditions this year. The tone of the market has returned to a firmer standing, while dealers locally

have not advanced quotations a healthier basis is now evidenced. Following are nominal prices:

SCRAP—

Automobile tires	0 75
Rubber shoes	0 02½
Yellow brass	0 05
Red brass	0 08½
Light brass	0 04
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02½
Light copper	0 07½
Heavy copper	0 10½
Wrought iron, R.Rd., No. 1 per gr. ton.	10 50
Malleable scrap (ton)	10 50
Pipe scrap (ton)	7 00
Heavy melting steel	7 50 to 8 00
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	20 00

DULL CANADA PLATES ARE REDUCED IN PRICE

Montreal.

With the season for Canada plates drawing to a close, quotations on dull sheets are lowered 20 cents on boxes of each quantity.

Through a change in the differential between Queen's Head and Fleur-de-Lis brands of English galvanized sheets, the former are now quoted 25 cents per 100 lbs. lower on all gauges.

New mill prices are announced on bright tin plates but do not warrant the announcement of lower prices to the trade. The market on all sheets does not show the marked degree of strength as was manifest during recent weeks, although the decided easier tendency is more pronounced in other lines of the steel industry. Considering the small amount of profit now obtainable, it is felt that easier prices to any extent are at present unlikely even if the recent improvement is not held at the primary sources. Local quotations are as follows;

BLACK SHEETS—

10 gauge	4 30	4 65
12 gauge	4 40	4 75
14 gauge	4 50	4 85
16 gauge	4 60	4 95
18-20 gauge	4 80	5 20
26 gauge	4 95	5 40
22-24 gauge	4 90	5 35
28 gauge	5 00	5 50

GALVANIZED SHEETS—

10½ ounce	6 85	7 75
28 gauge	6 45	7 35
26 gauge	6 15	7 00
22-24 gauge	5 95	6 75
20 gauge	5 80	6 60
18 gauge	5 80	6 50
16 gauge	5 70	6 50
14 gauge	5 65	6 50
12 gauge	5 40	6 50
10 gauge	5 30	6 50

English Standard—	Queen's Head—	Fleur-de-lis
28 gauge	8 25	7 75
26 gauge	8 00	7 60
24 gauge	7 40	7 10
22 gauge	7 05	6 65
18-20 gauge	6 35	5 20

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10½ oz. 25 cents per 100 lbs.

CANADA PLATES—

Dull.	
18 x 24 x 52s	5 60
18 x 24 x 60s	5 80
18 x 24 x 75s	6 10

18 x 24 x 60s	8 50

BRIGHT TIN PLATES

20 x 28 x 100 lb. bases	17 50
20 x 28 IC, 112s	18 00
20 x 28 IX, 112s	20 00
20 x 28 IXX, 50s	11 25
20 x 28 IXXX, 56s	12 00

LOWER PRICES ON SOIL PIPE AND FITTINGS

Montreal.

Through an increase in discounts, quotations on both soil pipe and fittings have been reduced in price. The 2 and 3 inch pipe shows an approximate reduction of 15 per cent., 4 inch nearly 17 per cent. Larger sizes, 5 and 6 inch, do not record quite so extensive a decline, while all sizes of fittings are now quoted 10 per cent. lower. There is a fair amount of activity in soil pipe at present, the demand no doubt assisted by the approach of colder weather, when the frozen ground will not permit the laying on such an extensive scale. Following are revised discounts;

SOIL PIPE—

2 and 3 inch	45%
4 inch	50%
5 and 6 inch	45%

Fittings

2 to 6 inch	50-10%
-------------	--------

FAIR BUSINESS IN RADIATION CONTINUES

Montreal.

Construction activity continues to demand a fair amount of radiation and boilers. Although the season is advancing, there is still some of the larger work requiring supplies, which will keep manufacturers fairly busy until the end of the year. No change in prices of either is evident, and following are current quotations;

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53% for hot water and 54% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 0 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 10 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in. to 36-in., 10 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 10 per cent. Ontario Govt. trimmings, net list.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

CURRENT PIPE MOVEMENT CONSIDERED FAIR

Montreal.

Considering the season of the year, the prevailing demand for wrought piping is fair. The movement is of small and sorting character, but orders continue to come to hand in good numbers. The smaller sizes still contribute the greater volume of business, outside dealers buying these where the larger piping is not in such general demand.

EAVESTROUGH, CONDUCTOR PIPE AND ELBOWS REDUCED IN PRICE

Montreal.

Through a change in discounts, net prices on eavestrough, conductor pipe and conductor pipe elbows have been lowered in price. The discount on pipe and trough is now 70 per cent, formerly being 60—10 per cent. Elbows will now sell for 60 off former discount being 55 per cent. Price declines are announced

on these lines to keep pace with the trend of the plain galvanized sheets which have been on an eager market since the last revision made in the above products.

The recent first touch of winter weather has had its effect on the current movement of eavestrough, etc. Sales are now reported as showing a decided falling off in the past two weeks. Business has, however, been fairly well maintained all during the late summer and fall months in comparison with other years. Following are list prices and revised discounts.

EAVESTROUGH—

O. G. Square Bead—Per 100 ft.				
8 inch	10 inch	12 inch	15 inch	18 inch
\$15 90	\$17 70	\$21 20	\$28 80	\$36 80

O. G. Round, and Half Round—Per 100 ft.				
8 inch	10 inch	12 inch	15 inch	18 inch
\$16 90	\$18 70	\$22 20	\$29 80	\$37 80

Discount 70 per cent. off list.

CONDUCTOR PIPE—Per 100 ft.

2 inch	3 inch	4 inch	5 inch	6 inch
\$18 40	\$22 30	\$29 60	\$40 00	\$49 00

Discount 70 per cent. off list.

CONDUCTOR ELBOWS—

Plain round or round corrugated.	
2 inch, list	5 25

4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 60 per cent.	

FAIR MOVEMENT IN ENAMELLED WARE

Montreal

Current sales of the different lines of enamelled ware continue in fair volume, stimulated to a certain degree by the advanced stage of building construction now nearing completion before the colder weather sets in. Locally, few changes are noticeable in market conditions, although the quotation of 20 and 10 per cent. off list prices are more generally maintained. Following are the list prices and discounts.

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	
16 x 24	\$7 50
18 x 30	\$8 70
20 x 30	\$9 90
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	\$51 40
Bath tubs, 5½ feet	\$57 10
Lavatories—	
17x19 in. Apron F139 or P4045	15 30
18x24 in. Apron F154 or P3845 or P3847	23 60
18x21 in. Apron F169 or P4205	17 60
17x19 in. Roll rim, F241 or P4345	12 60
Less 20 and 10 per cent.	

CLOSET PRICES REMAIN UNCHANGED

Montreal

The fair amount of activity recorded in other enamelled ware is also noted in closet outfits. Prices remain at the revision of last month, when a slight general advance was announced. Following are present local quotations.

CLOSET OUTFITS—

Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	9 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra

Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitreous China	20 00

"S" WRENCHES ARE LOWER IN PRICE

Montreal.

New lower quotations are now given on the various sizes of pipe and nut "S" wrenches. Following are net prices on sizes of both kinds;

"S" WRENCHES—	Nut.	Pipe.
6 inch, per dozen	10 00	10 00
8 inch, per dozen	12 60	13 20
10 inch, per dozen	14 80	16 00
12 inch, per dozen	22 80	24 00
14 inch, per dozen	30 50	31 80

SIDING AND SHINGLES SHOW REDUCTION IN PRICE

Montreal.

The general reduction in products of galvanized sheet manufacture has also reached siding and shingles. Painted siding is reduced 25 cents per 100 square feet, galvanized 50 cents square. Shingles shows a decline of 50 cents per square.

FEW CHANGES IN INGOT METALS

Montreal.

The ingot metal markets are more or less featureless, with very few changes in prices and the volume of business perhaps a little less than recently. Indications point to no marked change taking place in the near future.

TIN—There has been a slight improvement in London, and the market here is also higher owing to the advance in Sterling exchange. Opinions seem to differ as to the future of this metal, but it is probable it will work higher after the turn of the year. Local price 35 cents.

COPPER—The New York market seems to be slightly firmer, especially for forward deliveries. However, unless conditions in Germany improve and thus enable the resumption of export business, it is difficult to see how prices can advance to any great extent. London is now expected to present a better appearance after the recent decline. Electro is quoted at 17½ cents. Casting at 17¼ cents.

LEAD—The London market maintains its firm tone, but it is not expected that prices will go any higher in view of more plentiful supplies. There is nothing new as far as the American market is concerned, where the situation between supply and demand seems to be pretty well balanced. Quotation locally, 6¾ cents.

SPELTER—London eased off somewhat this week, but this is only regarded as temporary. It is significant that Germany is not offering any spelter despite the decline in the mark. East St. Louis is steady at about \$4.75, and producers are not anxious to sell at this figure. Local market is quoted at 7¼ cents.

ANTIMONY—New York is quiet and unchanged with no immediate sign of improvement. The local situation is also unchanged with a quotation of 7 cents for Chinese, 8 cents for high grade English.

TORONTO MARKETS

TORONTO, November 14.—Price changes of varying extent and importance have again developed on the current plumbing and steamfitting markets. Among the pre-eminent revisions are the declines on bar iron and steel, which reflects the recent easier tones prevalent in the steel industry generally. Eavestrough, conductor pipe, and elbows, also have lower quotations. Other reductions cover galvanized vent pipes; the Penberthy line of brass valves; Dart unions; galvanized siding and shingles, and corrugated sheets. The new lower prices on corrugated is another indication of the steel market trend; while through a revision in the differential between Queen's Head and Fleur-de-Lis galvanized sheets, a reduction of 25 cents per 100 lbs. appears on the Queen's Head brand.

An easier tendency is also noted on soil pipe and fittings, but no price developments have been recorded on the local markets. Tin plate quotations have also eased on the primary market centers; and with the rise in raw and cotton products now spent, prices on cotton waste have no upward incentive. On the other hand, the range boiler quotations are now being well maintained, any trend towards price-shading having been neutralized. The scrap markets are generally quiet; while the pendulum movement is still prominent in metal circles.

GALVANIZED VENT PIPE SHOWS PRICE DECLINE

Toronto.

A substantial drop in price has been recorded on galvanized local vent pipe. The revised quotations are as follows:—3 inch, \$6.69 per 100 feet; 4 inch, \$8.88; 5 in., \$12.00; and 6 inch, \$14.70 per 100 feet. Other items in this list remain unchanged.

BRASS VALVE DISCOUNTS SHOW REVISION

Toronto.

Revised quotations announced on the Penberthy line of brass valves, now register the following discounts:—Gate Valves, 25%; Regrinding Valves 20%; Swing Check Valves 10%; Compodisk Valves 20%.

FURTHER PRICE DECLINE ON CORRUGATED SHEETS

Toronto.

A further downward revision of prices on corrugated sheets has now been announced. This decline is chiefly attributed to the recent easier tone in the sheet markets generally, particularly on galvanized sheets and plates on the primary centres. While the recent strength in sheet inquiry was being maintained, the firmer tendency was reflected on corrugated, but with the recession in demand, this downward price movement then materialized.

With the advent of early winter, the weather conditions do not contribute to outdoor building activities, and consequently the current sales of corrugated sheets have suffered a recession. However, dealers express the opinion that the demand has been maintained in a fairly satisfactory fashion all through the summer and fall months, and a decline in the movement at this time of the year is generally expected. The new quotations are as follows:—

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	\$6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00

No. 20 gauge	12 50
No. 18 gauge	16 50
Less 7½%.	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

DART UNION DISCOUNTS ARE NOW REVISED

Toronto.

Through a revision in the discounts, quotations on the various sizes of Dart unions are now lowered. The extent of the decline is approximately 10 per cent. Prices on other lines of pipe fittings generally remain unchanged this week, with an average volume of sales being recorded. Only moderate business is anticipated, according to distributors of these products, during the current season of the year. The list on pipe fittings, including the revised discounts on Dart unions, is as follows:

PIPE FITTINGS—	Per cent.
Cast iron fittings	25
Plugs, cast iron	28
Do., solid	28
Do., countersink	28
Bushings, mall.	28
Do., cast	28
Unions, ¼ in. to 2 in.	45
Do., 8 in., 2¼ to 4 in.	45
Flanged unions	25
Dart unions, blk., ¼ to 2 in.	33½
Do., ¾ in., 2¼ to 4 in.	23
Do., galvd., add to black	30
Nipples, blk., and galvd. ½ to 4 in.	50
close and short	40
Do., 4½ in. and larger	60
Do., long, ½ in. to 4 in.	50
Do., 4½ in. and larger	30
Do., running thread	30
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—

	Black	Galvanized
Class A	0 55	0 68
Class B	0 23	0 33
Class C	0 15	0 23

PRICE DECLINES IN IRON AND STEEL MARKETS

Toronto.

Declines of varying extent on the different products now appear in the iron and steel markets. This condition has resulted from the recent easier tone of the industry generally, when the degree of improvement somewhat slackened, and the tendency toward firm prices was not maintained. The current re-

ductions, therefore, indicate the lower mill prices combined with a return of similar elements in these markets which developed during the dull summer period. Following are the easier price levels:—

IRON AND STEEL		
Mild steel bars, base	3 00	3 25
Mild steel bands, 3-16 in. base..	3 50	3 75
Bar iron, base	3 00	3 25
Angle iron, base	3 10	3 35
Horseshoe iron	3 75	4 10
Tire steel	3 50	3 75
Spring steel	5 00	5 50
Crucible cast sheet steel	30 00	35 00
Mining drill steel		18 50
Cast tool steel, medium	20 00	23 00
Cast tool steel, high grade	30 00	36 00
Sleigh shoe steel	3 00	3 25
Norway iron	12 50	15 00
Toe caulk iron	4 00	4 50
Hoop steel	3 50	3 75

LEAD MARKET TREND GRADUALLY BETTER

Toronto.

The current demand for lead and zinc goods is holding up fairly well, and prices are being maintained at previous levels. The recent price fluctuations on primary metals, which enter chiefly into the production of these goods, and especially solders, have not been of sufficient duration or extent to show reflection in the domestic quotations on the manufactured commodities. Primary lead and tin markets, however, are generally registering a gradual trend towards improvement. Prevailing quotations remain at the following unchanged levels:—

LEAD AND ZINC GOODS—

Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb 0 09½	
Cut sheets, ½ to ¾ lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 29
Do., commercial, lb.	0 20
Do., strictly, lb.	0 22
Do., guaranteed, lb.	0 24
Do., wiping, lb.	0 20
Zinc sheets, per lb.	0 13

STILL BRISK ACTIVITY IN ENAMELLED WARE

Toronto

There has been no change to record in the situation on enamelled ware, both prices and discounts remaining unchanged. The prevailing degree of activity is described as fairly active, however, with this movement being accentuated by the fact that many buildings commenced late in the summer and fall seasons, are now being rushed to completion. The current unchanged list therefore, is as follows:

ENAMELLED WARE—			
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.			51 40
Do., 5½ ft.			57 10
All Steel Enamel Baths, 4, 4½ or 5 ft., net \$16 25			
Do., do., 5½ ft., net.			17 50
Lavatories—			
17x10" Apron F139 or P4045			15 30
18x24" Apron F154 or P3845 or P3847 ..			23 60
18x21" Apron F169 or P4205			17 60
18 x 21" Roll Rim, F197, F199 or P4655-6			15 40
17 x 19" Roll Rim, F241 or P4345			12 60
Sinks, Roll Rim, 16x24 in.			18 10
Do., 18 x 30 in.			23 00
Do., 20 x 30 in.			24 70
Sinks, Flat Rim—	1 only	2 only	3 only
16 x 24	\$7 60	\$7 70	\$7 80
18 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90
All above list except lines marked net.			

MANY FALL BUILDINGS NOW IN-STALL RADIATORS

Toronto.

The current demand for radiators and boilers is showing a seasonal decline in activity from the brisk movement reported earlier in the Fall, but is still described as satisfactory for this season of the year. A fair proportion of the larger buildings which have been in the course of construction, are now in the stage where radiator installation is being rushed prior to the advent of winter. Prices are holding unchanged on these products, with no marked development in the primary contributory elements. Quotations follow:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 53 per cent. for water and 54 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent. for water and 49 per cent. for steam.

Discounts on 1-column hospital size, water 30 per cent.; steam 31 per cent.

Wall radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 50 per cent.

BOILERS—

Water:

Round, 60 per cent. off list. Square 10 per cent. off list.

Steam:

Round, 15 per cent. off list; square, 5 per cent. off list.

TIN PLATES EASIER IN PRIMARY CENTRES

Toronto.

Recent reports from southern primary steel markets indicate that some of the largest producers are putting into effect lower quotations on timplates. The extent of the decline is approximately \$1.00 per ton, and the new prices are stated as good until the end of March, 1922.

The tinplate markets have been far from strong during the past few weeks, and some lowerings have recently developed in local prices on coke tin and Canada plates. These are now generally holding at the following levels:

PLATES, CANADA—		Per box
Dull, 60 sheets	5 65
Ordinary, 52 sheets	5 60
PLATES, COKE TIN—		
1C, 20 x 28, 112 sheets	12 00
IX, 20 x 28, 11 sheets	19 00
IX, 20 x 28, 56 sheets	12 00
PLATES, CHARCOAL TIN —		
IX, 20 x 28, 112 sheets	14 00
1XX, 20 x 28, 56 sheets	16 00
PLATES, TERNE—		
1C, 14 x 20, 112 sheets	12 00

REVISED DISCOUNTS GIVEN ON TROUGH AND PIPING

Toronto.

Another decline of approximately 17 per cent. has been announced on conductor pipe and eavestrough; both ridge roll and valley. This change is in keeping with the easier tendency which has been noted in these markets during the last week or two, with the advent of the early winter season and the slackening in outdoor building and repair activities of this nature. The falling off in the primary steel markets generally, has also been reflected in many semi-finished and finished products.

The new discounts on eavestrough and piping are 70 per cent. off list; while elbows are quoted at list less 60 per cent, which represents a reduction of 10 per cent. Following are the revisions:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth:

	Per 100 ft.
8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50
Less 70 per cent.	

PIPE (CONDUCTOR)—

Plain, round or corrugated.

	Per 100 ft. in 10 ft. lengths.
2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	23 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00
Less 70 per cent.	

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 60 per cent.	

EASIER TENDENCY IN SOIL PIPE AND FITTINGS

Toronto.

While there has recently developed some anticipation of revisions in the discounts on soil pipe and fittings, no change had been announced and none could be determined upon at the time of going to press. One of the most prominent and well-informed dealers in these products, described the tendency to change at the present time as being uncalled for, when discussing this situation with Sanitary Engineer. It was pointed out that with but a few weeks before the end of the year, both distributors and merchants will be busily engaged upon annual inventory work, with very little time or incentive for placing orders or receiving fresh stocks.

Whether the local quotations on soil pipe and fittings will follow the lead of certain eastern markets and register reductions in the near future, could not be ascertained. Predictions in this direction were difficult to secure, and the consensus of opinion indicated an attitude of watchful waiting. It is noticeable that an easier tone has now developed on the primary steel markets generally, and this factor has been reflected in lower quotations on corrugated sheets, and reduced prices on bar iron and steel. Other tubular goods, however, are remaining unchanged with regard to price levels, and the primary factors do not contain any changes of marked interest. Prevailing quotations on soil pipe and fittings are as follows:

SOIL PIPE—

2 inch	25 per cent.
3 inch	30 per cent.
4 inch	30 per cent.
5 and 6 inch	30 per cent.
8 inch	net

FITTINGS—

2 to 6 inch	40-10 per cent
8 inch	Net

RANGE BOILER QUOTATIONS NOW WELL MAINTAINED

Toronto.

While a slight tendency was recently noticeable in the direction of price shading on the revised list quotations on

range boilers, principally due to efforts to lower supplies of the 30-gallon size—this situation has now improved and prices are generally being maintained. Distributors state that these products are now entering the season when the volume of sales is naturally more confined, and current conditions are such that dealers with stocks heavier than usual are naturally anxious to dispose of their holdings prior to the arrival of the winter onths. The prevailing list remains as follows:

RANGE BOILERS—

	Standard	Ex. Heavy
30 gallon	\$ 9 25	\$11 75
35 gallon	12 00	14 50
40 gallon	14 50	17 00
52 gallon	21 00	26 00
66 gallon	30 00	36 00
82 gallon	37 50	50 00
100 gallon	48 00	58 00
120 gallon	57 00	67 00
144 gallon	76 00

REDUCED PRICES APPEAR ON SIDING AND SHINGLES

Toronto.

A decline of between 6 and 7 per cent. also appears on galvanized siding and shingles. This change is in accordance with the recent revision to easier levels in prices on other lines of galvanized sheet manufacture. The new quotations on siding are \$7.50 per square; and on shingles, \$8.50 per square. There is a discount of 7½ per cent. applicable in both cases. These levels are 50 cents lower than the previous prices.

SCRAP MATERIAL MARKETS GENERALLY QUIET

Toronto.

The scrap material markets are generally in a quiet state, with the undertone holding to the recent slight improvement. The attitude of dealers is presented in the fact that accumulations of iron and steel scrap are strongly held, and future activity is still being anticipated in many quarters. Copper and brass scrap have been a little more prominent than the other metals, but business in these markets generally has been of a subdued nature, with no marked developments having been recorded. Following are dealers average prices for fairly large quantities:

SCRAP MATERIALS—

Scrap Iron		
Gross Tons—		
Heavy melting steel (Hamilton)	9 50	10 00
Borings and turnings	2 50	3 50
Revolving rails	10 50	11 50
Scrap pipe	6 00	7 00
No. 1 railroad wrought	10 25	11 25
Steel turnings (Hamilton)	5 50	6 00
Agricultural malleable	10 00	11 00
Railroad malleable	11 00	12 00
Net tons—		
No. 1 cast	15 00	16 00
Stove plate	11 00	12 00
Grate bars	10 00	11 00
Standard car wheels	13 50	14 00

Scrap Metals.		
Heavy copper and wire	9 25	10 00
Light copper	7 50	8 00
No. 1 composition	8 00	8 50
No. 1 comp. turnings	6 00	6 50
Light brass	3 00	3 50
Heavy yellow brass	5 00	6 00
Heavy lead	3 75	4 00
Tea lead	2 00	2 50
Scrap zinc	8 50	4 00

Scrap Rubber.		
Boots and shoes	2 00	2 50
Lumbermen's rubber boots	1 25	1 75
Auto tires	0 50	1 00
Solid tires	0 75	1 25

(Continued on page 32)

MUELLER Stop Cocks, Sill Cocks and Basin Cocks

The wide range of design, the uniform quality and the tested worth of each article make it a pleasure for plumbers to sell and install **MUELLER** goods. The precision with which every thread and joint is finished insures satisfaction to the user and saves time for the plumber. See A-1240, A-1245, A-1513 and A-1517.

TORONTO MARKETS (Continued from page 30)

FAIR BUSINESS FOR CLOSETS AND FIXTURES

Toronto.

Quotations on closet combinations and fixtures are still holding unchanged at the revisions recorded some few weeks ago. The demand for these products is described as fairly active, with some dealers having reported good business in both closets and enamelled ware. The season is nearing an end, however, and it is said that this is a contributing factor to the present degree of activity. Following is the general price list:

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	28 00
Do., with post hinge seat	28 75
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	31 00
Do., vitreous china, with oak post hinge seat and cover	31 55
Do., vitreous china, with mahogany post hinge seat and cover	31 75
Do., white, Vitro or Pussyfoot, with oak post hinge seat and cover	31 55
Do., white vitre or pussyfoot, with mahogany post hinge seat and cover	31 75
Do., enamelled iron tank with oak post hinge seat and cover	31 55
Do., enamelled iron tank with mahogany post hinge seat and cover	31 75
Additions or reductions to above	
Add for reversible trap bowl	1 25
Add for syphon jet bowl	7 00
For ¾ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 80
CLOSET BOWLS—	
Washdown bowl, less spud	10 00
Reversible trap bowl, less spud	11 25
Syphon jet bowl, less spud	17 00
"Richelieu" bowl	10 50
CLOSET TANKS, low down	
Oak, Vitro or pussyfoot tank with fittings, less seat	13 10
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 25
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	20 25
CLOSET SEATS—	
Oak wood strip seat and cover	3 70
Oak post hinge seat and cover	4 75
Mahogany finish post hinge seat and cover	5 00

EXPECT SEASONAL WINTER TRADE IN BOILER TUBES

Toronto

The boiler tube situation has failed to take on any strong semblance of recovery, insofar as the expected seasonal proportion of demand is concerned. The current sales have not increased to any great extent, according to recent reports, and the prevailing situation is generally summed up in expectations for future improvement. The winter months contain the hopes of domestic dealers in this respect, and this condition reflects the upward trend and brisker activity in other steel products generally; a factor which may develop in the boiler tube markets if stock liquidation and replacement values contribute in this direction. The average unchanged local quotations follow:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00	
1¼ inch	27 25	
1½ inch	26 25	
1¾ inch	29 75	25 00
2 inch	28 00	22 00
2¼ inch	32 00	25 00
2½ inch	40 00	27 00
3 inch	44 00	35 00
3½ inch	60 00	40 00
4 inch	75 00	50 25

ONLY MODERATE SALES FOR COMPRESSION GOODS

Toronto.

The general situation in compression goods has failed to develop any marked features. The current demand is of a moderate nature, with the proportion of sales having registered a seasonable decline since the advent of early winter weather. Interior building activities, and repairs of this nature, still combine to constitute periodical requirements of these products.

Quotations on the various makes, styles and sizes of valves and cocks, are holding at the latest revised levels, and no current changes have been reported. Following are the prevailing discounts:

VALVES—	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecoaks, stand'd	54
Roundway stop and waste cocks, std.	46
Brass steam cocks, standard	10
Globe, angle and check valves, std.	20
Mueller globe, angle and check	20
Mueller composition disc steam valves	20
J. M. T. valves	20
J. M. T. C.	25
J. M. T. gate valves	25
Gate or straightway	16-10

CURRENT PIPE MOVEMENT DESCRIBED AS FAIR

Toronto.

The demand for tubular goods has shown no material change, the movement continuing somewhat irregular in demand, and spasmodic in quantity. Dealers describe current sales as fair for this season of the year, and piping prices are unchanged, with list No. 53 remaining in effect.

In jobbing circles there are reported to be some signs of more activity; while producers are stated to be operating up to very fair proportions of capacity. On the whole, of course, there has recently been a slight recession in demand, this being a seasonal change in that direction.

REVISED DIFFERENTIAL ON GALVANIZED SHEETS

Toronto.

Through a change in the differential between Queen's Head and the Fleur-de-Lis brands of galvanized sheets, the Queen's Head are now quoted 25 cents per 100 lbs. lower on all gauges.

The brisk demand for sheets on the primary steel markets has recently subsided to some extent, and these easier tones are reflected on the domestic markets generally. An attempt by certain southern sheet producers to place still another advance on prices, failed to hold in view of the slackening in demand. The local situation remains fair, with prices holding unchanged at present.

BLUE ANNEALED—

10 gauge, base	4 00	4 50
12 gauge	4 05	4 55
14 gauge	4 10	4 60
16 gauge	4 15	4 65

BLACK—

18-20 gauge	4 55	5 05
22-24 gauge	4 60	5 10
26 gauge	4 65	5 15
28 gauge	4 75	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—

	Queen's Head	Fleur-de-lis
28 gauge	9 25	8 75
26 gauge	9 00	8 50
24 gauge	8 40	8 10
22 gauge	8 05	7 55
18 and 20 gauge	7 35	7 60
Premier and Apollo—		
10½ oz.	6 50	7 00
U. S. 28, base	6 10	6 60
U. S. 26	5 80	6 30
22 and 24	5 65	6 15
18 and 20	5 50	6 00
16	5 35	5 85
12 and 14	5 20	5 70

An extra is now charged on galvanized sheets, 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing sheets.

COTTON MOVEMENT SPENT WASTE PRICES UNCHANGED

Toronto.

The recent upward trend in the raw cotton markets has obviously receded to some extent, and the brisk activity in these circles has now spent itself. As a consequence, the stronger feeling in cotton waste markets is no longer evident, and there is no indication, at present, of any development towards recovery. One dealer expressed the opinion that the demand for cotton, and the reflected higher quotations on cotton goods generally, merely had an effect of making future declines in cotton waste prices more uncertain than might otherwise have been the case. Prevailing levels are therefore unchanged as follows:

COTTON WASTES—	
Cream, polishing	0 19½ 0 20
White, cotton.	
XXX	0 18½
XX	0 16½
X	0 15½
XC	0 14½

Above lines subject to trade discount for large quantities.

PRICES OF COPPER GOODS STILL MARKING TIME

Toronto.

With the quotations governing copper on the primary markets now holding at a steady level, the current prices on copper and brass goods likewise continue to mark time. The easier quotations recently recorded on copper and brass rods, sheets and tubing, remain unchanged, with prevailing trade in these markets reported to be registering signs of slight improvement in general business conditions.

TORONTO MARKETS

(Continued from page 32)

PENDULUM MOVEMENT IN
INGOT COPPER

Toronto.

The pendulum in the ingot metal markets is alternately swinging towards improvement with increased demand and higher prices, and then in the direction of price fluctuation with easier tones generally. This procedure has been especially marked in the copper markets, and prices on this metal are again firming up, due to a slight recovery in demand. This upward movement shows a return, at least of some extent, of the betterment in copper evidenced a few weeks ago; from which higher levels, quotations have since receded. Producers are still claiming that the prevailing markets are not attractive, and state that their hope lies in the direction of higher prices being maintained on futures, coupled with increased consumption.

The primary tin markets still retain varying fluctuations, but the general trend seems to be in an upward direction. The recent gains in the exchange rates, have served to enhance tin values. Aluminum quotations are showing signs of easing in the primary stage; but changes in the ingot markets generally have not been sufficiently marked to reflect on the current local quotations, which remain practically unchanged.

COPPER—After the rise in the copper markets, tabulated a few weeks ago, the strengthened inquiry and the price gains were not retained, and a re-action set in. Quotations receded from the higher levels attained on the primary markets, and the proportion of inquiry for copper fell away in a marked degree. Recent reports from primary sources, now indicate that the copper markets are again on the mend, having resumed the upward tendency. How far these repeated fluctuations are likely to develop, at present seems difficult to discern. It is noticeable that the frequent changes both upward and downward on outside markets have not been considered of sufficient importance by prominent local dealers in metals to reflect any corresponding revision in domestic prices. The average current quotation on copper, therefore remains locally at 17 cents.

TIN—The recent market fluctuations in sterling exchange have had the results of keeping the trade guessing as to absolutely correct values in tin. This atmosphere of change on the primary markets, has not been reflected locally however, the quotations remaining unchanged at 35 cents. Some degree of importance is attached by southern producers to the report that more tin plate mills will be starting in the near future. It is expected that this development should lead to some increased buying of tin; but on the other hand accumulations are still said to be fairly heavy.

LEAD—Primary markets report a slight increase in the demand for lead,

and now that the railroad strike controversy has been satisfactorily settled in the States, the lead markets there have again resumed a firmer attitude. Prices are generally unchanged, and the local quotation of \$6.50 still prevails.

SPELTER—Several of the leading producers of spelter are still out of the market, but report a confident feeling that under these circumstances, the present depression will not be of long duration. Judging by the recent slight increase in current purchasing, consumers' stocks are getting down to the point where a resumption in heavier buying is looked forward to in the not

far distant future. Outside of this factor, the markets are generally quiet. Local prices still remain at \$7.00.

ANTIMONY—No sales of any consequence have been recorded in this market. There has been a slight easing in quotations on the southern primary markets, but it is said that the lower offerings have not been taken up. The local situation holds steady, with prices unchanged from 8 to 10 cents.

ALUMINUM—This market contains no new features. The prevailing price levels continue to hold unchanged, and this can also be said to local quotations, which remain at 28 cents.

WINNIPEG MARKETS

WINNIPEG, Nov. 12.—Actual price changes in the plumbing and steam-fitting supply markets are of a restricted nature, but indications as to the future trend of various commodities offer interest to close followers of these products. Developments as regards easier prices are looked for in certain quarters on Canada plates, but no indication as to this event has as yet transpired.

Some unsettlement has appeared in the range boiler markets, this anxiety being chiefly due to the desire to reduce stocks prior to the arrival of the winter season. The majority of the other primary markets are holding firm, with quotations unchanged on such products as wrought piping, lead and zinc goods, fittings, brass and copper tubing, rods and sheets. Some revision to a lower level is anticipated on corrugated sheets.

PIPE SALES IRREGULAR
AND ON SMALL BASIS

Winnipeg.

Wrought iron and steel pipe are maintained at list No. 53, which recently came into effect. A sorting movement are now said to be in fairly good shape. has been in progress, and the stocks There is a decided falling off in sales, being very irregular, and generally on a small scale. Prices as shown on list No. 53 are as follows:

PIPE, WROUGHT—Per 100 ft.		Bk.	Galv.
3/8 inch	...	6 25	\$ 8 50
1/2 inch	...	4 96	7 48
5/8 inch	...	5 10	7 63
3/4 inch	...	6 56	8 50
7/8 inch	...	7 90	10 10
1 inch	...	11 27	14 53
1 1/4 inch	...	15 25	19 67
1 1/2 inch	...	18 25	23 50

2 1/2 inch	...	38 80	50 00
3 inch	...	50 80	65 45
3 1/2 inch	...	65 50	83 20
4 inch	...	77 60	98 50
4 1/2 inch	...	88 85	113 20
5 inch	...	103 60	132 00
6 inch	...	134 40	171 25

UNSETTLED FEELING APPEARS
ON RANGE BOILERS

Winnipeg

The range boiler situation appears to be temporarily unsettled, and local quotations are very indefinite. Owing to the quiet months approaching wholesalers are endeavoring to reduce their stocks and as soon as the supply runs low there will be a tendency for prices to be generally maintained. Following are the present nominal prices on the various sizes.

RANGE BOILERS—

20 gallons, each	...	\$10 00
30 gallons, each	...	10 00
35 gallons, each	...	13 25
40 gallons, each	...	16 25
52 gallons, each	...	23 45
66 gallons, each	...	33 15

82 gallons, each	...	40 60
100 gallons, each	...	62 50
120 gallons, each	...	75 00

SOIL PIPE QUOTATIONS
HOLDING UNCHANGED

Winnipeg

No change has been announced in the discounts on soil pipe or soil pipe fittings; and the demand seems to be falling off a little. As it is, conditions are below normal for this season of the year, and the development of a firmer tone is hoped for. The ruling prices follow:

SOIL PIPE—

2 and 3 inch	...	20 per cent. off
4 inch	...	30 per cent. off
5 and 6 inch	...	25 per cent. off
8 inch	...	10 per cent. adv.

FITTINGS —

2 and 3 inch	...	40 per cent. off
4, 5 and 6 inch	...	45 per cent. off
8 inch	...	10 per cent. adv.

EASIER TENDENCY NOTED
IN CANADA PLATES

Winnipeg

It is thought by some jobbers that Canada plate, will have a lower price soon; but there is nothing as yet to indicate the change. The current prices remain as follows:—

CANADA PLATES—Blued.

18 x 21 inch, per box	...	\$7 25
18 x 24 inch, per box	...	7 25
20 x 28 inch, per box	...	7 25

COTTON WASTE QUOTATIONS
HOLDING STEADY

Winnipeg

Prices on cotton waste remain unchanged. Following are the current market prices:—

WASTE—Cream polishing, 24 1/2c; White, XXX Extra, 21c; XX Grand, 20c; XLGR, 19c; X Empire, 17 1/2c; X Press, 16c. Colored, Fancy, 17 1/2c; Lion, 16c; Standard, 14 1/2c; Popular J, 13c; Keen, 11 1/2c.

This Sectional
View Shows the
Advantages
of the
JEWEL
Pipeless
Furnace

Notice These Points Particularly--

The Jewel stands for simplicity, as well as comfort, economy and efficiency. It can be installed by an ordinary mechanic in less than a day. It can be installed whether the cellar is full size or not. An excavation large enough for the furnace is sufficient. The cellar is not filled with cumbersome pipes. The Jewel has a large feed door—a target that any man can hit without spilling coal. The ash-pit is deep, with a full-sized pan that can be removed, saving cleaning out with a shovel. The combination dome and radiator provide a large area of effective heating.

Write us to-day for Booklet and learn what the Jewel Pipeless Furnace will do for the hardware man.

THE LONG

Patent Steam Trap

There are many convincing features to point out to your prospective clients: properly set to drain, it cannot freeze; no valves are required other than those which admit steam to the apparatus to which the Long Steam Trap is attached.

J. T. LONG, Plumber and Electrician

127 4th Ave., Maisonneuve, Montreal

This effective steam trap is regulated to work against 1 to 100 pounds pressure. It will drain from 900 to 1,500 feet of one-inch pipe. This proposition will pay you—write now, while you have it in mind, for particulars.

Toronto

Choose the Right Tool

You can't expect a cheap, inefficient wrench to hold and turn rusted pipe or fittings. It's bound to slip or break.

Williams' Stillson Wrench is dependable; it is made for heavy duty. Drop-forged from special steel, carefully hardened and tempered, its sturdy strength is proof against the knocks and strains of hard service. The tough teeth retain their sharpness; they 'bite' instantly, yet release readily.

For grip, power and endurance, choose Williams' Stillson. Wood and Steel Handle patterns—eight sizes 6 to 48 inches.

J. H. WILLIAMS & CO., Limited

PILOT SUPERIOR PIPELESS FURNACE

It Leads in Selling Points

Easy to install—A good mechanic can install it in one day.

Adjustable Collar. This is handy and often extremely valuable. It permits adaption to varying heights of cellars.

Direct-Connected Clean Out. This is another convenience and comfort for the user. Its advantages are too obvious to require comment.

Hot Blast. This acts as a carburetor, supplying the additional heated oxygen to make the combustion perfect.

The Dust Damper is a convenience that is much appreciated in keeping the dust from ascending from ash-pit to be deposited in the house.

Cast Iron Ashpit Bottom. A protection that makes it easier to shovel out the ashes with no fear of injury to the heating plant or cellar floor.

The Deep Roomy Ashpit permits a reasonable accumulation of ashes without risk of burning out the grate-bars.

Anti-Clinker Grate, the four-bar triangular type. This is the simplest and best grate ever invented.

Correctly Proportioned Combustion Chamber, a help and economy in saving fuel and yet an assurance of a warm, genial temperature in the house.

Fire Pot in Two Sections. There are no worries over expansion and contraction with its cracks and fissures.

Deep, wide Cup Joints assure solid, substantial construction with no flimsy connection between sections.

Hall-Zryd Foundry Company, Limited

Manufacturers of Pilot Stoves, Ranges and Furnaces.

The One Best Bet

One thing is sure. When you instal a Vitro "No Trouble" Tank you've done a good job. You have a right to feel proud of it. It's going to give a whole lifetime of satisfaction. It's going to be a lasting advertisement for the quality of your work.

"No Trouble" isn't a pet phrase. It's an established fact in regard to Vitro Tanks. Every part of the Vitro Tank is designed and made to avoid trouble. It is a *perfect* tank. Outside--a handsome molded, seamless, nonporous tank that can never leak or corrode—inside a scientifically accurate piece of mechanism.

It pays to instal the best. Choose Vitro for every particular job.

THE PROOF OF THE PUDDING

Time and Service have demonstrated that Pure Iron Galvanized Sheets are more durable than the ordinary Steel quality—

Time and Service have also demonstrated that ordinary Steel Galvanized Sheets are greatly improved when it comes to the matter of resisting corrosion, by adding a small per centage o f copper.

NOW—

Toncan Metal since 1908 has been a leader of the “PURE IRONS” and now since copper is added, it combines the virtues of both groups. In this it is unique—

No other “PURE IRON” Sheet has the Copper Content—

No other Copper Bearing Sheet has the Pure Iron analysis—

OUR PROPOSAL—

Write us on your business stationery stating that you are interested and we will send you all charges prepaid a full size sheet No. 28 Gauge Galvanized Toncan Metal. Try this in the worst place you know and thus find out for yourself the truth of our slogan—

ENDURES AND INSURES

This offer is limited to three hundred metal workers so do not delay.

Dominion Sheet Metal Corporation, Limited

Hamilton - Canada

Just wish you all could have visited the Made-in-Galt Exhibition, and seen our exhibit.

For while we **showed** our lines of brass goods we **featured** closet seats—closet seats of all kinds—mahogany—oak—and glistening white; closet seats of all styles, but all good, honest value seats that we were proud to show.

And we learned a lesson—that everyone is interested in closet seats, particularly when attractively displayed. Even the kiddies want to know all about them. For closet seats have the appeal of appearance. Take the snow white article—who could help wanting one in their own home when they see it? For the idea of “sanitary” is definitely linked up to the idea “white”—and nowadays it **must** be sanitary.

CRANE

DRAINAGE FITTINGS

ARE MADE WITH A SHOULDER AND ARE THE SAME INSIDE DIAMETER AS WROUGHT PIPE. THE PIPE SCREWS IN UP TO THE SHOULDER MAKING A CONTINUOUS PASSAGE, LEAVING NO POCKETS IN WHICH SOLID MATTER CAN LODGE.

We recommend the use of our drainage fittings for Vacuum Cleaning installations. Fittings that are ordinarily tapped pitched for drainage work can be furnished without pitch to order.

All drainage fittings are recessed to allow easy entrance of the pipe.

Talking SPENCER MAKES MANY A SALE

SPENCER WATER-TUBE STEAM BOILER
Capacities 1,000 to 10,000 sq. ft.

HOUSE SIZE

Some of the Reasons--

- 1st—**Every Owner** of a Spencer Self-Feeding Boiler saves from **THREE to FIVE Dollars** on every ton of coal required to heat his premises, and is **DELIGHTED** with the constant service he receives from the Boiler with so little attention.
- 2nd—This small-sized No. 1 buckwheat coal which the Spencer burns successfully, is always available. The only other known types of boilers that will burn this extremely low-priced fuel are the mechanically-equipped boilers, and many factories are now equipping their boilers to burn coal in a powdered condition. Of course the Spencer will successfully burn fuel in the larger sizes.
- 3rd—The magazine of the Spencer holds a 24-hour supply of fuel. The fuel feeds at a tempered condition in thin fires over the arched grates in exact proportion as the fuel is consumed, thus eliminating waste and allowing perfect control of firing conditions.
- 4th—Spencer Boilers are known to maintain temperatures for a period of 48 hours in the coldest weather, without attention.

THOUSANDS of Spencer Boilers are now in operation in various parts of Canada and the United States. We can refer you to almost every known

type of building where Spencers are successfully operating. We Manufacture in Canada the Spencer Cast Iron Sectional type of Boilers in ten different sizes, ranging in capacity from 600 square feet to 3,600 square feet, and the Spencer for steam is of fire and water-tube steel construction, ranging in capacity from 1,000 to 10,000 square feet, there being twenty sizes. Let us co-operate with you on the sales in your district. There is a SPENCER for every heating requirement.

Give us your address—NOW.

Argument Over Showroom Question

Manufacturers and Wholesalers of Plumbing Supplies, Along With Master Plumbers, Set Forth Other Angles of Question Introduced by Sanitary Engineer—Some Merit in the Idea, But Many Obstacles Presented When Subject Is Fully Outlined

DISCUSSING the advisability of centralizing showrooms of plumbing goods and placing them under the control of the wholesaler, a Toronto manufacturer of plumbing supplies expressed to Sanitary Engineer the following opinion:—

"I am of the opinion that this would not work out to advantage. In the first place it is doubtful if you could get the different jobbers to agree on a proposition of this kind, as some jobbers push certain lines more extensively than others and the particular line in which each jobber was interested would be the one that he would want shown to the best advantage. I believe it has also been the experience of jobbers who carry the expense of a showroom that it does not pay interest on the money invested. There are a certain number of people who are building a better class of house and go to these show rooms to pick out their fixtures but for 75 per cent of the houses that are built where the ordinary fixtures are used the plumber invariably orders the goods over the telephone and never goes to the trouble of picking out anything special.

"You are aware of the fact that a very fine showroom was closed up a few weeks ago as they evidently found that it was not a paying proposition. If the Trade Extension Bureau or some other organization ever succeed in educating the plumber to sell better quality of goods and try and educate the public to use a better class of goods it might then be a proposition that would work out to better advantage."

Some Good Points

A Western Ontario manufacturer of plumbing supplies states: "No doubt there are many excellent points if the scheme could be carried out but it seems so radical in certain ways that our opinion is it would be very doubtful if it could be put into effect without many plumbers failing to see the angle at which you wish them to size up the

A MISAPPREHENSION

The publication in the November 1, issue of Sanitary Engineer of an article entitled, "Wholesaler a Plumbing Merchandiser," and based on an interview with "an Ontario manufacturer and wholesaler of plumbing supplies" has caused more talk and aroused more interest among certain branches of the plumbing trade than anything which has occurred for some time. Apparently some readers have assumed that the opinions expressed in that article were those of Sanitary Engineer. These readers are reminded that the function of a trade newspaper is to set forth the news and opinions of all branches of that trade for the reader to apply whatever he finds of particular value to his business. The opinions of Sanitary Engineer and any other paper are expressed through the columns of the editorial page only.

It is the intention to present all phases of the subject introduced in the article referred to. To this end there are found on this page the opinions of certain other manufacturers, wholesalers and master plumbers on this important subject. Other views will be given later and it is hoped that the debate will be productive of some helpful pointers for all engaged in this branch of trade.

Sanitary Engineer is not sponsoring the opinion that showrooms for plumbers should be abolished. If it were it would hardly be reproducing in every current issue illustrations showing how such showrooms might be arranged to advantage.

If you do or do not agree with the opinions expressed, do not be afraid to say so and present your views on all sides of the question. Constructive criticism is what is wanted in these times, and the wheat can be very easily separated from the chaff when the material is available to work on.

idea. We can see that it would be of great benefit to many of them but it would tend to take away any individuality which a plumber might have injected into his business. We think it would not work out as well as it appears on the surface."

A Central Ontario manufacturer says: "We are a little surprised to note the sentiments expressed by the manufacturer in question, since the plumbing organization throughout Canada have been spending all of their efforts in the last two years to influence the plumber to be a merchant and to fit up an attractive showroom. In addition to this the Trade Extension Bureau of the U.S. has been carrying on a splendid campaign in this direction and we think that in Canada as well as the United

States they are working in the right direction.

"We fail to see how a central showroom could be handled satisfactorily, and again, the jobber and manufacturer should not, in our estimation, be obliged to extend his selling activities any further than the plumber. It is up to that individual to carry on from this point."

Selfish Motives

An Ontario master plumber makes the following statement:

"I read with some interest and also some amusement the views put forth in your issue of Nov. 1 by a manufacturer and wholesaler of plumbing supplies who would make the contractor a hewer of wood and drawer of water for the

alleged benefit of the public and the good of the plumbing supply business. I wonder how long the public would benefit if this man could put his scheme into effect and had his own way in arranging prices.

"His suggestions are so evidently prompted by selfishness that I do not think they are worthy of consideration.

"I would however, like to draw his attention to a few points, the first of which is that if any middleman between the manufacturer and the consumer is to be eliminated the wholesaler is the one who can best be spared.

"I think our friend has allowed himself to go off at half cock, without giving the matter proper consideration. His vision evidently does not extend beyond his own immediate field, for I cannot see how he would handle out of town business unless he had a branch in every town in which case the burden of overhead expense would not be lightened, but merely transferred from the dealer's store to his own. Or does he think that Mrs. Brown would travel one hundred miles to select a kitchen sink from his show room, to replace her old one?

"And I presume of course that he would be willing to collect the bills from the consumer.

"To put this matter in a nutshell, as I see it, this man is merely longing to get his feet right up into the trough with his nose buried in the cream. He seems disposed, however, to let the contractor have the skimmed milk—as long as there is no cream left in it.

"I think our friend was ill advised to put forth such views for publication, for they do him no credit, nor the business with which he is connected which ought to be a big business run by big men.

(Signed) "Live and Let Live."

Scheme to Kill Trade.

Another master plumber in Ontario makes the following statement: "I cannot quite understand what is meant in the article referred to. Is it the idea for the wholesaler to handle all plumbing goods selling wholesale to the consumer and have the plumber be the goat to instal these without any profit on the merchandise he is installing? If I am interpreting this right it looks to me as though it was about the best scheme to kill the plumbing trade that could be brought about. If this were the case in our city there would not be any plumbers left in it that are in business today.

"I hope that this has not been suggested and that I am wrong in my interpretation. I trust there will be further publication given to this. If this is the thought there is no doubt that this would not work out at all through the country, and we think there are plenty of carpet baggers in Toronto

without trying to put them all on that level."

A Toronto master plumber is absolutely opposed to the policy of the wholesaler handling the display to the exclusion of the plumbers.

He believes that this would be contrary to all tendencies of the past 10 years when the plumbing trade has made its greatest progress.

The plumber only lately began to get on a real merchandising basis. This in his opinion would be a step backwards from the standpoint of sales. He points out that the effect on the general public of only one or two central show-rooms instead of 70 or 80 scattered show-rooms, even though these latter are not on nearly as elaborate a scale, would tend to cut down the general volume of sales as it is a well known fact that repetition in advertising pays. This also would naturally apply to displays as a display is nothing more nor less than one form of advertising.

He presumes that the cause for the desire on the part of this manufacturer to cut out display room is because the necessity is realized for cutting down

somewhere the eventual cost to the consumer.

He points out in this connection that it is absolutely foolish to consider this matter only from the angle of the plumber himself who is the last in the sales chain, but he believes we should look at the matter when endeavoring to cut down cost of the manufacturer and distribution through all its different phases.

It will be seen that the general spread of cost does not depend so much on the margin charged by the plumber himself as in the intermanufacturing men and by the jobbers or wholesalers.

In short he believes that for the plumbers now to go back to the old idea of no showroom and merely having any "hole in the wall" place of business would be to put him in the same class now occupied by the paper hanger.

He is firmly of the opinion that the master plumber is not only a mechanic but also a merchant, and that the plumbing business will not reach the height of prosperity until the whole thing is put on a proper merchandising basis.

Policy of Unions Scored at Montreal Meeting

Present Demands Said to Be Excessive—More Activity in Building if Labor Cost Was Not So High—Housing Plan Discussed for Relieving House Congestion and Unemployment

MONTREAL—Contrary to those who maintain that an improvement now exists in labor insofar as the mechanic or laboring man is doing an honest day's work for the high wages paid him, the present attitude of the Trade Laborers' Union came under some severe comment at a meeting of the committee dealing with the problems of Government financial assistance to aid in the building of cheap homes in Montreal. The object is to relieve the local housing problem and at the same time to help the present unemployment difficulties.

Those present at the meeting included the mayors of the different municipalities adjoining Montreal, all of whom are members of the Metropolitan Commission, also representatives of the Chamber of Commerce, Board of Trade, The Builders' Exchange and a number of charitable associations.

Opening the meeting, the Chairman said they had been called together to consider the housing problem, in relation to the increasingly difficult labor and unemployment problems, with only 14 per cent. of the people of Montreal owning their own homes. He believed the Government housing idea was reasonable, provided it was not spoiled by interference from outside influences.

It was pointed out that three problems were to be faced; first, unemployment; second, lack of housing accommodation; third, the idea of securing their own homes for people, instead of the almost universal system of renting. The speakers declared that the cessation of building operations here and elsewhere, has been caused by the determination of the Unions to fight for the highest possible wages, while at the same time restricting the output of the workers in order to create a larger number of jobs. It was stated that if the workers were willing to give a decent day's work for a decent day's wage, the building troubles would be speedily solved, but the Unions would not permit this consummation.

Enormous Unemployment Costs

Figures were computed showing the enormous cost of unemployment per month. If the Government by a loan could aid building so as to relieve this situation, even though the cost of the houses was more than normal, it would be better than a complete loss occasioned by unemployment doles, which were considered inevitable this winter. These doles were an enormous loss, but if the money was spent on building it would not be completely lost.

Lower Costs to Assist 1922 Trade

After Quiet Months of Winter, More Activity Is Looked For.
Practically All Plumbing Supplies Lower in Price—Cheaper
Labor Now Being Offered

MONTREAL.—Local plumbers and tinsmiths are now busily engaged in jobbing work which usually causes much activity in the trade at this season of the year. Almost without exception, SANITARY ENGINEER was informed that more demands were now being made for this class of work than last year, and steady work was already promised well until the close of the year. Apart from the repairing of heating systems, furnaces, stoves, etc., before the very cold weather sets in, there was also a good amount of smaller plumbing contracts now being installed. It was pointed out that the apparent lack of larger construction work would necessarily mean that many plumbing establishments will not be in as fortunate a position for a whole winter's work as in other years, but the noticeable increase in the past few weeks of smaller erections lent en-

couragement. Locally, it is now recognized that more building of this class is now under way than in the earlier months of the year.

A Better Year Ahead

The general opinion is that after the quiet winter months, 1922 will open up on a much better basis for the trade. The appearance of more building in the late months this year gives every reason to believe that much more will follow when the weather permits. Undoubtedly the trend of many lines of plumbing supplies, when price declines have brought practically all commodities to lower levels than prevailed when building was contemplated early this year, will act as a stimulus for next season. Assisting also, will be lower labor cost. Through a slight reduction and a marked improvement, work will not be such an obstacle which the average man has had to take into consideration. Last year the handicap existed when certain

branches of labor were not satisfied with asking high figures, but took further advantage by not giving anything like a full day's work in return. This has greatly improved, and efficiency is now on a much higher scale.

Guarding Against Cheaper Labor

Dealing with the standing of the man in the shop in comparison with the labor situation in the trade a year ago, Alex. Charette, of Charette & Frere, stated that there now was a considerable amount of cheaper labor obtainable. It was unfortunate the plumbing trade was represented in the unemployed ranks to-day, although not to the extent, perhaps, as some other branches.

"Only this morning two men called and offered to work for half the figure we are now paying our men in the shop," said Mr. Charette.

It was pointed out how this had to be
Continued on page 14

Plumbing Goods for Christmas

The Christmas appeal has been taken advantage of by numerous plumbers in suggesting the gift of some bathroom accessories. These are times when gifts of practical value are most appreciated and many plumbers have found that an attractive display for Christmas, such as that shown herewith by Ecclestone and Bates, Ltd., Bracebridge, Ont., pulls considerable business. Mirrors, glass and enamelled shelves, towel bars, glass and brush holders, sponge racks, showers, etc., all make suitable and practical gifts. The window shown herewith is tastefully decorated with streamers and holly leaves.

How Plumbing Lines Will Be Marked

Marking of Country of Origin on Imports of Plumbing Goods
Outlined Fully — Special Consideration for Imports Ordered
Prior to October 1, 1921, Which Are Entered by July 1, 1922

SOME AMENDMENTS have been made to the original regulations of the Department of Customs concerning the marking of country of origin on imports. Some of the exceptions have been made more definite including the following which will not be required to be marked:

Metallic goods not intended for sale to consumer in condition imported but merely raw material for use in manufacture of articles in Canada; crude rubber, crude clay. Partly manufactured materials to be further manufactured or finished in Canada before passing to consumer are also excepted as well as completely manufactured parts for incorporation into articles of Canadian manufacture, provided in both cases that there shall be incurred in Canada at least 25 per cent. of the total cost of production of the article going into consumption in Canada into the manufacture or construction of which such partly manufactured materials or completely manufactured parts shall have entered. Partly or completely manufactured parts for use as repairs to articles made in Canada or imported and already indelibly marked with other country of origin are also excepted.

The most important amendment is as follows: "Goods bona fide ordered prior to October 1, 1921, shall not be subject to the additional duty of 10 per cent. ad valorem to be levied on the value for duty purposes provided such goods are imported into Canada prior to July 1, 1922, but such goods shall not be released from Customs' possession until they have been marked, stamped, branded or labelled with an indication of the country of origin as required by the provisions of the Act under Customs supervision at the expense of the importer."

Specific plumbing lines which must be marked according to the regulations are listed as follows:

PLUMBING SUPPLIES—

1. Each of following to have required indication of country of origin on an adhesive label attached thereto or stencilled or stamped thereon: Tanks, Toilet Seats, Sinks, Laundry Tubs, Bath Tubs, Urinals, Porcelain Wash Basins, Laundry Trays, Sink Trays, Fireclay urinals, Fireclay Sinks, Fireclay Closet Bowls, Fireclay Baths.
2. Following to have required indication stamped or stencilled or diesunk on each article: Seamless Copper Float Balls, Brass Faucets.

3. Following to have required indication on each bundle, package or container: Malacca Sewer Rods, Lead Bends, Lead Traps, Flexible Tubes, Putty, Tinned Pipe Clips, Rubber Gas Tube Ends, Overflow Fittings, Plumbers' Oakum, Floor & Ceiling Pipe Plates, Automatic Air Valves, Radiator Valves, Towel Bar Brackets, Brass and Cast Nuts, Canopy Flanges, Flush and Supply Pipes.

FURNACES, STOVES AND HEATING APPLIANCES—

1. Stoves, Fireless Stoves, Furnaces to be marked on each article.
2. Furnaces imported unassembled or in a number of pieces comprising one complete article to have indication of country of origin on name plate or principal part of each complete article.

METALLIC GOODS—

When not imported in compliance with regulations excepting articles entered as repairs or for incorporation in completed article in Canada, following articles to bear mark of country of origin: Valves, Steel Stamp Dies, Cast Iron and Steel Die Shoes, Cylinder Keys, Cast Iron Strap Hangers, Malleable Iron Pipe, Pipe Fittings.

Following articles answering same description as (1) to bear mark on each separate package or container: Ball Bearings, Roller Bearings, Tin Foil, Mineral Wool, Manganese, Carbon Flour, Nails, Screws, Rivets, Bolts, Lock Nuts, Spikes, Thumb Screws, Hose Nipples.

Following articles to be stamped, stencilled or diesunk, name of country: Pumps, Hose Couplings, Door Closers, Door Closer Brackets

Following articles, where capable, to have mark and where incapable of being marked to have required mark on each package or container: Art Metal Work.

Following to have mark stamped, stencilled or diesunk on each length or piece thereof: Copper Bars for window frames and sashes; Mouldings for window frames and sashes; Corners for window frames and sashes.

METALLIC GOODS (EXEMPTIONS)—

Following are not required to be marked: Babbit Metal, Pig Iron, Bars, Cold Rolled Strip Steel, Bar Iron, Silver Bullion, Zinc Spelter, Spiegel Iron, Slab Zinc, Bauxite Ore Concentrates, Crucible Steel, Barytes, Pig Lead, Spiegeleisen, Tin Ingots, Copper Ingots, Aluminum Ingots.

MICA—

Following to have mark on each container: Mica Pulp, Mica Dry.

TINWARE—

Each article of tinware to have required mark stamped, stencilled or diesunk thereon.

LOWER COSTS TO ASSIST TRADE

Continued from page 13

guarded against, especially at this season. While work appeared plentiful at present, there was the usual quiet spell of winter ahead, and the men now employed must be protected as much as possible when their work had been faithfully done in the busy months. There were times when it appeared that the journeyman gave little thought to his employer when labor troubles arose between them, but this was by no means general and in most shops there was a certain family feeling existing. Very often, no doubt, the man applying for work was equally as good a mechanic as the men already employed, and while for the moment it offered temptation to take on this cheaper labor, there were conditions existing to-day that would not allow it.

TO EXTEND KITCHENER

WATER WORKS

Kitchener, Ont.—A great deal of attention has been accorded a communication from the water commissioners asking that a bylaw be passed at the next meeting setting aside the sum of \$185,000 for the issue of debentures to provide funds for the necessary extension of the waterworks system. Chairman Breithaupt of the commission outlined the work contemplated so that this city would have an ample water supply and improved fire protection.

Mr. Breithaupt declared that all are aware of the necessity for more water. At present, he said, part of our supply comes from Waterloo. We are under contract to take a certain amount every day and as the contract runs until July 1923, now is the time to go ahead with the necessary work.

It is the intention of the commission,

providing the council and ratepayers sanction the bylaw, to build a million-gallon reservoir near the wells on Strange St. A new high pressure main should be put down on Wilmot St., and carried down to the centre of the city. This main will have to be laid at once as the street will be paved next year. With the new reservoir at Strange street and with the present storage equipment in other parts of the city we would have ample pressure and water to fight a serious fire.

TO INSTAL HEATING PLANT

Toronto.—Plans were arranged for enlarging the church and installing a new heating plant at an approximate cost of \$15,000 at a special vestry meeting of St. John's Anglican Church, Norway.

Brazing and Working out Taper Joints

By O. W. Kothe, Principal St. Louis Technical Institute, St. Louis, Missouri.

THE matter of brazing copper is a very interesting knack or as some people call it art. It requires extreme watchfulness and a steady hand.

It is related on first handed authority that when coppersmiths were so much in demand during the war period, many of the coppersmiths took undue advantage to protect their little secrets, and thereby also added their share to the increased costs of producing work.

As an example, the writer is well acquainted with one particular workman who had done coppersmithing, and was somewhat helpful with it as well as being an extremely skilled mechanic.

At first, he was given an elbow to hammer out that some other person had almost ruined. When this elbow was worked out in a far more perfect state than many of the other coppersmiths felt possible, this party was given some pipes to braze similar to that which we show in figure 5, although with different equipment.

As the mechanic and helper were progressing nicely and had the entire seam almost brazed with the exception of about 4 or 5 inches from one end, one of straw-bosses or foreman came around, and turned on the air, thus causing the fire to flare up at the moment the spelter was on the edge of melting and as a result of the intensified heat, a hole was burnt in the pipe.

To exercise the foreman's prerogative, he goes to the superintendent of the plant and complains that such and such a workman is spoiling the work, and as a consequence this particular workman

was discharged from the department and transferred to another department, where he distinguished himself above 300 other mechanics, who looked to him for getting out the work.

This item is not mentioned as one particular instance, but there have been many such petty selfish practices come to the ears of the writer, and the main feature in bringing this out is the harm a person can do to a piece of pipe with the smallest meddling while the work is in progress.

It would be far more helpful to the coppersmith trade, if these men who profess practical knowledge would give some of their fellow men a lift, rather than stunning them by petty practices, which in no wise helps the individual, or the trade. Because in many instances where a man has worked at a line of work for 3 or 4 years, or even that many months, he dislikes quitting it and hence, will stay with it, getting by with what little he knows. Hence, a friendly conversation will go a great ways to uplifting the coppersmith trade.

In brazing of copper, borax is used as a flux, similar to acid or rosin, is used on galvanized iron or other metals. This borax flows when heated, and makes a greenish color, and cleans the copper so thoroughly that as soon as the spelter begins to flow the spelter will fuse with the copper.

Where Copper Melts

It is interesting to know that copper melts at from 1948 to 1950 degrees Fahrenheit.

Spelter is a mixture of zinc and cop-

per and this makes brass, so spelter is in reality brass. Now this spelter is of different qualities, governed by the percentage of zinc mixed with the copper. The more zinc is used, naturally the easier the spelter will melt, and of course, the more brittle will the seam become. And the more copper in spelter the harder it will melt. But where 50-50 of zinc and copper is used, the spelter will flow much before the copper would melt. Often a percentage of 42 and 68 is used as well as other percentages.

As copper melts at about 1948 degrees, it becomes quite brittle at about 1650 degrees Fahrenheit. Zinc melts at about 786 degrees and vaporizes at 1684 degrees Fahrenheit. Brass melts at 1742 degrees while bronze melts at 1652 degrees. Very often silver is used in brazing and this melts at 1562 degrees.

In addition we may say that tin melts at 449 degrees; lead at 621 degrees; aluminum at 1212 to 1215 degrees and aluminum forms an oxide known as aluminum, whose fusion and temperature is 5400 degrees. Gold melts at 1949 degrees; or the same as copper, while gray cast iron melts at 2192 degrees; wrought iron 2730 degrees and platinum at 3232 degrees.

It is interesting to remember these fusion points of metals, especially for the coppersmith; not so much that he can judge the heat by it at the forge, but as a point of technicality.

Now copper is such a metal that it hardens by hammering and softens by heating. When heated above a cherry

"What Do You Mean by 'Overhead'?"

Many Sanitary Engineers Have Very Hazy Idea of What Overhead Expense Means in the Plumbing and Heating Trade—A List of Overhead Expenses Which Might be Kept for Handy Reference

By C. D. Henderson, Henderson Business Service, Ltd., Brantford, Ont.

THE DICTIONARY defines the word OVERHEAD as (above one's head) and no doubt this is where OVERHEAD EXPENSE got its name because it is unfortunately too true, that this all important matter goes over the heads of most of us.

Although some Trade Papers have given publicity to the matter during the past few years and it has been cussed and discussed at Association meetings time and time again, there is still only a hazy idea existing in our minds as to the fundamental principles behind it—What properly constitutes Overhead Expense—and an entirely wrong conception of the proper method of including it in the Selling Price.

The clearest explanation of Overhead Expense to my mind, is as follows: Any Payment, Obligation or Expense Contracted for That Cannot be Charged Directly to the Customer. To make this clear—Suppose I sell a ½" Bibb. Outwardly there is a charge for the bibb only, but indirectly, there should also be included in this charge an amount to cover the string and wrapping paper to tie the article up with. There should also be included a portion of my time making the sale—rent and a certain percentage of hundreds of other items which I am called upon to pay for in order to be in a position to furnish the customer with this bibb.

First it is necessary to get a clear understanding of just what constitutes Overhead Expense. This done, the problem is more than half solved, as then it is only a matter of keeping track of these items, arriving at the correct percentage to include in the Selling Price.

Including Proper Items

My experience gained from investigating this question of Overhead leads me to believe that a lot of the trouble is caused by business men not including the Proper Items in Overhead. For instance, some Sanitary Engineers have members of their family keeping the books (without remuneration). Others take no regular salary. Others make no allowance for breakage, lost materials, tools, etc. Some keep no books at all and simply guess from day to day.

Here is a list of items that constitute Overhead Expense. It is fairly complete and might be reduced for some small concerns, but it will serve as a guide and possibly call some items to the Sanitary Engineer's attention which he has hitherto overlooked

Now the important thing to bear in mind is that every dollar we take in must bear a percentage of each of the above items. If my volume of business

is \$30,000 for the year and the total expenditure on the above items is \$7,500, then my Overhead Expense is 25% on sales, or in other words, out of every \$1.00 I take in, I must lay aside 25c to cover Overhead and this is not making allowance whatever for profit.

On this page is shown a partial list of expenses as applied to the Plumbing and Heating business, which I would suggest being cut out of this paper and pasted up in some place in your office.

EAST END SEWER IS COSTLY

Hamilton—Some problems involving a very expensive equipment will have to be met in laying sewers in the extreme eastern portion of the city, E. R. Gray, city engineer, stated. The sewage system to be installed east of the Saltfleet line, and especially in the district toward the Beach pumping station would require a pumping station to maintain a flow of the sewage. Owing

to the flat ground and the levels, this expenditure could not be avoided, Mr. Gray said.

PORT CREDIT TO VOTE ON WATERWORKS BY-LAW

Port Credit, Ont.—It is likely that citizens of Port Credit will vote on a bylaw at the next municipal elections to spend \$75,000 on constructing a municipal water system. James, Redfern & Proctor, the town engineers, reported to a special meeting of the council that the cost of building a complete system would be approximately \$75,000. This would include mains, filters, pumps, standpipe and intake.

Port Credit is badly in need of a water system. Some time ago the Provincial Board of Health reported that some 80 per cent. of the wells were contaminated. Last January the electors carried a peticion submitted to them on the water question, but before construction can be commenced the people will have to vote on a money by-law.

List of Overhead Expense

Rent, (shop, store, warehouse, garage, barn, office).
 Light and Heat, (store, warehouse, garage, barn, office).
 Salary (Owner's salary that he could command as manager of a similar business).
 Telephone and Telegrams.
 Car, Truck or Horse and Wagon and Bicycle Upkeep.
 Bookkeeper's Salary.
 Stenographer's Salary.
 Stockkeeper's Salary.
 Office Boy and Delivery Boy.
 Percentage of Foreman's Time Spent Figuring.
 Insurance—Fire, Liability and Workmen's Compensation.
 Taxes—Municipal, Business and Property Tax, Provincial, Federal Income Business Profit Tax.
 Bad and Doubtful Accounts.
 Allowance for Lost, Stolen and Defective Materials.
 Labor Lost Replacing Defective Goods.
 Lost Time in Shop Repairing Tools, Etc.
 Interest on Capital Invested at 6 per cent., and Interest on all loans.
 Allowance on Accounts.
 Advertising (Newspapers, Programs, Signs, Etc.)
 Commissions.
 Repairs for Tools.
 Repairs around Store, Shop or Warehouse.
 Depreciation on Office and Store Furniture.
 Depreciation on Car, Tools and Machinery.
 Trade Papers, Association Dues.
 Stationery—Books, Printing.
 Stamps, Ink, Pencils, Typewriter Ribbons.
 Travelling Expense, Car Fares.
 Collection Fees.
 Legal Fees.
 Donations.
 Window Dressing Materials.
 Licenses (Auto and Business).
 And other items that cannot be charged directly to your customers.

Water Waste from Defective Plumbing

Waste of Water from Defective Plumbing Greatly Exceeds that Used in Sprinkling Lawns or Running to Prevent Pipes from Freezing — Average Leaking Plumbing Fixtures Waste 977 Gallons of Water Daily—Inefficient Water Closets Cause Much Waste

SOME surprising facts have been brought to light in a report by the general manager of the Board of Water Commissioners of a large American city. This report is based upon investigations that have been made by a private corporation that was engaged by the water commissioners to locate and stop the waste of water. Many leaks were located in the water mains, the stopping of which prevented the waste of millions of gallons per day, which had been running into sewers, with no surface indication that water was being wasted.

The work of this company also included making a house to house inspection of meters and plumbing fixtures, to ascertain how many fixtures were leaking and how much water was thereby going to waste.

The average householder who is confronted with a large water bill frequently assumes that the water meter is registering too high. Often, it is believed that sprinkling the lawn consumes a great deal of water or that a great waste is due to allowing the tap to run to prevent the plumbing from freezing. Here, then, are the facts. The daily average of water used in this city for each of these purposes is as follows:

	Gals. per Day
To prevent pipes from freezing . . .	750,000
For sprinkling lawns and the like . . .	900,000
Defective plumbing fixtures	23,000,000

17,597 Leaking Fixtures

The investigation resulted in the discovery of 17,597 leaking plumbing fixtures where the leak was sufficiently great to record on the water meter.

This was in territory totaling 80 per cent. of the population, and it is assumed that 10 per cent. of leaks in this territory remained undiscovered, from various causes. Therefore, in the whole city, it is assumed that there are about 25,000 leaking plumbing fixtures.

Another startling fact is that the average leaking plumbing fixture wastes 977 gallons of water per day. This fact was ascertained by measuring the rate of flow for over 4,000 fixtures. An examination of their inspectors' reports indicates that a leak of 1-10th of cu. ft. of water per minute is common. This equals 144 cu. ft. per day, amounting to 1,008 gallons and, at the lowest meter rate for domestic use, adds at least 5 cents per day to the water bill which means \$4.50 per quarter, or \$18.00 per year. Larger leaks than above described are not at all rare, even in the better residential districts.

We now begin to understand why water boards generally receive so many complaints regarding high water bills. Ratepayers in this city, for example, pay for a waste that approximates 8,000,000,000 gallons per year, an amount of water that weighs 34,000,000 tons.

The Water Department of Battle Creek issues a leaflet to ratepayers, giving the following information:

Leak through opening of	Gals. per day	Gals. per month	Cost per month at meter rates
1/4-inch	12,000	360,000	\$18.00
3/16-inch	8,000	240,000	13.00
1/8-inch	4,000	120,000	8.00
1/16-inch	1,000	30,000	2.40
1/32-inch	400	12,000	1.00

Water Closets Waste Most

The calculations of the Battle Creek water department are quite similar to those of the great majority of water departments. It is a well established fact that it is water closets that waste most of the water. A moment's reflection will serve to confirm this fact. Almost all other fixtures, such as bath tubs, lavatories, sinks, laundry tubs, etc., are equipped with faucets that are in plain sight, and where the drip is visually perceptible, but this is not true of the water closet. Here, a leak may occur without the least splashing of water, and with some types of bowls, it is unseen even if the valve has failed to close. Hence, a leak often attains considerable proportions before it is noticed, or before the noise of running water evidences the fact that repairs are necessary. Authorities consulted agree that of all plumbing, water closets give 90 per cent. of the trouble.

The question naturally arises, why is it that in this age of high efficiency in other lines, inefficient water closets seem to be the rule, rather than the exception. The answer is, that the average householder makes no effort to acquaint himself with the mechanism of water closets. All closet bowls look alike to him, and it is difficult to make him understand why some are more efficient than others. The "workings" of the tank are a deep, dark mystery, and the whole subject is distasteful. He may learn to tinker with his automobile, may know something of the electrical equipment of his residence, be able to subdue a refractory lock, or make the screens fit but, should something go wrong with the water closet, this is usually endured as long as possible and accepted as a necessary evil. Valves are allowed to cut out that might often be saved by the "stitch in time."

And because the householder knows nothing about the relative efficiency of differing types of closets, the kind that he buys with greatest readiness is that sold at the lowest first cost, which is the sort that is known to the trade as the "competition closet." This type is manufactured and sold for the simple reason that it is as cheap as anything the other fellow has to offer. It is first cousin to the dollar watch, the 69-cent razor, and the 15-cent suspenders.

It is hardly possible to give too much attention to the selection of the water closets for even the most modest home, bearing always in mind that the efficiency of the closet depends very largely upon the type of flushing mechanism selected. Otherwise, waste of water, unsanitary conditions and possible ill-health may easily be the result. The Battle Creek water department states that some types of flushing mechanism are not fit for use. On the contrary, other types have proved their efficiency through years of successful use. No closet should be selected because the first cost is low. Neither should another be selected because it has a pleasing exterior appearance, or is beautifully illustrated.

There seems to be no good reason why closets should continue to be selected that cause the water meter to operate continually, day and night, as is now known to be the case. Rather, the water used should be confined to that actually required to flush the bowl thoroughly—no more, and no less.

INCINERATOR FOR CHATHAM

Chatham, Ont.—Under the leadership of the chamber of commerce forum committee, a large and interesting meeting was held in the chamber of commerce rooms to discuss the bylaw which will be presented to the people at the next municipal election, to provide the money for the construction of a civic incinerator.

It was the general opinion of the meeting that this city is badly in need of an incinerator for the disposal of garbage, and the proposition as presented was regarded as a reasonable one, and one which should meet with the hearty endorsement of the ratepayers. The City of Chatham is in a peculiar position. She has been deprived of maintaining garbage dumps within the corporation, and it is upon the advice of Mr. Justice Logie that she is now considering the construction of an up-to-date incinerator.

Small Set Of Books For Plumbers

Proper Bookkeeping in the Plumbing and Heating Shop Commences With Small Set of Books for the Small Operator, Allowing Expansion as Business Grows—Valuable Information Based On Findings of National Trade Extension Bureau

IN INTRODUCING this instalment of the series of articles which have been appearing in Sanitary Engineer, we would refer the reader to the monthly trial balance as illustrated on page 17 of the November 15 issue. Some details concerning these various items will be given herewith.

The headings at the top of the various columns in the Sales and Purchase Journal appear on the Monthly Trial Balance form. There are also other accounts on the Monthly Trial Balance for which separate columns have not been provided on the Journal sheets. These are taken care of through the General Ledger and Miscellaneous Account columns.

All entries to accounts under Assets and Liabilities will be made in the General Ledger columns of the Purchase Journal or Cash Book, as the case may be.

The accounts listed under "Overhead Accounts" on the Monthly Trial Balance correspond to those under the same heading on the Purchase Journal.

Each month, after the totals for the preceding month have been brought forward, carry the grand totals to their respective accounts on the Monthly Trial Balance. In doing this, add to the figures on the Journal sheets the amount appearing in the first two columns. Understand, of course, that totals appearing under "Debit" on the Journal sheets must be entered in the Debit column on the Monthly Trial Balance. Credit amounts on the credit side. For adding in the amounts in the opening entry follow the same rule of adding Debits to Debits, and Credits to Credits.

An Illustration

To illustrate this method, we will take the figures appearing on the samples in the Nov. 1 issues as the totals of their respective columns. Turning to the illustration of the Purchase Journal: the first column is Accounts Payable, and the total of the two items appearing there is \$548.57. We find Accounts Payable Ledger Controlling Account on the Monthly Trial Balance under Liabilities. As the amount \$548.57 on the Purchase Journal appears under Credit it must be placed in the Credit column on the Monthly Trial Balance. When we come to do this we find that in the opening entry \$513.20 appears on the Credit side. Accordingly, we add these together, making \$1061.77, which we put in the Credit column.

The next column on the Purchase Journal is Freight Allowance. This is entered opposite Freight, Express and Drayage under Job and Contract accounts on the Monthly Trial Balance. As it is a Credit Column it must be en-

tered on the Credit side. We accordingly enter \$2.43 on the line of Freight, Express and Drayage in the Credit Column.

Next is the Material column, the total of which is \$426.00. We note first that this column is under Job and Contracts, so we look for the account on the Trial Balance under "Job and Contracts." We next look to see whether the total belongings on the Debit Credit side as shown by the heading at the top of the Purchase Journal. We find it to be Debit, and we note that in the opening entry there is \$1968.72 in the Debit column. We accordingly add our \$426.00 to this, and the total \$2394.72 is entered on the line of Material in the Debit column.

Productive Labor in the next column is treated the same way except that there is no amount to add to it. Had there been any entries in Miscellaneous Job Accounts they would also have been entered on the proper lines.

Office Salaries

The next column we have is Office Salaries. We find by our heading on the Purchase Journal that this is one of the Overhead accounts. We therefore look for it under the same heading on our Monthly Trial Balance, and carry the amount \$70.00 into the Debit column, because the word Debit appears at the top of the column in the Purchase Journal.

Next appears Non-Productive Labor in the Miscellaneous Overhead accounts; the amount is \$11.00, so we enter it in its proper place in the Debit column on the Trial Balance. You will see from this that, where there are several entries in the Miscellaneous Accounts, to different accounts these amounts must be gathered together, and the total charge to each account shown in the Journal.

We next turn to where a sample of the Sales Journal appears. We follow the same method as before. The Customers' Accounts is a Debit column showing the total \$17.30. We find the corresponding account, on the Trial Balance under Assets, and add \$17.30 to the amount appearing opposite under our opening entry. The total, 3,899.32, is extended in the Debit column. The other columns are extended in like manner. In this case they are all Credits and therefore go to the Credit column on the Trial Balance under "Job and Contract" explanation about the Loss and Gain accounts as they appear on the Monthly Trial Balance: there are four of these, as you will note, to correspond with the four divisions of sales arranged for in the larger book-keeping sets. This small set being for a business of small

volume it is not necessary to separate the various classes of sales as extensively as for the larger business. Accordingly we combine the first three Loss and Gain Accounts into one by bracketing them as shown.

Cash Disbursement

We will next take the illustration of the Cash Disbursement sheet. The illustration shows all disbursements being made by check, with a Petty Cash fund being used as described in the August article. Therefore, the figures on the "Cash Disbursements" and "Cash Receipts" forms have to do with "Cash in Bank" account.

Taking our first column \$540.10, which is Credit, we extend it in the Credit Column opposite Cash in Bank on Monthly Trial Balance Sheet. The next column, Discount Earned \$8.47, is also Credit, so we do the same with it.

On the right hand side of these Cash sheets are the Debit columns, so the amounts in these will be extended in the corresponding columns on the Trial Balance. Accounts Payable \$548.57 is put in the Debit column opposite Accounts Payable Ledger Controlling Account.

Turning to illustration of "Cash Receipts" sheet. The two columns to the left are headed Debit, so the amounts must be entered in the Debit column. The amount in the first column \$33.12, which is Cash Received, is added to \$125.90, the amount appearing in the Debit column of the opening entry opposite Cash in Bank and the total \$159.02 is entered in the Debit Column. The next column is Cash Discount, having a total of \$1.63. It is entered opposite that account in the Debit column.

The total in Customers Accounts, \$34.75, is entered in the Credit column of Customers Ledger Controlling Account.

We have now transferred all of our totals and we must next bring forward the remaining totals in our opening entry. They are the following:

	Debit	Credit
Shop Equipment	\$300.00	
Office and Show Room		
Equipment	529.60	
Small Tools	100.00	
Automobile	600.00	
Notes Payable		1,000.00
A. Plumber Net Worth		5,993.04

After extending the above amounts we add up both columns of our Trial Balance, and find that each column totals \$8,657.86. This proves that our work is correct.

While it has taken a good deal of time to read all this, we can assure every reader of this article that doing this

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights
—Keep the Entire Series Where It May Be Referred to and Studied

Article No. 43 of Series; Illustrations Nos. 49,50

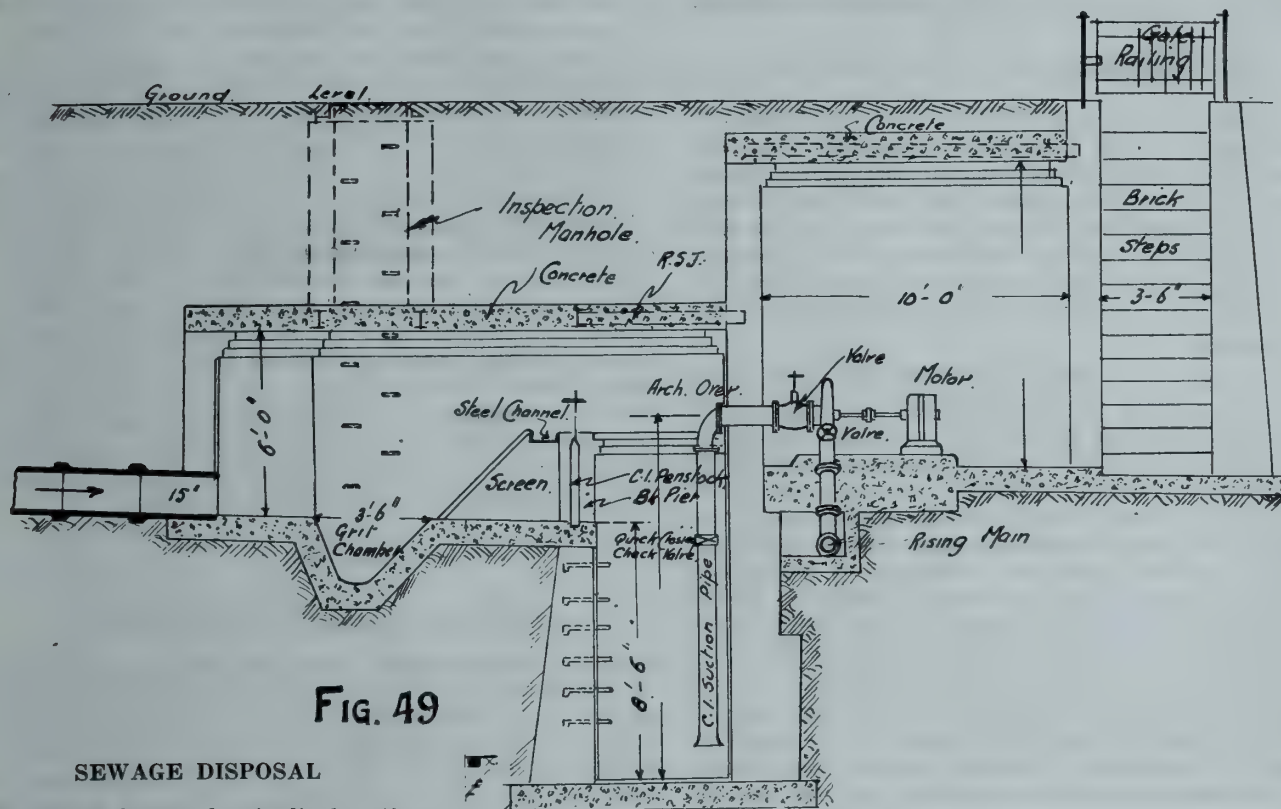

FIG. 49

SEWAGE DISPOSAL

FIG. 49 shows a longitudinal section of the entire pumping plant which fully illustrates the direction of the flow of sewage from the main outlet to the pumps and through the parts into the rising main laid in the concrete channel for easy inspection purposes under the floor.

Fig. 50 shows a cross-section through the pump house illustrating the valves on the delivery pipe from the pump to the rising main and the foundations of the engine beds.

The four walls are constructed of brickwork in cement and rendered with cement mortar. Step irons are built in as shown in the inspection shaft and also down the suction well.

The roof is constructed with Portland cement concrete in the proportions of 1 cement, 2 sand 4 broken stone reinforced with 6" x 4" R. S. Joist and expanded metal, and floors being Portland cement concrete composed of 1 part cement 3 parts sand and 5 broken stone 2½" mesh and finished off to a fine smooth finish facing mixture.

An Opening For Business

CHRISTMAS is but a short time off but the plumbing and heating engineer with a showroom should put plans into execution as soon as possible for securing the interest of local prospects in plumbing and heating equipment and smaller bathroom accessories. With the sale of such lines put upon a merchandising basis by the plumber, it becomes an advantage for him to emulate the example of other merchants and stimulate seasonable interest through a clean and attractive display of his wares.

These are years when gifts of more practical value are in order, and what could be more appreciated as such than a gift of some needed piece of plumbing or heating equipment? Perhaps the old folks would appreciate some articles of equipment for bathroom, kitchen or laundry, to say nothing of the wide range of accessories to be had for these important rooms in the home. Gas water heaters and other heating equipment is equally suitable for such gifts. There is no reason why plumbing and heating engineers can not get a share of Christmas business in such lines. It requires no stretching of the imagination to conceive of the purchase of such lines for Christmas gifts at a time when the necessities of life are popular to be exchanged as presents. The Christmas shopper always labors under difficulties in choosing gifts, hence the letter from the plumber to the right prospect, the window display extending a Christmas atmosphere, and the personal suggestion will do much to develop trade of this nature.

Why Does Iron Rust?

SPEAKING on what it pays to know about "Corrosion," G. A. Van Brunt, in a recent issue of "Factory," says that there are three theories of corrosion, the best of which is the "Electrolytic Theory." In explaining this theory he says that it offers a satisfactory explanation for a greater number of observed facts. He continues:

Ferrous salts, especially in solution or freshly precipitated, are rapidly oxidised in the ferric state by atmospheric oxygen; so that all the electrolytic theory must do is account for the solution of the iron in the first place. According to present views the reactions which take place between different substances in the presence of water are accompanied by certain readjustments of the electrical state of the irons. Thus, when metallic iron is put into a solution of copper sulphate, or blue vitriol, the copper is precipitated in metallic form and the iron goes into solution, the ions of this taking the electrical charge of the copper ions. Chemically, hydrogen behaves like a metal and has a lower solution tension than iron; therefore if we

place a strip of iron in a solution containing hydrogen ions, the iron ions will assume an electric charge and the strip will be dissolved, as it was in the copper solution, while the hydrogen will give up its electric charge, changing from the ionic to the atomic condition and escaping as a gas.

It has been shown that iron is slightly soluble in pure water, but if oxygen is not permitted to act on the solution, no sign of corrosion can be seen. When it is admitted, however, the red ferric hydroxide soon settles out. A little reflection will show that before iron can rust it must first go into solution, at the same time that hydroxide is set free, and oxygen must be present to oxidize the ferrous salts formed. An exchange of electricity between the reacting ions is therefore demanded and the case may be considered to be one of electrolysis, as the disappearance of a hydrogen ion, the hydrogen going off as gas, means the appearance of a ferrous ion somewhere else. We may consider, then, that corrosion is due to the iron being attacked by hydrogen ions and taken into solution. Since hydrogen is the characteristic ion of acids and hydroxyl that in cases, we should expect acids to stimulate corrosion and alkali substances to retard it, which is in accord with fact.

Taking a bird's-eye view of corrosion according to the electrolyte theory, we see that it lines up about as follows: When iron and water are in contact a certain amount of the metal goes into solution. Remembering that hydrogen acts like a metal, it is seen that its ions will tend to collect around the negative poles and exchange their electric charges with the iron so that the latter will go into solution and the hydrogen escape as a gas. Ordinarily, however, the concentration of the ions is low and the action proceeds very slowly. Iron goes into solution, nevertheless, as a ferrous salt; the oxygen of the air then acts on the ferrous salts and changes them into the ferric state, in which form they precipitate out as the familiar red rust. And so the process is repeated indefinitely.

Disarmament Conference

THE DISARMAMENT CONFERENCE, now proceeding in Washington, to which the representatives of the leading nations of the world have gathered, is the centre of the world's interest at the present time. Great results are expected from the deliberations being conducted, and if, as result of the conference, the world will be liberated from the yoke of terrific annual expenditures for the maintenance of armaments the gathering will have achieved its greatest object. The limitation of armaments among the nations of the world will remove much of the cause of friction which frequently is fanned into flame. With the dogs of war destroyed there will be much less likelihood of war. Another important phase is that the unending drain upon the nations' financial resources for the building and maintenance of such armaments will be stopped and much capital diverted to more productive channels with consequent aid to business in general.

As to the influence of the limitation of armament construction on the metal trades it is evident that preliminary reports have greatly exaggerated the probable effect. Analysis of the situation shows that in the United States the steel requirements of the Navy in the last five years equals about one-half of one per cent. of the finished output of the mills and for 34 years about one-third of one per cent. Judging by the size of the U. S. Navy this situation would probably be very similar in Britain, France, Japan and other leading naval powers. As a matter of fact the suggested limitation of naval construction has made a favorable appeal to steel manufacturers, because the initial effect would not be serious and the ultimate effect of the large release of capital and labor for merchant ship-building and other peaceful purposes, would be to help industry.

Heating and Ventilating

Kingston Central Heating Plant Described

Professors Wilgar and Arkley Give Details of New Scheme at Local Engineering Institute—Many Interesting Features

KINGSTON, Ont.—The new central heating and power plant now under construction on the water front for the General Hospital and Queen's University was described in a very thorough and interesting manner by Prof. W. P. Wilgar and Prof. L. M. Arkley, two of the engineers in charge of the work at a meeting of the Kingston Engineering Institute.

Prof. Wilgar described the construction of the tunnel which will connect the college and hospital with the central plant. He discussed the difficulties which the engineers had met in the form of old sewers and the water, gas and sewage pipes found at the street crossings. The lower end of the tunnel will be below the level of Lake Ontario and must, therefore, be made watertight. This was being done by the use of hydrated lime with cement. He explained that just below Stuart street a portal was being constructed at ground level for putting the pipe in the tunnel. The concrete pedestal on the college tennis grounds has nothing to do with the heating plant, but provides a solid base for instruments used in taking observations of the sun, etc.

Prof. Arkley described the plant itself. He explained the reasons for constructing such a plant. Both at the college and at the hospital the present plants were loaded to capacity and the authorities had either to enlarge the present plants or build new ones. After carefully estimating the cost of extending the plants, it was decided that a new plant would be the best thing.

Advantages of Waterfront Site

Discussing the location, Prof. Arkley showed that the water front was chosen for the following reasons: (1) coal could be obtained directly and therefore cheaply from the barges instead of having to be carted to the college; (2) there was an abundant supply of water available; (3) it would eliminate trouble from chimney gases, and (4) there was no place at Queen's for adequate coal storage. Again, if the present college plant had been extended a high chimney would have been necessary.

The speaker emphasized that the new plant was primarily for heating and the power and current which would be

generated would really be a by-product. It will provide a very efficient heating system, he claimed. Every pound of exhaust steam will be used in heating the buildings and every pound of condensed steam from the radiators will be taken back to the boilers.

Abundant B. H. P.

Speaking of the size of the new plant, Prof. Arkley showed that the present Queen's plant had a 600 boiler horse power capacity, while to accommodate the hospital 200 more horse power was needed. At the new plant 1,600 b.h.p. could be developed, and if necessary 3,000 b.h.p. by operating the boilers overloaded. There would be more power than would be needed for years. Space was also left in the boiler room for another boiler when required.

Prof. Arkley then gave a general description of the plant from the complete set of drawings which have been prepared. The building on King street, which will house the laboratory and power plant, will be 148 feet long and 44 feet wide. The boiler plant south of it will be 80 feet long, 50 feet wide and 60 feet from the water front. The boilers will be equipped with coal stokers for automatically feeding the coal, which will mean a big saving in operating expenses. The boilers will be served by a circular chimney, constructed of reinforced concrete or radial brick to harmonize with the stone buildings of the plant and will be seven feet in diameter at the top and 150 feet high, one of the highest structures in the city.

The heating of the hospital will be by hot water heated in the power plant by exhaust steam from the engines and sent to the hospital buildings in 6-inch mains by turbine driven centrifugal pumps. The university buildings will be heated with steam by a low-pressure vacuum system. A vacuum pump in the power plant with a 4-inch return pipe from Fleming Hall will take care of all condensed steam in all the buildings at the college and convey it back to the boilers. This water will not only be warmer than fresh water from the lakes, but better for the engines, because it will be practically distilled water.

The piping system provided the engineers with several interesting problems. It was estimated that the pipes, when the steam was turned on, would expand $2\frac{1}{4}$ in. for every 100 feet. This expansion will be taken care of by expansion joints every 150 or 200 feet. Another difficulty would arise, it was foreseen, by the condensation of steam in the pipes. This will be overcome by drip pipes connected with traps, where the water will collect. Much heat would also be lost through radiation, but the pipes will be covered with $2\frac{1}{2}$ inches of good pipe coating to prevent this.

WHEN IT DOES NOT PAY TO RISE TOO FAR

It is irksome not to advance rapidly. It tries one's patience. It makes one sometimes feel discouraged. But the events of the last eighteen months have brought home to many that it is dangerous to rise too far, especially in abnormal times. What has happened in a great many concerns is this: During the boom period promotions were made pretty rapidly. Things moved so quickly and money was being made so easily that promotions and salary increases were not always scrutinized with care.

Then disaster came. Boards of directors ordered drastic retrenchment. In many instances outside experts were called in to recommend reorganization of forces. Their investigations revealed that certain men were drawing big salaries for doing comparatively little work and that these men often were not of calibre warranting the salaries received. When heads began to fall, the heads of such men were the first to drop. In a great many cases, their places were taken by assistants or others who had not basked in the favor of any higher-ups and who were doing a lot of work for relatively little money.

If a list could be compiled of the dismissals during the last year of men drawing salaries of from \$10,000 to \$50,000 a year, it would create a tremendous sensation.

During this same period not a few able, industrious, conscientious fellows have moved upwards to fill the places of those who rose too rapidly and too far. The law of compensation may often seem to us to operate heartbreakingly slowly, but it does operate. It is safer to be paid less than one is worth than more than one is worth. That's a thought worth keeping in mind.—Forbes Magazine.

"Tremendous Influence in Re-Establishment of Normal Business"

So Business Papers are Described by Col. Henry Cockshutt, Ontario's Lieutenant-Governor — Leadership Through Business Press Said to Be a Big Help in Building Business Fabric of the Country

ONTARIO'S Lieutenant-Governor, Col. Henry Cockshutt, himself an outstanding success as a business man, paid an understanding tribute to the business papers of Canada when, speaking at a luncheon in connection with the annual meeting of the Canadian National Newspapers and Periodicals Association at the King Edward Hotel, Toronto, on Thursday, Nov. 10, he said:—

"I am especially glad to be with you to-day because I believe that the influence of the business press will be one of the most important factors in re-establishing business conditions in Canada on a safe and sane basis. I make a distinction between the business newspapers and the daily press because I believe that your papers—the business newspapers of Canada—exert a greater influence than the daily press because of the greater confidence your readers have in them. People read the daily newspapers to keep abreast of the general news of the day. They are interested in what is happening around them and they read to satisfy their desire for excitement or interest or entertainment. What they read in the daily newspapers to-day is forgotten to-morrow.

"But this is not the case with the business newspaper. Business men need the service of these papers in the conduct of their everyday business life. I have noted that they usually have a business paper or two in their pocket when they go home Saturday night. I do not say that they read them on Sunday, that I do not know, but I do know they study them carefully, and that a great number of your readers will come to their business on Monday morning with some clipping from your paper in their pockets. They will say to their associates, 'This is the situation, I can show it to you in this clipping.' For that reason, gentlemen, I say that yours is the greater obligation, because you are leaders, because you are helping to build up the business fabric of the country.

"You should be very careful that everything that appears in your columns bears the imprint of the truth. You must be sure that the news you give is correct beyond question, because there are thousands of your readers ready to set their business course by the news and advice you give them. I am familiar with a good many of your publications and I can personally attest to their high character. It is of vital importance that this high character should be

maintained, and that no effort should be spared to give in your columns the maximum of service.

"In these days when there is disorganization, dissension, disruption in all walks—business, politics and religion, there is a great place for the business paper to bring out more complete information, to assist in making us all realize we must work for a common cause, the upbuilding of our country. The business men of this country need your assistance. They are looking to you for information and advice, and are expecting it. On your shoulders therefore perhaps more than on the shoulders of any other single agency, rests the obligation to meet the needs of these trying days, with a sane and sound presentation of the case as it exists at the present time, a presentation free from private bias, or the desire to serve a popular demand.

"You can, and I believe will be one of the largest factors in helping to bring about a satisfactory readjustment of the business conditions of this country."

We publish Lieutenant-Governor Col. Henry Cockshutt's talk verbatim because it reflects what our journal stands for. We are always adding one more link to

our chain of service, and the convention which has just closed was really a gathering of the force to discuss ways and means of improving and adding to our present policy, so that our readers could be offered only authentic and valuable material.

SMALL SET OF BOOKS FOR PLUMBERS

(Continued from page 18)

work is very simple. For practice, take a few jobs from your own records, and make out Workman Orders for them, filling out the Cost Recap section. Then copy these into your sales Journal. Next, make some sample entries on the Purchase Journal and Cash Book sheets, from some of your own transactions. Foot and prove each sheet.

Next copy on your Monthly Trial Balance Sheet, using the first two columns the figures appearing under "Opening Entry" in Figure One. Then add the totals from the Sales and Purchase Journals and Cash Book sheets to the "Opening Entry" figures. To prove your work foot the Debit and Credit columns. If work is correct the Debits and Credits will agree and balance each other.

Galt Exposition Arouses Enthusiasm

Many Plumbing Goods and Other Manufacturers Represented With Booths at Week's Fair Held to Stimulate Interest in Local Products—Canadian Brass and Tank Manufacturers Entertained

WITH THE creditable idea in mind of stimulating local enthusiasm for local products, progressive manufacturers of Galt, Ontario, co-operated in the arrangement of a "Made In Galt Exposition" which was held from November 12-19 inclusive. The plan was successful beyond all expectation and its influence spread over a wide radius in Western Ontario, drawing interested visitors from such cities as Toronto, Hamilton, Brantford, Guelph, London, Montreal and Quebec.

The manufacturers of Galt conceived the idea in order to boost Galt as a manufacturing city as well as to popularize locally made goods. The movement was initiated in large part by Colonel A. J. Oliver, R. McDougall Company, but the exposition was carried on under the direction of C. A. Webster of

Galt. Every day and night while the affair was in progress large crowds were in attendance. It is estimated that the attendance averaged up to 3,200 a night, and great interest was displayed in the seventy-one exhibits arranged by local manufacturers. In some cases three or four booths were occupied by one manufacturer.

Special attractions in the form of music and entertainment were provided and a dance was held each night. The revenue raised from the fifteen cent admission to the exposition and from the dancing, was handed over to local charities. In order to get the affair away to a good start, a street parade was held each evening, headed by a local band.

Wide Publicity

The crowds which visited the exposition (Continued on page 36)

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Galt, Ont.—Brown & Horney, plumbers, have dissolved partnership, Horney continuing.

Simcoe, Ont.—Wm. Preston succeeds J. H. Madden in the plumbing and stove business here.

NEW FIRMS

Peterboro—Nelson & Dunsford have opened a plumbing shop here.

FIRE LOSS

Montreal—J. O. Houle, plumber, suffered fire loss.

OBITUARY

William Armstrong, father of F. Armstrong, managing director of the Port Hope Sanitary Mfg. Co., Toronto, and of W. Armstrong, head of the Armstrong Company, died this week at the age of 86 years. Deceased was for some time in the plumbing business with his son, but retired some years ago.

W. R. STAVERT LEAVES JENKINS BROS.

W. R. Stavert who has for the past twenty-one years been associated with Jenkins Bros., Montreal, for the greater period as sales manager, has severed his connection with this company and has taken over the agency for the Kerr Engine Co., Walkerville, Ont., manufacturers of valves, sprinkler equipment, fire hydrants, etc. Mr. Stavert will represent the latter firm in the district east of Hamilton including the province of Quebec. His headquarters are in Toronto.

WATERWORKS AND SEWERAGE

Bluevale, Ont.—Morris Twp. Council will secure plans and estimates for the tile drainage work and improvements. A. MacEwan Twp. Council Clerk, Bluevale, Ont.

C. A. Jones, Engr., Petrolia, Ont., will prepare plans and estimates for drainage repairs and improvements for Plympton Twp. Council.

Port Frank, Ont.—Estimates are being secured regarding cost of draining large area in vicinity of Port Frank for Lambton County and Bosanquet Twp. Councils. G. A. McCubbin, Engr., Chatham, Ont.

Kelly and Crawley of Mitchell, Ont., have been awarded a contract for drainage work to cost \$22,000 by the London Township.

William Knapp, 885 Adelaide St., London, Ontario, wants prices on heating, plumbing and electrical work for new \$4,000 dwelling.

David Eggett of London, Ont., has announced that he will again be a candidate for the School Board at the coming elections.

W. N. Burn of Tillsonburg, Ont., is preparing plans for a new \$4,000 residence and is interested in prices of heating and plumbing.

A. McDougall, 195 Wortley Road, London, Ont., wants prices on hot air heating, plumbing and electrical work in connection with new \$4,500 residence.

Hyatt Bros., 288 Egerton St., London, Ont., contemplate erecting nine residences to cost \$45,000 and are interested in prices of heating, plumbing and electrical equipment for same.

Plans being prepared at London, Ont., by the Board of Education, for improvements at the Technical school include a system of shower baths, a swimming pool and additional lavatories.

The installation of fifteen new bathrooms and of hot and cold water in the upper rooms at the Belvedere Hotel, London, Ont., is planned and prices are wanted on equipment. W. J. Lashbrook, proprietor.

In connection with changes in the Board of Works department at Hamilton, Ont., Hector Phillips, who has been assistant to City Engineer Harry Brazier at London, Ontario, has been appointed designing engineer.

Engineer E. V. Buchanan, of the Public Utilities, at London, Ont., wants prices immediately on electrical equipment in connection with a new \$50,000 ornamental street lighting system for which he is preparing plans.

The bylaw for an addition to the hospital to cost \$160,000 was carried by the

ratepayers at St. Thomas, Ont., and work will be proceeded with at an early date. The plans call for a low pressure steam heating system, ventilation system, and electrical signal system and electric lighting. E. A. Horton is chairman of the Board of Governors and N. R. Darrach, St. Thomas, architect.

U. S. FIRM SECURES RIGHTS

TO MANUFACTURE CAST IRON

PIPE BY DE LAVAUD PROCESS

The announcement is made that negotiations have been completed between Gordon F. Perry, President National Iron Corporation and the United States Cast Iron Pipe & Foundry Company of Philadelphia, whereby that company obtains the exclusive license in the United States for the manufacture of cast iron pipe by the de Lavaud process.

WORK WELL FORWARD

ON NEW WATER SYSTEM

Richmond Hill, Ont.—By the first of the year Richmond Hill's new water system will be finished. The work is progressing rapidly, but there has been some delay over the matter of installing the pumps.

The system is estimated to cost \$95,000. The water is to be obtained from a creek at the west side of the village. A dam is being built and will be finished in a day or two. From the dam the water will be pumped through filtration beds to a stand pipe, which is already completed.

SOLUTION OF WATER DISPUTE

Islington, Ont.—After a year's debate the dispute over the waterworks system for the Long Branch district is step by step approaching a settlement. At the last meeting of the Etobicoke Township Council Engineer R. O. Wynne-Roberts reported it would cost approximately \$180,000 to instal a system if the water was purchased from New Toronto. He recommended that the offer of New Toronto to furnish the water be accepted, and opposed the earlier plan of installing a complete plant at a cost of \$300,000.

The plans for bringing the water from New Toronto will be sent to the Provincial Board of Health and if the Board of Health approves, the question will then come before the Railway Board. It is before the Railway Board that opposition is expected.

ENERGY

The Key

There was a time when business could be attracted—when the buyer sought the seller—when clever display was a magnet that drew many sales. Money came easily—and was freely spent.

But today business must be sought. Buyers are cautious. Prices in general are on the decline. Buyers must know that the price is right; they must feel that their purchase is essential—now.

Port Hope is willing at all times to assist the plumber in his sales efforts and the prosperity of the entire industry. The success of the business and ability of the plumber are the primary concerns of Port Hope Sanitary.

Business Success

Today is the day of the salesman. Action is the key word to success. Energy commands a high price;—and gets it.

In plumbing, as in other fields, "it is the go-getter that wins out." New methods are being adopted, where real success is being attained—non-essentials are being dropped; overhead expenses are being cut. The big effort is made *outside* to get the business.

BRAZING AND WORKING OUT TAPER JOINTS

Continued from page 15

red it weakens the structure of the metal and makes it brittle. or we may say, sort of burns it.

This is a very bad condition for seams especially in pipes where considerable jar or pounding through pumps, and this and that, is necessary. This is liable to crack the joints where it is brittle, and the only way to overcome that would be to cut out the burnt part and put in a pitch or another section of pipe.

At L in near figure 5, we have a sketch reproduced from our former drawing in the 1st article, showing how a V-shaped trough is used for filling the spelter and borax in place. This pipe is then placed over the forge as in figure 5.

Generally the mechanic has a helper and an apprentice to control the air pressure, since this is necessary, as when the mechanic sees the metal coming to a fusion heat, he has the air reduced to insure a good flow of spelter and still not use the full heat which would burn a hole through the pipe.

Very often in pipes of moderate length, and especially pipes of thinner gauge, the heat will often warp the edge and as in sketch C. To press this back into shape a poker with a hook as at C and B is used by the workman and rubbed along the seam, which readily pushes the edge back in place since the copper is hot and very pliable.

The workman will braze as much of the seam as the forge will take and after each step the pipe is moved forward thus bringing the unbrazed seam over the flame and this is heated by turning on the air until near the fusion point when the mechanic beckons to the helper to close off the air a trifle and this is then brazed. This process is continued throughout the entire length of seam.

When all the drippings of spelter are filed off or ground off on an emery wheel, after which the seam is laid over a stake and hammered smooth so it is not visible that there was a joint made in this position.

Coke For Brazing

We should say that coke is generally used for brazing with a blast pipe as shown in figure 5. In using coke the fire must be started and brought to a red glow, thereby showing that all the smoke and fumes have largely burnt away from the coke.

If this is not done and the coke smoke gets in the seam with dirt, ashes, etc., the workman will experience considerable worry before he makes a joint.

Oil as a fuel is also used in many shops, but this requires very careful regulating so a clean fire is produced. By burning too much oil, an oily smoke is produced and when this dirty grease gets between the seams, there is no brazing.

The same holds good after a sheet of copper has been further edged and you rub your fingers along the edge, causing grease or perspiration to pass from your fingers to the copper; you may be sure

that you will have a very hard time brazing that portion. Hence, where grease or oily substance has passed over the joints to be brazed, this grease must be removed, by either sand paper or other means.

A very common practice for the copper-smith is to reduce some straight pipes to tapers as in figure 6. For this a mould block is used as at D, having many shaped moulds carved in the edges and faces of the cast iron.

The general practice for tapering a straight pipe is to set the block up and hang a torch as figure 7 or any other sort of torch that will produce a good heat on a stand as at E, by placing hooks in the position shown by F in figure 6. When the copper becomes heated, a fibre-headed mallet is used, thereby working the metal into the mould.

At intervals the indentations must be hammered out similar to sketch H, where the pipe is placed over a stake or shaft and rounded out.

At sketch G, we show the general process of how the taper takes shape, where the first round is hammered as at -a- which will draw the pipe in say 1/8

of an inch. The next round is hammered as at in section -b-, and this will cause a slanting from a horizontal line of possibly a quarter inch more or less.

After this, the next section -c- is hammered and the -d-, which will work out for the end in a bell shaped flare.

This bell shaped flare is then worked out on the mould gradually, always keeping the torch so the copper is kept flexible. When the taper is worked out, the pipe is rounded and hammered to harden the metal, but this is done in a way so as not to stretch it.

That is, one of the features to copper-smithing, is to know how to hammer the metal, to stretch it or to draw it or to hold it neutral and in either case hold the metal to its approximate thickness. It is safe to say that there is no copper-smith who can call himself a skilled workman who cannot do this.

Gas torches as in Fig. 7 are a great help to the copper-smith in shaping his metal and also as help outs in brazing peculiar places. There is nothing says that the torch must follow the outlines of our sketch. In fact any torch of any design that will throw a good heat and clean flame is suitable.

Contracts Awarded

Hamilton, Ont.—Scanlon & Moyer, 995 Barton St. E., have general contract for construction of sewer costing \$10,000 on Longwood Rd., from end of present sewer to Paradise Rd. for City.

General contract for construction of sewer at cost of \$5,000 Edgevale Ave., from Longwood Rd. to Paradise Rd. for City is awarded to Scanlon & Moyer, 995 Barton St.

Cap de la Madeleine, Que.—Plumbing and heating contracts for fire station costing \$20,000 for City are awarded to H. Massicote & Frere, Ltd., Cap de la Madeleine.

Dartmouth, N. S.—Contract for erection of addition to school costing \$31,000 for School Bd., are: Plumbing and heating, Richards & O'Hara, Dartmouth.

Plumbing and heating, contracts for church costing \$30,000 for R. C. Congregation are awarded to Young & Dunn, Dartmouth.

Halifax, N. S.—Plumbing contract for pumping station costing \$6,100 for City are awarded to Mitchell & McRae, 29 Grafton St., Halifax.

London, Ont.—London Twp. Council awarded general contract for construction of Flood Drain costing \$22,000 to Kelly & Crawley, Mitchell, Ont.

Mille Roche, Ont.—Kyer & Scott, Mille Roche, have general contract for construction of "Eastman" drain at cost \$10,000 for Cornwall Twp. Council.

Toronto.—General contract for service station costing \$12,000 for Canadian Oil Companies Ltd., 2 Strachan Ave., is placed with A. Weller & Co., 54 Tecum-

seh St. Additional contracts include: plumbing and heating, Geo. R. Baker, 37 Lapping Ave.

Toronto.—F. N. Carr, 87 Sherwood Ave., is building store and apts. costing \$10,000 for A. Beamish, 15 Sherwood Ave. Additional contracts: heating and plumbing, G. Moore, 3125 Yonge St.;

Burnaby, B.C.—General contract for waterworks extensions costing \$29,795 for Municipality of Burnaby, is awarded to Dominion Construction Co., Ltd., 509 Richards St., Vancouver.

Toronto.—T. Ross, 82 Bedford Rd., is building a residence costing \$8,000 for Mrs. S. Cooper, 85 Bloor St. E. Additional contracts are: plumbing and heating, Mr. Ray, 217 Ranleigh Ave.

Toronto.—Heating and plumbing contracts for duplex residence costing \$25,000 for S. J. T. Warrington, 199 Yonge St., are awarded to W. Wray, 215 Ranleigh Ave.

Toronto.—Plumbing and heating contracts for residence costing \$6,000 for F. Dixon, 50 Bowood Ave., are awarded to P. Stollery, Roslin Ave.

Toronto.—McNaughton & McKenzie, 1 Shaw St., have plumbing contract for residence costing \$8,000 for D. R. Stock, 14 Price St.

Toronto.—Additional contracts for residence costing \$12,000 for R. E. McDonagh, 299 Huron St., are: plumbing, J. R. Seager, 288 Jane St.

Windsor, Ont.—Additional contract for warehouse costing \$17,000 for Eaton Clark Co., Windsor is: Plumbing, J. L'Heureux, 43 Wyandotte St. E., Windsor.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

THE UNSETTLED conditions apparent in the market for soil pipe and fittings attract specific interest in current plumbing and steam-fitting circles. In eastern markets, these supplies again register an easier revision, while discounts in other markets remain unchanged, thus accentuating the wide divergence apparent between quotations given on the two chief distributing centres. Other high quotations on certain copper products offer one of the current features. Increased levels are recorded on copper tubing, rods and sheets; while copper scrap has also attracted some attention, with higher prices resulting.

Other price developments supply changes to lower levels. Through a revision in discounts, quotations are reduced on standard steam valves; while easier quotations appear on agricultural wrenches, knife-handled, and double-head "S" wrenches. Some shading is again noticeable in prices on range boilers, this condition particularly applying to the standard 30-gallon size. Fair activity is reported in enamelled ware, with closet fixtures registering a similar degree of activity. The suggested reduction in freight rates is described as hardly being of sufficient importance to affect price levels, and no immediate reflections are looked for.

MONTREAL MARKETS

MONTREAL, November 30—Price developments of a varying nature are recorded in the markets of plumbing supplies, revisions both upwards and downwards being announced on some important lines. The easier tone in the sheet market has again resulted in lower prices on both black and American galvanized sheets appearing in some quarters. Black is reduced from 20 cents to 35 cents per 100 pounds, while galvanized shows a minor reduction of 10 cents per 100 lbs. Brass steam cocks are lower in price, due to revising the discount to 40 per cent. Soil pipe, with the exception of 4-inch, again features the markets with a further revision downwards. Through the continuance of a better tone in copper on the primary markets, copper sheets are now quoted two cents per pound higher. Ingot metals generally have gained, with advanced quotations on some metals. Scrap prices undergo a general revision, but the market remains very quiet. In tools, lower prices appear on double head "S," knife handled and agricultural wrenches.

There is still the unsettled feeling on different lines of plumbing goods and prices on some lines are very nominal. This would apply especially to range boilers, these still selling at a varying quotation.

NEW LOWER PRICES ON DOUBLE HEAD "S" WRENCHES

Montreal.

A decline is announced in prices of the double head "S" wrenches, and new quotations on the various sizes are as follows:

DOUBLE "S" WRENCHES		Unfinished.	Finished.
3-8 x 7-16 per doz.		\$1 55	3 40
1/2 x 9-16		2 80	4 40
3/4 x 13-16		4 25	8 00
7-8 x 1		6 00	11 00
1 x 1-8		7 50	13 00
1 3-16 x 1 1/4		9 40	17 20

KNIFE HANDLED WRENCHES REDUCED

Montreal.

A reduction is made in knife handled wrenches. Coe's will now sell at less 12 1/2 per cent., W. & B. less 27 1/2 per cent.

AGRICULTURAL WRENCHES NOW 47 1/2 OFF

Montreal.

New lower prices are announced on agricultural wrenches and these are now quoted at less 47 1/2 per cent.

STEAM COCKS ARE REDUCED THROUGH NEW DISCOUNT

Montreal.

Through increasing the discount on standard brass steam cocks from 10 per cent to 40 per cent. quotations on this line of compression goods shows a considerable reduction. Other lines remain unchanged with the buying movement showing a slight slackening with the advancing season. Prevailing quotations are as follows:

COMPRESSION WORK—	
Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 6	30%
Do., Nos. 1 and 2	30%

Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard	40%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, standard	20%
Gate or straightway	16/10%
Jenkins Globe	10/10%
Jenkins gate valves	10%
Emco Globe Valves	20%
Emco Check Valves	20%

SOIL PIPE SHOWS FURTHER REVISION

Montreal.

A further revision is recorded in the 2, 3, 5 and 6 inch soil-pipe, these now being quoted less 47 1/2 per cent. In the last issue of "Sanitary Engineer" a reduction of marked proportions was announced, when the discount was revised to 45 per cent., and the following of a further decline would denote the easier market now prevailing in these products. An outstanding feature in the situation is the unchanged prices in other markets. Although easier in tone, certain Ontario markets have failed to register a price decline, unless the announcement was made within the past few days. That such a variation in quotations should exist between the two chief distribution centres is extraordinary, but local dealers state there is no indication of a change to higher levels, and the tone of this market as well as of other iron and steel products, shows an easier tendency. Following are present discounts:

SOIL PIPE—	
2 and 3 inch	47 1/2%
4 inch	50%
5 and 6 inch	47 1/2%
Fittings—	
2 to 6 inch	50-10%

SCRAP QUOTATIONS ARE REVISED

Montreal.

Revisions, both upwards and downwards, are recorded in the market of waste materials. Outside markets, which

control the local situation, have also shown recent fluctuations but ultimately no change has resulted. Quotations are still very nominal, but an easier tendency has again developed in the market as a whole. With the exception of machinery cost, prices show a varying reduction. The revision of non-ferrous scrap is slight, while malleables are reduced from \$10.50 to \$8. per gross ton, pipe scrap from \$7.40 to \$6. The market is generally in a quiet stage, consumers stating they are out of the market for the present but would be interested at a little later date. This lends encouragement and increased activity is looked for after the turn of the year. Nominal quotations are the following:

SCRAP—	
Automobile tires	0 75
Rubber Shoes	0 03
Yellow brass	0 04½
Red brass	0 08½
Light brass	0 03
Scrap zinc	0 03
Lead, heavy	0 04¼
Lead, tea	0 02½
Light copper	0 07½
Heavy copper	0 10
Wrought iron, R.Rd., No. 1 per gr. ton.	10 50
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 50
Heavy melting steel	7 50 to 8 00
No. 2 bushing	4 00
Boiler plate	8 00
No. 1 machinery cast	21 50

COPPER SHEETS SHOW PRICE ADVANCE

Montreal.

Copper on the primary markets continues to improve with higher quotations now given. This has reflected in sheets, while rods and tubing are for the present unchanged. Both plain and plain tinned sheets are marked two cents per pound base higher. With the strength continuing in this metal, further changes in prices of the finished products will again follow. Brass goods remain unchanged with following prices being present levels:

BRASS—		Base
Sheets	0 25	
Rods, ½ to 1 inch, round	0 23	
Tubing, seamless	0 32	

COPPER—

Rods, ½ to 2 inch	0 30
Soft sheets, plain, 16 oz. and heavier lb.	0 34
Plain tinned, 16 oz. and heavier, lb.	0 39
Polished and tinned, 16 oz. and heavier, lb.	0 43
Tubing, lb.	0 34
Above prices are for full sheets or bars. Cuts, 5c. per lb. higher.	

BLACK AND GALVANIZED SHEETS REDUCED IN SOME QUARTERS

Montreal.

The easier tendency in the sheet market is again responsible for slightly lower prices in some quarters. Other jobbing houses are maintaining former levels, and generally quotations are nominal. Black sheets are revised from 20 to 35 cents per 100 lbs. lower, while the American galvanized sheets show a decline of a minor nature, approximating 10 cents per 100 lbs.

There is now the seasonable dullness on both the domestic and outside markets, with little change reported in prim-

ary sources. With a quiet month ahead, the mills will not, in all probability, contemplate any development until after the turn of the year. Certain indications point to brisker trade in the opening months of the year and it is thought that a firmer tone and higher prices will accompany any increased activity. Nominal quotations are as follows:

BLACK SHEETS—

10 gauge	4 00	4 65
12 gauge	4 10	4 75
14 gauge	4 40	4 85
16 gauge	4 50	4 95
18-20 gauge	4 55	5 20
26 gauge	4 60	5 40
22-24 gauge	4 65	5 35
28 gauge	4 75	5 50

GALVANIZED SHEETS—

10½ ounce	6 75	7 75
28 gauge	6 3	7 35
26 gauge	6 05	7 00
22-24 gauge	5 90	6 75
20 gauge	5 75	6 60
18 gauge	5 75	6 50
16 gauge	5 60	6 50
14 gauge	5 45	6 50
12 gauge	30	6 50
10 gauge	5 30	6 50

English Standard—		Queen's Fleur-de-lis—
28 gauge	8 25	7 75
26 gauge	8 00	7 60
24 gauge	7 40	7 10
22 gauge	7 05	6 65
18-20 gauge	6 35	5 20

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10½ oz. 25 cents per 100 lbs.

CANADA PLATES—

Dull.	
18 x 24 x 52s	5 60
18 x 24 x 60s	5 80

18 x 24 x 52s	8 25
18 x 24 x 60s	8 50

BRIGHT TIN PLATES

20 x 28 x 100 lb. bases	17 50
20 x 28 IC, 112s	18 00
20 x 28 IX, 112s	20 00
20 x 28 IXX, 50s	11 25
20 x 28 IXXX, 56s	12 00

NO CHANGE IN CORRUGATED SHEETS

Montreal.

No further change has taken place in the situation on corrugated sheets since the reduction in all gauges two weeks ago. The plain galvanized sheets are still on an easier trend, and prices on these are again slightly lower in some quarters. However it is thought a more marked reduction would have to appear before a reflection would be cast on corrugated sheets, and a continued easier trend in the sheet markets is necessary before any further change can be made, especially at this time when business is seasonably dull. Following are list prices and discount:

CORRUGATED SHEETS—		Per 100 sq. ft.
No. 28 gauge		6 50
No. 26 gauge		7 00
No. 24 gauge		9 00
No. 22 gauge		11 00
No. 20 gauge		12 50
No. 18 gauge		16 50

Less 7½%.
Lighter than 24 gauge and wider than 27 inches.
75c a square extra.

FAIR ACTIVITY IN ENAMELLED WARE

Montreal.

There is little or no change to record in the situation on enamelled ware,

prices and discounts remaining unchanged. The discount of 20 and 10 per cent. is now being well maintained, thus causing a settlement in the unsteady condition that prevailed up until a few weeks ago locally. There continues a fair degree of activity in all lines, and distributors look for a fair business well into the winter months to take care of the buildings now under construction. Locally there is now more activity in building operations of the smaller class than in the spring months. Following are the unchanged prices and discounts:

Sinks, roll rim—	
18 x 30	\$23 00
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$7 50 \$7 40 \$7 30
18 x 30	8 70 8 60 8 50
20 x 30	9 90 9 80 9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	51 40
Bath tubs, 5½ feet	57 10

Lavatories—

17x19 in. Apron F139 or P4045	15 30
18x24 in. Apron F154 or P3845 or P3847	23 60
18x21 in. Apron F169 or P4205	17 60
17x19 in. Roll rim, F241 or P4345	12 60
Less 20 and 10 per cent.	

CLOSET QUOTATIONS STEADY

Montreal

Quotations on closet combinations are holding unchanged. Building construction still demands supplies, and this is expected to continue, as a good amount of building is now under way. Following are the unchanged prices:

CLOSET OUTFITS—

Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 50
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	9 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	8 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitreous China	20 00

QUOTATIONS STILL VARY ON RANGE BOILERS

Montreal

The 30-gallon range boilers continue to attract attention on the local market. Although there is not the amount of price shading that prevailed in the earlier fall months on this line, prices are still by no means uniform. There was an improvement noted only a few weeks ago, and it was generally thought the standard list would again be maintained. However an unsettled condition is again brought in by some jobbing houses quoting lower prices. One local distributor stated that apparently range boilers were being offered as a "lead" to obtain other business in plumbing supplies, and with this being the case an improvement in the situation would be sometime in arriving. Business is now

quieter and little activity is now expected for the remainder of the year. Following is the standard list of prices:

RANGE BOILERS—		Std.	Ex. Heavy
30 gallon	9 25	11 75
35 gallon	12 00	14 50
40 gallon	14 50	17 00
52 gallon	21 00	26 00
66 gallon	30 00	36 00
82 gallon	37 50	50 00
100 gallon	48 00	58 00

COTTON WASTE PRICES HOLD

Montreal.

Although there is no present indication of higher prices on cotton wastes, dealers state they would not be surprised if a revision was made early in the new year. The strength of the raw cotton market has receded for the present, but it will be remembered that waste prices did not advance at the time when an increase was announced on other cotton goods, and any further strength shown in primary sources will in all probability reflect on wastes. Unchanged quotations are as follows:

COTTON WASTE—Cream polishing, 20c; White, XXX, 17c; XX, 16c; X, 15c; XLCR, 15c; X Empire, 14c; X Press, 13c; 6 X Special, 12c. Colored, Fancy, 14c; Lion, 12½c; Popular, 10c; Keen, 9c. Wool Packing, Arrow, 30c; Axle, 25c; Anvil, 20c. Dominion Wipers, Washed and Sterilized, White cotton, 20c; colored cotton, 14c.

Above lines subject to trade discount for quantity.

STILL FAIR DEMAND FOR RADIATORS

Montreal.

Manufacturers and distributors on radiators and boilers state that a satisfactory season has been shown, but the buying movement has now slackened to an extent. There is still a good amount of smaller construction to be supplied but the larger work is now well taken care of. Quotations are unchanged as follows:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53% for hot water and 54% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 0 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 10 per cent.
For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in., 10 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 10 per cent. Ontario Govt. trimmings, net list.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

SMALLER SALES OF EAVESTROUGH

Montreal.

With the season now well advanced, current sales of eavestrough, conductor pipe, etc. have now fallen off considerably, and little further activity is expected this season. Quotations remain at the reduction announced two weeks

ago when discounts were revised. Following are list prices and discounts:

EAVESTROUGH—

O. G. Square Bead—Per 100 ft.		8 inch	10 inch	12 inch	15 inch	18 inch
\$15 90	\$17 70	\$21 20	\$28 80	\$36 80		

O. G. Round, and Half Round—Per 100 ft.		8 inch	10 inch	12 inch	15 inch	18 inch
\$16 90	\$18 70	\$22 20	\$29 80	\$37 80		

Discount 70 per cent. off list.

CONDUCTOR PIPE—Per 100 ft.

2 inch	3 inch	4 inch	5 inch	6 inch
\$18 40	\$22 30	\$29 60	\$40 00	\$49 00

Discount 70 per cent. off list.

CONDUCTOR ELBOWS—

Plain round or round corrugated.

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

IRON AND STEEL PRICES HOLD

Montreal.

Quotations on the various grades of bar iron and steel are generally maintained, although a quotation of \$2.75 on common bar iron appears from one source. This would indicate the easier tone which still prevails in the steel industry as a whole, assisted no doubt by the usual dull period at this season. No change of importance has developed at primary sources, and little further development is anticipated until after the first of the year at least. Considering the small margin of profit that mills are now working on, any increased activity in the opening months of the year is expected to be accomplished by slightly higher prices. The recent adjustment of freight rates, while appreciable, is considered not of so extensive proportion as to cause any present development in prices. Following are existing quotations:

IRON & STEEL—

Common bar iron, 100 lbs.	2 90
Refined iron	1 40
Iron finished machinery steel	2 95
Mild steel	2 90
Single reeled machinery steel	4 75
Band steel	2 90
Spring steel	4 50
Sleighshoe steel	2 90
Tire steel	3 10
Toe calk steel	3 80
Harrow tooth steel	3 05
Mining teeth steel per lb.	0 22
Black Diamond tool and cast steel	0 22

NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

LEAD QUOTATIONS UNCHANGED WITH MARKET FIRM

Montreal

The continued gains of metals on the primary markets hold attention to the situation of the finished products, but up to the present no revision is made in quotations. Tin, Copper and Lead are all advanced on the ingot markets, and it would seem only a question of a short time until this reflected on lead products. Sales are seasonably small, although in the past week dealers state that business has shown a slight improvement. This only considered temporary, as the closing month of the year usually pronounces a quiet period. Following are unchanged prices:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.		
Lead traps and bends	10% off

Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 10¼
Do., 4 to 8 lbs., sq. ft.	0 09½
Cut sheets ¼ lb. extra and cut sheets to size, ¾ lb. extra.	0 25½
Solder, guaranteed, lb.	0 23½
Do., strictly, lb.	0 20½
Do., commercial, lb.	0 21½
Do., wiping, lb.	0 35
Do., wire, lb.	0 11½
Zinc, sheets, casks	0 12
Do., broken lots	

FAIR BUSINESS IN FITTINGS

Montreal.

Current demand for pipe fittings continue of fair proportion, one jobber stating it was surprising the call for the various kinds. Orders are small, but fairly numerous considering the advanced season. No further change in quotations since the reduction in Dart unions two weeks ago.

PIPE FITTINGS—		Per Cent.
Cast iron fittings	25
Bushings, cast	27½
Bushings, malleable	25
Flanges	37½
Plugs	27½
Flange unions	22½
Malleable unions	42½
Dart unions, black	33
Do., galvanized	23
Nipples, ½ to 4" close and short	50
Do., long	60
Do., ½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., ½" and larger	10
Pound Goods—		
Class A	0 53 0 65
Class B	0 21½ 0 28½
Class C	0 14 0 21½

INGOT METALS CONTINUE TO GAIN

The market for ingot metals has retained its firm tone, and prices generally are somewhat higher although it is questionable whether the volume of business in some lines is sufficient to warrant prices that are being quoted. It is possible therefore that with the usual dullness prevailing during December there may be a slight reaction.

TIN.—Tin continues to advance in London and at present there is a decided scarcity of Lamb and Flag quality in primary markets. There are of course ample stocks of straights quality but this is not used to any extent here. Local market is firm at 36½ cents.

COPPER.—The New York market continues to advance and London is also somewhat higher. The price of electro now seems at a fairly high price considering the demand is only moderate, but producers seem firm at to-day's figures. Local market is higher at 18 cents for electro, 17¼ cents for casting.

LEAD.—This metal is evidently well controlled and the market is very firm at present, especially in London, where prices are at the highest level in over a year. The American situation is unchanged and the activity appears to be in outside markets. Local price unchanged at 7 cents.

SPELTER.—The American market is dull and there is not likely to be any activity until after the turn of the year. London market is higher, but this has no bearing on prices here at present. Quotations unchanged at 7¼ cents.

TORONTO MARKETS

TORONTO, November 30—Some higher prices on copper and copper products generally, attract specific interest to the current markets on plumbing and steam-fitting supplies. This advance covers such lines as copper sheets, rods and tubing, and is a direct reflection of the firm tone recently prevailing in primary copper circles. Some higher levels are also noted on certain scrap materials, such as rubber, copper, and brass. Other price changes are generally to a lower level. Through revised discount quotations, agricultural wrenches, and also standard steam valves show reduced prices. Some shading of nominal quotations on Canada plates is reported, but is not general.

Unsettled conditions still exist in soil pipe and fittings, with the local discounts being unchanged, thus accentuating the wide divergence between quotations on these products at the two chief eastern distributing centres. Some price shading again appears on range boilers, but the general desire is to maintain the standard list.

AGRICULTURAL WRENCHES HAVE FURTHER REDUCTIONS

Toronto.

A further reduction has been announced in quotations on Agricultural wrenches. The revised level shows a discount of 50 per cent.

STANDARD STEAM COCKS SHOW REVISED DISCOUNT

Toronto.

A revision in the discount on brass standard steam cocks, now shows reduced quotations applying to these products. Other lines of compression goods show no further change, the recent discounts being generally maintained. Business in these commodities is described as gradually getting quieter, the approach of the Christmas season usually witnessing the period where both distributors and merchants desire to take records for the annual inventory period, and little new buying is anticipated until early in the new year. Prevailing quotations follow:

VALVES—

	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecoaks, stand'd	54
Roundway stop and waste cocks, std.	46
Brass steam cocks, standard	40
Globe, angle and check valves, std.	20
Mueller globe, angle and check	20
Mueller composition disc steam valves	20
J. M. T. valves	20
J. M. T. C.	25
J. M. T. gate valves	25
Gate or straightway	16-10
Jenkins globe	10-10
Radiator valves, standard	58
Do., removable disc	58
Emco, J. D. valves	20
Emco, check valves	20
Webber gate valves	25
Emco, Globe valves, ¼" to 2"	30
Emco, Globe valves 2¼" to 3"	20
Basin cocks—	
No. 1 and 1, Fuller pattern	30
¼" opening No. 3633	43

COPPER SCRAP OFFERINGS ATTRACT INTEREST

Toronto.

While dullness continues to reign in most sections of the scrap markets, the exception is at present in copper and other similar metals. Scrap rubber is also showing more life, this factor being

attributed to the demand from southern markets.

Higher offerings have appeared for copper scrap, and quotations have generally moved up on copper wire, yellow brass, and heavy lead. The iron and steel scrap, continues quiet. Following are the average dealers' nominal quotations for fairly large quantities:

SCRAP MATERIALS—

Scrap Iron	
Gross Tons—	
Heavy melting steel (Hamilton)	9 50 10 00
Borings and turnings	2 50 3 50
Rerolling rails	10 50 11 50
Scrap pipe	6 00 7 00
No. 1 railroad wrought	10 25 11 25
Steel turnings (Hamilton)	5 50 6 00
Agricultural malleable	10 00 11 00
Railroad malleable	11 00 12 00
Net tons—	
No. 1 cast	15 00 16 00
Stove plate	11 00 12 00
Grate bars	10 00 11 00
Standard car wheels	13 50 14 00
Scrap Metals.	
Heavy copper and wire	9 50 10 50
Light copper	7 75 8 25
No. 1 composition	8 25 8 75
No. 1 comp. turnings	6 25 6 75
Light brass	3 25 3 75
Heavy yellow brass	5 25 6 00
Heavy lead	3 75 4 00
Tea lead	2 00 2 50
Scrap zinc	3 50 4 00
Scrap Rubber.	
Boots and shoes	2 50 3 00
Lumbermen's rubber bts	1 50 2 00
Auto tires	0 50 1 00
Solid tires	0 75 1 25

UNSETTLED CONDITIONS IN SOIL PIPE AND FITTINGS

Toronto.

In spite of prominent reductions which have appeared on both soil pipe and fittings in the eastern markets recently, local quotations on these products continued to remain unchanged. In discussing this situation with one of the largest Toronto distributors, Sanitary Engineer elicited the information that the recent market condition in Montreal was not entirely based upon healthy trade factors. In this opinion, it was due to the fact that one manufacturer in that city had a fairly large quantity of soil pipe on hand, and was in the habit of quoting direct to the trade. To meet this competition, it was suggested that other manufacturers and distributors had imported an inferior grade of soil pipe, and thus recent discounts developed.

It was further pointed out that local manufacturers could not maintain present quality on their products, and contemplate lower prices, without entailing losses. Whether this covers the entire situation or not, it is understood that business in soil pipe and fittings throughout certain sections of Ontario has been going to the representatives of Montreal houses quoting the latest reductions. Another dealer expressed the opinion that it was hard to see how prevailing local prices could be maintained for long in the face of the present Montreal competition. Any likelihood of further change in the Toronto quotations, therefore, is primarily based upon the looked for action by local manufacturers and distributors who are expected to reach a decision in the near future.

SOIL PIPE—

2 inch	25 per cent.
3 inch	30 per cent.
4 inch	30 per cent.
5 and 6 inch	30 per cent.
8 inch	net

FITTINGS—

2 to 6 inch	40-10 per cent
8 inch	net

HIGHER PRICES ON COPPER PRODUCTS MATERIALIZE

Toronto.

In conjunction with the strength recently apparent in primary copper circles and the increased price levels on this metal,—both in the ingot and other stages of manufacture also,—the quotations on copper sheets now register the expected advance. These copper products such as rods, tubing and sheets, are generally two cents per lb. higher than formerly, while the price levels on similar brass products remain unchanged. This situation indicates that the copper markets are recovering from the recent depression, stated one manufacturer, but according to this opinion, in the case of brass there remained fairly large quantities of scrap material still to be absorbed. The new prices are as follows:

BRASS—

Sheets base, per lb.	\$ 0 22
Rods, base, per lb.	0 20
Tubing, base, per lb.	0 25

COPPER —

Rods, base, per lb.	0 23
Soft sheets, plain, 1 oz. and heavier, lb.	0 30
Do., plain tinned, 16 oz. and heavier, lb.	0 42

PRICE SHADING APPEARS ON RANGE BOILERS

Toronto.

To state that the nominal price list on range boilers is apparently again in danger, would indicate that some distributors of these products are quoting prices on the 30-gallon standard size boiler at a lower level than those recently established. Quotations of \$8.50, and \$8.75, on this size, are reported to have made their appearance in certain quarters, and when this is compared with the nominal price of \$9.25, the disturbing elements which developed in the range boiler markets some weeks

(Continued on page 32)

Put Your Problems Up To Mueller Experts

Mueller makes a variety of Reducing and Regulating Valves for water, steam, gas, air, oil and ammonia—a style to meet every demand—but different conditions require different types of valves.

To insure satisfactory service each valve must be (1) the right kind, (2) the right size, (3) properly assembled (4) properly protected.

Mueller Regulators and Strainers.

meet the requirements—and when installed under our direction, are fully warranted and will give satisfactory service.

The Mueller corps of experts will gladly solve your special problems without charge—and will send you complete information regarding Mueller Reducing and Regulating Valves and Strainers upon request.

Styles A-5040 and A-5010 illustrated above.

TORONTO MARKETS

(Continued from page 30)

ago, are again revived. The majority of the local distributors, however, are maintaining the nominal list, which is as follows:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$ 9 25	\$11 75
35 gallon	12 00	14 50
40 gallon	14 50	17 00
52 gallon	21 00	26 00
66 gallon	30 00	36 00
82 gallon	37 50	50 00
100 gallon	48 00	58 00
120 gallon	57 00	67 00
144 gallon	76 00

SHADING OF NOMINAL PRICES ON CANADA PLATES

Toronto.

Some lower prices have recently appeared on the local markets on Canada plates. This situation is attributed to certain endeavours on the part of some dealers to reduce stocks on hand. A quotation of \$5.35 for Canada plates was recorded in one quarter, while the nominal level on the ordinary 52's is \$5.60. It is stated, however, that such price shading was not general, although no surprise was expressed where stocks may be heavy; and where an attractive inquiry offered a special inducement to lower levels: Following are the nominal prices on these products still prevailing:

PLATES, CANADA—	Per box
Dull, 60 sheets	5 65
Ordinary, 52 sheets	5 60
PLATES, COKE TIN—	
1C, 20 x 28, 112 sheets	16 00
IX, 20 x 28, 112 sheets	19 00
IX, 20 x 28, 56 sheets	12 00
PLATES, CHARCOAL TIN—	
IX, 20 x 28, 112 sheets	14 00
IX, 20 x 28, 56 sheets	16 00
PLATES, TERNE—	
1C, 14 x 20, 112 sheets	12 00

FIRM TONE MAINTAINED IN LEAD AND ZINC PRODUCTS

Toronto.

Metals entering into the manufacture of lead and zinc goods show recent gains on the ingot markets, and the opinion has been expressed that if this strength is maintained, such a situation is expected to be reflected sooner or later in the prices on finished products. The prevailing market is described as firm, with quotations at present unchanged from the following levels:

LEAD AND ZINC GOODS—

Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb 0 09½	
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 29
Do., commercial, lb.	0 20
Do., strictly, lb.	0 22
Do., guaranteed, lb.	0 24
Do., wiping, lb.	0 20
Zinc sheets, per lb.	0 13

FAIR TRADE RECORDED IN PIPE FITTINGS

Toronto.

Developments in the market for pipe fittings indicate that trade is slackening

in these products, and a quieter period is anticipated during the next few weeks. Some revival is looked for as regards volume of orders with the turn of the year. The present trade, however, is described as fair, and good for this season. Discounts are holding at recent revisions. Following is the current list:

PIPE FITTINGS—	Per cent.
Cast iron fittings	25
Plugs, cast iron	28
Do., solid	28
Do., countersink	28
Bushings, mall.	28
Do., cast	28
Unions, ¼ in. to 2 in.	45
Do., 3 in., 2¼ to 4 in.	45
Flanged unions	25
Dart unions, blk., ¼ to 2 in.	33½
Do., ½ in., 2¼ to 4 in.	23
Do., galvd., add to black	30
Nipples, blk., and galvd. ½ to 4 in. close and short	50
Do., 4½ in. and larger	40
Do., long, ½ in. to 4 in.	60
Do., 4½ in. and larger	50
Do., running thread	30
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—

	Black	Galvanized
Class A	0 55	0 68
Class B	0 23	0 33
Class C	0 15	0 23

SOME MARKETS HAVE EASIER PRICES ON SHEETS

Toronto.

While some slightly lower quotations on black and galvanized sheets are reported to have appeared in certain quarters, this movement has by no means become general. Other distributors state that they are meeting any such lower levels where it might appear, but do not report any prevalence in this connection. No change has been made in the nominal list quotations. Other dealers reported that lower prices, especially on the galvanized sheets, constituted a new and unexpected factor on the current markets, and was a development worth watching. Current quotations follow:

BLUE ANNEALED—

10 gauge, base	4 00	4 50
12 gauge	4 05	4 55
14 gauge	4 10	4 60
16 gauge	4 15	4 65

BLACK—

18-20 gauge	4 55	5 05
22-24 gauge	4 60	5 10
26 gauge	4 65	5 15
28 gauge	4 75	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—

	Queen's	Fleur-de-lis.
28 gauge	9 25	8 75
26 gauge	9 00	8 50
24 gauge	8 40	8 10
22 gauge	8 05	7 65
18 and 20 gauge	7 35	7 50

Premier and Apollo—

10¾ oz.	6 50	7 00
U. S. 28, base	6 10	6 60
U. S. 26	5 80	6 30
22 and 24	5 65	6 15
18 and 20	5 50	6 00
16	5 35	5 85
12 and 14	5 20	5 70

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing sheets.

ONLY MODERATE SALE FOR CONDUCTOR PIPE

Toronto.

Current sales for eavestrough, conductor pipe and elbows are naturally becoming less prominent as regards volume, owing to the advanced season. The recent discounts are remaining in effect as follows:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth:

	Per 100 ft.
8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50
Less 70 per cent.	

PIPE (CONDUCTOR)—

Plain, round or corrugated. Per 100 ft. in 10 ft. lengths.

2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	23 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00
Less 70 per cent.	

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 60 per cent.	

FAIR DEMAND REPORTED FOR CLOSET FIXTURES

Toronto.

A fair degree of trade activity is reported for closet combinations and fixtures. Fall construction work still demands a fair volume of supplies, and with interior work being carried on among many buildings recently erected, current requirements for these products are stated to be fairly steady. Quotations are therefore, unchanged, with the list prices remaining in effect as follows:

CLOSET COMBINATIONS, low down each

Closet, standard outfit, oak	28 00
Do., with post hinge seat	28 75
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	31 00
Do., vitreous china, with oak post hinge seat and cover	31 55
Do., vitreous china, with mahogany post hinge seat and cover	31 75
Do., white, Vitro or Pussyfoot, with oak post hinge seat and cover	31 55
Do., white vitre or pussyfoot, with mahogany post hinge seat and cover	31 75
Do., enamelled iron tank with oak post hinge seat and cover	31 55
Do., enamelled iron tank with mahogany post hinge seat and cover	31 75

Additions or reductions to above

Add for reversible trap bowl	1 25
Add for syphon jet bowl	7 00
For ¾ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 80
CLOSET BOWLS—	
Washdown bowl, less spud	10 00
Reversible trap bowl, less spud	11 25
Syphon jet bowl, less spud	17 00
"Richelieu" bowl	10 50

CLOSET TANKS, low down

Oak, Vitro or pussyfoot tank with fittings, less seat	13 10
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 25
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	20 25

CLOSET SEATS—

Oak wood strip seat and cover	3 70
Oak post hinge seat and cover	4 75
Mahogany finish post hinge seat and cover	5 00

TORONTO MARKETS

(Continued from page 32)

ACTIVITY IN ENAMELLED WARE PRODUCTS

Toronto.

The current situation in enamelled ware is reported to be fairly satisfactory. Activity in these products is dependent upon the interior fitting of seasonal building operations. As a consequence, dealers are looking for trade to continue in varying proportion while this demand is evident. Quotations are unchanged, with the following prices and discounts being maintained:

ENAMELLED WARE—		
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51	40
Do., 5½ ft.	57	10
All Steel Enamel Baths, 4, 4½ or 5 ft., net	\$16	25
Do., do., 5½ ft., net.	17	50
Lavatories—		
17x10" Apron F139 or P4045	15	30
18x24" Apron F154 or P3845 or P3847..	23	60
18x21" Apron F169 or P4205	17	60

20 x 30	9 70	9 80 9 90
All above list except lines marked net.		

BUSINESS IN CORRUGATED BECOMING QUIET

Toronto.

No further changes have been announced in the corrugated sheet market since the revision to lower price levels recently effective. The primary sheet markets continue to register easier tones, but whether further recession will develop in the future is considered contingent upon the current demand. Business in corrugated is naturally entering upon the quiet season, as the prevailing weather conditions mitigate against outdoor activities at this season of the year. Current quotations follow:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	\$6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50
Less 7½%.	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

STRENGTH SUBSIDES IN COTTON MARKETS

Toronto.

Although the firm tone in the raw cotton circles has now subsided, the material situation as regards cotton waste prices has registered no change. The strength in the cotton markets merely served to maintain current levels on waste, and prevented further recessions at that time. Owing to the fact that waste prices were not advanced in keeping with the higher quotations on manufactured cotton goods, the easier market tone in primary cotton circles is therefore not directly reflected on waste. Unchanged quotations follow:

SEASONAL SLACKENING IN DEMAND FOR RADIATORS

Toronto.

Dealers report there is still a fair proportion of demand for radiators and boilers, the movement in these products being described as satisfactory for this season of the year. The buying of radiators has naturally slackened considerably from the brisk activity reported a few weeks ago, but some late building is given as the reason for the present degree of trade. Quotations remain unchanged, as follows:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 53 per cent. for water and 54 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent. for water and 49 per cent. for steam.

Discounts on 1-column hospital size, water 30 per cent.; steam 31 per cent.

Wall radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 50 per cent.

BOILERS—

Water:

Round, 60 per cent. off list. Square 10 per cent. off list.

Steam:

Round, 15 per cent. off list; square, 5 per cent. off list.

COPPER ONLY ACTIVE METAL ON INGOT MARKETS

Toronto.

Little general change has been recorded in the ingot metal markets, copper being the only metal to register

signs of activity. On the primary markets, copper quotations have slightly advanced again, but domestic prices are generally unchanged.

COPPER—The primary copper markets continue to show signs of strength, and southern producers have been quick to again advance prices. The outside markets can hardly be described as active, but anticipations evidently exist for export business. The domestic markets maintain a waiting attitude, and prices are holding steady at 17 cents.

TIN—While the undertone in the tin markets is said to be firm, there continues to develop fluctuations on primary markets. The changes in Sterling rates have been directly affecting London advices, and other centres record a sympathetic tendency. The local quotation on tin is also marking time at 35 cents.

LEAD—The lead market is slightly easier in some quarters, but domestic prices are holding unchanged. The undertone locally is said to be fairly firm, but the primary circles have failed to register any developments of note. Local prices of \$6.50 still prevail.

SPELTER—Trading in this metal is not quite so active in general, as was the case earlier in the month. Large producing interests in the south, however, are maintaining an attitude of indifference and refusing to entertain any lower quotation. The easier tone in the primary markets is ascribed to a falling off in demand, but some quarters indicate that this condition may only be of a temporary nature. Local quotations remain unchanged at \$7.00.

ANTIMONY—This market has developed signs of a slightly easier nature, but generally is reported dull and unchanged. Prices are remaining steady, at present, both on foreign and domestic markets. The local prices are from 8 to 10 cents, as usual.

ALUMINUM—This metal has been in little demand, and there is no evidence of any revival of activity in the market. Prices continue to remain at 28 cents.

WINNIPEG MARKETS

WINNIPEG, November 30—Some important price reductions are recorded in the current markets on plumbing and steam-fitting supplies. These changes cover candle wick packing, which has registered a slight recession; some easier quotations on bar iron and steel; another price decline on corrugated sheets; and now lower quotations on conductor pipe and eavestrough.

Other primary markets are maintaining previous price levels; wrought iron pipe, fittings and compression goods, registering very few developments. Only small orders are now apparent for range boilers.

EASIER QUOTATIONS ON BAR IRON AND STEEL

Winnipeg.

Prices have recently dropped on bar iron and steel. It was thought for some time that the next change would bring about firmer prices, but on account of very slight movement in primary circles prices were brought down: also dealers stocks are in fair shape. Following are the present prices:

3-16, 1-4 & 5-16	\$ 4 90	Base
Rounds and Squares 3-8 to 2 and Flats up to & including 1x4.....	4 90	"
Rounds and Squares over 2 up to & including 2½ to 6.....	6 15	"
Rounds over 2½ to 6	6 15	"
Band Steel	5 20	"
STEEL—		
Soft or Mild Rounds and Squares 3-16 1-4 and 5-16.....	5 20	"
Rounds and Squares 3-8 to 2 and Flats up to & including 1x4.....	5 20	"
Rounds and Squares over 2 up to and including 3 and Flats over 1x4 up to 6 wide	5 65	"
Rounds over 3 to 6.....	6 15	"

WINNIPEG MARKETS

(Continued from page 34)

SLIGHT PRICE RECESSION IN
CANDLE WICK PACKING

Winnipeg.

Prices on candle wick packing having seemingly reached their higher level, are now receding a trifle. The price has been quoted lower this week, and is 55c. per lb.

MINOR ORDERS PREVALENT FOR
RANGE BOILERS

Winnipeg.

Range boiler prices are being fairly well maintained on the local markets, and few developments have been recorded. The same general conditions prevail, as have been in evidence for several weeks past. The proportion of current sales is made up principally of small orders only. Quotations are as follows:

RANGE BOILERS

30 gal.	10 00	each
35 gal.	13 25	"
40 gal.	16 25	"
52 gal.	23 45	"
66 gal.	33 15	"
82 gal.	40 60	"
100 gal.	62 50	"
120 gal.	75 00	"

ANOTHER PRICE DECLINE ON
CORRUGATED SHEETS

Winnipeg.

Prices on corrugated sheets have again been reduced. This decline is attributed to the recent easier tone on galvanized sheets and plates on the primary centers. On account of the early winter, the weather conditions do not permit of outdoor building, etc., consequently the sales of corrugated sheets have fallen off. However, this condition is generally expected at this time of the year. The new prices are as follows:

CORRUGATED IRON

GALVANIZED—

28 Ga.	\$6.75	per 100 sq. ft.
26 Ga.	7.43	per 100 sq. ft.
PAINTED—		
28 Ga.	\$5.63	per 100 sq. ft.
26 Ga.	6.30	per 100 sq. ft.

FIRM UNDERTONE IN LEAD
MARKETS

Winnipeg.

Conditions in the lead and zinc markets remain unchanged, and are holding their own. Prices have been firm for some time; stocks are depleted and prices are considered to be down to rock bottom. Following are the prevailing quotations:

LEAD AND ZINC GOODS

Lead Pipe	\$12 06	per 100 lbs.
Lead Waste	12.96	per 100 lbs.
Lead Traps and Bends	5% off list.	
Lead Sheets, full rolls	10 1/4	per lb.
Do., less	11c	per lb.
Sheet Zinc	13c.	per lb.

LOWER PRICES ON CONDUCTOR
PIPE AND EAVESTROUGH

Winnipeg.

Another decline has been announced on conductor pipe and eavestrough. The

early winter season and the slackening in outdoor building has had a tendency to bring about lower prices on these lines. Following are the revised prices:

Eavestrough, per 10 ft., 8 in.,	\$5.48; 10 in.,	\$6.08; 12 in.,	\$7.29; 15 in.,	\$10.13
Conductor Pipe, 2 in., per 100 ft.,	\$6.69; 3 in.,	\$7.70; 4 in.,	\$9.72; 5 in.,	\$13.77.

PRICES ON COTTON WASTE
HOLDING UNCHANGED

Winnipeg.

The general opinion now is that the cotton markets have receded to some extent, and the brisk activity in these circles has also spent itself. The stronger feeling in cotton waste markets is no longer evident, and there is no indication at present, of any development towards recovery. The demand for cotton and the resultant higher quotations on manufactured cotton goods generally, merely had an effect of making future declines in cotton waste prices more uncertain than might otherwise have been the case.

Prices are therefore unchanged and are as follows:

WASTE—

GALT EXPOSITION

(Continued from page 22)

tion from various parts of Western Ontario came largely as a result of the wide publicity given the affair. Mention of the dates of the affair and reproductions of the city's coat of arms were spread broadcast on letterheads used by Galt manufacturers, and distributed in

hotel rotundas, on street cars and trains.

Word of the success of the affair spread so rapidly in Western Ontario that it is said there were representatives of Chambers of Commerce of nearby cities in attendance to obtain pointers for guidance in planning such exhibitions. A feature was the naming of the various days of the fair as an added incentive for record attendances.

Local officials of the "Made in Galt Exposition" were as follows:— Colonel A. J. Oliver, R. McDougall Co., President; T. H. Watson, Canadian Machinery Corp., Vice-President; Beverly Neill, Canadian Machinery Corp., Secretary; George A. Dobbie, Stauffer Dobbie, Ltd., and Newlands, Ltd., Treasurer. The Executive Committee consisted of the following: H. C. McLaughlin, McCaskey Systems, Ltd.; R. W. Roelofson, Galt Machine Screw Co.; Chas. Turnbull, C. Turnbull, Ltd.; W. S. Fallon, Getty and Scott, Ltd.; Geo. Fisher, Canadian Brass, Ltd.; G. P. Stuart, Sheldons, Ltd.; G. E. Gardiner, P. W. Gardiner Co.; A. R. Goldie, Goldie McCulloch Co., Ltd.

A feature of the week was the entertainment of the Canadian Brass Manufacturers Ass'n. and the Canadian Tank Manufacturers Ass'n., being the guests of the Canadian Brass Company of Galt.

NEW LINE OF TAPS

The Gill Brass Co., of Galt, Ont., are putting a line of heavily nickel plated brass taps on the market to the plumbing trade very shortly. The taps will comprise only three parts.

A tube is laid from the containing chamber into the main flow of the faucet, and the water passing over the end of the tube in the mouth of the faucet creates a syphonic action in the containing chamber drawing off all water due to pressure that leaks up around the vertical plunger.

The vertical motion plunger eliminates most of the wear in the seat washer, according to the claims of the manufacturer, and is opened by low water pressure and is receded by a combination tap and handle.

This line of tap is being manufactured for the Gill Brass Co. by the Elliott and Whitehall Tool Co.

Importing Brass Munitions as Scrap

Concerning the article which appeared in November 15 issue, of Sanitary Engineer, pointing out that Canadian imports were handicapped when compared with importers of other countries in that they were not enabled to import brass cartridge cases, fuses, etc., as "scrap" brass, R. R. Farrow, Commissioner of Customs and Excise, Ottawa, Ont., has answered enquiries on this subject by Sanitary Engineer, as follows:

"Item 348 (b) of the Customs Tariff provides for the entry free of duty of brass scrap and importations which are brass scrap in condition as imported are so admitted by this department. Whilst brass cartridge cases, fuses and other munition parts which have been crushed or otherwise rendered into condition of scrap would be admissible free of duty under the above mentioned tariff item, this department cannot admit to entry thereunder as being scrap, brass cartridge cases or other articles of brass which are not crushed or otherwise rendered into condition of scrap, simply on the ground that they are surplus materials and have been sold by The British Munitions Board or other foreign Munitions Boards at greatly reduced prices or at prices equivalent to those of scrap."

Ever Hunt Deer?

Probably you found them by their fixed habit of returning to the same place for water at every dawn and dusk, day after day. That's a pretty natural way of finding deer, by going where deer are sure to be.

Twice a month, practically everybody in Canada that is interested in the plumbing and heating trade, goes to Sanitary Engineer in search of the business items, markets and advertising where they find the latest news and newest goods offered in the Can-adian plumbing market.

There, twice a month, you can find and reach practically the whole plumbing and heating trade of Canada. It's a good time and place to tell them about your house and product. A full page weekly costs slightly over half a cent for each subscriber reached!

There is no obligation, no expense attached, in sending for a representative. He will explain this service and point out its advantages to you.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal. By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Simplex Closet Augers and Extension Springs

Seamless Tube is bent to guide spring into closet and provided with convenient hand grip and rotary crank handle. Manufactured with 3 or 6 foot Flexible Wire Spring and Removable Guard.

Extension Springs with Couplings furnished in 3, 6, 12½ and 25 foot lengths.

True Economy Stack Heater

The Stack Gas Water Heater will heat water in one minute.

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated.

Take notice of the small size and large number of coils; this means quick heat. The numerous small pipes will naturally heat water quicker than one big pipe because of the greater heating surface offered.

More hot water with smaller consumption of gas—that's true economy.

Markets

Sanitary Engineer Marketing Reports are eagerly looked for by progressive plumbing and heating Engineers of Canada.

A thorough knowledge of prevailing prices and tendencies in the trade is an absolute necessity for the conduct of any business in these days of frequent price fluctuations.

Sanitary Engineer Marketing Reports are compiled at considerable expense. We are determined to keep them reliable, complete, and up-to-date.

Sectional View
Of
PerfectO Flush Valve

Showing the oil-chamber with the working parts completely cut off from contact with the water. The flow of water may be easily and quickly regulated to suit varying requirements.

Write for Catalogue

Why an Oil-Controlled Valve?

WHAT IS the logical medium for regulating a flush valve? Water? Water often contains impurities that obstruct the by-pass and interfere with the smooth working of the valve.

Oil! There is the answer. PerfectO Flush Valves are Oil-Regulated. Water can't cause any trouble—because no water can get into the by-pass—nothing but high-grade mineral oil.

This oil is contained in a sealed, cast-brass chamber. It cannot escape or evaporate and never needs replacing. Its density is unchanging—hence the action of the valve, once it is adjusted, does not vary. PerfectO Flush Valves are Oil-Controlled because an oil-controlled valve gives better service for a longer time. And that's why there is genuine satisfaction ahead when you install PerfectO Oil-Regulated Flush Valves.

HALL

AN ODE TO THE PILOT.

The "Pilot" Line now shows the way,
Our Pipeless Furnaces have come to stay,
The Tinsmiths used to kick and squeal,
But now Bedad's, they think "ALL'S WEAL."

A Merry

The Superior Pipeless is the boy,
That fills the country-side with joy,
The women all now sing its praise,
As the cold, cold seasons become June days.

When a smoker's pipeless he's just a brute,
Do what you will he's liable to shoot,
Like a house without a "Pipeless" in it never live,
It's dear at any price, no matter what you give.

In all the cellars, now what can be found?
Not cabbages rotten, but vegetables sound,
It sends all the heat right into the house,
And your cellar's so cold it would freeze a mouse.

When the Coal man comes to collect his bill,
You don't need to dig to the bottom of the till,
The heat's kept in and the Doctor's kept out,
So the old Superior Pipeless makes you holler and shout.

Now let me tell you one and all
If you want solid comfort what to install,
The Superior Furnace will fill the bill,
But the Pilot Success might be better still.

To All

Heartiest Greetings!

To our readers, whose common needs and interests make the publication of this journal a necessity.

To the advertisers whom we have served in the past and whom we will serve in the future.

To all, because—it's Christmas-Time.

Trusting that the New Year will witness the dawn of a new era of prosperity, and confident that, in some measure, our good wishes are reciprocated, we wish you, one and all, the Happiest of Christmases and a most Prosperous New Year.

Yours truly,

SANITARY ENGINEER.

Advertising Manager.

GREETINGS!

and best wishes to all our business friends—everywhere.
May this Christmas be the forerunner of a most prosperous year in all lines of the plumbing and heating trade.

The James Morrison Brass Mfg. Co. LIMITED

93-97 Adelaide Street, West - Toronto, Ont.

In calling to mind the many pleasant transactions we have had with the Wholesale and Retail Trade during 1921, we feel it is a rather difficult task to express our thanks and good wishes in mere words.

Can only say we are glad to be with you. We sure get a lot of fun and satisfaction out of taking care of your orders and we wish you one and all

A Merry Christmas

Satisfactory Heating—Proper Sanitary Equipment and “A Bath a Day” go a long way toward providing Health and Prosperity—May you have all you can handle and a little more in the New Year.

*No. 7.

BOILER PRESSURE CONTROL

Eight ounces of pressure should be the maximum amount required on any Dunham Home Heating System, more often it is two or four ounces. The desirability of effective damper control to guard against wastefulness of higher pressure is apparent.

Too many times in the past, a damper control has been considered a needless *decoration* on a steam boiler, and something soon to be discarded, but one might as well discard the carburetor on an automobile. The trouble in many cases in the past of an unsuccessful damper control, rested on improper installation.

A hand damper should be installed in the smoke pipe to regulate the intensity of the draft to suit varying weather conditions.

A balanced check damper full size of the smoke pipe must be installed in the smoke pipe, as this is the most effective device for checking the fire with resulting fuel economy.

The diaphragm damper regulator on the boiler must be of a size suitable to respond to the low pressure four to eight ounces, which it is desired to maintain.

This is the seventh of a series of talks on steam heating, appearing monthly in Sanitary Engineer. You will find all very interesting and of help in your daily work.

XMAS GREETINGS FROM CANADIAN SOCIETY D. S. & H. E. 1922 OUTLOOK FOR BUSINESS

"WE sincerely believe that the business to be done in our trade in 1922 will exceed in volume that of last year and will be performed under much better conditions.

"Trade conditions in general are improving, and although up to the present the gain appears slight, it is sure and steady. Building construction in the present closing month of this year is being carried out to an encouraging degree. Buildings under erection are mostly of the smaller class, but this alone promises well for the future, when the weather opens, permitting increased activities next spring. Further demands for homes all over the country, many more in the cities and greatly improved ones in the country an improvement here also, and while many lines must still be brought to a lower level, we have every reason to believe a more stable condition will prevail. These improved conditions, now evident, enable us to look forward to 1922 with confidence.

"We have pleasant memories of the many friendships made at the Quebec Convention, and trust to renew them all at our next, and we take this opportunity of wishing all members of the Canadian Association of Domestic Sanitary and Heating Engineers a Very Merry Christmas and a Happy and Prosperous New Year.

"The public are appreciating more and more our value, thanks in a great measure to the effectiveness of the work carried on by the various local Master Plumbers' Associations and through the city and municipal councils of the Dominion which are co-operating splendidly with us in our efforts to ensure that the homes of the people are equipped with the most effective heating, ventilating and sanitary arrangements.

"Our mechanics are giving the public and ourselves better value than ever, and are realizing as never before that a fair day's work is sure of a fair day's pay. The prices of plumbing materials are receding, gradual in some instances, while of a more marked degree in other commodities. The trend of the market for supplies for the past twelve months has not been beneficial to the trade because of the amount of unsettlement, which constructed a barrier to the prospective builder, whether large or small. We can look for

more steady conditions and an increasing volume of trade during 1922 and the extent of this business will be limited only by the amount of energy and thought which every operator puts forth."

(Signed) T. LATOURELLE, President.
D. K. TROTTER, Secretary.

Sanitary Engineer supports the sentiments as expressed herewith by officials of the Canadian Society, D.S. & H.E., and in extending to all readers the timely wish for a Happy Christmas season and a Prosperous New Year, it is the firm conviction that the desired end can be achieved during the year 1922 if all bend their various communities. Sentiment is changing in favor and close study of requirements to develop the greatest possible volume of trade.

Through organization, great strides forward have been made in the plumbing and heating industry in recent years, and this progress has stamped the operators in this industry as being sufficiently important to justify a high place in the business interests of favor of the plumber whose person and business methods their various communities. Sentiment is changing in were once thought to be not above reproach. This improvement in status has come largely through the far-sightedness of those leaders in the industry many of whom today are still the bulwark of the trade and who are doing all in their power to improve the conditions of this industry.

The following out of these principles during the year 1922 should be very productive. Many authorities are predicting an increasing volume of new building. In this connection it is interesting to note that one authority states that house building done in the recent months of this year represents as large a volume of house building as has been done in the same period in any previous year. If this is the case it is a good omen for the volume of building likely to be undertaken as soon as Spring weather permits, and every operator should plan his business so as to be able to take every advantage of it when it comes.

The merchandising of plumbing and heating equipment on the basis which has been established by other trades should also be a distinct help in increasing the volume of business.

TELESPHORE LATOURELLE
President Canadian Society D. S.
and H. E., who extends Xmas greet-
ings and New Year's wishes to the
trade, and deals briefly with the
outlook for 1922.

Developing an Active Xmas Trade In Plumbing And Heating Goods

CHRISTMAS offers many opportunities to plumbers for the sale of bathroom equipment. To some in the trade this suggestion might seem to have little foundation, but those who harbor such ideas are the ones who require the most help in order to become merchants of plumbing equipment. The public must be educated to a better appreciation of plumbing and heating goods, everyone in the trade realizes this and one of the ways to achieve this end is to put the sale of such fixtures on a merchandising basis. The example of other retail merchants must then be followed and every advantage taken of the current seasons or events to push the sale of such equipment. It will therefore not only be an immediate source of trade to attract Christmas

business but it will be an influence on the future course of trade to show that the sale of plumbing and heating equipment is on practically the same basis as that of other goods.

The Merchandising Idea

In recent years many contractors have realized the opportunities which Christmas presented for increasing business and their efforts have borne fruit. Those contractors who have the merchandising idea are using it actively at this time. The trend in recent years has been toward the giving of more practical gifts, and what could be more useful than plumbing and heating equipment? In view of investigations which have shown the important influence on the health of the community of efficient

plumbing equipment, there should be little hesitancy in offering it as suitable for Christmas gifts. True many of the more cumbersome pieces could not be made to look quite as appealing as some other articles tied up with dainty ribbons, but there are such accessories as towel bars, mirrors, soap dishes, brush holders, tumbler holders, sponge racks, etc., which present an attractive appearance and which lend themselves admirably to attractive parcelling. But the large pieces of plumbing equipment lend themselves equally well as Christmas gifts and after all, the wrappings are soon forgotten and the true value of the article is all that holds appreciation for it.

What will cheer the heart of the housewife more than to have a snowy

Have The Plumbing Right For Xmas.

The following are a few of the many ways in which you can guard against the possibility of having the plumbing in your house done right.

white sink, laundry tub, built-in bathtub, pedestal lavatory, laundry tray, water heater, etc. If she has been forced to do without such comforts, or has been getting along as best she can with inefficient equipment, there will be no gifts more appreciated than those outlined and others which the contractor can supply.

Permanent Value

In appealing for such business it can be used as an argument that the purchase of such lines not only provides a suitable gift, but it is something of more or less permanent value due to its long period of usefulness and due to the fact that such equipment will pay for itself in saving time, patience and health. Should the property be sold the modern plumbing equipment will bring a price equivalent to its value.

The list of suitable gift lines in the plumbing and heating contractor's shop can be extended to include a new set of taps, showers, heat regulators and electric pumps, to say nothing of the list of small accessories aforementioned. For the rural prospect an electric lighting system or water supply system might be suggested. Where these are already installed a large number of accessory lines can be offered.

In order to convince the public that such lines will make suitable gifts for Christmas, the utmost advantage must be taken of merchandising plans such as advertising, window and store display, mailing lists, etc. Throughout all the effort the practical nature of gifts of plumbing and heating equipment should be emphasized and definite suggestions put forth for various members of the family. If the contractor can make a survey of conditions in many local homes, taking information from the report cards of his men, it would pay to send out personal letters to certain of the best prospects indicating exactly what piece of equipment they could use to best advantage and why it would pay to pool their money for presents and buy some such equipment rather than fritter it away on a lot of small goods which will soon be forgotten. Few men who own property would resist such a suggestion which offers a suitable gift and which will add value to his property, to say nothing of the comfort, better health and time saved to members of his family.

Using Merchandising Principles

It will take much application of merchandising principles to bring about a thorough appreciation of this point of view on the part of the public, and it will be necessary for every contractor to do his part to educate his prospects. When this is done, Christmas will no longer be looked upon as a time of inactivity in the plumbing and heating trades, but on the other hand will be looked forward to as a time which offers

Bathroom Equipment For Xmas Gifts

While many of the small lines of bathroom accessories are frequently offered as Xmas gift suggestions, this might well be extended to some of the larger pieces of equipment such as are shown in this seasonable display of Eclipse Plumbing and Heating Co., Toronto. This display includes basin, enamelled drip tray, closets, furnace rings, medicine cabinets, in addition to medicine chest, towel bars and some of the smaller accessories.

splendid opportunity for developing sales.

In the ad layout shown in connection with this article, some suggestions are given for the advertising of such lines for Christmas. The ad by C. R. Hoben & Co., Halifax, N. S., under the title, "Have the plumbing right for Christmas" says "The Christmas season is a bad season for pipes. You can guard against the contingency of having the festivities marred by having your plumbing inspected now.

Under the heading, "Why puzzle your self about Christmas presents?" the ad by McKelvey & Birch Ltd. Kingston, Ont. continues "when we have done the puzzling already by stocking our showroom with useful presents which your relatives and friends can use every day and appreciate. Our special Christmas goods includes medicine cabinets and mirrors, nickel plated bathroom fixtures such as towel bars, soap dishes, tumbler, toothbrush and toilet-paper holders, and glass shelves with N. P. bracket."

An Effective Ad

Wm. Stairs Son & Morrow Ltd., Halifax, N. S. advertised for the Christmas trade as follows, "Make your Christmas gift one that will give unbounded pleasure to the whole family—one that will fill a real home need—a well equipped

bathroom. Do you know of any other gift that would create a greater degree of delight and that would give more comfort, month after month, and into the years, than this most enduring gift? There are prices and designs to meet all purses and tastes and each model guarantees a full measure of sanitary safety. Choose your bathroom equipment carefully for it is so well made and substantial that it will last a long time. If you let your showroom be your guide you will obtain the fullest measure of value for the money you expend."

R. Chestnut & Sons Ltd., Fredericton, N. B. suggest "non-leakable laundry tubs" at this time of year, stating in their ad "this is the kind we will instal in your laundry—the kind that will not give you trouble after a few weeks or months of constant use."

Advertising for plumbing and heating business under the heading that, "Building costs are down," Wm. Ritchie, Summerland, B. C. says "This is your opportunity to put up that house which you have been intending to build, but which has been postponed, waiting for lower prices."

Other seasonable ad suggestions are shown by Moffatt & Parr, Barrie, Ont., and W. J. Walsh, Dundas, Ont., the latter advertising for business on a monthly payment basis.

Self-Corrosion Of Cast Iron Pipes

Discussion on Disintegration of Concrete in Alkali Soils Brings Out Result of Extensive Experiments Made With a View to Obtaining More Definite Information on Destruction of Cast Iron Water Mains, Particularly in Western Provinces

Reproduced in Sanitary Engineer by courtesy of W. Nelson Smith, M.E.I.C., Consulting Electrical Engineer Winnipeg Electric Railway Co.

(Continued from Nov. 15 Issue)

THIS set of experiments affords sufficient proof that the soils in the City of Winnipeg will corrode cast iron pipe on their own account, if given water enough and time enough. All samples of iron lost weight, and all but 2 pitted.

From the foregoing experimental study the following conclusions were drawn:—

1. The corrosion of cast iron by soil salts individually and collectively is readily accomplished under natural conditions, without access of stray current, and is of graphitic pitting nature, by which is meant the commonly observed condition of the material remaining in place, which is invariably of a soft spongy texture, with part of the iron dissolved out, the remainder resembling graphite in texture and softness, hence the term "graphitic."

2. Magnesium salts are the most corrosive of the soil salts, and magnesium sulphate, which was found wherever a cast iron pipe had been destroyed, is apparently the most effective of the salts experimented with.

3. Local action induced by naturally occurring concentration cells may easily be a factor in the pitting of cast iron exposed to salt by varying concentration.

4. Slight pitting corrosion was found in pieces of cast iron exposed to the action of small samples of wet soil and intermittently heated, even in the short period of 40 days, and with only a limited supply of water as compared with conditions in the ground, without any impressed e. m. f. being present.

Products of Corrosion on Cast Iron Pipes

The products of corrosion appear in two forms, first the scale and the iron compounds that form in the clay immediately upon and adjacent to the pipe, and secondly the residual matter in the so-called pits in the wall of the pipe itself. These were examined separately.

The scale was loosely adhering and contained considerable quantities of iron. It varied in color, thickness and consistency, but when first uncovered was usually a very dark bluish green turning yellowish red on exposure to the air. In all places where there was any quantity of scale it was noticeable that the moist clay removed from immediate contact with the pipe was saturated with this same dark greenish ferrous oxide which turned the clay

practically black. This was particularly noticeable in the case of clay that was packed against the end of a bell at a joint, the angle made by the joint being apparently a convenient collecting place for a considerable mass of this fresh ferrous oxide which is the first product of corrosion. Doubtless its presence at this particular spot is very often due to slight but continuous leakage through a pin hole in the lead joint. In very many places the greenish black ferrous oxide was present in much larger quantity than the reddish yellow ferric oxide, doubtless because the surrounding clay prevented access of sufficient atmospheric oxygen required for the formation of the latter. This condition was quite marked on a hydrant casing at the Manitoba Gypsum Works on the outskirts of Winnipeg, which is a mile distant from the nearest car tracks. The soil here was full of magnesium sulphate and chloride and the soft pasty scale was $\frac{3}{4}$ " thick on the pipe.

Table "E" gives analyses of several samples of scale.

TABLE E

	Nature of Iron in Pipe Scale			Remarks
	Metallic %	Ferrous %	Ferric %	
1.	1.4	30.0	7.4	Slightly magnetic
2.	4.2	9.7	13.0	Slightly magnetic
3.	0.4	12.5	0.2	Non-magnetic
4.	1.1	23.1	12.5	Slightly magnetic

Some analyses were also made of the residual matter in the pits. These pits are the soft, porous, honey-combed mass of the pipe remaining in place and still preserving the form of the pipe until ruptured by the pressure which it can no longer withstand. The substance of a pit may not differ in outward appearance from the uninjured wall of the pipe adjacent to it, but an inspection with the end of a knife blade discovers the pit and the soft mass can be easily dug away. This soft spongy residue consists of such electro-solution pressure as iron, together with residual iron not yet dissolved and hydrated iron. The metallic iron not yet removed may have been protected mechanically from the ground water by the graphitic-silicious matter in the residue. The large proportion of carbon gives the residue the consistency of graphite, and this sort of pitting is frequently called graphitic.

Table "F" contains the results of this analysis for several pipes from repre-

sentative localities. The first two were taken from near the centre of the city, but where the pipes would generally have been negative rather than positive to the track rails. The other three samples were outside the range of stray current, having been $\frac{1}{2}$ to a mile to $1\frac{1}{4}$ miles outside any probable path of the electric railway return. The first two samples had been in the ground the longest, which accounts for there being less metallic iron remaining in them.

Phosphate and Sulphide in Corrosion Products

Although it seems a comparatively simple matter to account for the fundamental chemical re-actions that result in the formation first of the ferrous and then of the ferric hydroxides, we have found other corrosion products of such a strange character as to make it evident that the corrosion process in the soils considered may be quite complex.

In some of the graphitic spongy residue in the pits of corroded pipes we have found ferrous phosphate incorporated with the other material, being noticeable by reason of its light bluish green color. Sometimes small lumps of it could be lifted out of the pipe pits as a filling can be lifted out of a cavity of a tooth. A partial analysis of one sample showed 18% of ferrous phosphate, 20% of metallic iron and 42% of carbon and silica. Evidently it did not occur in the original iron, but was formed in the corrosion products along with the hydroxides. It has sometimes been reported as a deposit in buried bones, but not as a product of stray current electrolysis. Why ferrous phosphate should occur in a corroded cast iron water main is a riddle that has yet to be solved.

Along with other corrosion products iron sulphide was found to be nearly always present both in the pits and in the scale, from pipes not only within the city, but several miles outside the electric railway area. A number of experiments were made with cast iron and soil samples in glass bottles to try and determine whether the sulphide was the result of self-corrosion or of stray current corrosion. Sulphide was found to be present in both cases, showing that it is not peculiarly a product of stray current electrolysis. The sulphur required for its formation seems to come chiefly from the free sulphur mixed in with the original cast iron, but it is also possible that the electro-chemical reactions

cause the reduction of the sulphates in the soil to sulphides. If it is an electro-chemical process it can happen as easily with galvanic as with stray current. Sulphides are found in pipe pits and scale on the inside of water pipes as well as outside. We have found sulphides in chips of wood and clay taken from the butts of electric light poles recently taken out of the ground, and it is suspected that the presence of sulphur forming bacteria may have something to do with the formation of sulphides, wherever found. We are not aware that either the phosphate or the sulphide of iron have been previously reported by other investigators of the corrosion of cast iron pipe.

The moisture content of the samples of soil collected in this investigation varied considerably. The electrical conductivity of the soils is a function of the moisture content as well as of the salt content, and it was deemed desirable to measure the electrical resistance and determine the moisture content of about 50 samples taken from various places.

Eighteen of the samples were taken directly from off water pipes, and the average moisture content was 28.75%, the range being from about 20% to 35%. The resistance of these same 18 samples averaged 570 ohms per cu. cm., which is a very low average rating of soil resistance. One was as low as 206 ohms, while another was 1085 ohms, the difference in these two instances being probably due more to difference to the salt content than the moisture content of the samples.

In several cases the resistance of the soil was measured twice, once in its natural condition as received, and subsequently in a saturated condition, and the results showed that when saturated the same soil would have its resistance reduced to only about one-quarter of its resistance when in its natural state.

In contrast to the foregoing samples of limy clay silt soils, the same measurements were made on a sample of coarse gravel backfilling next a water pipe in St. Boniface which showed only 3.4% of moisture and a resistance of 37,000 ohms per cu. cm. which was reduced on saturation to about 12,750 ohms.

In the face of the above comparison it is not surprising that pipes laid in gravel and similar porous soils are very seldom troubled with self-corrosion. The moisture content varies indeterminately with depth. Sometimes the dried soil is above, sometimes below, and there is no way of foretelling what the order will be at any one spot. The character of the soil varies at different levels and the capacity for holding moisture varies with the character of the soil. Clay soils are well known to be most tenacious of water.

One sample of soil was taken from around a gas pipe in a limy silt soil at Edmonton and St. Mary's Street, Winnipeg. The pipe was about 4 feet down.

The moisture content was only 4.5% and the resistance was 1965 ohms per cu. cm., or about $3\frac{1}{2}$ times the average resistance of the 18 samples taken from the water pipes. This fact is of particular interest also, because the soil around this gas pipe was comparatively dry,

while in samples taken 2 or 3 feet directly above and below, the moisture content was 3 or 4 times as great, and the electrical resistance less than one-half that of the soil directly around the pipe.

(To be Continued)

TABLE F
Composition of Matter in Pits on Cast Iron Pipe

Master Plumber Would Confine Showrooms To Wholesalers

A prominent Montreal master plumber sets forth some interesting views concerning the subject of Showrooms for Plumbers as dealt with in recent issues of Sanitary Engineer. His letter on the subject is as follows:

"I am inclined to think that the supply man you refer to is very much one-sided, he evidently wants the plumber to advance only on labor to take care of his overhead and profit. This would never do, the plumber would be compelled to advance at least one hundred per cent. on labor to take care of his running expense.

"I claim that the manufacturers and supply houses are principally responsible for so many 'shoestring' plumbers in our cities and towns. They not only sell to the general public at plumbers' prices, and in some cases at lower than trade price, but some houses have a very bad habit of selling the fixtures and also finding a 'shoestring' to instal their goods for the customer.

"My opinion is that the supply house is the proper party to have the showroom, as they would have a much better display of goods than the average plumber, and as new ideas in fixtures would come into the market they would be displayed to advantage.

"The plumber or sanitary engineer should have a nice, comfortable office and reception room to receive his customers, and be exceptionally clean, but the private showroom as a rule is only a sort of makeshift and the same fixtures are displayed from year to year, at a very heavy expense.

"While I am recommending showrooms by supply houses, this must be done on business principles; each fixture must have its price marked in plain figures, and the salesman know no other price. It will not be necessary for the salesman to tell the customer that there is a discount of 25 per cent. to the plumber, also 2 per cent. cash discount. The plumber must live as well as the supply man, not in a fifty thousand dollar house and what goes with it, but in comfort. The plumber must have an advance on fixtures and material supplied by him or he will always be a 'shoestring.'

"It is a disgrace the way some supply houses conduct their business. They claim to be wholesale, but in many cases anyone can walk in their warehouses and buy two washers for five cents; some of them have clerks behind their counters with cash receipt books selling material the same as you see in retail dry goods stores, at the same time this firm has a turnover each year running into the millions.

"Now, then, Mr. Hairbreadth Wholesaler, it is up to you to make the 'shoestring' plumber stronger. I expect this will be the means of making all supply houses sell to the plumber only."

Heating and Ventilating

Relative Costs Of Warm Air Installations

Planning Modern Equipment at Minimum of Cost—Relative Costs of Installation on Three Different Bids for Installing a Warm Air Furnace—Best Planned Installation Is Cheapest in the End

MUCH has been written on the theoretical and technical side of warm air heating. A phase of the matter which does not receive frequent treatment is that of the relative costs of different methods of installing warm air furnaces. It is therefore of interest to reproduce herewith a paper recently presented at the American Society of Heating and Ventilating Engineers by an authority on the subject. It is as follows:—

Fig. 1.

Planning modern equipment at minimum costs sounds easy and everyone has probably had experience in it. One will, no doubt, claim that he plans the modern part and that the "other fellow" attends to the minimum cost. I am not, however, convinced that this is true in the modern heating equipment supplied in residences. I am much more familiar with warm air details than with hot water and steam, but I know enough about the latter to be certain that every person engaged in residence work can parallel in either water or steam the things I shall try to cover by using warm air as an illustration.

In order to establish a common starting point to define modern heating I recognize the fact that in the larger towns most building is done by Realtors. Their interest in the heating equipment of such houses is nearer that of the user than some of the earlier builders who only wanted to know the installer's price and the finish on the registers. These Realtors build houses fit for any luxury lover to live and low enough in cost for a high-grade mechanic to own.

I intend to assume proper size and proportion of the heating plant and give special attention to the final minimum cost. A very simple house will serve the purpose. Assuming that a Realtor is building three of them, each

having the same heat requirements, and that the architect's plans call for a furnace just about large enough, a 12 inch run to the parlor, 10 inches to the dining room, 9 inches to the largest bedroom, and 8 inches to the other four rooms. This makes a total outgo from the furnace of 453 square inches of pipe area. He also plans to take the air supply from one of the rooms under windows through an oak grill 20 x 50 inches connected to the furnace with a galvanized pipe 24 inches in diameter; its area is practically 453 square inches. One will admit that the architect has planned a good heating equipment for a house sold under competitive conditions.

Three Different Bids

The Realtor has three different bids and decides to give a contract to each of the three, A, B, and C, thus giving us an opportunity to follow the plans further.

A cases his furnace as shown by the solid lines in Fig. 1.

Notice that the top of the casing is so low that the air cannot get into the pipe from the top, nor can it fill the pipe from the sides. About 80 per cent. of the pipe area gets into the pipe. By this method he allows 362 square

Fig. 2.

Figure 2. Showing Register Boxes With Narrow Throats.

inches of air to pass into the pipes (453 sq. in. x 80 per cent. = 362 sq. inches). B and C use a canopy as shown by the dotted lines in Fig. 1 high enough to allow the full amount 453 sq. inches to reach the pipes. By this method of construction A saves \$1.50 in material and labor.

A also uses registers and register boxes that have narrow throats as shown in Fig. 2 and also flattens or ovals the round warm-air pipe and pushes it into the already restricted register box bottom.

The studding is 3 3/4" wide. A could have utilized the space occupied by plaster and baseboard, but did not, he utilized only 3 3/4" instead of 5 inches in the small register and 9 1/2" in the 12 inch register.

Figure 3. Showing Duct Connections.

A delivers 210 sq. inches to register and saves \$4.63 on fittings and \$1.50 on registers.

B uses narrow throats, but uses properly shaped connections instead of ovals. He also buys a register for the 12 inch pipe of proper catalogue dimensions except that the throat has less area than the 12 inch pipe. He delivers 267 sq. inches and saves \$1.50 in fittings and 75 cents on register.

C uses a full size connection in every case. With the 12 inch pipe he uses a register that projects about 4 3/4 inches out into the floor, and passes 113 square inches to this register. His total delivery through register is 453 square inches.

The air supply as planned is through an oak grill 20 inches by 50 inches under dining room windows.

The floor joists are 14 inches apart and 8 inches dep. The grill is 50 inches long so three spaces 8 inches by 12 inches are available for use as a return. A nails galvanized iron on the bottom of the joists and uses a 24 inch round duct (area 453 square inches), connecting it directly into the galvanized iron bottom of the grill as shown in the sketches in Figure 3. B, however, builds

a pan down 3 inches below the joists and allows 453 square inches to pass to the 24 inch duct, but he connects the 24 inch pipe directly into the bottom of the pan.

As air flows into a duct like water over a dam, he adds only 110 sq. inches of air actually flowing into the duct or a total of 272 square inches.

C does one of three things. He builds a pan 6 inches deep instead of three inches under the joists or if head room is important he makes the pan 3 inches

Table 1. Relative Costs of Different Methods of Installation.

A		B		C	
Sq. In.	Saved	Sq. In.	Saved	Sq. In.	Saved
362	\$1.50	453	453	
210.....	1.50	267.....	\$1.50	453	
	4.63		.75		
162	4.00	272	2.00	453	
162	15.88	267	6.75	453

				162	sq. in.
				\$1.42	\$108.05
B	275.00		268.25	267	1.04
				453	.667
C	275.00		302.50		
C—\$302.50 plus 7 tons @ \$12—\$ 84 —					
A—233.21 plus 15 tons @ 12—180 —					

Figure 4. Showing Air Intake of Furnace.

deep as B did but at the end near the furnace he builds a portion of the pan 6 inches or 8 inches deep so the full volume of air passes into the 24 inch pipe; or else he makes an oblong transition piece that reaches across most of the 48 inch pan and terminates in the 24 in. pipe. He gets 435 square inches of air into the duct. A saves \$4.00; B saves \$2.00.

It is still necessary, however, to pass the air on into the furnace casing. A extended his pan to a point near the furnace and dropped down alongside of and close to the furnace, as shown in Figure 4.

The basement is 84 inches deep. He made the shoe at furnace 20 inches wide and 24 inches high so that two joints of pipe each 30 inches long will reach to the pan and make up the required 84 inches. He saved \$4.25. B does the same except that he makes his shoe 24 inches wide and 20 inches high. He saved \$2.50.

Furnace 5. Another Method of Air Intake.

The ash pit is 14 inches deep, so C made the shoe 14 inches high and 36 inches wide, and also started farther back and used elbows so that the flow of air is unaffected by the heat from the pot (see sketch in Figure 5). Note that C admits the air around the cool ash pit; whereas A and B admit much of the air against the hot pot. This results in decreasing the air flow as indicated by the arrows.

Compares C With A

It is apparent that C has planned carefully and conscientiously to deliver into the rooms a very large portion

of the heat created by the furnace, and possibly it is interesting to know how such planning compares in cost with the incompetent bungling done by A.

The things mentioned are in reality only a small portion of the thing left undone by A, but we must overlook the balance and hurry on. We can not even discuss the vapor pan A saved by leaving out.

C finds that the market price of labor and material on the job is \$275.00. C belongs to some sort of civic organization; he also belongs to a lodge or a church, and such things cost a little extra money. He has determined that his son shall have more than a primary education, and that costs some money.

He has telephone and other bills, so he adds 10 per cent., or \$27.50, making his price \$302.50. He delivered the full

453 square inches of air. It may therefore be said that the cost of C's well-planned job is \$6.67 per square inches of delivery; but we are not yet certain that this is the minimum cost. B saved \$6.75 in material. He adds nothing for the future or for expenses, so his price is \$275.00 minus \$6.75, or \$268.25. He delivers 267 square inches of air, and the job costs \$1.04 per square inch. But 267 inches at \$6.67, or C's cost, would only equal \$178.09.

A saved \$15.88 (beside the water pan and other sundries) which should have made his cost \$259.12. But he has a boy who has quit the grade schools, a mighty good worker, and he does not have to pay a high priced man to do his work, so he deducts 10 per cent., making his price \$233.21. As he delivers (Continued on page 34)

Prices On All Gift Suggestions

In showing a window of bathroom accessories as Christmas gift suggestions, such as is evident in this display by Ecclestone and Bates, Ltd., Bracebridge, Ont., it is always highly advisable to show prices. Xmas shoppers want to know the most practical gift they can secure for the money they have in mind to spend. The contractor's window of plumbing and heating equipment can do most good by effectively reaching such prospects and giving them the information required.

Becoming A Merchant

THE CHRISTMAS season offers the plumbing and heating contractor a valuable opportunity to develop his merchandising ability and develop some profitable business from the sale of plumbing and heating equipment as Christmas gifts. It requires no stretch of the imagination to see that plumbing and heating equipment and the smaller accessories, are lines which add real value to the home and which, therefore, constitute gifts of the real practical character which are desired in times like the present.

The Christmas season has generally been looked upon as the dull season in the plumbing and heating industry, but with some application of merchandising principles this can quickly be changed until the Christmas season becomes one of active movement. In order to conduct this branch of trade on a merchandising basis it is necessary to adopt merchandising principles and take advantage of every current development. Therefore in connection with Christmas trade it would be wise to use the windows and store displays to best advantage in conjunction with local advertising. A letter might be sent to prospects dealing with their particular needs.

This plan can be applied alike to other seasons of the year, but the point which it is desired to emphasize is that an increased turnover of plumbing and heating equipment and a higher appreciation of the practical value of such equipment on the part of the public will follow only upon the application of those merchandising principles which have been employed with good success in other branches of trade. Certain of these plans are outlined in this issue of Sanitary Engineer as applied to Christmas business, and in every issue appear suggestions for windows and store displays, advertisements, letters for mailing lists. The reader who is really anxious to become a merchant should not merely glance over these articles and think they mean nothing to him, but should study them thoroughly and apply what is best for this particular business. The Christmas season is a good one in which to make a start by encouraging your prospects to look upon your equipment and accessories as suitable articles to be given as Christmas gifts.

The Election

MUCH INTEREST has been taken in the Federal election by merchants and others, and it is to be expected that now with the contest settled, business will be rid of one element which has been acting as a brake upon business. No political party is blamed for this condition, but it is a well known fact that the detraction of interest from normal pursuits and the uncertainty which immediately precedes a general election tends to restrain normal business activity.

It will be interesting to see what the incoming Government will do with various items of irritating legislation now on the statutes. The defeat of the administration redoubles the chances of some change being made in the Marking Act which is now scheduled to go into effect on December 31. The tariff question will no doubt be dealt with but it is the general opinion that despite much wild pre-election talk, no action of a drastic nature and which might have serious effect on business, is likely to be taken. This department will likely be under the control of Hon. W. S. Fielding.

In any case the election has served to clear the air and as result a healthy volume of Christmas trade should be enjoyed and a stimulus given business for 1922.

The Marking of Imports

THE DATE for the enforcement of the Canadian Customs regulations governing the marking of country of origin on imports, namely January 1, 1922, is drawing near, and recent alterations indicate that the Government is taking action to render the provisions less onerous rather than to further postpone them as many business men have expected. While the marking regulations have come in for considerable abuse, this has been directed more at the severity of certain regulations rather than at the principle of having marks on all imports in order that the Canadian buyer may identify the country of origin on his purchases of imports. As a matter of fact the Canadian law is very similar to the general marking act of the United States which has been in effect for many years. Such Acts are also enforced by other countries and must be observed by Canadian exporters. In principle the legislation has some advantages but there are still many provisions which will cause hardship.

Careful note should be taken of the revised regulations as outlined in this issue. It will be noted that goods ordered prior to October 1, 1921, and imported prior to July 1, 1922, will not be penalized to the extent of the 10 per cent. ad valorem duty if not marked according to the regulations, but such goods will not be released from Customs until they have been marked as required. It is quite evident that importers would be unable to mark many of these imports in as permanent a way as would be done in process of manufacture, and it is likely that the regulations will not be severely enforced on imports until manufacturers have had an opportunity to establish the proper facilities for marking their product according to the regulations. A study of the various provisions, as specifically applied to various items of hardware, is interesting to the trade and will be helpful to manufacturers so affected. These will be found in detail elsewhere in this issue.

While it appears that the marking regulation is to be enforced on the date set, it is possible that events following the general election may be such as to make some radical changes regarding this regulation.

Briefs

AT the general meeting of the Canadian Credit Men's Trust Association held in Toronto, W. E. Coulter, Booth-Coulter Brass Co., Toronto, representing the Ontario Board, C. M.A., stated that manufacturers in general were now operating at about 60 per cent. of normal. Replying to a questionnaire, five hundred and three manufacturers in Ontario had stated that present inventories were priced at present replacement values. It was the opinion that from this statement credit men should not be too much concerned when statements of firms showed reduced inventories.

Patterns For Spiral Conveyor

By O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Missouri:
Written for Sanitary Engineer.

A subscriber asks for a spiral conveyor whose stem is 8 inches in diameter and the conveyor 24 inches wide, having $1\frac{1}{4}$ turn in 75 inches of rise. The enclosed drawing will show the layout.

First, describe the plan from a horizontal line making the stem the 8 inches and the width of conveyor 24 inches, and describe the semi-circles.

Divide the larger semi-circle in any number of equal spaces, of which there are 8 in this case, 4 being in each quarter circle.

Observe that in $1\frac{1}{4}$ turns of spiral, we would have 20 spaces; 16 spaces to make a complete turn and 4 extra for the quarter turn gives us 20 spaces.

Now from the center B, erect a center line as B-A equal to the 75 inches. Divide this distance in 20 equal spaces as shown. Observe that each space in plan raises one of these spaces in center line.

An outline of spiral is not necessary in a working drawing since it is only the rise per space that we wish. So let h-t be the rise of each space.

As the heel raises the distance of h-t in the length of 2-4 in plan, so we pick this line to 2-4 and set as t-4 in diagram R.

Next pick the space 1-3 from plan and set as t-3 in diagram. Now these lines h-4 and h-3 are girth lines for the edge of spiral and also can be used for the rim and stem.

Also pick the dotted line 2-3 from plan and set as t-3' in R. Then h-3' is the true length of this line in plan.

The solid lines of plan as 1-2; 3-4, etc., are true lengths, since the bottom must remain level.

To lay out the bottom draw any line as 1-2 equal to 1-2 of plan and then pick the girth h-4 and using 2 in pattern as center, strike arcs in point 4.

Then pick the girth line h-3 from R and using 1 in pattern as center, strike small arc as at 3. Then pick true length h-3' and using 2 in pattern as center, cross arcs in point 3.

Repeat this for the next space 3-5 and 4-6 and you have about as much of the pattern for bottom as you can handle in one piece.

This bottom is made in small pieces between 2 and 3 feet in length, because certain places of it must be stretched or hammered in order to make it level. This is something you will have to experiment with as you assemble the work.

To lay out the spiral on the stem so it will be in the flat, pick the girth from half plan as 1-3, etc., and set it as 1-1 in pattern for stem.

Square up lines indefinitely and then from each point in the elevation line A-B bring over points to cross these stretchout lines.

The intersections enable you to trace the spiral lines as 1-1' and 1'-9". As the stem is only 75 inches high this can be nicely laid off on a sheet of iron as shown.

To enable drawing the lines parallel the girth spaces 1-2-3-4, etc., are set off on the top as well as the bottom so as to have two definite points to apply the straight edge.

Instead of projecting the lines the eights can be picked from B of plan with dividers or trammel points; or with picking one point and setting it off on

the next line, thus graduating each line and each point, which will give you the same results.

To lay out the pattern for the rim on the outer edge of conveyor, drawing the diagram as at S.

Pick the girth 2-4 from plan and set it as 2-4 in S. H-4 is equal to the rise of one space and this gives the slant line H-2.

Parallel with this line H-2 draw the line C-D, making it to suit the height this rim is to have. This can be done by measuring 2-a and H-b and then drawing lines through these points.

By extending the right angle lines

we produce the miters, especially for the bottom as G-2-a. This would be laid off on a long strip as in pattern T as 2'-a'-D'.

The upper miter cut on the top floor would be the same and cross seams for joining 2 or more strips could be just right angle joints as H-b.

It is not necessary to make the miter H-C because that is for a vertical butt joint.

Laps for riveting must be allowed extra on all patterns, and it is well to make up a small sample before working the big size in order to see how your lines work out.

"Show your customers that by paying cash, and getting a cash discount, they are getting what belongs to them; and they are not helping to pay for goods which the deadbeat walked away with. The plumber who decides that he should change his methods, and encourage the cash buyer, should work out the details in his own way. Of one thing you may be sure, a business will never grow and be really profitable to the owner, as long as he has to borrow money to take the place of money outstanding on open accounts."

SCARBORO TO INSTAL SEWERS

Scarboro Township Council has instructed the engineering firm of James Redfern and Proctor to prepare estimates of the cost of installing a sewerage system in the southern section of the township.

INSTAL MAINS IN ST. JOHN

St. John, N.B.—Commissioner Jones has presented a report from Engineer Hare as to an approximate cost of installing a thirty-six-inch main from the One-Mile House to Little River by diverting it around Fernhill. He said that to instal an iron pipe would cost approximately \$576,600 providing the work was done in favorable weather. The same line made of reinforced concrete capable of withstanding a heavy head would cost approximately \$474,000, a difference of \$102,600. From Little River to Uhinney's Hill and using 2,200 feet of cast iron pipe now on hand, the cost in round figures, he said, would be \$191,500. To parallel the wood stave main with reinforced concrete, the pipe would cost in summer weather \$157,200, plus the cost of laying the 2,200 feet. If in winter it would cost \$2 more a lineal foot.

Mayor Schofield and Commissioners Frink and Bullock agreed that a new main was needed right through to Lock Lomond, and favored the commissioner of water and sewerage bringing in a report in the form of a final plan. It was suggested that the work could then be done in stages.

DEFECTIVE WATER PIPE CAUSES ENORMOUS WATER WASTE

Montreal.—By repairing the defective pipe system in St. Michel de Laval, the water supplied by the city to this municipality, as shown by the meters, has been reduced from 190,000 gallons a day to 102,000 gallons. The Superintendent of the Water Department stated the system was found in a very bad condition, as most of the joints examined allowed water to escape, due to the fact that these joints had not been calked. A ten inch pipe also had been found broken.

Getting Cash for Plumbing Business

Is the Money You Are Earning Staying in the Pockets of Your Customers?—Here Is a Plan Which One Plumber Used to Improve Collections

HOW CAN I get cash?" is the cry of many a plumber today. Farmers have extended their credit on account of the low price of farm stuffs. The result is many dealers are carrying accounts on their books ranging from \$200 to \$700 and books show collections in 1921 are 10 per cent, to 15 per cent. lower than in 1919.

Yes, sir! Ready cash is mighty hard to lay hands on these days.

Here is how one dealer met the problem. He writes:

How One Dealer Did it

"For seven years I watched my business grow on the books. But the cash drawer and the bank balance didn't seem to grow. My banker always watched my account and it was hard for me to get credit. And yet I was giving long time credits to all of my customers.

"It took me seven years to realize that the money I was earning by increasing my business was mostly in the pockets of my customers instead of in my own. I finally woke up to the fact that a balance on the books didn't mean anything. It was a balance in the bank that counted.

"I made a complete change in my business methods. Today, three-fourths of my business is strictly cash, and except in rare instances the other fourth of my trade pays up every thirty days.

Here's The Scheme

"Liberal credit had always been my policy and I couldn't revolutionize things in a minute by insisting that customers pay cash. So I offered 5 per cent. discount for cash on all purchases amounting to one dollar or more. I offered a discount of 2 per cent. on all bills which were paid on or before the 10th of the month following purchase.

"On my statements and bills I had this notice printed:

"When we borrow money from the

bank we have to pay interest. When we sell goods to you on credit it is the same as loaning you that much money. We are extending this accommodation with the understanding that you will pay promptly. If you do not pay by the tenth of the month we will charge you interest at the rate of 6 per cent.

"It wasn't long before my customers began to realize that the 5 per cent. discount for cash meant a real saving to them. To make this clear, I instructed my staff to count out the discount separately from the charge. As an example, suppose a customer made a purchase amounting to \$3.80 and gave the clerk a \$5.00 bill. The clerk says, 'Here is your change', handing the customer \$1.20. At the same time he says, 'And here is your cash discount, 5 per cent. on \$3.80,' handing the customer 19 cents. In this way, people recognize the saving in paying cash. As I said before, three-fourths of my trade is now strictly cash. They like to pay cash.

Charging for Credit Brings Cash.

"Charging interest on unpaid bills is a wonderful stimulant toward prompt payment. This plan has driven the 'slow pays' away from my store but it brought more than enough 'prompt pays' to take their places.

How I Profited

"Last year my total business amounted to \$73,640, which was a splendid increase over any preceding year. I paid out \$2,500 in discounts. At first thought it might appear that these discounts would make a big hole in my net profits. But not so. I didn't have to borrow money and pay interest.

Today I Am Independent

"Best of all, I know exactly where I stand. For seven years I was hard up for cash. To-day I am under obligation to no one.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights
—Keep the Entire Series Where It May Be Referred to and Studied

Article No. 44 of Series; Illustrations Nos. 51, 52, 53

(Continued from last issue)

FIG. 51 illustrates the side view of the pump house showing the entrance staircase in brickwork Fig. 52 and the ventilation and lighting system through the windows and door.

Fig. 53 shows the method of building in the galvanized W. I. iron steps and size and detail construction of the screen placed at an angle of 45 degrees supported on the concrete bottom and 6in. x 3in. steel channel iron which serves as a receiver for the floating matter taken off the screens by the rakes.

All pumping plants should be preceded with a grit and screening chamber, otherwise the mineral solid and floating matter will damage the vanes in the pump.

The plunger or force pump is a good style of pump to install where the lift is great or where continuous working is required and consists of a cylinder or working barrel in which the plunger or piston works up and down through the stuffing box or gland. The plunger is either hollow or of solid metal, accord-

This pump works either horizontally or vertically and its action is as follows: In the up-stroke of the plunger a vacuum is created which allows the water to enter through the suction pipe into the working barrel and body of the pump, filling the space left by the plunger. The water is retained by a cock or valve at the top of the suction pump and is again forced by the down-stroke of the plunger through the delivery pipe, being retained by the delivery valve, and rises at each successive stroke until it reaches the point of discharge. Unless an air vessel is fixed on the main during the up-stroke of the plunger, the forward motion of the water through the delivery pipe would cease and the discharge would therefore become intermittent instead of continuous; the air being compressed during the descent of this piston or plunger re-acts and forces the water through the delivery main during the up-stroke. This prevents shock to the working parts and the same time economizes the power of the engine by keeping the water in constant motion.

Fig 51.

Fig 52.

ing to the conditions required, and may consist of one or more plungers each working in its own barrel. The barrel should be of brass or bronze but is usually, for cheapness, made of cast iron connected at one end with the delivery pipe with valve box at the other end.

The suction and delivery pipe should be of ample size, as straight as possible and perfectly air tight. Wrought Iron pipes are preferable and if bends are necessary they should be of as large a radius as possible. In cases of long suction pipes or heavy lifts, foot or retaining valves should be fitted, in fact it is better to fit them in all cases as they

Fig 53.

keep the pump charged with water. The diameter of delivery pipes should be uniform whether they are long or short. A check valve should be placed on the delivery pipe to relieve the pump from back pressure when starting or when taken apart for adjustment or repairs.

If the delivery pipe is very long the diameter of same should be increased in proportion to allow for increased water friction, but bends and angles increase the friction more rapidly than the length of pipe. All joints should preferably be flanged, well faced and the holes drilled to template as, unless the joints are well and carefully made, leakages are very liable to occur especially with heavy pressures.

Spigot and socket joints are used with success on pumping mains, but if great pressure has to be withstood, the flange joints are the best.

Toronto—Chas. Lennox, 35 Patricia Drive, is building I pair stores and apts. costing \$12,000 for Sarah J. Lennox, 35 Patricia Drive. Plumbing and heating contracts are placed with L. J. Harris, 42 Keystone Ave.

Walkerville, Ont.—Additional contracts for bank and apts. costing \$41,700 for Royal Bank of Canada, 147 St. James St. Montreal, are: plumbing and heating, Windsor Plumbing & Heating Co., 518 Pitt St. W., Windsor.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

GET BIG HEATING CONTRACT

Woodstock, Ont. — Messrs. Sheehy Brothers, local sheet metal workers, announced that they have just been awarded a fine big contract in their particular one. This is for the supplying and installing of the complete heating system in the new addition to the paper plant of the Abitibi Power and Paper Co., at Iroquois Falls, Ont.

CONSUMERS GAS OPENS NEW SHOWROOMS

Toronto.—The Consumers' Gas Co. has opened a spacious new showroom at 55 Adelaide St., E. The room occupies the entire main floor of a building entirely remodeled and to which one floor has been added. All up-to-date gas appliances are being shown.

WESTERN ONTARIO NEWS

W. J. Green, 488 Egerton St., London, Ont., has been awarded contract for hot air heating and plumbing in connection with new \$4,500 house for A. Hambleton.

W. H. Heard, St. George St., St. Thomas, Ont., contemplates building new three storey summer hotel at Port Bruce and is interested in prices of bath room and plumbing equipment.

William Stevely & Son, 197 King St., London, have been awarded heating contract for two new dwellings costing \$9,900 being erected by Gordon Waide. Plumbing work to be awarded shortly.

John Hartsell of Norwich, Ont., is preparing plans for new \$4,000 residence and wants prices on heating, plumbing and electrical equipment.

H. H. Martinson of Cottam, Ont., was awarded the contract for new hot air heating system for the Baptist Church.

Plans are being prepared at London, Ont., and work will start in the spring on new buildings for the Western University to cost \$2,000,000. Steam heating system is planned. Col. W. J. Brown, Western University, London, will look after all plans.

Alex. White, sanitary engineer, Windsor, Ont., has moved to 824 London St., West, and in the new location plans to handle metal work as well as plumbing and heating contracts.

John Walsh of Kingsville, Ont., is preparing plans for new \$4,000 residence and wants prices on plumbing, hot air heating and electrical work.

Thomas Copp, 51 Wortley Road, London, Ont., is preparing plans for three

new residences to cost \$12,000 and wants prices on hot air heating, plumbing and electrical equipment.

Plans are being prepared and work will commence at Petrolea in the spring on a new reservoir for storage purposes. The Water Commissioners also plan the installation of electrical pumps. The improvements will cost \$42,000.

Alex. Milne, 176 Wharncliffe Road, London, has been awarded contract for plumbing and heating for new \$4000 residence for D. S. Murray.

In the recent municipal election at London, has been awarded contract for the Board of Education last year missed being returned by a narrow margin.

W. R. STAVERT

For the past twenty-one years associated with Jenkins Bros., Montreal, latterly as sales manager, who, as outlined in last issue of Sanitary Engineer, has severed his connection with that company and taken over the agency for the Kerr Engine Co., Walkerville, manufacturers of valves, sprinkler equipment, etc., which he will represent in district east of Hamilton including Quebec Province.

R. McAllister of Comber has entered into partnership in the business of J. C. Mann at Essex, Ont.

Claud Chapman of Amherstburg, Ont., was awarded contract for installing steam heating system in the Central garage.

James Sandford, 613 Oxford St., London, wants prices on heating, plumbing and electrical work for new \$8000 duplex on which work has been started.

James Telfer, St. Pauls, Ont., is pre-

paring plans for new \$4000 residence and wants prices on heating and plumbing.

Williams and Roberts, of London, Ont., have opened a down town shop and showroom at the corner of Ridout and King street. In the front part of the premises an attractive display of plumbing goods, baths, toilets, etc., has been arranged.

J. M. Totten, 14 Brighton St., London, Ont., wants prices on hot air heating, plumbing and electrical work for new \$4500 residence.

A. E. White, 174 Langarth St., has commenced work on new residence to cost \$4000 and wants prices on hot air heating, plumbing and electrical work.

E. W. Moore, 370 Ontario St., London, wants prices on hot air heating, plumbing and electric work for new \$3800 residence.

A. J. Kernehan, 436 Quebec St., London, has commenced work on new residence to cost \$4000 and wants prices on hot air heating, plumbing, and electrical work.

PETERBORO AGREES TO PROVINCIAL DEMANDS

Peterboro, Ont.—The following resolution has been carried by City Council:

"That this Council, having been ordered by the Provincial Board of Health to construct sewage disposal works of the activated sludge type, direct the City Engineer to complete the details of the plans and specifications for disposal works of that system in consultation with the Provincial Engineer as quickly as they can be prepared, and that the Committee of the whole Council be directed to advertise for the construction of the works as soon as plans are completed."

PETERBORO SAVES MONEY ON WATER MAINS

Peterboro, Ont.—That a saving of over \$15,000 has been made by the Utilities Commission in laying the mains of the filtration plant themselves was revealed at a meeting of the Utilities Commission. The waterworks department estimated that the work would cost \$31,126, using ten-inch pipes. As a matter of fact, work has cost only \$23,586.86. Six-inch pipes were laid but even had the original design been carried out they would have been \$5,000 within their estimate, according to the Commission.

FIRST TOWNSHIP WATERWORKS

Scarboro, Ont., waterworks system, a project involving an expenditure of \$50,000 has been formally opened at a dinner in the filtration plant. Four hundred and fifty buildings are affected, largely private dwellings.

Water is obtained by means of a 24-inch steel intake pipe extending 2,500 feet out into the lake.

The new Scarboro system is stated to be the only waterworks system controlled by a township in all details, including supply works. York township, which is also provided with water privileges buys its water from the city of Toronto.

The filtration system used, which is called the mechanical gravity filter, differs from that used by the city of Toronto on Toronto Island. The water is first treated with alum and then allowed to settle for two hours. Gravity takes it through the filter beds composed of 30 inches of graded quartz and 18 inches of graded gravel. From there the water is collected in a reservoir. When the filter sand becomes dirty, the flow of water is reversed and the sand mechanically washed.

NEW ESTIMATES \$110,000

Port Credit, Ont.—A by-law calling for the construction of a waterworks system for the town to cost \$60,000 was passed by council. The ratepayers will vote upon this at the municipal elections. The distributing system will cost \$50,000 more and will be a separate undertaking to be dealt with under the local improvement act. The new plan means a saving of \$30,000 as the last estimates called for an expenditure of \$140,000.

INSTAL PUMP ON FURNACE

Kingston, Ont.—The County Council, has adopted the recommendation of the Property Committee to instal a motor pump at the west end furnace in the Court House for the purpose of improving the heating facilities of the building. The cost will be \$535 with an economizer, and the work will be done by Elliott Brothers.

CHATHAM INVESTIGATES SWIMMING POOLS

Chatham, Ont.—The chamber of commerce has appointed a special committee to conduct an investigation into the advisability of having a swimming pool constructed in the city. The committee will hold weekly meetings until they have something definite to hand to the public. The committee is composed of Richard Knight, chairman, Clarence Merriitt, C. A. Glock, James Ost, City Engineer, C. H. R. Fuller and Major P. K. Morley. Acting Manager W. R. Landon of the chamber of commerce is collecting data for the committee.

Contracts Awarded

CONTRACTS AWARDED

Toronto.—Byrne Bros., have plumbing contract of \$535 for new rooms at St. Bridgid's School.

Toronto.—Plumbing and heating contracts valued at \$41,979 in connection with North Toronto High School extension have been awarded to Mechanical Trades, Ltd.

London, Ont.—Additional contracts for residence costing \$9,000 for Harry Langford, 361 Talbot St., are: plumbing and heating, Wright Teale Co., 60 Dundas St.

Moncton, N. B.—Plumbing contracts for 4 tenements costing \$12,000 for A. Fownes, Union St., are awarded to T. Johnson & Co., Ltd., 895 Main St.

Montreal.—Plumbing and heating contracts for cottage costing \$14,500 for E. Vadeboncoeur, St. Catherine St., are awarded to Conroy Bros.

Montreal.—Plumbing, heating and roofing contracts for 2 residences costing \$16,000 for Manseau & Beaulieu, 375 Westhill St., are awarded to McAuley & Tucker, 7 Calumet Ave.

General contract for erection of 20 residences at cost of \$120,000 for Rockland Housing Co., Room 304, Bank of Nov Scotia Bldg., is placed with L. A. Ott & Co., 10 Cathcart St. Additional contracts are: Plumbing and heating, White & Delaney, 51 City Councillors St.

Ottawa, Ont.—Additional contracts for residence costing \$6,200 for Thos. Switzer, Eussel P. O., are: plumbing and heating. Gervin & Hodgins, Bank and Sunnyside.

Ottawa, Ont.—Additional contracts for residence costing \$9,000 for W. H. Lee, 60 Glen Ave., are: plumbing and heating, Gervin & Hodgins, Bank and Sunnyside; heating, Capital Hardware Co., 845 Bank St.

A. J. Williams, 172 Glenora Ave., is awarded plumbing contract for residence costing \$7,000 for Leday McFarland, Ltd., Bank St.

Ottawa, Ont.—Plumbing and heating contracts for residence costing \$7,000 for Miss Duhamel, care of Millson & Burgess, architects, 293 Sparks St., Ottawa, are awarded to Gervin & Hodgins, Bank and Sunnyside, Ottawa.

Toronto.—Additional contracts for residence costing \$16,000 for Dr. J. F.

Ross, 124 Castle Frank Rd., are: plumbing and heating, McNaughton & McKenzie, 1029 Shaw St.

Toronto.—Additional contracts for residence and garage costing \$17,000 for E. M. Hoare, 35 Roxboro' Drive, are plumbing and heating, John Fraser, 443 Danforth Ave.

Toronto.—Plumbing and heating contracts for residence costing \$15,000 for Mrs. Sutherland, care of Page & Warrington, architects, 199 Yonge St., are awarded to B. J. Miller & Co., 550 Bathurst St.

Toronto.—B. J. Miller & Co., 550 Bathurst St., have plumbing and heating contracts for residence costing \$15,000 for Mrs. Sprague, care of Page & Warrington, architects, 199 Yonge St.

Toronto.—Plumbing and heating contracts for 3 bungalows costing \$8,500 each for Brook Sykes, 7 Boon Ave., are awarded to John Sheard, 80 Westmount Ave.

Toronto.—Plumbing, heating and electrical contracts for residence costing \$8,000 for W. Law, 56 Innis Ave., are recorded to R. J. Ritchie, 851 Logan Ave.

Toronto.—A. Shanks, 1 Edith Ave., has plumbing contract for residence costing \$7,500 for Sharpe & Huff, 1425½ Bloor st. W. Heating contract is placed with Howard Plumbing & Heating Co., 21 Howard avenue.

Toronto.—Contracts for residence costing \$35,000 on Poplar Plains Rd., are: plumbing and heating, Mechanical Trades, Ltd., 54 University Ave.

Toronto.—Additional contracts for 2 stores and apts. costing \$10,000 each for Leo. F. Bennett, 90 Glendale Ave., and E. T. Hart, 3 Watford Ave., are: Roofing and heating, A. J. Wise Heating & Plumbing Co., Ltd., Vaughan Rd.; plumbing, Scott & Morrison, care of general contractor, G. B. Robinson, 109 Geoffrey St.

Toronto.—Heating and plumbing contracts for store and apts. costing \$9,000 for A. Calderone, care of B. Swartz, architect, 336 Dundas St., are awarded to W. H. Miles & Co., 188 Dupont St. and Geo. Elliott, care of architect.

Montreal.—Additional contracts for warehouse costing \$11,000 for J. R. Choog & Sons, 28 Bonaventure St., are: plumbing, Jno. Tweedle & Co., 103 La-gauchetiere street.

Nothing is more essential to the progress of sanitary engineering — round; by the public to the trade; by the trade to the public — between plumbers — between jobbers — between manufacturer and trade; good-will and appreciation of services be

Good-will to the manufacturer. For he must shape the crude materials into the finished product. His methods must change with the times — his policies are formed to meet conditions. Only the quality of his products must remain unchanged. For if he would progress his aim must be to keep quality before price. Satisfactory service must precede immediate gain.

Good-will to the plumber. He is the key-link in the chain. For day after day he brings health and comfort to those he serves. His handiwork saves lives. Week after week he tells the story of better home sanitation. Often he must convince clients to install equipment against their previous judgment. His big difficulty is to make people do what he knows is best for their needs. Above all, good-will to the plumber.

day business, a necessary function. He re-
sponse ensures speed in delivery. He is of great
his wares.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

P RICE developments in plumbing and steam-fitting supplies are again both numerous and important. Lower quotations appear on enamelled ware through a revision in the discounts. There has also been another reduction in malleable fittings, both black and galvanized pound goods being quoted lower. Price recessions are noted on the J.M.T. line of brass valves, also the Jenkins gate, straightway and globe valves. Other declines recorded are on coke tin plates, and plumbers' oakum, while reduced base prices on galvanized and black sheets have been announced in some quarters. The prevalence of reported price shading on range boilers is now substantiated with the general recognition in certain markets of a new lower list, although no change has been made in the manufacturers' nominal quotations. The wide variation in discounts on soil pipe and fittings is

still apparent, no readjustment having been made.

Two advances have been recorded in solder quotations, these increases affecting the different grades in varying extent. Some higher prices are also noted on brass rods and sheets, this change reflecting the continued firmness in primary metal markets. Signs of improved activity in ingot circles have resulted in higher price levels on copper, tin, lead and spelter. On the other hand, aluminum records even further depression accompanied by another slight decline. There have been some reports of price shading on radiators, current trade in these products having receded in a marked degree. Business in such lines as corrugated sheets, eavestrough and piping, is of a quiet nature at this season of the year. Slight price gains are noted in non-ferrous scrap materials, copper grades leading this upward tendency. Only minor inquiries are evident for boiler tubes.

MONTREAL MARKETS

MONTREAL, December 14.—Many important lines of plumbing and steam-fitting supplies are now recorded with changed quotations. Enamelled ware furnishes the feature, when the discount on the various lines is now quoted at 33 1-3 per cent. off, former quotations being less 20 and 10 per cent. Manufacturers of these wares announced the reduction, effective December 12th. Closet outfits with different bowls are also reduced, although the standard outfit remains unchanged. This price decline, however, is not made through lower manufacturers' prices. Another important item in the line of reduced quotations is the new list on range boilers. The unstable condition of the local market on these for some time past has resulted in some jobbing houses issuing the lower quotations, while manufacturers maintain replacement costs have not been changed. Plumbers' oakum is now quoted at \$7.35 per 100 pounds, a slight reduction being made. Pipe fittings are slightly easier, with lower prices on pound goods appearing in some quarters, and a revision is made in Jenkins valves.

Solders register a price advance, all grades being now quoted higher. Traps and bends remain at former figures, but the undertone of the market is very firm. Copper and brass scrap metals are also increased in price due to the continued strength of copper in the metal markets. Other lines are remaining unchanged with business in jobbing circles showing a slight slackening owing to the advanced season and the approach of the holiday season.

ENAMELLED WARE NOW QUOTED LESS 33 1-3 OFF

Montreal.

A reduction is announced in the quotations on the various lines of enamelled ware, through revising the discount to 33 1-3 per cent. off list prices, former discount being 20 and 10 per cent. Manufacturers issued comparative lower prices, effective December 12th, and

distributors immediately revised their lists accordingly. These lower prices are welcomed by the trade, and it is thought they will have a settling effect on the unstable conditions that have been evident on the local market for some time. The revision comes at a season of the year when little can be expected in the way of a stimulus to increased business, but it is felt that more con-

fidence will now be displayed. Following are list prices with the new discount:

Sinks, roll rim—			
18 x 30			\$23 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	\$ 7 50	\$ 7 40	\$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70

17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim, F241 or P4345			12 60
Less 33 1-3 per cent.			

LOWER PRICES ON JENKINS VALVES

Montreal

Through a change in discounts, many lines of Jenkins valves are now quoted at lower figures. Other lines are remaining unchanged at former discounts. Sorting orders of fair proportion are reported among jobbing circles, with the following revised quotations:

COMPRESSION WORK—	
Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard	40%
Do., removable disc	58%
Globe, angle and check valves, standard	20%
Gate or straightway	16/10%
Emco Globe Valves	20%
Emco check valves	20%
Jenkins Globe, angle, check and swing	
check	19%
Jenkins gate or straight way	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body gate	33%

PLUMBERS' OAKUM SLIGHTLY REDUCED

Montreal.

Slightly lower quotations are made on plumbers' oakum, and the local price is now \$7.35 per 100 pounds. Former quotation was \$7.50.

NEW LIST APPEARS ON RANGE BOILERS

Montreal

Distributors of range boilers are now using a new lower list of prices, although manufacturers state no general lowering has been announced. The 30 gallon boiler will now sell for \$8.75, with other sizes reduced accordingly. The condition of the market for some time past has been such that the new prices now given have been quoted in past weeks, through concessions made to obtain orders, but it was not thought that revision would be generally announced, considering replacement costs maintained by the manufacturers. It is hoped that a more staple condition will now prevail, although some express doubt as to this even with lower prices. Following is the new list quoted:

RANGE BOILERS—	Std.	Ex.	Heavy
30 gallon	8 75	11 25	
35 gallon	11 25	13 50	
40 gallon	13 50	16 00	
52 gallon	20 00	24 50	
66 gallon	28 00	34 00	
82 gallon	35 00	46 50	
100 gallon	45 00	55 00	
120 gallon	54 00	63 25	

SOLDERS ARE ADVANCED IN PRICE

Montreal.

Solders are now advanced in price one and one half cents per pound on all grades. Other lines, such as lead traps and bends are holding at unchanged figures for the present, but it would not be surprising if the firm tone in the market would result in a further development, covering these lines. Tin, lead and spelter each continue to show marked strength on the ingot markets with price advances made in each case recently. The tendency of lead products has been on the firm side for the past number of weeks, pending further strength in the primary sources, and it has been generally believed for the past few weeks that any price development would be in the nature of an advance. The buying movement is seasonably slow at present, with following prices now quoted:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 10¼
Do., 4 to 8 lbs., sq. ft.	0 09½
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 27¾
Do., strictly, lb.	0 25¾
Do., commercial, lb.	0 22¾
Do., wiping, lb.	0 23¾
Do., wire, lb.	0 37¼
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

SOME REVISIONS IN CLOSET OUTFITS

Montreal.

Accompanying the lower quotations in other lines of enamelled ware, are revisions made in some of the extra bowls in closet outfits, although the standard outfit remains unchanged. The wash-down, reversible trap and "Riche-lieu" bowls are each quoted at lower figures. Following are the revised net prices:

CLOSET OUTFITS—

Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., "Riche-lieu" bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitreous China	20 00

EASIER TONE IN PIPE FITTINGS

Montreal.

An easier tone has again developed in the market for pipe fittings, and is now pronounced in a slight reduction made in pound goods in some quarters. A reduction of one cent per lb. is announced by some jobbing houses, but owing to still lower quotations formerly existing in other quarters, prices quoted below are nominally unchanged. Other fittings are for the present unchanged, and following are prevailing discounts:

PIPE FITTINGS—	Per Cent.
Cast iron fittings	25
Bushings, cast	27½
Bushings, malleable	25
Flanges	37½
Plugs	27½
Flange unions	22½
Malleable unions	42½
Dart unions, black	33
Do., galvanized	13
Nipples, ½ to 4" close and short	50
Do., long	60
Do., 4½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4½" and larger	10
Pound Goods—	Blk. Galv.
Class A	0 53 0 65
Class B	0 21½ 0 28¼
Class C	0 14 0 21½

BOILER TUBES NOW ON A DULL MARKET

Montreal.

The buying movement in boiler tubes is now seasonably slow, with prices remaining unchanged. The usual winter demand for repair work is anticipated, but little increased activity of a marked nature is expected until after the quiet months in the earlier part of the new year. Following are quotations:

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70
1¼ inch	24 50
1½ inch	24 00
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2½ inch	27 75	23 50
2¾ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

BAR IRON AND STEEL PRICES HOLD

Montreal.

The basic price of common bar iron remains at \$2.96 generally, but a quotation slightly less is given in one quarter. Although there would appear to be an easier tendency in the market, distributors state that there is little likelihood of a further change in a downward direction this year. The last revision, it is claimed, was made owing to local conditions, without any material change noted at the primary sources. One large local distributor stated to Sanitary Engineer that their warehouse was now practically bare, and would remain so until a more active demand was evident in the early months of the New Year. Undoubtedly stocks are in the same position in all parts, and with a slight indication of a firmer situation, the buying movement would commence. For this reason the trend for the New Year would seem of a steadier to firmer basis, with chances of a change in prices in an upward direction. Prevailing local quotations are as follows:

IRON & STEEL—

Common bar iron, 100 lbs.	2 90
Refined iron	4 40
Iron finished machinery steel	2 95
Mild steel	2 90
Single reeled machinery steel	4 75
Band steel	2 90
Spring steel	4 50
Sleighshoe steel	2 90
Tire steel	3 10
Toe calk steel	3 80
Harrow tooth steel	3 05
Mining teeth steel per lb.	0 22
Black Diamond tool and cast steel	0 22

NOTE—Refined iron is approximately \$1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

COTTON MARKET LITTLE CHANGED

Montreal.

The position in the cotton market shows little change in the past two weeks. The strength displayed some time ago has now subsided, with waste prices still remaining at former quotations. There is said to be every chance of a revision in the earlier weeks of the new year, and future developments will be watched with interest. Present quotations are as follows:

COTTON WASTE— Cream polishing, 20c; White, XXX, 17c; XX, 16c; X, 15c; XLCR, 15c; X Empire, 14c; X Press, 13c; 6 X Special, 12c. Colored, Fancy, 14c; Lion, 12½c; Popular, 10c; Keen, 9c. Wool Packing, Arrow, 30c; Axle, 25c; Anvil, 20c. Dominion Wipers, Washed and Sterilized, White cotton, 20c; colored cotton, 14c.

Above lines subject to trade discount for quantity.

SHEETS ARE NOW QUIETER

Montreal.

Nominal sheet quotations remain unchanged at the revision of two weeks ago, and little change is now expected until after the first of the year at least. The sheet market in general shows little activity at present, the usual December quietness everywhere evident. The call for Canada plate and galvanized iron, has not subsided with the advanced stage of furnace and stove pipe works.

Interest is commencing to be shown

in connection with any development that might take place with the opening of the New Year. It is generally conceded that more active demand will firm the situation, but the extent of increased business and the time that such is likely to take place is problematic at present. Undoubtedly mill prices compare well with present productive costs, and in this connection it is stated that the recent revision to lower levels on the local market was the result of current domestic conditions rather than any development at the sources of supply. Following are nominal prices:

BLACK SHEETS—

10 gauge	4 00	4 65
12 gauge	4 10	4 75
14 gauge	4 40	4 85
16 gauge	4 50	4 95
18-20 gauge	4 55	5 29

LITTLE BUSINESS IN EAVES- TROUGH

Montreal.

The season for eavestrough and conductor pipe is now practically closed and with the holiday season now at hand, little will be done with regard to bookings for next year until next month. Prices are holding at revised discounts announced a few weeks ago. Following are list prices and discounts:

EAVESTROUGH—

O. G. Square Bead—Per 100 ft.				
8 inch	10 inch	12 inch	15 inch	18 inch
\$15 90	\$17 70	\$21 20	\$28 80	\$36 80

5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

NO CHANGE IN WROUGHT PIPE**Montreal.**

Wrought iron and steel pipes continue to sell under list No. 53, with the demand continuing fair for this season of the year. With the approach of the new year, the movement is expected to show little further activity as December and January are usually the quiet months in goods of this class. Producers are operating to fair capacity, but here too a slackening in the present output is looked for in the months immediately to follow.

Price List No. 53.

HIGHER PRICES ON BRASS**AND COPPER SCRAP****Montreal.**

Non-ferrous scrap metal, insofar as brass and copper are concerned, have new higher quotations. The continued firmer tone of copper on the metal markets has improved the tone of the scrap market on these metals in the past few weeks, and the advance in prices has been expected. Other lines remain at former figures with the market still very dull. With the closed winter weather now at hand, little improvement can be expected until the earlier months of the new year. Following are present quotations:

SCRAP—

Automobile tires	0 75
Rubber Shoes	0 03
Yellow brass	0 05
Red brass	0 09
Light brass	0 03½
Scrap zinc	0 03
Lead, heavy	0 04½
Lead, tea	0 02½
Light copper	0 08
Heavy copper	0 10½
Wrought iron, R.Rd., No. 1 per gr. ton.	10 50
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 50
Heavy melting steel	7 50 to 8 00
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	21 50

NO FURTHER CHANGE IN SOIL PIPE

Montreal.

No further change has developed in the market for soil pipe and fittings since the revision of two weeks ago. Prevailing prices remain steady on the

local market, notwithstanding these are considerably lower than in other markets. Western markets report that their distributors are hoping for an early improvement in Montreal's trade conditions, placing the responsibility for the variations in quotations on an unsettled market. Local dealers, however, maintain there is no indication of a revision in prices from the marked reduction made last month, and general market conditions in heavier iron goods would have to show a general improvement before any great change could take place. Following are local quotations:

SOIL PIPE—

2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%
Fittings—	
2 to 6 inch	50-10%

BUSINESS IN RADIATORS IS QUIETER

Montreal.

With the season advancing, radiators and boilers are now moving much slower. The demand for these products has been well maintained throughout the fall months and dealers are not surprised at the present slackening as building construction is well advanced in most quarters. Prices and discounts are holding as follows:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 53% for hot water and 54% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 50%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 0 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 10 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in. to 36-in., 10 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 10 per cent. Ontario Govt. trimmings, net list.

Round steam boilers, standard trimmings, 20 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

TIN FEATURES THE INGOT METAL MARKETS

Montreal.

The metal markets have all been firm during the past week with some showing more strength than others. The chief feature has been the advance in tin, and the sharp advance in all foreign exchanges, which has tended to give a very firm tone to the markets. Locally conditions have been rather quiet and buyers generally have not been keen on following the advance.

TIN.—The London market is very strong and has advanced over £20 from the low point. The pace has been rather rapid and a re-action would not be surprising. At the same time those in control are quite capable of pushing prices still higher. The local market is strong at 39½ cents.

COPPER.—New York seems to have reached the top on the present movement, but business remains good. London is

slightly easier owing to the advance in exchange. The market will probably be quieter until after the turn of the year. Local quotations unchanged at 18cts. for electro, 17½cts. for casting.

LEAD.—Both London and East St. Louis are steady with little change in price. Demand remains fairly good and there is no surplus of prompt lead. It is possible that the market may not hold at today's level, but there is no sign of weakness as yet. Local price 7½ cents.

SPELTER.—There is not much change in this metal, although the demand on this side is probably lighter than has been the case recently. It is expected, however, that demand will improve after the first of the year, and producers are not cutting their prices. Local market slightly lower at 7¼ cents.

ANTIMONY.—There are no new features to this metal, and business is dull with prices unchanged at 7 cents

for Chinese, 8 cents for high grade English.

ALUMINUM.—This metal continues dull on the market, with quotations also unchanged at 27 cents.

DULL SEASON FOR CORRUGATED SHEETS

Montreal.

With the season practically closed for this year sales of corrugated sheets have shown a decided slackening in recent weeks. Little increased activity is now looked for until after the turn of the year at least. Quotations are continuing unchanged since the revision of a few weeks ago as follows:

CORRUGATED SHEETS—		Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50
Less 7½%.		
Lighter than 24 gauge and wider than 27 inches,		
75c a square extra.		

TORONTO MARKETS

TORONTO, December 14.—Two advances have been recorded in solder quotations since the last market report covering steam-fitting and plumbing supplies. The higher price levels on solders appear in varying extent on the different grades. Increases are also noted on brass rods and sheets, this change reflecting the firmer tone in primary metal markets. Slight price gains are recorded on non-ferrous scrap materials, grades of copper scrap leading the upward tendency. Signs of activity in the ingot markets attract attention, with some higher prices on copper, tin, lead and spelter. Other metals remain quiet, with easier prices on aluminum.

Price declines are both numerous and important. Another reduction is recorded in malleable fittings, both black and galvanized being quoted one cent per pound lower. Quotations on enameled ware also register a decline through a revision in the discounts. Recessions appear on the J.M.T. line of screwed brass valves, also the Jenkins gate, straightway and globe valves. Coke tin plates are shown with easier price levels, the Canada and terne plates retaining previous quotations. Some lower base prices on both black and galvanized sheets are noted in certain quarters, while the iron and steel markets generally remain at moderate levels. The market in soil pipe and fittings still records a variation in discounts, no settlement having been announced. The nominal list on range boilers has succumbed to the prevalence of price shading, quotations of \$9.00 and \$8.75 on the 30-gallon standard size being almost generally recognized.

PRICE INCREASES ON BRASS RODS AND SHEETS

Toronto.

Following the higher price levels recently announced on copper products such as sheets, rods and tubing, a corresponding increase has now developed on certain brass goods. This change affects brass sheets and rods, both these lines registering quotations which are 1 cent per lb. higher than formerly. Other price levels are remaining at recent new revisions.

In discussing these latest market developments in brass and copper products with one manufacturer, Sanitary Engineer was informed that such increases reflect the trend of prices on basic products. The raw material markets have been through a period of depression,

and prices on semi-finished goods were comparatively low as a result of these conditions. However, it was pointed out that quotations are not generally expected to go up much higher, at present, because of the fact that the recent upward movement in copper has eased a little. The current increases already reflect the extent of the gains recorded in primary circles. It is noted that base tubing prices are unchanged. Following are the new quotations:

BRASS—	
Sheets, base, per lb.	\$ 0 23
Rods, base, per lb.	0 21
Tubing, base, per lb.	0 25
COPPER —	
Rods, base, per lb.	0 23
Soft sheets, plain, 1 oz. and heavier, lb.	0 30
Do., plain tinned, 16 oz. and heavier, lb.	0 37
Do., polished and tinned, 16 oz. and heavier, lb.	0 42
Tubing	0 29

TWO ADVANCES RECORDED IN SOLDER QUOTATIONS

Toronto

Since the market on lead and zinc goods was described as very firm in the last issue of Sanitary Engineer, two distinct increases have been recorded in quotations on solders. The initial change was an advance of 2 cents per lb. on all grades, thus reflecting a considerably stronger tone and also the recent price gains which have developed on primary metals entering into the manufacture of these products. It was pointed out in a previous market report that an upward revision was expected sooner or later.

The second advance to even higher price levels shows a varying increase of one and two cents per lb., wire solder and guaranteed now recording the most marked advances. Following is the revised price list

LEAD AND ZINC GOODS—	
Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Cut sheets, 4 to 6 lbs., sq. ft. in rolls, lb	0 09½
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 32½
Do., commercial, lb.	0 22½
Do., strictly, lb.	0 24½
Do., guaranteed, lb.	0 27½
Do., wiping, lb.	0 22½
Zinc sheets, per lb.	0 12

LOWER QUOTATIONS ON ENAMELLED WARE

Toronto.

Lower quotations are now given on enamelled ware through a revision in the discounts. This change has been looked for in these products for some time, but with the exception of a change in eastern markets which did not materialize locally and failed to hold for any length of time, quotations throughout the season generally remained unchanged.

Manufacturers are now reported to be taking advantage of some recessions in production costs and the revised discount level also indicates that higher priced stocks have now been more or less liquidated. The net prices on the all-steel enamel baths have been lowered on each side. Other list quotations are unchanged, with the easier discount available. Following are the current quotations.

ENAMELLED WARE—	
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F154 or P3845 or P3847	23 60
18x21" Apron F169 or P4205	17 60
18 x 21" Roll Rim, F197, F199 or P4655-6	15 40
17 x 19" Roll Rim, F241 or P4345	12 60
Sinks, Roll Rim, 16x24 in.	18 10
Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70
Sinks, Flat Rim—	1 only 2 only 3 only
16 x 24	\$7 60 \$7 70 \$7 80
18 x 30	8 50 8 60 8 70
20 x 30	9 70 9 80 9 90
Above prices list, less 33 1-3 per cent.	
All steel enamel baths, 4 and 4½ ft.	\$14 00
Do., 5 ft.	15 00
Do., 5½ ft.	16 75
These quotations are net.	

LOWER BASE PRICES ON GALVANIZED SHEETS

Toronto.

Prevailing quotations on both black and galvanized sheets have been reduced 25 cents per 100 lbs. in certain quarters. This decrease brings the galvanized base price from \$6.10 down to \$5.85; while the new quotation for 28 gauge black sheets is \$4.50. Other dealers are still adhering to the previous levels, and the spread in the market is indicated by the range shown on the lists quoted herewith.

The current volume of trade in sheets and plates has receded from the active levels recorded during the Fall period. The local market is now described as quiet, but fair for this time of the year. On the primary centres, the proportion of railroad buying is a factor serving to maintain a good proportion of orders for these products. Business in the steel industry generally records a nominal basis of operation, with a further improvement looked for in the Spring.

Toronto.

BLUE ANNEALED—

10 gauge, base	4 00	4 50
12 gauge	4 05	4 55
14 gauge	4 10	4 60
16 gauge	4 15	4 65

BLACK—

18-20 gauge	4 30	5 05
22-24 gauge	4 35	5 10
26 gauge	4 40	5 15
28 gauge	4 50	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—

	Queen's	Fleur-de-lis.
28 gauge	8 25	7 75
26 gauge	8 00	7 50
24 gauge	7 60	7 10
22 gauge	7 25	6 75
18 and 20 gauge	7 10	6 60

Premier and Apollo—

10½ oz.	6 25	7 00
U. S. 28, base	5 85	6 60
U. S. 26	5 55	6 30
22 and 24	5 40	6 15
18 and 20	5 25	6 00
16	5 10	5 85
12 and 14	4 95	5 70

An extra is now charged on galvanized sheets, 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing sheets.

ANOTHER PRICE DECLINE ON COKE TIN PLATES

Toronto.

Further reductions of a substantial nature have been announced in prices on coke tin plates. The extent of the decline is approximately 15 per cent., applying to both IC and IX grades. Other quotations covering charcoal tin and terne plates, remain unchanged at prevailing levels. The list prices on Canada plates, however, are reported as subject to slight variation where an attractive inquiry induces easier quotations. Following are the current revisions:

PLATES, CANADA—	Per box
Dull, 60 sheets	5 65
Ordinary, 52 sheets	5 60
PLATES, COKE TIN—	
IC, 20 x 28, 112 sheets	13 50
IX, 20 x 28, 112 sheets	16 50
IX, 20 x 28, 56 sheets	9 00
PLATES, CHARCOAL TIN —	
IX, 20 x 28, 112 sheets	14 00
1XX, 20 x 28, 56 sheets	16 00
PLATES, TERNE—	
IC, 14 x 20, 112 sheets	12 00

PRICE RECESSIONS APPEAR ON BRASS VALVES

Toronto.

Another downward revision has been announced in quotations on certain brass valves. This change is chiefly attributed to the fact that manufacturers have decided to meet competition, while basic market conditions do not call for additional price lowering on the finished products at the present time. The trend of both copper and brass in the raw material and semi-finished stage, is of an upward nature. However, the current recessions appear on the J. M. T. line of screwed valves and also the Jenkins gate straightway and globe valves. Following are the new discount quotations:

VALVES—	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecoaks, stand'd	54
Roundway stop and waste cocks, std.	46
Brass steam cocks, standard	40
Globe, angle and check valves, std.	20
Mueller globe, angle and check	20
Mueller composition disc steam valves ..	20
J. M. T. valves, screwed	20/10
J. M. T. C., screwed	25/10
J. M. T. gate valves, screwed	25
Jenkins gate or straightway, screwed ..	25
Jenkins globe, screwed	19
Radiator valves, standard	58
Do., removable disc	58
Emco, J. D. valves, screwed	20
Emco, check valves, screwed	20

Emco, Globe valves, 2½" to 3", screwed ..	20
Basin cocks—	
No. 1 and 1, Fuller pattern	30
Quick opening No. 3633	43

REPORT PRICE SHADING ON RADIATOR QUOTATIONS

Toronto.

Rumors of price shading on radiators and boilers have now appeared in these markets. No great importance is attached to this reported condition at the present time, however, the nominal price lists being generally unchanged locally. In discussing the current trend of business in these products with manufacturers and distributors, Sanitary Engineer was informed that it is the intention of the producers to stand pat on prevailing prices for the balance of this year. Trade in radiators was quite brisk up until the end of November, but the last two weeks has registered a marked falling off, which is however, usual at this season. Following is the nominal list of prices and discounts:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 53 per cent. for water and 54 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 48 per cent. for water and 49 per cent. for steam.

Discounts on 1-column hospital size, water 30 per cent.; steam 31 per cent.

Wall radiators—5 ft. \$1.15; 6 ft. \$1.10; 7 ft. \$1.05; 9 ft. \$1.05; 12 ft. \$1.05. Discount 50 per cent.

BOILERS—

Water: Round, 60 per cent. off list. Square 10 per cent. off list.

Steam: Round, 15 per cent. off list; square, 5 per cent. off list.

ANOTHER REDUCTION IN MALLEABLE FITTINGS

Toronto.

Another minor reduction is recorded in malleable pipe fittings, this change affecting all classes in both black and galvanized. The extent of the decline is one cent on each grade, and the revised quotations are included in the lists given below.

PIPE FITTINGS—	Per cent.
Cast iron fittings	25
Plugs, cast iron	28
Do., solid	28
Do., countersink	28
Bushings, mall.	28
Do., cast	28
Unions, ¼ in. to 2 in.	45
Do., 8 in., 2¼ to 4 in.	45
Flanged unions	25
Dart unions, blk., ¼ to 2 in.	33½
Do., ½ in., 2¼ to 4 in.	23
Do., galvd., add to black	30
Nipples, blk., and galvd. ½ to 4 in.	50
close and short	40
Do., 4½ in. and larger	40
Do., long, ½ in. to 4 in.	60
Do., 4½ in. and larger	50
Do., running thread	30
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—

	Black	Galvanized
Class A	0 54	0 67
Class B	0 22	0 32
Class C	0 14	0 22

ONLY MINOR INQUIRIES FOR BOILER TUBES

Toronto.

Prices on boiler tubes continue to remain at unchanged levels, the current volume of inquiry not being sufficient to bring out easier quotations. For some time past it has been thought in certain quarters that lower price levels on boiler tubes would not be surprising, but distributors state that at the existing minor proportion of business activity, the prevailing quotations on these products are well representative of current market costs. A strong demand might produce some future reductions, but no marked improvement is looked for at the present season of the year. Following is the nominal list:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00
1¼ inch	27 25
1½ inch	26 25
1¾ inch	29 75	25 00
2 inch	28 00	22 00
2¼ inch	32 00	25 00
2½ inch	40 00	27 00
3 inch	44 00	35 00
3½ inch	60 00	40 00
4 inch	75 00	50 25

SOIL PIPE MARKETS STILL SHOW VARYING PRICES

Toronto.

While the quotations on soil pipe and fittings are still unchanged on the local markets, the question as to probable future developments is naturally receiving a great deal of attention throughout the trade. One distributor expressed the opinion that if the prevailing low levels are maintained in Montreal for any length of time, such a situation was more or less bound to directly affect the Ontario markets, and future discount changes are looked for. On the other hand, the expectation prevails in some quarters that quotations in eastern centres will again be revised to the previous existing levels, as soon

(Continued on page 32)

A NEW FEATURE

A-2150 **MUELLER** Combination Lavatory Supply with Pop-up-waste is so designed that the stems of the supply valves may be refitted with seat washers or repacked without disturbing the connection between the supply valve bodies and the lavatory, a feature peculiar to **MUELLER** patterns.

Five hundred of these were installed in the new addition to the King Edward Hotel, Toronto. This is only further evidence of the up-to-dateness of **MUELLER**-designed fittings.

This design has appealed to the Architect as well as to the Plumber by reason of its utility, beauty and elegance.

TORONTO MARKETS

(Continued from page 30)

as the current stocks of soil pipe are disposed of at the prevailing discounts. Another viewpoint covered the possibility of these easier price levels being offered on soil pipe and fittings in order to attract other business in similar commodities. Whether such a condition would meet with much success, cannot be immediately ascertained. However, the current situation provides an extraordinary precedent in the wide range now evident between quotations given on the two chief distributing centres in Eastern Canada.

No further change has developed in the market and the general situation remains as outlined in the last issue of Sanitary Engineer. Prices remain steady on the domestic products, with the local distributors hoping for an early improvement in the Montreal trade conditions. Indications that a settlement will be made as regards the recent lower quotations, are prevalent; while business is seasonably dull in these products. Nominal unchanged discounts on soil pipe and fittings are as follows:

SOIL PIPE—	
2 inch	25 per cent.
3 inch	30 per cent.
4 inch	30 per cent.
5 and 6 inch	30 per cent.
8 inch	net
FITTINGS—	
2 to 6 inch	40-19 per cent
8 inch	Net

SLIGHT PRICE GAINS IN NON-FERROUS SCRAP

Toronto. Additional higher prices have appeared in the scrap material markets, these changes chiefly affecting heavy melting steel, and steel turnings; also non-ferrous metals such as heavy copper and wire, light copper, heavy yellow brass, and scrap zinc. There is a little more activity reported, but the degree of improvement has been very slight; the higher quotations resulting from the strength apparent in certain primary markets, together with a feeling of confidence. Dealers' average buying prices for fairly large quantities are as follows:

SCRAP MATERIALS—		
Scrap Iron		
Gross Tons —		
Heavy melting steel (Hamilton)	11 50	\$12 00
Borings and turnings	2 50	3 50
Revolving rails	10 50	11 50
Scrap pipe	6 00	7 00
No. 1 railroad wrought	10 25	11 25
Steel turnings (Hamilton)	6 50	7 50
Agricultural malleable	10 00	11 00
Railroad malleable	11 00	12 00
Net tons —		
No. 1 cast	15 00	16 00
Stove plate	11 00	12 00
Grate bars	10 00	11 00
Standard car wheels	13 50	14 00
Scrap Metals.		
Heavy copper and wire	10 00	11 50
Light copper	8 00	9 00
No. 1 composition	9 00	10 00
No. 1 comp. turnings	6 00	7 00
Light brass	3 25	3 75
Heavy yellow brass	5 50	6 50
Heavy lead	4 00	4 50
Tea lead	2 00	2 50
Scrap zinc	4 00	4 50
Scrap Rubber.		
Boots and shoes	2 50	3 00
Lumbermen's rubber boots	2 00	2 50
Auto tires	0 50	1 00
Solid tires	0 75	1 25

ONLY MODERATE TRADE IN BOWLS AND FIXTURES

Toronto.

Current trade in closet combinations and fixtures is now at a moderate level. This condition is stated as customary for the present season of the year, when the holiday season, which is followed by the annual inventory period, are matters receiving general attention. Quotations on these products remain unchanged at the following levels:

CLOSET COMBINATIONS, low down		each
Closet, standard outfit, oak	28 00	
Do., with post hinge seat	28 75	
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	31 00	
Do., vitreous china, with oak post hinge seat and cover	31 55	
Do., vitreous china, with mahogany post hinge seat and cover	31 75	
Do., white Vitro or Pussyfoot, with mahogany post hinge seat and cover	31 55	
Do., white Vitro or Pussyfoot, with mahogany post hinge seat and cover	31 75	
Do., enamelled iron tank with oak post hinge seat and cover	31 55	
Do., enamelled iron tank with mahogany post hinge seat and cover	31 75	
Additions or reductions to above		
Add for reversible trap bowl	1 25	
Add for syphon jet bowl	7 00	
For ¾ in. valve on supply pipe	1 50	
Deduct for supply pipe	0 70	
Deduct for floor flange and bolts	0 80	

CLOSET BOWLS—	
Washdown bowl, less spud	10 00
Reversible trap bowl, less spud	11 25
Syphon jet bowl, less spud	17 00
"Richelieu" bowl	10 50

CLOSET TANKS, low down	
Oak, Vitro or Pussyfoot tank with fittings, less seat	13 10
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 25
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	20 25

CLOSET SEATS—	
Oak wood strip seat and cover	3 70
Oak post hinge seat and cover	4 75
Mahogany finish post hinge seat and cover	5 00

STILL REPORT PRICE SHADING ON RANGE BOILERS

Toronto.

Some indications of lower prices on range boilers continue to be apparent on the weekly markets. The nominal price of \$9.25 on the 3-gal. standard size, has been shaded in some quarters to \$9.00 and then \$8.75. Other reports confirmed this quotation, and although the official list remains at present unchanged, this is stated to be the recognized general nominal price list at which range boilers are now being offered. Current business in these products is described as quiet, and this condition is generally thought responsible for the desire to move stocks at the easier quotations. The following is the nominal unchanged list:

RANGE BOILERS—		Standard	Ex. Heavy
30 gallon	\$ 9 25	\$11 75	
35 gallon	12 00	14 50	
40 gallon	14 50	17 00	
52 gallon	21 00	26 00	
66 gallon	30 00	36 00	
82 gallon	37 50	50 00	
100 gallon	48 00	58 00	
120 gallon	57 00	67 00	
144 gallon		76 00	

IRON AND STEEL MARKETS AT FAIR LEVELS

Toronto.

Quotations on bar iron and steel are generally being maintained at the nominal list recently effective. A few minor instances are reported, however,

where some slightly easier prices have been given. This condition is stated as applying solely to odd sizes and exceptional circumstances, with no general tendency in this direction. The basic market quotations are also reported to be on fairly firm levels at the present time, with conditions in the industry generally reported as favorable for the current season. The structural and bar iron markets are described as waiting the impetus expected from new business in the early months of the new year. Tin plate and pipe mills supply the feature spots in current production activity. Following are the average local market prices on bar iron and steel:

IRON AND STEEL			
Mild steel bars, base	3 00	3 25	
Mild steel bands, 3-16 in. base	3 50	3 75	
Bar iron, base	3 00	3 25	
Angle iron, base	3 10	3 35	
Horseshoe iron	3 75	4 10	
Tire steel	3 50	3 75	
Spring steel	5 50	6 00	
Crucible cast sheet steel	30 00	35 00	
Mining drill steel		18 50	
Cast tool steel, medium	20 00	23 00	
Cast tool steel, high grade	30 00	36 00	
Sleigh shoe steel	3 00	3 25	
Norway iron	12 50	15 00	
Toe caulk iron	4 00	4 50	
Hoop steel	4 50	5 00	

SIGNS OF ACTIVITY IN INGOT MARKETS

Toronto.

Lead, tin and spelter, are other ingot metals which have recently developed signs of activity, in addition to copper. Antimony still remains on a moderate basis, with the demand of a very quiet nature. Aluminum quotations sagged sharply on primary markets, and are probably touching bottom. In contrast to these tendencies, an upward movement has been recorded in prices on both tin and lead, while copper quotations are also advanced another ½ cent in one quarter.

COPPER.—Although the rapid advance of copper on primary markets has recently shown slight moderation, the general firm tendency is reflected in local quotations. An increase of ½ cent is again recorded, while the price of 18 cents has also appeared. Whether the undertone will continue its present strength and even up at higher levels, is stated as dependable upon the proportion of demand at the current market basis. Local prices show a variation between 17½ and 18 cents.

TIN.—Further advances in tin prices are again recorded, this condition being apparent on both the primary and domestic markets. The strength of the general trend, and the improved position of this metal, have resulted in quotations being again advanced, this time to the extent of 2 cents. The level of 39 cents, is now generally in effect. Tin is described as having been down in the dumps for some time, and the present upward tendency is generally welcomed in metal circles, chiefly because of the reflection of a greater volume of activity.

LEAD.—The outlook for lead has al-

so recently improved, and some local quotations have been slightly increased. The current demand, however, has not recorded any marked degree of improvement, but the undertone in this market is considerably firmer. The average local price has firmed up to the level of \$6.75.

SPELTER.—The market for spelter has shown some recovery from the recent depression, and as a consequence, prices are also showing a firmer tone.

WINNIPEG MARKETS

WINNIPEG, December 14.—Nominal prices on plumbing, steam-fitting and sanitary supplies generally remain unchanged, but some indication of shading certain quotations has recently appeared in some quarters. This situation chiefly applies to such materials as Canada plate and soil pipe. The incentive to reduce stocks on hand, coupled with attractive inquiries for this season of the year, is attributed as conducive to these prevailing price variations. Current business in wrought piping is of a quiet nature, while the lower price levels recently announced on both black and galvanized sheets remain in effect.

BUSINESS IN PIPING OF QUIET NATURE

Winnipeg.

No further changes have been announced in the quotations on wrought iron piping, since the revision to lower price levels recently effective. As to whether further recessions will develop in the future is stated as depending principally upon the demand. Current quotations are as follows:

WROUGHT PIPE—

	Black, Galvanized. Per 100 lbs.	
1/8 inch	6 25	8 50
1/4 inch	4 96	7 48
3/8 inch	5 10	7 63
1/2 inch	6 56	8 50
3/4 inch	7 90	10 10
1 inch	11 27	14 53
1 1/4 inch	15 25	19 67
1 1/2 inch	18 25	23 50
2 inch	24 55	31 65
2 1/2 inch	38 80	50 00
3 inch	50 80	65 45
3 1/2 inch	65 50	83 20
4 inch	77 60	98 50
4 1/2 inch	88 85	113 00
5 inch	103 60	132 00
6 inch	134 40	171 25

LOWER PRICES ON SHEETS REMAIN IN EFFECT

Winnipeg.

The recent lower price levels on black and galvanized sheets remain firm, and it is thought they will remain in effect for at least a few weeks. Following are the present quotations:

SHEETS—

	Black Galvanized. Per 100 lbs.	
10 gauge	5 70	7 00
12 gauge	5 70	7 00
14 gauge	5 80	7 05
16 gauge	5 90	7 15
18 gauge	6 30	7 40
20 gauge	6 30	7 40
22 gauge	6 35	7 05
24 gauge	6 35	7 05
26 gauge	6 40	7 20
28 gauge	6 65	7 80
10 3/4 oz.	8 20	

The local quotation has generally advanced to \$7.25.

ANTIMONY.—The current demand for antimony remains of a quiet nature, and there is little new to record in this market. Between 8 and 10 cents remains the average local quotations.

ALUMINUM.—This metal has been marked by a sharp reduction in prices on the primary centres. Some local recessions are also apparent, this change reflecting the general easier tone. The market is described as continuing extremely dull, while prices on the domestic market have receded to 27 cents.

UNSETTLED MARKET ON SOIL PIPE AND FITTINGS

Winnipeg.

Current quotations on soil pipe and fittings are reported as being shaded in some quarters. While business in these products has been fairly brisk during the early fall, the recent volume of trade has shown a marked recession, due to climatic conditions. It is inferred among certain wholesale houses that an inferior grade of soil pipe has appeared on the market, thus tempting dealers to shade quotations in order to meet this style of competition. However, the nominal list prices at present remain unchanged as follows:

SOIL PIPE & FITTINGS—

Soil Pipe.

2 and 3 inch, 20 per cent. off.
4 inch, 30 per cent. off.
5 and 6 inch, 25 per cent. off.
8 inch, 10 per cent. advance.

Fittings:

2 and 3 inch, 40 per cent. off.
4, 5 and 6 inch, 45 per cent. off.
8 inch, 10 per cent. advance.

SLIGHT VARIATION IN CANADA PLATE PRICES

Winnipeg.

Although some lower prices have been quoted for Canada plates, this is principally due to dealers endeavoring to reduce their stocks. Generally, the prices remain unchanged. Following are the prevailing levels on these products:

CANADA PLATES—

	Per box
Blued:	
18 x 24	\$ 7 25
18 x 24	7 25
20 x 28	7 25
Tin Plates:	
IC, 20 x 28	21 50
IC, 20 x 23	26 25
IX, 20 x 28	24 75
IX, 20 x 33	31 00

.AGRICULTURAL WRENCHES ON. LOWER PRICE LEVEL

Winnipeg.

Another reduction has been announced in quotations on agricultural wrenches. The new prices are as follows:
AGRICULTURAL WRENCHES—6 inch, per doz., \$5.25; 8 inch, \$6.30; 10 inch, \$7.75; 12 inch, \$9.45; 15 inch, \$12.60.

COSTS OF WARM AIR

INSTALLATION

(Continued from page 17)

162 square inches his price is \$1.42 per square inch, and at \$.667 per inch it is really worth \$108.05.

Note that the cheap A job cost at end of the first season \$26.71 the most; and will cost \$96.00 extra for many years.

I think this table shows us that the job that is planned best, following the assumption credited to the architect, is coupled with the minimum cost per square inch of actual delivery; that is to say, of actual performance.

Now allow me to follow up two of these jobs one heating season. An unlucky man bought the A house; a more fortunate man bought the C house at the same price as the first man paid.

The latter lived in a comfortably heated home using 7 tons of coal, while the unlucky owner was never really comfortable, although he burned 15 tons of coal. Our fortunate owner likes his town, he likes his house, and his Realtor; he respects his coal dealer and worships his heating plant.

Our unlucky owner regards everybody as a grafter; he hates his town, he abuses all "real estate houses." He reviles his coal dealer and curses his furnace, although it is a duplicate of the furnace in our fortunate owner's house. I indicated earlier that every error A accomplished could be duplicated in either water or steam. If our unlucky owner had a home containing a hot water plant of the same quality his troubles would be of the same nature.

He who properly warms and humidifies a home enlarges the sphere in which correct American principles may be inculcated—in which art, music, literature and the human affections and resulting obligations may grow—in a word: Where Christian civilization may prosper.

I have added this just to be certain that our modern equipment justifies the adjective "modern" in its best sense. No home is truly an American home unless it provides comfortable conditions where the younger members love to spend much of their time. Modern equipment at minimum cost is therefore essential in modern life.

PUMP CONTRACT AWARDED

The Dominion Engineering Works, Limited, Lachine, Quebec, have secured the contract for the 3 30-million-gallon electric pumps, 12 36-inch Johnson combined stop and check valves, and 6 42-inch gate valves, required for installation in Montreal's new low level pumping station.

A. R. Wilson, plumber of Sherbrooke, P.Q., is building a new business block on Frontenac St. and will occupy one of the stores himself. There will be several apartments above the stores for residential purposes.

CRANE DRAINAGE FITTINGS

ARE MADE WITH A SHOULDER AND ARE THE SAME INSIDE DIAMETER AS WROUGHT PIPE. THE PIPE SCREWS IN UP TO THE SHOULDER MAKING A CONTINUOUS PASSAGE, LEAVING NO POCKETS IN WHICH SOLID MATTER CAN LODGE.

We recommend the use of our drainage fittings for Vacuum Cleaning installations. Fittings that are ordinarily tapped pitched for drainage work can be furnished without pitch to order.

All drainage fittings are recessed to allow easy entrance of the pipe.

BETWIXT or the Biggest Thing BETWEEN

By Booster Binx

Betwixt and between, if I remember what my little old red school house spelling book said, is about the same as having something on either side.

Which I have a notion is the same as saying that your boiler stands between the coal bin and the chimney. Forever and always the coal bin is trying to empty its coal into the chimney.

And the chimney is everlastingly devouringly hungry for a chance to get at the coal.

Now the shortest distance between two points is sure enough a straight line.

But when you treat coal that way, by sending it up a chimney by way of a boiler, it's like chucking money out doors.

That then, is why we made the Burnham's fire travel that makes its *short* coal bill." This is what the Big Boss said when he hired me for this job of dropping around to chat with you: He said: "Remember, Mr. Binx, that it's the Burnham's *long* fire travel that makes its *short* coal bill."

I never have forgotten it.

Hope you never will either.

Can't just tell what will be on my mind next time I see you.

Anyway, it's your turn to start something.

ANTHES

“As ye sow so

Anybody could preach a sermon with that text—that's why we don't have to preach. Any practical, experienced plumber can draw his own conclusions. We don't have to point out that Anthes Syphons are good and that when you put a lot of them in the ground you are going to harvest a good crop of business that naturally follows.

The man for whom you do the work is pleased. If he needs another syphon you'll get the job. In any case, he tells his neigh-

Anthes

Toronto and

Manufacturers Cast Iron

SYPHONS

shall ye reap''

bors that Anthes Syphons made good for him—and you get that job.

So it goes. You put down Anthes Syphons which operate according to purely natural laws, without moving parts to stick or cause trouble. They are seamless and made in one piece and their construction makes them very easy and simple to install. You benefit from the general satisfaction. We'll help with Bulletin No. 2 and supply blue prints and specifications.

Do You Read These Advertisements?

Every advertisement in this magazine is worth reading. It is the product of some concern that is using a modern piece of selling machinery—technical paper advertising—to present most effectively to you the leading features of its line.

These advertisers are making it easier for you to buy intelligently with the least waste of your time and theirs. They realize that a sales force can not replace this service at equal cost. They know that advertising is good business, for the manufacturer who does not advertise cannot save the cost of advertising. Consistent advertisers are progressive merchandisers. They are saving your money and their own; and it pays to do business with them.

Don't miss your opportunities. These advertisements are interesting. Some are distinctly instructive, and a glance through them every month will keep you posted on the latest developments in Sanitary Engineer.

When writing advertisers please mention that you saw their advertisement in the SANITARY ENGINEER.

Kerr Valves

Give
Character
to Work

They reflect credit on the man who specifies them, the man who installs them, and they give complete satisfaction to the men who use them.

Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face to face dimensions; observe the accessibility of the stuffing box; the strong, generous flanges and the properly spaced bolting.

KERR VALVES ARE GOOD VALVES

Vulcan Pure Air Furnaces

VULCAN

The Really Modern Furnace

Heating Engineers are fully aware to-day of the menace of foul air and gas as well as the added difficulty of heating such atmospheres. Fresh air is easier to heat. The constant supply of pure fresh air makes it the most healthful form of heating, as well as most efficient.

The grate is simple, reliable and so designed that no coal can drop through. The elimination of ash-sifting is very convincing to prospective customers.

Vulcan Pure Air Furnaces are satisfactory in service, economy of fuel, comfort in the home and ease of operation. We can prove this; write and ask us to.

THE LONG

Patent Steam Trap

There are many convincing features to point out to your prospective clients: properly set to drain, it cannot freeze; no valves are required other than those which admit steam to the apparatus to which the Long Steam Trap is attached.

J. T. LONG, Plumber and Electrician

127 4th Ave., Maisonneuve, Montreal

This effective steam trap is regulated to work against 1 to 100 pounds pressure. It will drain from 900 to 1,500 feet of one-inch pipe. This proposition will pay you—write now, while you have it in mind, for particulars.

Want More Business?

Then Use

"Toledo" Geared Adjustable Threading Tool
No. 2½. Capacity 2½ to 6 in. inclusive
Weight 120 lbs.

Jardine — Toledo Pipe Threading Tools

Range ½" to 12"—All sizes threaded at one cut
Effective tools in which the dies open out, as the tool advances on the thread, so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter mouth. Beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble, they work so easily, smoothly, rapidly and accurately.

One man does the work of two

A. B. Jardine & Company, Limited, are the sole makers of "Jardine" Pipe Threading Tools and the sole licensees to make and sell "Toledo" Tools in Canada.

HERE is no such thing as a poor Vitro Tank. Vitro inspectors are far too exacting to let anything short of perfection leave the plant. Tank and fittings must be trouble-proof—tank of the famous Vitro material, molded and seamless—fittings accurately gauged and machined by master workmen. That's the reason you can rely on Vitro No Trouble Tanks absolutely. They're the best you can get. You'll be proud to install them.
